1: Lhote MS25 Tuareg

# TABLE DES MATIÈRES

Avant-propos ..... 7

Avertissement au sujet de l'orthographe du mot « Touareg » 9

LIVRE I. — GÉOGRAPHIE PHYSIQUE. LE PAYS. SON CLIMAT. SA FLORE. SA FAUNE ..... 11

Introduction ..... 11

Chapitre I. — Aperçu géologique et géographique ..... 14

Chapitre II. — Les régions naturelles ..... 17
- L'Atakor et ses dépendances ..... 17
- L'Anahef ..... 20
- La Tăfedest ..... 20
- Le Tassili-n-Ajjer ..... 21
- L'Immidir ..... 22
- L'Ahnet ..... 23
- Tassili du Sud ..... 26

Chapitre III. — Hydrographie du massif central saharien. 28
- Bassin de l'Igharghar ..... 32
- Bassin de l'oued Tămanrasset ..... 33
- Bassin de l'Azaouak ..... 33
- Bassin du Taffassasset ..... 34

Chapitre IV. — Climatologie ..... 36

Chapitre V. — La flore ..... 40

Chapitre VI. — La faune ..... 45
- Faune antique ..... 45
- Mammifères ..... 46
- Oiseaux ..... 48
- Reptiles, Batraciens ..... 49
- Poissons ..... 50
- Insectes ..... 51
- Mollusques ..... 52

LIVRE II. — L'HOMME. LE PASSÉ DU SAHARA, SON PEUPLEMENT ..... 53

Chapitre I. — L'Anaggar pré et proto-historique ..... 53
- Les industries lithiques ..... 54
- Gravures et peintures rupestres ..... 59
- Les tumuli ..... 65
- Monuments lithiques ..... 71
- Kasba de Ti-n-Hinân ..... 72

Chapitre II. — Le peuplement du Sahara central et l'origine des Touaregs ..... 76

[p. 399]

1: Lhote MS25 Tuareg

Documents tirés de l'histoire de l'ancienne Égypte ..... 78
Documents tirés des auteurs grecs et latins ..... 90
Éléments apportés par les gravures et les peintures rupestres du Sahara Central ..... 106
Période post-islamique ..... 112
Documents tirés des auteurs arabes ..... 114

LIVRE III. — LES TOUAREGS. DIVISIONS POLITIQUES. CARACTÈRES PHYSIQUES. LANGUE, ÉCRITURE ET LITTÉRATURE ORALE ..... 126

CHAPITRE I. — DIVISIONS POLITIQUES ..... 126

CHAPITRE II. — CARACTÈRES PHYSIQUES DES TOUAREGS ..... 130

CHAPITRE III. — LANGUE ; ÉCRITURE ET LITTÉRATURE ORALE DES TOUAREGS ..... 141
Langue ..... 141
Écriture ..... 143
Littérature orale ..... 145

LIVRE IV. — LES TOUAREGS DE L'AHAGGAR. ORGANISATION SOCIALE. CONFÉDÉRATION DE L'AHAGGAR ..... 149

CHAPITRE I. — ORGANISATION SOCIALE ..... 149
Classes et castes ..... 149
Monogamie et matriarcat ..... 150

L'Amrar ..... 157
Les Imochar ..... 158
Les Inislimen ..... 161
Les Imrad ..... 164
Vassaux assimilés ..... 167
Iborelliten ..... 168
Les Iklan ..... 169
Iklan-n-Egef ..... 172
Iderfan ..... 173
Les Enaden ..... 173

CHAPITRE II. — CONFÉDÉRATION DE L'AHAGGAR ..... 180
*Tobol des Kel Rela* ..... 182
Les Dăg Râli ..... 191
Les Agouh-en-Tĕhlé ..... 193
Les Aït Loaien ..... 195
Les Relaiddîn ..... 196
Les Ibettenâten ..... 197
Les Iklăn-en-Tâousit ..... 197
Les Issekkemâren ..... 198
Les Iheiaouen Hâda ..... 199
Les Kel In Rhar' ..... 199
Les Kel Tăfedest ..... 200
Les Kel Immîdir ..... 200
Les Kel Tăzoûlet ..... 201
Les Irréguénaten ..... 201
*Tobol des Tăitok* ..... 202

1: Lhote MS25 Tuareg

Les Irechchoûmen ..... 205
Les Kel Ahnet ..... 206
Les Tégéhé-n-Efis ..... 207
Les Kel I-n-Toûnîn ..... 208
Les Iouarouaren ..... 208
Les Ikechchemaden ..... 210
Les Ikouttisen ..... 210
Les Ikadeien ..... 210
*Tobol des Tégéhé-Mellet* ..... 211
Les Kel Terourirt ..... 212
Les Kel Ouhet ..... 212
Les Kel Torha ..... 212

LIVRE V. — LA VIE MATÉRIELLE ..... 214

CHAPITRE I. — LES CONDITIONS DE VIE CHEZ LES TOUAREGS DE L'AHAGGAR ..... 214

CHAPITRE II. — L'HABITATION ..... 221
Le campement ..... 221
La tente ..... 223
Les greniers ..... 225
Le couchage ..... 226
Le feu ..... 227
Mobilier ..... 228

CHAPITRE III. — L'ALIMENTATION ..... 230

CHAPITRE IV. — LA CHASSE. LA PÊCHE ..... 240
La chasse ..... 240
La pêche ..... 243

CHAPITRE V. — L'AGRICULTURE ..... 244

CHAPITRE VI. — L'ÉLEVAGE ..... 249
Le chameau ..... 249
Le mouton ..... 251
La chèvre ..... 251
L'âne ..... 253
Le cheval ..... 253
Le zébu ..... 254
Règles concernant le passage et le nomadisme des troupeaux. 255

CHAPITRE VII. — ENTRETIEN ET PRATIQUES SE RAPPORTANT AU CORPS ..... 257
Propreté et soins du corps ..... 257
Tatouages — Fards ..... 259
Médecine — Chirurgie ..... 260

# THE TUAREG

114 Most of what has been written about the Tuareg is of very little value for the purposes of modern ethnological study. Much of it is merely superficial and more is the result of serious but amateurish work by men who were often enough sincerely dedicated students of mankind, but whose great enthusiasm could not make up for their lack of that broad yet specialized professional grounding without which no one is fully equipped to analyze socio-economic patterns of human communities, however simple they may be.

This may sound like an unjustly harsh and pretentiously stuffy statement, but it is not. What fever-stricken soldier in his right mind would go to the colonel's office for medical attention? What farmer would take a broken-down tractor to the village minister to be repaired? It is an inconvenient fact that highly specialized work can be well done only by people with sound professional training or great experience, preferably both; but this simple fact has been ignored all too often in ethnological research where there is no compelling force like commercial competition to make it obvious. Ethnological research in the Sahara Desert has suffered grievously as a re-

114 sult, and the Tuareg have been among the most spectacular victims.

The famous veil of these great desert warriors (figs. 25, 26, and 51) has cast its shadow of romantic mystery not only over the faces of its wearers but over their whole culture, and so both opportunity and temptation to romanticize have overcome to some extent many of those who have written about the Tuareg tribes. In the summer of 1956 the author heard a well-known public lecturer and traveler, who had even been to Tamanrasset for a few days, declare to his unsuspecting audience of honest New England farmers that the Tuareg are probably descended from a little band of crusaders who got cut off in the rock-walled valley of Petra (in what is now the Kingdom of Jordan), whence they finally escaped and found their way (heaven knows how) clear across Africa to the mountains of the Ahaggar. He added that Tuareg men are
[141] about 7 feet tall—and he was speaking in a church—although the tallest one so far recorded measured just over 6 feet 5½ inches, while the average Targui stands only about 5 feet 8 in his sandal-feet (*see* table A-2).

114 Tuareg morality and personal hygiene have
515 been the subjects of hardly less exaggeration. Several generations of frustrated readers have by now found vicarious satisfaction in titillating tales of the great ladies of the Ahaggar, beautiful of face and graceful, gracious and unclean, skilled in the arts of love, poetry and music, fascinating and refined and evil-smelling. These unattractively attractive custodians of a spuriously antique chivalrous tradition have been said to welcome to their bosoms and their beds nearly all socially presentable admirers, while their docile husbands stand modestly aside and show their good breeding by
114 concealing their emotions. Few authors seem to have been bothered by the glaring contrast between this rather pitiful picture of long-suffering patience and the very different one that they usually present only a few pages earlier, in which we see the fire-breathing knights of the Ahaggar, those seven-foot sons of the flower of Christian chivalry, busily chasing each other up and down the rocky mountain slopes when there doesn't happen to be anyone else around to kill. But this contrast bothers us—surely there must be something wrong somewhere. So let us take a

114 closer look and find out just what really does go on in the bosom of such a seemingly impossible community. The best general source on the Ahaggar Tuareg is probably Blanguernon (1955), while Benhazera (1908) gives some valuable demographic data and Lhote (1947 and 1955) supplies a mass of miscellaneous details. But all these works are in French: Rodd (1926), writing in English, gives a fairly good general picture of the Tuareg as a whole although he deals primarily with the Aïr.

101 The Tuareg of the Sahara proper, as we have defined it, are divided into three confederations, those of the Tassili n Ajjer, the Ahaggar and the Adrar n Ifoghas, distributed in that order from Northeast to Southwest.

[161] There are probably only about 10,000 or 11,000 of them in all, for most of the Tuareg, some 140,000 strong, now live outside our area in the Aïr and the northern central Sudan. We will take the Ahaggar confederation as our Tuareg socio-economic sample because this group not only seems to have remained the least affected by foreign influence but has also been the most extensively studied and described, and because it is the only one with which the author is personally familiar.

101 The Tuareg as a whole used to range over an enormous territory extending roughly as
166 far north as Ouargla, eastward to Gatroun, westward to a bit beyond a line running from
131 Aoulef to Timbuctoo, and southward to below the Niger Bend and the northern border of Nigeria. The eastern, northern and western limits of this range have been slowly driven back over the last few centuries, first by ever stronger Arab pressure from the East and North and then by the gradual southward extension of French and, more recently, Italian control. These steadily increasing pressures have produced a steadily increasing though fluctuating flow of the Tuareg population southward from the Desert proper, through the Aïr and the Adrar n Ifoghas and into the Sudan. Under the stimulus of disaster in one form or another, this flow has occasionally become torrential for brief periods, as when, following the suppression of the 1916–18 rebellion, a great wave of Aïr Tuareg moved into British Nigeria (Rodd, 1926, p. 361) and the main body of the Taïtoq tribe left their home range in the western Ahaggar for the

101 country just to the West of Agadès (Lhote,
166 1955, p. 217). These movements were but the latest major episodes in a general southwest-
131 ward drift of which we have evidence going back at least as far as the 8th century (Rodd, 1926, p. 376) when the weight of the great Arab invasions first began to be felt.

631 The military administrative unit known as the *Annexe du Hoggar* covers roughly the territory that lies between Amguid and In Guezzam, and Djanet and Ouallen, and corresponds fairly closely to the present normal range of
[101] the Ahaggar Tuareg. This area is about the size of New York State, Pennsylvania, Virginia and Maryland put together (146,300 square miles, with nearly 31,000,000 inhabit-
[161] ants in 1950), and supports a total native population of probably about 12,000, roughly the same as that of Athol or Swampscott, Massachusetts, or Gainesville, Georgia. Cambridge, Massachusetts, has more than ten times as many permanent residents. Twice as many people work in the Pentagon Building alone as live in the entire Ahaggar.

162 Accurate population figures for nomadic peoples are always very hard to obtain, and in the Ahaggar it is practically impossible to arrive at anything better than very rough approximations. We are probably safe in assuming, however, that there are about 4,400 Tuareg and 4,000 Negro slaves in the area, plus some 3,500 sedentary Haratin, a few small families of smiths, and a very small handful of Arab shopkeepers from the Northwest who have settled in the largest sedentary centers.

197 The Tuareg speak Tamaheq, which is a form of Senhadjan Berber.

619 **Social Organization.** The Tuareg are divided into confederations as we have seen, and these are divided into tribes which are subdivided
565 into clans and the latter into fractions. The nomadic population is divided socially into

[534] *A hemispherical drum made of half a big gourd with a skin stretched over the opening.

551 †Tuareg tribal and personal names are spelled in as many different ways as are the geographical names
104 of the Sahara. The most common variations are found in the alternative use of *dj* and *g* (or *gu*), *sh* (or *ch*) and *h*, and *gh* (or *r'*) and *r*, all of which sometimes reflect local differences in pronunciation and sometimes the personal preferences of various transliterators.

622 *A chief may be succeeded by his younger brother, as the Amenokal Younès was succeeded by Guémama (commonly written *ag Mama*) in 1820 or

565 three main classes, the Tuareg nobles (fig. 46) and vassals (fig. 47) and the Negro slaves.

565 Rank seems to be essentially a quality of the clan rather than of the individual, for the
614 Tuareg commonly speak of "noble clans" and "vassal clans," and, when one is in doubt about
[554] a person's social status, one does not ask what his rank is but what clan he belongs to. The "tobol,"[6] the symbol of precedence, is clan property and belongs to no particular family, although it is kept by the chief of the premier clan of a tribe as the symbol of his authority.

619 The Ahaggar confederation comprises three tribes, the Kel Rela, the Tégéhé Mellet and the
614 Taïtoq, each headed by a noble clan which gives its name to the tribe as a whole[7] (figs. 25, 26, *b* and 27). Noble clans by definition outrank vassal clans, so that the chief of a noble Ahaggar clan is usually chief of his tribe as well. The noble clans and their dependent vassal clans with them are arranged in an order of precedence, and so the chief of the premier
[643] clan (the *Kel Rela*) is also chief of the Kel Rela tribe and paramount chief (*Amenokal*) of the Ahaggar confederation.

614 It is men who govern at all levels of Ahaggar society. Among the Tuareg a tribal chief is
622 chosen from the premier clan of the tribe by
562 a clan council made up of the male heads of households, but he must be confirmed in office by a council of male representatives of all the component clans of his tribe because his tenure depends materially on the willingness of these clans to pay him tribute. For the same reason, the final confirmation of an amenokal rests with a council made up of male representatives of all the clans in the whole confederation. Tribal chiefs also act as judges, and an amenokal is the chief justice of his confederation.

622 Chieftainship is hereditary in the female line,[8] but within fairly broad and seemingly rather indefinite limits of degree of relation-

thereabouts, but this succession may not have been thought of as brother-to-brother inheritance after all. It seems perhaps more likely that the successor in such a case is looked on as an heir of the former chief's mother rather than of the former chief himself. Ancient Egyptian records, cited by Bates (1914, p. 112), tell of at least one Libyan chief who was succeeded by his younger brother in preference to his son. It would be a waste of time for us to try to explain the few early cases of father-to-son inheritance that have been reported because the circumstances surrounding them are not at all clear.

622 ship, and so an undesirable heir-apparent can easily be passed over in favor of a less direct heir who is considered acceptable (Butaye, 1957).

614 The position of an Ahaggar Tuareg clan is not firmly fixed within the framework of the confederation. Component clans will sometimes break away from one tribe in times of adversity and attach themselves to another and more powerful tribe that is better able to protect them. In the old days vassal clans were sometimes swapped back and forth between noble clans, and so had their tribal allegiance changed for them more or less arbitrarily. At least one clan, the Ibotenaten, has been reduced from noble to vassal status, in this case by a crushing defeat suffered in the course of a blood feud. Thus the distribution of the various clans within the tribal framework of the confederation tends to change gradually [578] over the years, while internal tribal crises and intertribal warfare naturally accelerate the process.

[582] Marriage is usually although not always within the clan but outside the first degree of 614 cousinship and outside the camp community or fraction. A child of Tuareg parents inherits 611 rank and privileges through the mother, re- 428 gardless of whether she is a member of the father's clan or not; but the child is known as "Such-and-such, child of So-and-so," the parent thus referred to being the father, and inheritance of property follows Moslem law (*see* the Koran, iv, 12 and 175) which provides that a male heir shall receive twice as much as a female heir who is related to the deceased in the same degree. Today a Targui, asked to give his ancestry, will recite the list of male forebears in his father's line, although Ibn Battuta (Gibb, 1929, p. 321) tells us that in the 14th century descent was counted through the mother's brother, and a man's heirs were his sister's children rather than his own. Bates (1914, p. 112), citing Duveyrier (1864, p. 397), says that property acquired by force of arms used to be inherited by "the eldest son of the eldest sister of the deceased."

591 A newly married couple live in the camp of the bride's parents for about a year and then usually move over to a camp of the husband's people, but they sometimes settle permanently among the clansfolk of the bride if she and her

591 husband are of different clans. A Tuareg camp is usually known, however, by the name of the highest ranking male member of the camp community. Children are normally brought up and continue to live among the group which their parents finally joined on a permanent basis, although boys are sometimes brought up by a maternal uncle. A widowed woman and her unmarried children are usually taken into the family circle of one of her brothers or married sons.

837 The question of moral laxity hardly con-
cerns us here, for even if irregular sexual rela-
[835] tions were as general among the ladies of the Ahaggar as some authors would have us believe, they are still confined as a rule to the kinship group of the clan or at least to that of the tribe. But even so we will do well to examine briefly a widespread popular misconception. In point of fact we can probably
[582] accept Blanguernon's (1955, p. 141) statement that a substantial majority of Tuareg ladies remain virgin until wed, even though the usual age at marriage is 20 to 25 for women and close to 30 for men. Monogamy is the uni-
586 versal rule and divorce is both unusual and
837 generally frowned on. Adultery is probably no more common than it is in most societies where husbands and wives are frequently separated for periods varying from a couple of days to several months. An injured husband
[684] theoretically has the right to kill both his wife and her lover if they are caught in the act, but in practice he usually repudiates his wife although he may decide to keep her regardless of her faults, in which case he appeals to the Amenokal who then fines the corespondent. The injured wife of an unfaithful husband simply packs up and goes back to her own people, unless she prefers to ignore the whole affair.

837 It has been said that Tuareg women of the Ahaggar, single or married, lend themselves freely to male friends and guests as a general rule, but this is certainly a myth. We get the impression that in this matter, and in others too, some authors have not only been influenced subconsciously by the conditioning of their own societies, but have also extrapolated hypothetical Tuareg behavior from behavior sometimes observed among the Tuareg when in contact with their new European rulers.

837 There can be little doubt that the behavior patterns of the Tuareg on such occasions are often different from those which characterize them when they are among themselves.

We must not forget either that irregular sexual activities, before or after marriage, are all but impossible to conceal in the wide open spaces of a desert, whereas it is no trick at all to hide them among the blocks and skyscrapers of great cities like Paris and New York or even in such provincial capitals as Boston and Algiers. All things considered, it seems rather unlikely that sexual laxity is more common among the Ahaggar Tuareg than it is in the urban communities of western Europe and America, at least in cases where husbands and their wives are separated as often and for comparable periods of time.

593 A bride retains full title to all her personal
422 property including livestock, while the husband pays all the family expenses out of his own pocket although his wife may contribute if she feels so inclined. Women are treated
562 with the greatest respect and deference, but they can hold no office nor can they exercise any command beyond the very limited field of their own household affairs, nor can they appear in council or appoint speakers to represent them there. On very rare occasions a noble woman may intervene as an official peacemaker in a quarrel so serious that it might lead to a blood feud if allowed to go unchecked, and this can happen even in cases where the parties to the quarrel are not related to her by either blood or marriage, but only an older woman of very high rank and renowned for her intelligence, strength of character and diplomacy can ever play such a role.

The discerning reader will have noticed that
611 the picture we have just examined is full of gaping holes which cannot be filled in at present for lack of the necessary information. In spite of this we get a distinct impression of a double descent system as defined by Gibson (1956): "the utilization in one society of both patrilineal and matrilineal principles of affiliation resulting in two lineage systems cross-cutting each other." Among the Ahaggar Tuareg the patrilineal descent system is "conjunctive" in that it provides channels of interaction between segments of a "disjunctive" matrilineal system which "divides the society

611 into separate corporate bodies," and so the situation in the Ahaggar appears to be the reverse of that which Gibson found among the cattle-raising Herero of Ngamiland, in southwestern Africa. The Tuareg descent system is like that of the Herero, however, in that "The present function is in terms of a wide range of kin-like relationships leading to economic co-operation and to intermarriage among persons unrelated patrilineally" (although rarely "of scattered origin"). "Double descent, therefore, permits a society such as the Herero," or the Tuareg as a whole, "highly fractured into scattered and politically independent local groups, to maintain cultural uniformity and social cohesion. . . . The segmentation of matri-clans . . . appears to be no more than a mechanism for limiting the wide extension of exogamy and special privilege to persons not too distantly related; it was quite likely a concomitant of an expanding population and the scattering of the tribe."

It is not unnatural to jump to the conclu-
121 sion, as Gautier (1935, pp. 33 and 109), Lhote
611 (1955, pp. 186–88) and others have done, that the ancestral Tuareg of ancient times were
[174] exclusively matrilineal and fully matriarchal as well, and that the patrilineal elements we find in modern Tuareg culture were acquired relatively recently through Moslem influence, but this is not necessarily so. The concept of double descent was stated for the first time by Rattray (1923, pp. 77–78) in his description of the pagan Ashanti of the Gold Coast (now Ghana), among whom "Inheritance and succession to authority follow the female line and the avunculate exists, but residence is patrilocal and the household consists of a patriarchal extended family" (Murdock, 1940, p. 557, paraphrasing Rattray), a situation which was probably characteristic of the pre-Islamic Tuareg as well. The Ashanti also have matri-sibs based on "blood" inherited in the maternal line, and patri-sibs based on "spirit" inherited through the father, and this again suggests that the basic concepts underlying the double descent systems of the Ashanti and Tuareg have much in common.

Gibson (1956, p. 137) seems inclined to think that the double descent systems of the Herero and of the southwestern Bantu in general evolved "as a whole," matrilineal and

611 patrilineal elements being present together in
121 a single complex from its beginning, and we have no good reason to suppose that this tentative assumption may not be equally applicable to the Tuareg. But we are hedged about with lack of information. We are faced here with yet another instance of the futility of empirical deduction unsupported by adequate field investigation of the culture concepts that lie at the root of our problem.

423 **Land Tenure and Tribute.** The Amenokal of
643 the Ahaggar is said to be "the owner of the land" by virtue of his position as paramount chief of a warrior aristocracy. We are inclined to suspect, however, that this may be an oversimplification of the case, for the land of the various tribes that make up the Ahaggar confederation is apparently treated as basically communal property, the title to which is vested in each succeeding Amenokal as an executive trustee rather than as a proprietor. This brings out the very important point that the Amenokal of the Ahaggar Tuareg seems to be essentially a chief executive and not a true king or autocratic chief in the commonly accepted sense of those terms. And, theoretically at least, he can be forced out of office by popular demand. All things considered, his position is not so very different in fact from
643 that of the President of the United States.

622 The Amenokal and the noble tribal chiefs
565 under him collect tribute from those whose
[651] destinies they control, but they are also supposed to protect these people by force of arms when necessary. When the warriors of a noble
[721] clan go raiding they often take the men of one or more of their vassal clans along, and these vassals receive a substantial share of plunder if the raid is a success, but vassals also have an obligation to fight at the side of their noble masters in intertribal wars.

423 Each vassal clan holds exclusive pasturage
[565] rights to a definite territory upon which no one else may enter, without express permission of the Amenokal, excepting noble clans who are always free to use the pastures of their own vassals as and when they please. Some men also hold exclusive hunting rights to certain specified areas. Many Tuareg own garden plots in agricultural centers, and sometimes date palms and fruit trees of other kinds as well, all of which holdings are now par-

423 celed out to Haratin sharecroppers although some of them used to be worked by slaves. Since ownership of land is never outright in
[427] any case, each leaseholder must pay rent in one form or another to someone or other at least once a year.

565 Vassal clans usually pay annual tribute to their tribal chiefs or to the Amenokal, or
651 both. This tribute includes such things as dates, millet, congealed melted butter, baby camels, sheep, goats and manufactured articles of various kinds, a share of all merchandise imported by the clan as well as a share of the profits from any caravan commerce they may have, and about half of any booty they may capture in independent raids. Each vassal family used to contribute towards the upkeep of a particular noble family, and the nobles in their turn, men and women alike, were constantly begging from their vassals who could hardly afford to refuse them. But if this begging became unbearable, the vassals would sometimes pull up stakes and move quietly out of reach of their noble parasites.

Lhote (1955, pp. 190–91) says that all adult
651 males, potential warriors that is, of the Ahaggar confederation, were supposed to pay an annual head tax of 5 francs (then worth about 4 cents) each to the Amenokal as recently as 1948. Hunters annually paid in mouflon for exclusive local hunting rights. After each harvest each Hartani would pay a third of a bushel (more or less) of grain to the Amenokal for each garden plot that he worked, in addition to a share of the produce which he paid to the local leaseholder. But much of this fiscal system has fallen into disuse in re-
651 cent years, for the Amenokal together with
178 his whole camp is now supported almost entirely by the French Government, which also contributes free grain weekly to many of the poorer Haratin. Once more it is the middle class, the vassal Tuareg and the lesser nobles in this case, who suffer most severely from the stresses of cultural change.

**Tuareg Economy and the Roots of the Class**
233 **System.** All Saharan nomads live primarily off
137 their livestock, and livestock lives off pasturage. There are two main kinds of pasture in the Sahara, the permanent growth of wiry yellowish grass, little woody shrubs and thorny bushes that one finds scattered very thinly

233 across much of the land and concentrated
[137] along dry river bottoms, and the small patches of thick, lush, emerald green grass that flourish briefly in hollows here and there following rainstorms. Pasturage is always either very sparse or very scattered in the Ahaggar and so the nomadic inhabitants of the area must move often, for the supply in the immediate neighborhood of a camp is quickly exhausted.
[312] To make life still more difficult, water points are often few and far between as we already know, and it is not unusual to find good pasturage so far from any water that it cannot be used for more than a day or two, if at all. This combination of circumstances has
233 made it necessary for the Ahaggar Tuareg
221 to break up into small and highly mobile camp units composed of fractions of clans, or even single families, and each of these units must move at intervals of usually somewhere between a week and a month and often over considerable distances, although always within the territorial limits of the tribe (fig. 36).

As soon as a camp or constellation of neighboring camps is established in a new location, the head men first set up the daily grazing routine of the flocks and then set out at once to scout far and wide in search of the next pasture to be used and the next camp sites that their families will occupy. And so it goes the year around, and so the Tuareg of the Ahaggar are highly mobile nomads by force of circumstances, for they cannot survive otherwise in the region which they have made their own.

565 It is in the compelling circumstances of
233 their environment that we find the roots of the class system of the Ahaggar Tuareg, for,
463 quite apart from the question of mobility, such conditions can be met successfully only
182 by a well conceived and firmly established division of labor. In the Ahaggar it is the nobles of a tribe and the headmen of the vassal clans who ride out in search of new pastures and at the same time act as military scouts, always on the watch for enemy raiders as

[423] *The fundamental difference between the two systems lies in the fact that the basis of land tenure among the Tuareg is not that of the *beneficium* while personal allegiance is not based on the concept of the *comitatus*. The true feudal system of mediæval Europe was based on the conferring of privilege by an absolute ruler (or one of his vassals) on a less

565 well as for potential victims, alien camps or
233 caravans which they can raid themselves. The
463 vassals in their turn are responsible for the daily management and immediate protection of the flocks and herds, and also constitute an armed reserve that can be called up quickly in case a battle becomes imminent or the opportunity for a major raid presents itself. The
[567] slaves take care of the domestic service and household chores of the camps while their boys go out as shepherds to the flocks.

Thus it is clear that the Tuareg class system
565 is a necessity of pastoral life in the Ahaggar;
642 for no pastoral community can survive there without nomadizing, and no community of
[182] nomads can survive without a rigidly formalized division of labor and authority similar to that embodied in the class system of the Tuareg. It now becomes clear also that the seemingly paradoxical combination, within the social framework, of rigidity during the period of a single adult lifetime and a relative fluidity over slightly longer periods still so short as to span often no more than a couple of generations and sometimes less, is not in fact a paradox at all. It merely reflects in simple functional terms the fact that extreme conditions call for an extreme response, that the framework within which the allocation of authority is made at various levels in the communal structure must be very firmly established but must also allow considerable freedom periodically in the choice of those who are to occupy critical positions of decision and command so as to avoid the danger of having such positions filled automatically by persons unfit to occupy them, a danger that could well be quickly fatal to the whole community.

And finally we see that Tuareg government really has nothing essential in common with the feudal system of mediæval Europe to which it has so often been confusingly compared.[9] In the last analysis authority resides in the vassals, for they can make and at least
[643] in theory break the mightiest of all the nobles, the Amenokal himself, and they can do all this by peaceful means, at least again in theory.

powerful neighbor in exchange for some specified kind of continuing or periodic service. Among the Tuareg the relationship between "noble" and "vassal" looks much the same at first glance, but this is an optical illusion, a case of merely superficial resemblance.

565 this by peaceful means, at least again in theory.
642 Ancient Egyptian records tell of a Libyan chieftain, Meryey who was peacefully deposed and replaced by a younger brother following a disastrous defeat in battle (Bates, 1914, pp. 114–15, 218 and 221). It is some of the vassal clans that are the biggest numerically and also the richest on a *per capita* basis; and if vassal clansmen pay tribute to their noble "masters" it is only because they choose to do so, because they find it in their interest to keep the nobles on their payroll so to speak. Thus the Tuareg government of the Ahaggar is in fact a kind of republic and not a real monarchy or true military aristocratic autocracy at all.

233 **Livestock.** Herds of camels and flocks of hairy sheep and goats constitute the bulk of the capital investment and so form the primary basis of Tuareg economy in the Ahaggar. The quantity and composition of the total livestock investment has been variously estimated, but the following rough approximations are probably not far from the true figures: camels—12,000, sheep—2,000, goats—20,000, donkeys—5,000 and cattle (zebus)—300 or thereabouts.
[231] Donkeys, as we have seen, are unproductive except as beasts of burden, and the cattle are so few as to be of negligible importance. Only some 4,500 camels are actually kept in the Ahaggar while the rest are put out to pasture in the Tamesna region on the northern edge of the Sudan, roughly half way between the Aïr and the Niger Bend. Most of the sheep too are pastured outside the Ahaggar proper, mainly in the country around Tin Zaouaten, southwest of the Ahaggar and northwest of the Tamesna.

235 The Haratin of the Ahaggar keep chickens,
262 but only the eggs are eaten as a rule. The Tuareg eat neither eggs, fowl nor fish, but we will discuss this further in the section on *Nomad Diet* in the following chapter.

232 It has been said that the Tuareg have no special breed of riding camels but that likely looking animals are picked out early and given special training for use as mounts. The fact remains, however, that the young of famous stud camels are always the preferred choice, and these animals are specially marked shortly after birth. The method of marking consists of pinching up three small folds of skin in a row, about 2 to 3 inches apart, along

232 the ridge of the nose, and then tying a very thin leather thong very tightly around the base of each fold much as a string is tied around the opening of a toy balloon to keep the air in. After a while the thongs are cut away and three little round knobs, about the size of the end of your index finger, remain for the rest of the camel's life as a kind of hallmark of outstanding quality (fig. 26, *a*). Riding camels are very carefully and patiently trained from the age of about 2 years on, and the males are castrated when about 5 years old.

**Trading.** We have now seen that pastoralism 439 is the central column and garden rent a corner post of Tuareg economy in the Ahaggar. Trade is the second corner post, and salt is, as we have seen, the chief article of export. [317] In April or May some of the Ahaggar Tuareg send their slaves to the salt mines of the Amadror for two or three weeks. In July they go south with their cargoes of salt, through the [487] rich pastures of the Tamesna region where they rest their animals for a while or exchange them for fresh ones, and then on to the commercial centers of the country just north of the Nigerian frontier. Here trading begins in earnest, late in October as a rule, and endless discussions and bargaining go on for a couple of months or so. Salt, and also camels, donkeys, and dates obtained from the North, are exchanged chiefly for millet but also for a variety of manufactured articles such as cotton cloth and clothing, leather goods, sandals, saddles and bridles, wooden household utensils and tools and weapons of iron and steel. In January the Ahaggar Tuareg turn north again, pause once more for a while in the Tamesna, and finally reach their homes in March or early April.

Camels, hairy sheep, goats, donkeys and congealed melted butter used to be traded in the oases of the Tidikelt and the Touat mainly for dates, and also for cotton cloth, thin woolen blankets from the Gourara, tea, sugar and tobacco. Caravans engaged in this trade used to leave the Ahaggar in January or early February and return in April. Over the last 30 years or so, however, this commercial current has been reduced to a mere trickle by middlemen with trucks who have gradually taken over delivery of the goods that caravans used to fetch from the North. The trade still exists in a sense, but it has become indirect

439 and its focus is now strictly local as far as the Tuareg are concerned.

Salt and dates were once traded in the Niger Bend country for camels, sheep, millet and rice, and camels, sheep and goatskins used to be traded to Ghadamès in exchange for swords, richly embroidered cloaks, dates, tea and sugar. Ghadamès is still an important center for the production of metal utensils and occasionally weapons.

**Protection.** Aside from their own trading ac-
439 tivities, the Tuareg used to control caravan
486 trade in general over a very wide area, and this was the third corner post of their economy. Barth (1857, vol. 1, p. 238), writing a century ago, tells us that in his day the Amenokal of the Ahaggar, Guémama, controlled all trade routes between Mourzouk and Timbuctoo, and it seems likely that this situation already dated back over a considerable period. The Ahaggar Tuareg used to control all trade in the southwestern Sahara as far west as Ouadane and southward into northern Nigeria at least as early as the beginning of the 15th century, but their grip on much of this area, and notably on the salt trade of the southwestern Desert, was broken by the Moroccans at the end of the 16th century, and the Tuareg never seem to have extended it again much beyond Aoulef in the Northwest or southwestward beyond Timbuctoo.

The mechanism of control was based on the furnishing of guides and armed escorts to caravans passing through areas under Tuareg domination, and for these services there was a fairly uniform customary scale of charges based on the estimated value of a caravan's cargo and the reputed wealth of the owners. Caravan leaders sometimes failed to agree on the figure to be paid and proceeded on their own, while big caravans occasionally brought guides and guards along with them and small ones now and then tried to slip through unobserved. The Tuareg, however, succeeded in making such expedients unprofitable in most cases by themselves raiding reluctant customers along the road. Thus a highly profitable protection racket was maintained for several centuries before the period of European domination.

**Raiding.** The fourth economic corner post
721 of the Ahaggar Tuareg was raiding pure and

721 simple, and this activity can be divided into two main types according to the chief object in view. Raiding for booty was practised irregularly but fairly often, especially in times of hardship or in connection with intertribal feuds. Sneak attacks by small bands who lifted livestock and then promptly fled with it were typical. Slave raiding was practised on a fairly regular basis. In the nomad camps of the
727 Ahaggar the number of Negro domestic servants is usually about equal to the number of Tuareg present, and this labor force used to be replenished when necessary by raids on Negro villages in the desert fringe of the Sudan and occasionally even on Tuareg camps in the Aïr, Tamesna and Adrar n Ifoghas regions. The present writer knows a mulatto freedwoman who was taken in this way from the Aïr some 40 years ago, and has long been happily settled at Tamanrasset; and she is by no means an exception. Thus raiding, the fourth corner post of Tuareg economy in the Ahaggar, was primarily a mechanism designed to keep the supply of livestock, both animal and human, at a satisfactory level in an area where the environment caused a steady normal decrease in the local supply.

**Economic Summary.** We have seen that pas-
177 toralism was the central column and crop shares, trading, protection and raiding the four
182 corner posts of the economic structure of the Ahaggar Tuareg. With the coming of European domination the last two pillars were kicked away, the third buckled and bent to a mere fraction of its former height, and the roof fell in along three sides and part of the fourth. The Ahaggar Tuareg presumably never lived a life of ease—no pastoralist can in such a rigorous environment—but their greatest perils used to be those of warfare. These dangers have been removed completely by the new European rulers of the area, and yet the Tuareg of the Ahaggar as a whole are undoubtedly in worse economic shape today than they have ever been before. Their old
182 culture, whatever some may think of it on the basis of modern European standards, was remarkably well adapted to conditions in their chosen homeland. The destruction of two of its five main supports and the progressive weakening of a third have thrown their economic structure so seriously out of balance that the whole edifice is obviously doomed,

182 and the Tuareg of the Ahaggar as a nation, too stubborn to adapt themselves to any way of life other than their own, have at last signed their name to the ever-lengthening list of vanishing peoples.

Shelter. The typical dwelling of the Ahaggar
342 Tuareg is a leather tent, made preferably of the skins of goats although sometimes those of sheep or even calves are used (fig. 36). A tent of moufion skins is considered the height of luxury and elegance, but it is almost impossible to come by enough of them to make such a tent nowadays. The prepared skins are
281 very soft and have a pleasing dull red brick
342 color which is produced by rubbing them on both sides with a mixture of red ocherous clay and dried camel dung. After being prepared and cut down to rectangular form, they are sewed together with fine strips of leather. Anywhere from 30 to as many as 150 may be used to make a single tent, but the first number is not far below the average. A finished tent of ordinary size weighs about 50 pounds more or less.

342 Tents are mounted on wooden frames of various closely similar types, the most common of which consists of three elements, each composed of two uprights with a horizontal member laid across their tops. The highest element is set in the middle with one upright in front and the other in the back, and the two remaining elements are set up parallel to it, one on either side. The tent covering is then stretched over this framework, with its back and sides pegged down and the front left open, usually facing south. In good weather the overhanging front of the roof is stretched out horizontally to form an awning held in place by three supplementary posts, one in the middle and another at each end. The average tent is 6 to 10 feet deep from front to back, 10 to 15 feet wide and 4 to 5 feet high in the middle, with the roof sloping away very gently on both sides and toward the back wall. The structure is completed by
[285] long strips of stiff, yellow matting made of
351 thin reeds, roughly 3 feet wide and up to 20 feet long more or less, with simple geometric designs in black or reddish brown leather ribbon woven into them. These strips are set on edge around the inside of the tent so as to make an inner wall at the back and sides,

351 and are extended out in front to form a sheltered enclosure which is usually semicircular with the entrance opening in the middle. The little forecourt and the ground inside the tent as well are covered with clean sand or very fine gravel from the bed of a nearby stream. Tuareg camps are always very tidy and astonishingly clean.

Both in the forecourt and in the tent itself
562 the men's place is on the right as you enter
342 and the women's and children's on the left, which is the reverse of the arrangement customary among Arabs. It has often been said that the men's place is on the East, but this is simply because tents are almost always pitched facing south.

Household furniture and effects include
352 sheepskins, or rugs obtained from the North
[439] by trade, leather bags of food and personal belongings, saddles, bridles and weapons,
[415] wooden bowls, funnels and spoons and maybe an earthenware cooking pot or two, a wooden
[412] mortar and pestle or perhaps two sets of different sizes, and a stone quern which may be either of the Neolithic saddle type or the small rotary model of the Roman Legions. Arms and food are stored in the men's half of the tent and equipment connected with food preparation in the women's half. A guerba full of water is hung from two long stakes just outside the forecourt. A brush
[343] windbreak built nearby shelters the outdoor kitchen, and another windbreak, some 50 to 100 yards away, shelters the family slaves.

Sometimes in the hottest months, and particularly when a camp remains stationary for a considerable length of time as it does in periods so dry that it is dangerous to move far from a permanent water supply, the tents may be stowed away and zeribas set up in their place. We recall that these are cubical or cylindrical structures made of reeds, long grass or palm fronds laid over a wooden framework measuring roughly 10 to 15 feet across and 8 to 10 feet high (fig. 37, *a*). The Amenokal's camp was installed in zeribas when the writer visited it in November, 1955, near the end of an unusually long period of drought.

361 Camps are always pitched in an inconspicuous spot and always on high ground except on very rare occasions when the sky is cloud-

361 less and there is no immediate fear of a sudden downpour that might produce flash floods. Each tent is occupied by a single family unit
592 and there are almost never more than 5 or 6
361 tents at the most in any normal camp. In the camp of the Amenokal there are usually 15
644 to 20 tents or even more, and one sees no flocks nearby, but this is a wholly artificial situation made possible only by the fact that the Amenokal and his personal retinue receive most of their supplies by truck from the nearest French Army post, and so can live in a way that would be impossible in the Ahaggar under anything approaching normal conditions.

**Clothing, Cosmetics and Cleanliness.** In the old
291 days the Tuareg used to wear leather shirts that reached below the knee and were sometimes elaborately decorated with fringe. Monod (1947, p. 47) recalls that Herodotus (IV, 189) described Libyan women as wearing fringed garments of red leather some 2,500 years ago, and he adds that some Tuareg women of the Niger Bend country still do so. Lyon (1821, p. 110 and plates facing pp. 110 and 113) tells us that leather shirts were worn by many of the Tuareg who visited Mourzouk while he was there in 1819, but Duveyrier (1864, p. 406) found that they were already becoming scarce only 40 years later. The present writer has seen no leather clothing worn by anyone in the Ahaggar, although Benhazera (1908, p. 37) says that poor folk wore leather clothes there 50 years ago while Reygasse (1950, p. 97) states that leather shirts are still worn by some of the slaves and Capot-Rey (1953, p. 226) adds that they are often worn by smiths.

Another once characteristic article of Tuareg dress that has now gone largely out of use was the high, conical fezlike cap, made of soft red felt and worn sticking up through the middle of the turban, that Lyon (1821) saw at Mourzouk. Barth (1857a, vol. 1, p. 424, footnote) says that caps of this kind were "obnoxious to the" Tuareg "tribes of pure blood" in 1850 but this is probably either an error or a matter of local eccentricity, for they were still standard equipment in Duveyrier's time. They disappeared almost completely from the Ahaggar, however, in the course of the next 50 years or less although

29 some Moroccan Arab tribes wear them even now. This type of headdress seems to have been exactly or almost exactly like the tall, fezlike tasseled cap that we see worn, though without a turban, by Chusor Phtah in portraits that occur on coins struck probably during the last quarter of the 1st century B.C. at the provincial Berber capital of Lixus, the modern Tchemmich, an old Phoenician settlement on the Atlantic coast of Morocco, roughly half way between Rabat and Tangier (Mazard, 1955, pp. 60, 64, 125 and 153; figs. 630–35, 640–42). Chusor Phtah has been identified as the diety who was supposed by the Phoenicians to have brought order out of primeval chaos. And so we are left wondering if the high-crowned floppy fez of the Tuareg was originally a northwestern African Berber invention or a Phoenician import from the Near East. In any case it suggests the possibility of [177] a very early relationship of some sort between the Tuareg and the northwestern coastal fringe of Barbary.

Tuareg men today wear very loose, baggy trousers made of dark indigo blue or black cotton cloth,[10] which are held in place in the same way as our pajama trousers are but with a braided leather cord by way of drawstring. The seat is baggy and hangs down below the knees, the ends of the legs are sewed up so as to fit closely around the ankles, and there are no pockets and no fly. A loose, white cotton shirt, rather like a nightgown with very wide sleeves of medium length, used to be the standard undergarment, but the gandoura [177] of the Arabs finally replaced it and is now being replaced in turn by the European type of shirt. The Tuareg gandoura is made of a huge rectangle of cloth, roughly 7 to 8 feet wide by 8 to 9 feet long. This is folded over on itself and the free corners are sewn together so as to leave the bottom and most of both sides open, a V-shaped opening for the head and neck is cut out of the fold at the top, and a large patch is sewed on inside so as to make a roomy pocket placed just below the left breast. The gandoura worn next to the skin, or directly over the undershirt, is usually made of white cotton, and a second

[10] Frequent reference to the plates will make the following descriptions easier to understand.

291 one, of dark indigo blue cotton cloth this time, is customarily worn over it. On gala occasions some of the Tuareg wear a third gandoura, made of very narrow vertical strips of Sudanese cotton cloth dyed a lurid pinkish violet or of alternate strips of violet and white or dark blue, often with two large spiral patterns embroidered in coarse white thread, one over the left breast and the other on the back between the shoulders. This third type of gandoura has gone almost completely out of use within the last few years, but, like the white tie and tails of our own formal dress, it is still worn occasionally and is considered very elegant. A Tuareg gandoura should be wide enough so that when the upper corners hang down freely they cover the hands, but they are usually rolled up over the forearms so as to leave the hands free and sometimes are folded over the shoulders, thus freeing the whole arm.

A woolen outer garment is occasionally worn in cold weather. Lightweight blankets from the Gourara and the Touat used to be worn like giant shawls, but these have been replaced to a great extent by the "burnous" (Arabic = *bernoos*) of the Arabs, a long hooded cloak made of wool or of camel's hair mixed with wool.

The Tuareg have two types of footgear. The older type, a sandal with the end folded back over the toes, is held in place by a narrow strip of leather which passes around the heel below the level of the ankle, and is attached to the sole directly between the great and second toes and indirectly by a loop on either side of the foot halfway between the instep and the heel. The second type, [439] usually imported from the Sudan, is a large flat sandal which extends out about an inch beyond the foot in all directions. It is held in place by a V-shaped pair of broad strips of leather with the arms of the V attached directly to the sole on either side of the foot and the point attached to a thin roll of leather which passes between the great and second toes. The older type is rarely seen today, but still survives in some of the more mountainous regions.

And so we come at last to the mysterious "teguelmoust," the men's veil that has done so much to make the Tuareg so famous. The

291 teguelmoust is actually a combination veil and turban made of a band of lightweight cotton cloth some 10 feet long by a foot or so wide, preferably dark indigo blue in color but often white or black nowadays. This band is wound around and around the head and face so as to leave exposed only the eyes and a small patch on the crown of the head. The lower edge of the eye opening is often doubled over in the middle so as to draw the cloth tighter across the bridge of the nose, thus preventing the veil from slipping down. The slit left open for the eyes is made as narrow as possible on formal occasions, and is then strikingly reminiscent of the snow goggles of the Eskimos.

Self-respecting Tuareg still think it shockingly indecent for a man to let his mouth be seen by anyone to whom he owes the least formal respect, so much so in fact that Lhote (1955, p. 307) was able to write of Tuareg women married for over 20 years who claimed never to have seen the mouths of their own husbands. When a man is eating or drinking, the left hand is slid up underneath the fold of cloth that covers the face so as to hold it out away from the mouth without raising it above chin level, and the spoon, bowl or glass containing food or drink is then passed up under the veil with the right hand in such a way that the mouth and even the chin remain concealed during the entire process. A Targui about to enter a camp other than his own must stop first and arrange his veil so that the eye slit is very narrow, for to do otherwise would place him in a position similar to that of a stranger ostentatiously whistling at the girls in a small American town. It may be taken as a general rule that a Targui will never show his face to anyone whose social standing he considers superior to his own.

But when, where and from whom did the Tuareg get the curious idea that men must all wear veils while women go without? All that Lyon, Barth, Duveyrier, Benhazera, Reygasse, Rodd, Bovill, Lhote, Blanguernon and your humble servant, among others, have been able to elicit from the Tuareg themselves over a period of a century and a quarter of patient effort is that self-respecting men wear veils and always have, simply because it is the proper thing to do. Duveyrier (1864, p. 391), followed more recently by Rodd (1926, p.

291 288) and Lhote (1955, p. 305), held that the teguelmoust cannot have had a utilitarian origin because it is worn by men whose womenfolk habitually go unveiled in spite of the fact that both sexes are exposed to the same rigorous environment. Benhazera (1908, p. 39) agreed with this theory, and cited as evidence the fact that Tuareg men questioned by him all denied flatly that the veil was intended to serve any useful purpose. Other equally serious investigators have gone to extremes of both fantasy and caution. Barth 1857a, vol. 1, p. 424), for example, suggested that the veil, turban and floppy fez "combine to imitate the shape of the helmet" of a mediæval knight, although the supposed resemblance is about as farfetched as any that one can think of, while Blanguernon (1955, p. 99), after noting that the veil is in fact very useful whatever its chief purpose may now be, prudently declined to speculate as to its origin on the very reasonable grounds that there is no factual evidence at all to go on. It has been suggested too that Tuareg men hide their mouths only because they think it shameful to expose either end of the alimentary canal, just as we think it shameful to expose the lower extremity thereof (Foley, 1930, p. 25, among others); but if this is so, then why are women's mouths not considered just as shameful as those of men?

The arguments advanced in favor of the theory that the teguelmoust cannot have had a utilitarian origin fail to convince the present writer, for several reasons. In the first place we must remember that the men of all Saharan nomad tribes often veil their faces with a fold of the turban when out in the sun and wind or in a sandstorm, although being veiled or not seems to have no ceremonial implications for any of them except the Tuareg. Everyone who has traveled at all extensively in hot deserts knows that it is often advantageous to the point of being almost essential when on the trail to cover the head, nose and mouth with light, loosely woven cloth, for such a covering protects the wearer from the sun and wind and also maintains a pocket of relatively moist air, kept humid by the breath, around the mouth and nostrils. This last function is of great practical importance in that it protects the mucous membranes of the respiratory

291 tract which otherwise suffer severely in an arid climate, even when the ambiant temperature is only moderately high. Thus it is clear that the teguelmoust does have a very real practical value, regardless of what the Tuareg may say; and it is clear also that the men who wear it need it far more than do their womenfolk who go without.

291 It is not true that Tuareg women of the Ahaggar (fig. 48) are exposed to the rigors
512 of their environment either as much or in the same way as are their menfolk. The men are
462 out and about a good deal of the time, riding here and there across the countryside on errands of one sort or another or on long journeys far away, while the women sit quietly in the shelter of their tents, gossiping, telling folk tales, doing fancy leatherwork, and teaching tribal lore and sometimes Tifinagh [11] to the children. Every family that is not miserably poor has at least two or three
[567] slaves to fetch and carry water, prepare the meals and do the other daily chores, so that the mistress of a normal Tuareg household in the Ahaggar has no need to take a single step outside her tent except when camp is moved, or to visit with her neighbors and to answer calls of nature.

291 Although it is true that Tuareg women do not wear veils, it is also true that women
171 of the other Saharan nomad tribes, Arabs included, seldom if ever wear veils either, except on the very rare occasions when they visit a sedentary settlement or town, and even then not always by any means. But Tuareg and other Saharan nomad women alike all draw a corner of the head shawl (or turban cloth) across the nose and mouth occasionally as a simple matter of physical protection, and this has the same practical effect as putting on a veil does.

291 All this data on the wearing of veils and going without them proves nothing, to be sure, but it does go to show that the Tuareg teguelmoust itself can have had a strictly utilitarian origin, after all, as Blanguernon (1955, p. 99) implied, quite apart from the origin of the elaborate and rigid ceremonial
291 quality with which its use has become imbued.
177 As for the date at which the teguelmoust

[11] The Tuareg alphabetic script.

291 177 was introduced among or developed by the Tuareg, we have as yet only negative evidence to go on and precious little of that. All we can say with any assurance is that it cannot very well be older than the introduction of cotton cloth, which is self-evident, and that it could easily have been derived from some quite ordinary type of turban, like that of the Arab Chaamba for example. Cotton cloth must have been introduced into the Sahara on a commercial scale very soon after the introduction of camel domestication had led to the establishment of a regular caravan trade with Egypt, if not before. There are indications 291 175 that it may have been known in the Ahaggar as early as the 5th century A.D. (Reygasse, 1950, p. 98) and perhaps even in late Neolithic times, and yet there is no evidence in the literature that the Tuareg were wearing veils before the 10th or early 11th century. As Rodd (1926, p. 328) has said: "It seems very strange that none of the classical and post-classical authors should have recorded a feature which so distinguishes this people from other races. There is no reference to the Veil until we come to the first Arab authors. . . ." Desert raiders remarkably like the Tuareg are known to have been in increasingly frequent and violent contact with Romans, Vandals and finally with Byzantines from probably as early as the dawn of the Christian era until the first wave of Arab invaders arrived some 600 years later, and after that they were in contact with the Arabs for another 350 years or so before we begin to hear talk of veiled men in the Sahara.

El Bekri (Lhote, 1955, p. 128) describing the city of Tademekka (in the Adrar n Ifoghas country) as it was early in the 11th century, wrote of the inhabitants that ". . . they veil their faces as do all Berbers of the desert . . . ," while Ibn Battuta (Gibb, 1929, p. 338), writing 300 years later, said: " . . . we came to the country of the Haggar, who are a tribe of Berbers; they wear face veils and are a rascally lot." But these statements too are very strange, for the matter-of-fact language in which they are couched seems to suggest that even El Bekri may have taken it for granted that his readers were already familiar with veiled men of Saharan Berber tribes, presumably the northern

Tuareg.

291 Tuareg. It is all very puzzling and mysterious indeed.

Tuareg women wear either a short cotton skirt that reaches just below the knees or a pair of baggy trousers, like those of the men but shorter. Like the men they usually wear a white gandoura with a blue one over it, but the under one at least is sewed farther up the sides leaving open arm slits only 1½ to 2 feet long. The costume is topped off with a shawl and a head scarf of indigo blue cotton cloth, the first measuring roughly 9 feet by 6 and the second about 4 by 2 feet as a rule. Lightweight woolen shawls, measuring as much as 10 feet by 6½ and white or darkish pink in color, used to be worn on festive occasions but have practically disappeared in recent years. Lhote (1955, p. 107) says that Tuareg women sometimes wrap goatskins around their shoulders in wintertime. Straw hats with very high conical crowns and enormously wide, floppy brims, made of narrow interwoven strips of palm fronds, were always worn in summertime by women of rank, especially when on a journey, but these too have almost completely disappeared. We have already seen that Tuareg women never wear a veil, which is just as well since many of them are extremely good-looking, but they often drape a fold of the head shawl loosely across the nose and mouth when sitting out in the open or riding on the trail, simply as a matter of physical protection. Young unmarried Tuareg women and girls are inclined to be overcome with giggles when strange foreigners arrive in the camp, and then they hide their faces with a corner of the shawl or whatever piece of clothing is most handy, just as little girls do everywhere in the world.

Tuareg women sometimes plaster their fore-
302 heads and cheeks with mudpacks of red or yellow ocher, and smear their mouths with indigo and the region of the eyes with black pigment made of powdered antimony or char-
coal mixed with grease. This lurid make-up
[751] gives fairly good protection against sun and wind, and the Tuareg consider it very beautiful as well although to our eyes it makes the wearer look absolutely frightful. Men also use black pigment around the eye openings,
291 especially on gala occasions.

439 The reader will have noticed that the

291 Tuareg attach considerable importance to
[439] indigo blue cotton cloth, a product which they get from the Sudan. This material is commonly known as "chegga" (pronounced *shegga*), and the most archaic and highly prized variety is made of a multitude of long strips about an inch wide sewn tightly together. The cloth itself, of very ordinary quality, is so heavily impregnated with crude indigo as to be literally stiff with it. A brand new piece looks black when seen at a distance or in a poor light, but in bright sunlight it is a dark purplish blue with a coppery sheen like that of cheap carbon paper; and the indigo dye comes off on your fingers at the slightest touch, just as the ink on carbon paper does but much more so.

302 Obviously, anyone who wears clothes made of such material is soon stained with indigo from head to foot, and the Tuareg even rub it into their skins on purpose. Women often smear it on their foreheads, cheeks and temples and around their mouths by way of make-up. The
[751] Tuareg claim that indigo not only protects human skin from the direct effects of sun and wind but also lubricates it and so prevents cracking, and they are quite right, at least up to a point. If the Tuareg wash themselves only
[515] very rarely, it is partly to preserve the accumulated protective coating of indigo, the humble practical value of which has been
[554] gradually enhanced by an ever-increasing value of prestige that has risen in proportion to the rising cost of indigo-dyed cloth. A dirty looking, bluish skin is admired by the Tuareg just as much as a rich golden tan is admired in midwinter by the business men and women of New England and New York.

515 It should be noted that in the Sahara Desert proper one can go unwashed for long periods without either feeling or looking noticeably dirty. The air is so dry that perspiration usually evaporates instantly upon reaching the surface of the skin, and so it is unusual for anyone to sweat visibly. Most of the nomadic
[147] natives are in excellent physical condition in that they are very lean and wiry, and so they sweat relatively little in any case. Thus it is extremely rare to meet one who has any perceptible body odor at all, regardless of whether he looks clean or not. White foreigners are seldom in anywhere near as good physi-

515 cal condition, and they appear to sweat much more, perhaps in part because nearly all of them persist in maintaining their European eating and drinking habits. There is a strong hint here that a systematic investigation of the relationship between diet and sweat loss in the Sahara might produce some very interesting and useful results.

When an Arab nomad of the northern Desert goes to town, the first thing he usually does is to head for the public baths and get himself thoroughly steamed and scrubbed all over, but the Ahaggar Tuareg almost never visit any town big enough to have public or even private baths. A few permanent waterholes and a number of seasonal ones are to be found, however, scattered thinly through most of the Ahaggar massif, and the Tuareg of the region make use of such pools occasionally, though perhaps not quite as often as do their cousins of the Aïr, of whom Rodd (1926, p. 163) wrote as follows: "In justice to my friends, I must admit that they washed their clothing, and especially their white trousers, very frequently, and when they washed their person, they did so very thoroughly from head to foot, with much rubbing and a prodigious splashing of volumes of water." The Tuareg of the Ahaggar, women as well as men, wash themselves with equal gusto when they wash at all, and this is not the kind of thing that one would expect of people who have any real dislike or fear of water as such.

And finally it should be noted that among Saharan peoples in general, including the Tuareg of the Ahaggar, bodily cleanliness seems to show a pretty uniform positive correlation with economic status, as it so often does elsewhere in the world.

**Racial Minorities, Parasitic Groups and Race**
567 **Mixture.** We have already gone far enough into the question of slavery in the Ahaggar so that not much remains to be said about it here beyond a brief summing up of the situation. The slaves are almost all Negro captives from the Sudan, or the descendants of such captives. They are chattels which can be bought, sold and inherited, and they do all the manual labor and housework around the camp and also acts as shepherds. A slave can seldom marry without the permission of his master, who usually advances the necessary

567 dowry. But slaves are well fed and cared for as a rule; they get two or three days off each week to look after their own affairs, their children are brought up with the children of their masters, and custom forbids the freeing of a slave who is either too old or too young to fend for himself. A slave may even have a few goats of his own, although when he dies they are not inherited by his family but revert to his master instead. Barth (1857a, vol. 1, p. 387) notes as a striking exception that he saw slaves hitched to a plow and driven with whips in the Auderas Valley, some 60 miles northwest of Agadès.

567 Female slaves are often taken as concubines by Tuareg men of the Ahaggar, who prize
595 them because they are less capricious and overbearing than Tuareg women are and "be-
[827] cause they have cool skins," a point which would bear further investigation with a skin temperature machine. The children of such unions are often recognized by their fathers but do not inherit from them, and, although free, they have a debased social standing little better than that of their slave forebears. Moussa ag Amastan, who was Amenokal of the Ahaggar from 1905 to 1921,[12] remained unmarried for over 50 years, during most of which time he lived with a bevy of Negro concubines and a young Tuareg girl, named Harendou, whom he had captured on a raid into the Niger Bend country (Benhazera, 1908, p. 142; Lhote, 1955, pp. 221–23). Although this case was exceptional, it was by no means unique.

567 The slaves of the nomadic Tuareg, like those of sedentary communities in the Sahara, seem to have no tribal or clan organizations, but they too have a strong feeling of corporate solidarity that finds expression now and then in nocturnal jamborees which are Sudanese in character.

326 The smiths of the Ahaggar present a familiar culture pattern that characterizes groups
171 of smiths and tinkers which, as we have seen, are to be found living among a whole series of nomadic peoples scattered all the way from Baluchistan through Arabia and on, southwest-

[217] [12] Lhote (1955, p. 220) gives the date of Moussa's death as 1920, the official genealogical table of the Ahaggar nobility, which is kept in the archives of the French Army post at Tamanrasset, gives it as 1921, and Foley (1930, p. 9) gives it as 1922. In 1956

326 ward and then westward, across the North
African hinterland to the shores of the Atlan-
[171] tic. The general description of this pattern, given above in chapter V under the sub-heading *Special Classes and Minority Groups* in the section on *Agricultural Centers,* leaves little more to add.

Smiths of the Ahaggar usually live in single
326 family units or small groups widely separated
463 from each other (fig. 50). A few families follow Tuareg groups on their seasonal rounds, but the great majority remain sedentary most of the time in one agricultural center or another, and go out only now and then for a few weeks or months, to do a general repair and re-equipment job in the camps of some nomadic tribe or clan. The men work wood
[759] and metals and are also barber-surgeons, while the women specialize in fancy leatherwork and embroidery. In addition to these functions
[584] and those previously mentioned, both sexes of the smith community act as both go-betweens and spies in clandestine love affairs. They also engage in intertribal secret intelligence work. And a major Tuareg chief may sometimes have a smith as his most trusted counsellor and confidant.

The smiths usually dress as do the poorer
326 Tuareg. The men all wear the teguelmoust
[291] but in a sloppy fashion, and they seem to have no qualms about exposing their mouths.
[582] They are endogamous and monogamous as a general rule, although a few have more than one wife and some of them marry Haratin or occasionally slaves. Ostensibly because of their lowly social status, but probably in fact more because of the fear of sorcery that they inspire, they come and go everywhere as they please, although always with a cringingly ingratiating manner. Even after one has come to know them fairly well they still give an impression of constant watchfulness and profoundly sycophantic tact of the delicately oiled as opposed to the heavily greased variety. The smiths are the most perspicacious and cleverly adaptable of all Saharan peoples, for they have learned to live off and so outlive flamboyant warriors with their retinues and

[217] the author was so fortunate as to obtain a copy of the genealogical table in question, thanks to the very kind co-operation of Captain Roger Bret, Commandant of the *Annexe du Hoggar*, and Claude Blanguernon, Director of Nomad Schools.

326 grubbing gardeners alike. They have turned their status as "untouchables" to their own advantage and so remain untouched.

326 Physically the smiths of the Ahaggar cover
142 the whole range of human variation between the Bush Negro type on the one hand and the Berber variety of Mediterranean on the other, but they seem to fall mostly within a highly variable category characterized in general by "European" features combined with a yellowish brown or occasionally coppery skin, thickish lips, and curly or frizzled hair. They are lean in build as a rule, but seem softer and less wiry than the more active Tuareg (fig. 57, *a*).

326 And this brings us to another exasperating
174 blank in our picture of Saharan peoples. The smiths of the Ahaggar claim to have come from the Adrar n Ifoghas and to be related to the families of smiths who live there now, and Benhazera (1908, pp. 221 and 223) reproduced an old Arabic text which states that "the smiths and the Fulani have the same mother." Cline (1937, p. 141) maintained that the art of smelting iron was introduced into the western Sudan by "camel-riding Berbers" from the North, across the Sahara. But no one really has any idea where the smiths of the Ahaggar actually did come from or when, where and from whom they first learned their trade. No one, so far as the present writer knows, has ever published measurements or blood group classifications of a single one of them, and no one seems to have found out anything to speak of about their social organization or even their kinship terminology. Not a dozen photographs of their faces are available to students. Why? Simply because the Tuareg are spectacularly romantic while the smiths are not.[13] The smiths of the Ahaggar and of the Sahara as a whole have suffered the same fate that the Spanish gypsies might have suffered had George Borrow not been born, and, like the Spanish gypsies, they are
614 disappearing fast.

565 A number of vassal clans of the Ahaggar
173 confederation are said to be of Arab or mixed

[13] Here the author has laid himself wide open to
[114] a very embarrassing question. "Why," he seems to hear the frustrated reader ask, "haven't you done something to fill this aching void yourself since you find it so distressing?" The author's time in the field has been severely limited by the exigencies of writing this preliminary survey, and recently by political

565 Arab and Tuareg ancestry. Benhazera (1908,
173 pp. 90, 102 and 222–23), Lhote (1955, pp.
614 234–36) and Blanguernon (1955, pp. 52–55) all agree in lumping most of them together in a special almost tribelike class known as the Issoquamaren, but they do not agree entirely on just which clans should be included in this group. According to Benhazera the Issoquamaren once claimed descent from a woman purchased in the Adrar n Ifoghas country by Arab invaders who came there straight from Mecca about the middle of the 7th century A.D., and he adds that they are thought to have moved northward to the Touat early in the 12th century. The first part of this tale is very characteristic of the marginal Arab schools of historical fiction, or fictional history if you prefer, which are often no more reliable than is the modern school of lecturers who tell us, for example, that the Tuareg are descendants of veteran crusaders who came to the Ahaggar from the Levant. This parallel that spans the centuries is funny, to be sure, but there is much more in it than just an amusing concidence. It is a striking illustration of the fact that uncritical minds, Moslem and Christian alike, are always deeply moved by thoughts of the past glories of their race and of "that old time religion." We must never forget the dangers of grotesque misinterpretation that result from the action of this powerful subconscious force. Most of the Saharan peoples who have been converted to Islam stubbornly insist against all sense and reason that they are of Arabian Moslem origin.

According to Lhote (1955, p. 236) the Issoquamaren are believed to be the descendants of Arab fathers and Tuareg mothers of the Tademaït region, whence they were recruited as mercenaries by the Tuareg of the Ahaggar, but Blanguernon (1955, p. 52) holds that they are descended from a group of Arab tribes of the Tidikelt and the Touat who were defeated and then assimilated by the Ahaggar Tuareg in the 18th century or possibly before. The Issoquamaren have been thought by some to enjoy a social status superior, at least in

[114] unrest as well, and so he has had to resign himself to filling in small but important gaps in relatively complete pictures rather than run a serious risk of getting bogged down for months or doing only a superficial job in attempting to reconstruct pictures whose main outlines even are as yet unknown.

565 theory, to that of ordinary vassals (Lhote,
1955, p. 236), but in fact they are looked
173 down upon as greatly inferior to Tuareg vas-
sal clans (Blanguernon, 1955, p. 52). Although
614 the Issoquamaren clans and fractions have
been parceled out among various tribes of the
Ahaggar confederation, they still seem to re-
tain some remnants of the social structure of
a single and united tribe. Since the Issoquama-
ren have become rich in camels, they have
regained in practical power and influence
most of what they once lost in hierarchical
prestige.

[131] The Irreguenaten are based on the Tamesna
region south of the Ahaggar, and nomadize
from there northwestward across the Adrar
n Ifoghas sometimes even as far as the Erg
Chech (pronounced *Shesh*). They are be-
lieved to have sprung from a series of mar-
riages between Gouraran and Kounta Arab
men and Tuareg women of the Ibotenaten
clan. The descendants of these unions became
so numerous and so very rich, in camels and
in slaves, that they were finally able to estab-
lish a separate clan of their own. Although
they are included in the vassal category, they
enjoy a nebulous but well-recognized position
of precedence in relation to most of the other
Tuareg vassal clans.

The Irreguenaten constitute a matri-clan
subdivided into two patri-clans, the Hag-
garenin and the Settafnin, which are based on
supposed descent from two ancestral Arab
groups, one of them thought to have been of
Shorfa stock. And this is very interesting as
an example of a matrilineal clan structure that
has been effectively split into two patrilineal
clans while still remaining basically a unit in
the matrilineal terms of Tuareg social and
politico-economic organization and, to a great
extent, in terms of its own internal economic
organization too.

565 It will be noted that the partly Arab clans
of the Ahaggar Tuareg confederation live for
614 the most part outside the Ahaggar proper,
and are distributed in an arc that curves
101 around its southwestern, western and north-
131 western borders. The northwestern extremity
of this arc continues curving eastward, then
southeastward and finally on southward
around the territory of the Ajjer Tuareg con-
federation. The southern gap in the circum-

565 ference of the resulting oval is closed by the
614 Negro-Tuareg contact zone of the southern
101 Aïr. The Ahaggar massif lies at the center of
131 this oval refuge area: it is a Berber island, so to speak, whose broad beaches are continually swept by waves of the surrounding Arab sea and, along the southern and southeastern shores, by the negroid "Gulf Stream" of the Sudan.

565 There have probably never been many
174 Shorfa or Maraboutic families established in
563 the Ahaggar itself, although a few of them have lived there for a long time now. Arab Shorfa missionaries from Morocco first ar-
[797] rived probably in the 7th or early 8th century. They soon set up a theocratic dynasty, the Imenan, who ruled the Ahaggar and the Ajjer Tuareg as a single confederation until about 1650, when Goma, last of the Imenan "sultans," was murdered by Biska, a noble of the Oraghen tribe of Ajjer Tuareg. There followed a long period of anarchy and civil wars out of which finally arose, about the middle of the 18th century, the main framework of the Tuareg political structure which we now know. Descendants of immigrant Arab holy men are very few and scattered in the Ahaggar today, and their power has been reduced to no more than a faint shadow of what it used to be. People of this kind are much more numerous, united and powerful in the northeastern and southwestern corners of Tuareg territory, among the Ajjer and the Ifoghas of the Adrar, than they are in the region with which we are directly concerned at the moment. It is significant, however, that as recently as 1900 a Shorfa holy man exerted decisive influence in the electoral council of the Ahaggar confederation when that body found itself seriously divided over the choice of a new amenokal (Benhazera, 1908, p. 126).

We know that Arab blood has been seeping very gradually into the topmost level of the Tuareg aristocracy, for at least a century,
[591] through the occasional marriages of noble Tuareg women with Arab men. In all such cases residence is strictly matrilocal. Since
[611] rank is inherited through the mother, a son of this kind of union ranks as a Tuareg noble and can become a chief. Duveyrier (1864, pp. 22–23) describes the case of the Ajjer Tuareg governor of Ghat in 1861, whose father was

565 an Arab merchant from the Touat, Leblanc
563 (1946, table facing p. 40) mentions an heir to
an Ajjer Tuareg chieftainship whose father
174 was an Arab, and the son of a Maraboutic Arab from Ouargla is at present one of the potential heirs to the paramount chieftainship of the Ahaggar confederation.

The question of Tuareg mixture with the Teda has been discussed above, in the section dealing with the latter group.

771 Although the Tuareg of the Ahaggar still retain much of the pre-Islamic magico-religious practices and doctrine of their animistic ancestors, they are all Moslems now, at least nominally, but are not very pious as a rule. It has been said that the Tuareg once had a Berber translation of the Koran, in the 8th and 9th centuries (Benhazera, 1908, p. 57), but it was long ago destroyed or lost (if indeed such a text ever did exist) in the course of a religious reform movement. The annual
[796] Moslem fast, during the month of Ramdhan, is not very generally observed, although in the middle of the 14th century Ibn Battuta (Gibb, 1929, p. 338) noted that the Ahaggar Tuareg suspended raiding operations during this period.

The religious order of the Tidjani used to
794 count an overwhelming majority of the Ahaggar Tuareg among its followers, but the Senoussi have built up a substantial following in the region during the last 70 years or so, much aided in this by Tuareg who passed through Senoussi territory on the pilgrimage to Mecca. Very few Tuareg from the Ahag-
778 gar have been to Mecca in recent times, although Lyon (1821, pp. 101–102) saw a single group of roughly 150 of them pass through Mourzouk on their way there in May, 1819 (before the Senoussi order was founded). The
643 Amenokal, Mecca pilgrim or not, has usually been the local model of formal piety. Bey ag
771 Akhamouk, the present Amenokal of the Ahaggar, is an unusually good example of this, as was Moussa ag Amastan in the early years of the present century. There are indications that in ancient times Tuareg chieftains may have been vested with religious as well as temporal primacy (Bates, 1914, p. 117).

The European conquest of the Sahara Des-
648 ert has done much to stimulate the Islamiza-
797 tion of the Tuareg in general during the last

648 100 years, for Marabout and Shorfa families
797 of the North often found it advantageous to move southward and attach themselves to Tuareg tribes or clans whom they then proceeded to stir up against the French and Italian newcomers. In this way the Koran became a kind of battle flag of local resistance to European penetration throughout the Sahara. The Camel Corps troops, who have long maintained order for the European rulers of the Desert, have always been recruited mainly from among Moslem Arab nomad tribes, notably the Chaamba, and their thinly scattered garrisons and outposts in the Tuareg country soon came to serve as centers for the continuing diffusion of Islamic doctrine. And finally it has
[582] become less and less unusual for noble ladies of the Ahaggar to marry men of Arab Shorfa or Maraboutic families. Thus racial and religious penetration have marched hand-in-hand into the Tuareg country, following the path that leads through adversity to union in a common cause, and so to bed.

792 The basic relationship between the "living saints" and the warlike nomads of the Sahara Desert is clearly stated in the Old Testament, as Monod (1947, pp. 72–73) has pointed out with keen insight and inimitable wit. In Esau and Jacob he recognized the pastoral nomad warrior and the holy man of the Sahara, where Marabouts and Shorfa families used to parley instead of fighting and bought off raiders just as Esau bought off Jacob long ago (Genesis, *32*). In Monod's words: "The Marabout's soul is in anguish at this extreme but inevitable generosity which he imposes on himself, but he would a thousand times rather have anguish in his soul than brought into his body in the shape of a sharp javelin ending its whistling flight between his shoulders. But there are times when the Marabout gets his revenge for the humiliating brutality of the warrior. The latter is indeed too simple not to be superstitious, and so, with the roles reversed, there comes a day when he in turn will tremble before the religious chief and implore the blessing of the sorcerer on his raids; for who would dare undertake such an expedition without the magic formulae and the amulet which will assure success for the enterprise and personal safety in combat? The man of God alone confers, and not without a price,

792 the power that is entrusted to him; and the man of the sword pays. It is indeed his turn."
000 As a typical example of a nomad warrior buying the benediction of a holy man, Monod cites the transaction between Abram and Melchizedek, "the priest of the most high God" (Genesis, *14:* 18–20), and he reconstructs the scene in imaginative but wholly convincing detail drawn from his long experience among desert nomad tribes. After Melchizedek had invoked the blessing of God on Abram, the latter said: "How much will that be?" "Nay, my lord is joking," replied Melchizedek, "It's free, I *give* my blessing; I *give* it to him." And Abram bowed down and said (thinking that after all if the blessing wasn't paid for it might not work, and knowing only too well moreover what his interlocutor meant by "gift"): "Harken unto me: I give the price of the blessing and of the amulets for my camels; accept it of me." And Melchizedek answered him: "Let not my lord be vexed, and may he harken unto me: I do not sell him power, I give it to him. But if in return he chooses to bring me the tenth part of all that is his, what is that between us?" And Abram understood, "And he gave him tithes of all" (Genesis, *14:* 20).[14] Nothing could be more characteristic of desert nomads and revealing of the basic relationship between them and holy men in the Sahara Desert and elsewhere.

105 **Summary.** The Tuareg of the Ahaggar are a diversified pastoral nomadic group who live in a very arid mountainous massif, an environment that requires extreme mobility.

Their social organization seems to be based on essentially matrilineal and patriarchal extended and joint family clans which are grouped into tribes that form a confederation. There are two main social classes, commonly referred to as "nobles" and "vassals," and rank, which embodies the right of succession to authority, is inherited in the female line, but a new chief can take and hold office only by consent of a general council of all male heads of families or clans who come under his control. This is doubtless because the clans that are strongest in terms of material wealth and fighting manpower as well are in the

[14] The King James Version of the Old Testament does not make quite clear just who gave tithes to whom, but Knox (1948, p. 18), in his translation of

105 "vassal" class. Thus the government is in effect a republic of basically Berber type which is kept from turning into either a democracy or an hereditary autocracy by the presence of a double descent system whose origin is unknown.

The economy is now based on the conservational domestication of camels, goats and hairy sheep, and on crop sharing with sedentary Haratin tenant gardeners. The flourishing caravan trade of the Tuareg has been largely destroyed by mechanized competition, while the exaction of toll charges from passing caravans of other groups and the practice of systematic raiding have been suppressed altogether by the French authorities. Thus the whole economic structure has been thrown seriously out of balance and is now disintegrating fast.

Manual labor and domestic services are performed by Negro slaves of Sudanese origin, who are usually present in numbers roughly equal to those of their masters. Manufactured goods are obtained mainly from outside the area in exchange for salt that is mined locally. Equipment maintenance and the occasional manufacture and decoration of articles of metal, wood and leather, are in the hands of a few small and scattered families of semi-sedentary smiths about whom almost nothing is known.

Shelter takes the form of small lightweight tents of leather or sometimes grass huts. Clothing is loose, voluminous and light in weight, and men wear a combination veil and turban which protects their eyes from glare and their faces from wind and sunburn. Tuareg costume is an ideal mechanism for the purposes of insulation, ventilation and sweat-loss control in the climate of the Ahaggar, although the Tuareg themselves claim to have no knowledge of or interest in its very great practical value.

Thus we see that the Tuareg of the Ahaggar had achieved an adaptation to their chosen environment that was about as perfect as could be, in terms of social, political and economic organization and of material culture, until the forces of European culture contact

the Vulgate as interpreted in the light of earlier Greek and Hebrew texts, leaves no room for doubt on this point.

105 began to destroy the economic base and so to undermine the entire structure.

[Pp. 103B-162B not processed]

141 We have already seen that the Saharan Tuareg are famous for their extreme tallness, which, however, has often been grievously exaggerated. The fact remains, nevertheless, that they are the tallest people in our area and among the tallest in the world. The mean stature of males is approximately 5 feet 8 inches, a bare ½ inch below the American male mean, but individual statures vary widely, from about 5 feet to 6 feet 5½ inches in the series that have been published. The legs of Tuareg men are relatively long but their arms are of only ordinary length in relation to their stature. Leblanc (1928–29, vol. 39, p. 22), followed occasionally by more recent authors (*e.g.*, Lhote, 1955, p. 165 and Blanguernon, 1955, p. 43), listed excess of span over stature as one of the two most distinctive physical peculiarities of the Tuareg. A glance at table A–11 shows that his theory has no foundation whatever in fact, for span exceeds stature in nearly all human populations everywhere, while even the Mzabites and humble Haratin are set apart much more distinctly in this respect than are the Tuareg. Tuareg shoulders are narrow both relatively and absolutely, by European standards, and hips are rather narrow too. Chests are small and relatively flat.

The heads of the Tuareg are typically longish, with a mean cephalic index just below the lower limit of mesocephaly, but occasional individuals have low brachycephalic indices. Faces are moderately short and wide, with foreheads that are often very broad by European standards although relatively narrower than those of other Saharan groups. Lower jaws are narrow both relatively and absolutely.

[1] Dixon (1923, p. 21) described his fundamental "Proto-Negroid" type merely as Dolichocephalic (long headed), Hypsicephalic (high headed) and

2:Briggs E-4,5 (ca.1956) 1958
MS25 Tuareg MS25
[P.163B] Hoggar

141 Noses are of medium length and fairly broad, with a mean index that is high by European standards but only average for the Sahara. Ears are moderately large in size and of ordinary proportions (figs. 46–54).

142 Leblanc (1928–29, vol. 39, p. 20), again followed by Lhote (1955, pp. 162 and 165), has laid great stress on the nasal profile as the prime distinctive racial characteristic of the Tuareg. "The Targui nose," he wrote, "is high, narrow at the root, long, slightly aquiline, but never convex in its entirety as one finds among Semitic types. . . . *It ends in a narrow and drooping point*" (the italics are his). But this peculiar nasal profile does not appear to occur in females, nor is it found in all of the men by any means. In fact, the present author is inclined to think that it is probably not a heritable character at all, but merely an artificial deformation produced by the pressure of the veil which the older boys and men of the Tuareg bind, often tightly, across the lower half of the nose (fig. 26, *b*).

Unexposed skin is usually white or pale brunet. As Duveyrier (1864, p. 382) wrote, it is white in infancy but becomes quickly bronzed by exposure to the sun. The degree of tanning is extremely variable, however, and may sometimes be related to incipient blondism or rufousity on the one hand or to negroid admixture on the other.

Eye color varies normally from light to very dark brown, but blue and mixed eyes do occur occasionally in spite of all that has been said to the contrary (Leblanc, 1928–29, vol. 39, pp. 20 and 33; Lhote, 1955, p. 163). In April, 1956, Henri J. Hugot (*verb. com.*) met a Targui of

Platyrrhine (broad nosed), and his "Caspian" type as Dolichocephalic, Hypsicephalic and Leptorrhine (narrow nosed).

142 the Mouydir region who was about 5 feet 10 inches tall, and had "an ivory white skin and very pure sky-blue eyes." General Daumas (1845, p. 326) and Duveyrier (1864, p. 382) both reported blue eyes as occurring now and then among the northern Tuareg, while Saïd (1903, p. 36), Verneau (1916, p. 240) and Rodd (1926, p. 161) speak of blue and gray eyes among their southern cousins. Eyes other than brown must be really rare in the Ahaggar, however, for the author has not observed any there himself, while both Blanguernon and Pierre Cocquet (one of the oldest European inhabitants of Tamanrasset) could remember only two Tuareg men with blue or gray-blue (or light mixed?) eyes when he questioned them on this subject in November, 1955.

Hair color in adults is practically always very dark brown or black. Lhote (1955) says, however, that blond babies are not uncommon, which suggests the possible presence of a partially submerged factor for blondism. He also mentions having seen an adult male Targui of the Ajjer who had red hair and "albino eyes." Hair form varies normally from straight to curly, with a small minority in the frizzly to woolly range.

Tuareg women appear to be fairly tall, but with arms and legs of only moderate length in relation to their bodies. The few female facial measurements that have been recorded suggest that their faces are both smaller and relatively narrower than those of males—and yet, the author cannot refrain from recording his impression that the flaring malars of Tuareg women often give them a startling resemblance to Indian women of the southwestern United States and Mexico, a trait that does not seem to be shared by their menfolk. Female noses are markedly narrower than are those of men, but this again may be due only to the fact that women wear no veils.

143 The Tuareg of the Sahara, and even their cousins who live south of the Desert proper, all show typically Berber *ABO* blood group patterns which set them clearly apart from all other Saharan peoples whose blood has been examined, except for the Teda. In fact we can say that the northern and southern Tuareg, of the Ajjer country and the Air respectively, are "super-Berbers" in their very high *O* percentages, while the Ahaggar Tuareg,

143 curiously enough, seem to be slightly less "pure" in this respect. The latter group, however, has a very low incidence of *B*, which is another typically Berber character and suggests, moreover, a relatively low degree of negroid admixture.

The Ajjer Tuareg are the only people of the Sahara who have been examined for blood group factors other than those of the *ABO* series, and they have been tested in addition only for gross *Rh* positive and negative reactions. The results of these tests indicate that the Saharan Tuareg have an extremely high incidence of *Rh* —, comparable to what one finds among Moroccan Berbers. Kabyles too have moderately high *Rh* — percentages, which, however, do not appear to exceed those of Arabic-speaking groups of Morocco and northern Algeria (Briggs, 1955b, p. 112). This latter situation is due probably to the fact that speakers of Berber and Arabic have intermingled extensively over the last 900 years in most of Barbary, excepting the more remote mountain districts of Morocco. Tuareg of the Aïr, which lies south of the Ahaggar and outside of the Sahara proper, have a very low incidence of *Rh* —, indicating extensive negroid admixture which has, nevertheless, had surprisingly little effect on their outward appearance.

In closing our discussion of Tuareg serology, we may add that the typically Berber combination of very high *O*, low *B* and very high *Rh* — finds a striking parallel among the Basques, who live in the mountainous frontier country that lies between France and Spain. We are still in no position, however, even to make a guess as to what this extremely curious coincidence may mean.

174 The possible origins of the Tuareg have been discussed far more extensively and by more authors than those of any other Saharan [114] people. Barth (1857–58), Duveyrier (1864), Rodd (1926), Lhote (1955) and Blanguernon (1955), to mention only a few, have devoted dozens of pages to the subject. But their original sources consisted only of the writings of Classical and Mediæval Arab historians and travelers, whose verbose, obscure and contradictory statements hardly allow of any broad deductions above the level of rough guesswork, and of the traditions of the Tuareg

174 themselves, which are either hopelessly vague and sketchy or obvious fabrications of Islamic inspiration, or a combination of the two, and which also are often contradictory. In the opinion of the present author it seems unreasonable to hope to learn much about Tuareg origins from literary sources, either written or preserved by word of mouth.

Fortunately, other kinds of sources are open, 172 to us. The so-called tomb of Tin Hinan (fig. 40), the legendary ancestress of the Ahaggar 174 Tuareg (*see* Reygasse, 1950, pp. 88–106, and Wheeler, 1955, pp. 107–11), yielded a rich collection of jewelry including objects of gold, silver and iron and beads of glass and semiprecious stone, as well as various other odds and ends such as fragments of leather clothing (?) and wooden furniture, Roman lamps and glassware, arrow (or javelin?) points and nails of iron, and thin discs of gold that had been pressed over a coin or coins of Constantine the Great. Specialists consulted by the author[2] agree on two points: firstly, that most of this material bears no resemblance to anything we know from Egypt or the Sudan while all of it may well have come from elsewhere; and, secondly, that the whole assemblage has a distinctly eastern Roman flavor and may date from as early as the 4th or as late as the 6th century A.D. The iron projectile points are faintly disturbing, for they look almost exactly like those used on arrows by the modern Teita who live in the Coastal Province of Kenya Colony (Prins, 1955). All of this does not help us much, however, for as Wheeler (1955, p. 111) says: "In the absence of comparable relics within hundreds of miles of Tin Hinan, it is impossible at present to put her fortlet and tomb into a wider context." The one important lesson to be learned here is that we may hope to learn more about the origins of the Tuareg from future excavations of similar monuments and ancient habitation sites in the Tuareg country and surrounding regions. In the meantime we can only fall back once more on physical, linguistic and cultural evidence.

144 Physically the modern Tuareg of the Sahara

[2] These authorities included Christine Alexander and Vera K. Ostoia of the Metropolitan Museum of Fine Arts, New York City, Anthony J. Arkell of University College London, Dows Dunham of the

144 seem to be very close to northern Berbers, and particularly to relatively isolated and supposedly purer populations, notably the Rifians and Baamaranis (figs. 66 and 67), of northeastern and southwestern Morocco. They resemble these peoples in arm length, head form, facial proportions in general, nose length and nasal profile, hair form and skin color. They differ from the northern Berbers chiefly in that they have narrower shoulders and hips, longer legs, slightly broader noses, longer ears and darker hair and eyes. Their chests are smaller and flatter than those of Rifians or Kabyles but no more so than those of Baamaranis. Tuareg women are distinguished particularly by their short upper faces, narrow foreheads and long noses. We note in passing that the Tuareg seem to be closer in general to the Rifians and Baamaranis than to their eastern cousins.

Thus it is apparent that, metrically speaking, the Tuareg are markedly differentiated from northern Berber stocks only by a more elongated and refined general morphology, the details of which may well be adaptive characters developed locally in response to the extreme stresses of the central Saharan environment, as Bates (1914, p. 33) noted long ago. The broadness of adult male noses is probably due to nothing more than the pressure of the veil, although there may be an adaptive factor also involved. The rareness of light hair and eyes may possibly have been [143] brought about by genetic drift operating in a population where endogamy within the tribe and usually within the clan has long been customary.

Thus we see that the Saharan Tuareg seem to fit very well, both metrically and morphologically, into the great Berber family of Northwest Africa in which their membership has already been established on the basis of both linguistic and serological evidence. But much work still remains to be done before we can even begin to define their relationships to other members of this family or to the other peoples of the Sahara who surround them on three sides.

Boston Museum of Fine Arts, George M. A. Hanfmann and Hugh Hencken of Harvard University, and Raymond Mauny of the *Institut Français de l'Afrique Noire* at Dakar.

144 The question of the racial origin of the Tuareg, as a branch of the Berber stock, is so intimately bound up with the problem of their origin in the broader sense which we have just been discussing that there is not much left for us to say about it separately. The learned 144 authors cited earlier in this section have all had 174 their say, but we have seen that their conclusions rest on evidence which is unavoidably [114] fragmentary and usually equivocal as well, since there is no other kind available at present. As for ourselves, we shrink as did Leblanc (1928–29, vol. 39, p. 44) from the temptingly spectacular but risky sport of skating over such thin ice in pursuit of a dream, no matter who the dreamer may have been. We are already in substantial agreement with the opinion of Vallois (1948, p. 40) that the Tuareg came into the Sahara probably from the North and possibly about the beginning of the Chris-

144
174

tian Era, and we had better let it go at that for the time being. There are indications in the mythology of the Tuareg that they were already Berber-speakers when they arrived in their present homeland. There are vague hints too, in the tales of Herodotus as well as in the serology of the Teda, that people something like those whom we now call Berbers may have been living in the eastern half of the Sahara for centuries before the birth of Christ, but whether or not they could have qualified as Tuareg, or even Berbers, in the sense in which we have been using those terms, is about as moot a question as one could hope to find. More and much fuller studies of physical morphology, blood groups and linguistics would go far toward helping us to solve the mystery of the Tuareg, but in the meantime our hands are tied.

# THE TUAREG OF THE AHAGGAR

*by*

GEOFFREY HOLIDAY

131 The Ahaggar region of the Sahara desert, with its administrative headquarters at Tamanrasset (Fort Laperrine) provides an almost exact geographical centre for the territory inhabited by the Tuareg; the nomadic tribes of the "blue veil". At the northernmost point is In Salah and to the south, Agadez. Eastward there is Djanet in the Tassili des Ajjer and the western boundary is formed, perhaps, by the line of the Tanezrouft. [361] Within this area the Tuareg wander from oasis to oasis or, in the case of a few, dwell peaceably in the shadow of the French towns and outposts that mainly owe their location to the existence of water tempered by administrative and strategic factors.

977 186 The Tuareg would appear, at first glance, to be one of the few remaining peoples of the world possessing a culture of their own that is entirely free of influences, direct or indirect. Some among the tribes still believe that the desert is the world, inhabited admittedly by many different kinds of people, but the world nevertheless. This is the extreme view, obviously not shared by those who have travelled on the great caravan routes as far south as Kano or to Timbucktu and the Niger. It may not be the view of [648] the younger generations who, to an increasing extent, are benefiting by the primary education facilities inaugurated by the French administrators; particularly in Algeria where the Ahaggar region lies at the foot of the Territoires du Sud: a knowledge of the French language does not necessarily bring about a lessening of superstitions or a widening of perspectives. One is always faced with the parallel of the farmer (who should have known better) and the ostrich: 'There ain't no such animal!' Nevertheless, from this aspect the influences are so few as to be negligible and are more likely to come from the varied genre of the official and semi-official indigenous population gathered together under the Tricolour at the towns and outposts of the region than from direct contact with the European. The Tuareg are almost the exception that proves the rule of man's gregariousness, though, naturally enough, they are gregarious in that they possess very strong tribal instincts.

291 751 As a tribe the Tuareg have very marked characteristics that immediately set them aside from any other social group in what may be termed loosely north Africa. To begin with, the men are seldom seen unveiled: the women, who can be very beautiful, never cover their faces although, often they will wear a head covering, presumably as protection against sun and sand. The men, however, do not wear the veil solely as protection against the elements. Discounting those few who have become soldiers under the French flag, a Tuareg man—or, more properly, a Targui—assumes the veil on approaching manhood and wears it continuously, even for eating and drinking. He unveils to no one, not even in the sanctuary of his tent alone, let alone in the presence of his wife. This veil wound low round his forehead and across the bridge of his nose covers the mouth, ears and nostrils. Since the other openings of his body are concealed by his robes he has complete protection against evil spirits entering and taking control—and this is the key to why the veil is worn. To protect his eyesight against the Evil One amulets are worn from a chain round the neck and doubtless also such amulets provide a measure of safety in battle.

174 The origins of the Tuareg tribe are particularly interesting in that they have as yet to be definitely established. Their antecedents go back anything between 600 and a 1,000 years and it is supposed that they are an offshoot of the Berber Arabs, driven into the desert during one of the many invasions of the Tel, the fertile coastal belts of Algeria and Morocco, that continued up to the 13th century when the Moors became really established on the Barbary coast. Likewise, the Berbers with their light skins and blue

3: Holiday J-5 (ca. 1955) 1956 MS25 Tuareg MS25
Hoggar

eyes are probably descended from the Vandals who invaded north Africa some 300 years earlier. Legend, though not springing from the Tuareg themselves, suggests they grew out of a lost band of Crusaders that wandered into the desert after the Holy wars of the middle ages: a legend that draws attention to the Tuareg's use of chain mail and long two-handed swords and to his stature and Aryan features. The language of the Tuareg is called Tamahaq; their speech soft and guttural. In its written form, Tifinar, the alphabet is possibly that of the ancient Libyans. The hieroglyphics are utterly unlike Arabic and the construction of the alphabet is consonantal, a feature which makes the task of translation difficult. For many years now Dr. Wakefield, an Englishwoman, has been living in Tamanrasset making a study of Tamahaq and translating the Bible. It is already 8 years ago that the National Bible Society of Scotland published the Book of Ruth for missionary work among the Tuareg based on Dr. Wakefield's studies.

174 [714] [411] 194 212 174

[539]

ⵜⴰⵎⴰⵀⴰⵇ ⴰⵏ ⵜⴰⵏⵏⵓⵏ ⵏ ⵜⵎⵓⵜⵜⴰⵏ
ⵜⴰⵔⵉ ⵏ ⵓⵏⵏⴰⵏ ⵜⴰⵎⴰⵀⴰⵇ, ⵉⵜⵜⵓⵏ ⵓⵜⵜⵓⵔ

**The Bible in Tamahaq**

(*Ruth, Ch. 2, Verse 17*)

*"So she gleaned in the field until evening, and when she beat out what she had gleaned, it was about an ephah of barley."*

Again, the influence of such work is too limited at present to be a cogent factor. From the standpoint of religion the Tuareg reveal a strange mixture of paganism and lip-service to Islam. Literally, the word Tuareg—or, in its purer form Twarek—means "abandoned", i.e., the abandoned of God. To some extent the limits of the Tuareg domain are fixed by his superstitions; which have peopled areas like the Plateau du Tademait, north of In Salah and the mountains of Emmid-Din to the east of the Ahaggar with ghosts and djinns. The Tuareg are, above everything, religious opportunists; in that, like all superstitious people, they believe what suits them best. Unlike most other social groups they do not seem to have synthetised their beliefs or emotions into a set of religious observance that is a collective interest of the community. Marriage and divorce exist but, sexually, the tribe is a-moral and a feature of the social structure of the group is the "ahal", a love-feast at which the men serenade their chosen lovers, praising their beauty in terms of the moon, a flower or with images equally poetic and universal.

771 [101] [832]

Tuareg society is matriarchal: another distinctive feature that sets them apart from the Arab world. Although authority appears to be invested in the male, in so far as tribal groups are administered by the Amenokal, or king, it is through the women that heredity is determined. The child of a Targui begotten by a woman outside the tribe will not be Tuareg; but a Targuia (Tuareg woman) who has a child by a slave, for instance, claims for the offspring direct Tuareg descent, though not necessarily in the same social circle. There are, in fact, several social strata within Tuareg society that have arisen through the centuries as a result of raiding for slaves; and also from the involved relationship between slaves and slaves, and masters and slaves since the children of some are free, while others are not; and the children of the second generation of some are free. These last are called "Hartanis", meaning literally, "free in the second generation (from "Harr"—free, "Thani"—second). The nobility of the tribe are known as "Kel" and the men can be distinguished by the dark blue veil. The serfs, although Tuareg by birth, wear a white veil, while the Hartanis, who are mostly of negroid descent, go unveiled.

567 611 565 567 [291]

Thus it is that a great many influences have combined to build up the tribe and, consequently, it is not surprising to find in their music certain similar incongruities.

177 533

3: Holiday J-5 (ca. 1955) 1956 MS25 Tuareg MS25
Hoggar

533 For example, a rough division can be made straight away between the songs that seem
[177] to suggest a negro origin and those whose flavour is indisputably, let us say Moorish, rather than Arabic. First of all it would be as well to deal with the few instruments used by the Tuareg in relation to the type of song they accompany; for, here again, the same division occurs.

534 The nearest that the Tuareg possess to an instrument capable of producing a melodic line is the "amzhad" (or "imzad". The plural of the word, "imzaden" meaning "hair"). This is a single stringed instrument of the lute variety comprising a sound box usually made from a gourd and covered with stretched membrane, a rough neck of stick being fixed across the diameter and projecting about 12 inches. The string is passed over a rudimentary bridge made of two short pieces of stick lashed together so as to form a shallow "V" and tied to the end of the curved neck. The pitch of the string is determined first of all by a sliding loop further down the neck and controlled during performance by the musician's left hand. A bow is used and it is from this that the instrument derives its name, since the bowstring is made from the hair of the women. The instrument is pitched on the open string usually at an approximate middle "C", though this can vary since an "E" above middle "C" frequently becomes the tonic note. Its range is roughly an octave and a third, accompaniments often being played in the top part of the register. Intervals approximating to perfect intervals predominate during performance.

Two kinds of percussion are used by the Tuareg, not counting group handclapping that features with many of the songs: a tom-tom with a wooden shell and single head, and a more hybrid contraption involving a gourd and a bowl of water. The tom-tom, which is played with the flat of the hand, has a head of stretched gazelle skin fastened by a cord made of goat hair and can be tuned by damping with water. Dry, the tom-tom produces a "treble" note, and wet, a bass one. The shape of the shell resembles an eggcup, and although tom-toms vary in size they are roughly a foot in diameter and eighteen
[439] inches high. The wood comes from the French Sudan, but the tom-tom is to be found wherever the Tuareg go. The gourd and bowl of water suggest that it is a recent innovation, since bowls are not readily obtainable in the Sahara except through foreign manufacture and trade, i.e., foreign to the Tuareg. Indeed, the bowl largely favoured is an ordinary enamelled affair about six inches deep and perhaps eighteen inches across such as is found in the kitchen of any European home. Filled with water and this surface struck rhythmically with an inverted half gourd it produces a deep, damped note comparable to a well-tuned bass drum.

Wind instruments are unknown among the Tuareg and the "amzhad" and the two percussion instruments mentioned above are the only musical devices used. Certain distinctions govern the use of these three instruments that have their roots in tradition.
462 All of them are played by the women who, particularly with the "amzhad" display con-
533 siderable virtuosity: for a Targui to play an instrument would be *infra dig*. Consequently, much of the propagation of folk-culture is in the hands of the women, though the men-
[170] folk do not consider the heroic beneath their dignity. However, the war songs, recounting the deeds of great warriors, are practically extinct since the Tuareg have passed from being a fighting race, levying protective tolls upon the caravans, to become a quiet, almost passive people, anxious for survival in the face of encroaching modern civilisation that has already dissipated the often considerable wealth amassed before the French gained control in the Sahara.

533 The music of the Tuareg falls into the two types mentioned earlier: songs that seem
[177] to owe their origin to negro influences, and those that have certain Moorish characteristics. It is curious to note that none of the songs of the women feature the use of mordents or shakes, whereas those of the men invariably do so. Secondly, percussion other than handclapping is never used to accompany the men, while the "amzhad" is never used to accompany the songs of the women. When the "amzhad" is used, perhaps because

3: Holiday J-5 (ca. 1955) 1956 MS25 Tuareg MS25
Hoggar

of its delicate tone and lack of volume, handclapping is always absent, though a particular song with differences in tempo and rhythmic attack is often sung either with "amzhad" accompaniment or handclapping. In the latter case the melodic embellishments tend to disappear and the tune emerges in its basic form: 533

Targui Love Song

Most of the songs of the men are love songs, such as are sung during the "ahals" and it is logical to deduce that the "amzhad", which is used exclusively for love songs, is the female voice, the necessary complement to a declaration of love and, indeed, the phrasing of the "amzhad" is more that of obbligato than of counter-melody.

It is the chant-like quality of the women's singing that suggests the negro influence; the tom-tom rhythms used in accompaniment are invariably simple and without the intricate cross-rhythms found south of the Sahara. For instance, this song, which describes the lope of the camel, has a rhythm set against it that shifts to imitate the changes in gait of the camel as it quickens its pace to the equivalent of a gallop:

Voices in Unison

Rhythm

This example is from Agadez in French West Africa. A mere hundred miles further south at Tanout the same song introduces a second melody note, observing the same intentions in its rhythmic shifts, but in total effect is very much simpler:

Voices in Unison

Rhythm

Although the cycle of this simple theme is short, variances in the stresses and inflections suggest that several cycles are woven into a larger metric pattern of which the key to them would be a knowledge of the language. In this next example, a semi-humurous song about "a father and mother camel", the length of the cycle is varied by the omission of the fourth bar or the introduction of another, similar to the preceding one, before the tune resolves itself onto the tonic. These variations do not occur at regular intervals in the cycles, but seem to be anticipated instinctively by the performers.

3: Holiday J-5 (ca.1955) 1956 MS25 Tuareg MS25
Hoggar

533 The melody of this attractive little song is more advanced than the two preceding examples, but the accompanying rhythm is now restricted to a straight beat that never varies:

Voices in Unison

Rhythm

535 Dancing among the Tuareg seems to be restricted to the men; a kind of war dance, nowadays no more than a remembrance of things past, in which they stamp and whoop and brandish their weapons in time to the chanting of the women. It is possible, though not likely, that Tuareg women do dance at the "ahals"; but in the absence of actual corroboration the supposition may be discounted: the role of women would appear to be predominantly passive, the initiative being the prerogative of the men. It must be
105 remembered that the Tuareg has not the settled village existence of the African tribe and as a result his life is marked less by organised ceremony, less by religious observance, however primitive. Aloof and alone the Targui remains the "last of the desert". Within two days' journey of his territory his name becomes legendary: little is known of his customs and his music is unheard. He is the Abandoned of God.

| ⵓ | ieou | OU | و | |
| ⵢ ⵢ ⵢ | iey | Y | ي | |
| ⵊ | iej | j | ج | Among the Taïtoq |
| ⵖ | iegue | Gu (before e, i); G (before a, o, u) | ق | |
| ⵜ | iedj | Dj | between ج and ق | Special pronunciation |

Radamès and Rardaïa, than to write Ghadamès and Ghardaïa and pronounce Gadamès and Gardaïa. The first transcription is closer to the true pronunciation.

Note: The Arab ح (H') has no equivalent in Tamashek. The Tuareg always pronounce it KH ( خ ). Thus they say Mokhammed for Mohammed; El Khadj for El Hadj.

The Arabic ع (âa) no longer has an equivalent in Tamashek. The Tuareg always pronounce it R' ( غ ). Thus they say R'ali for Ali; br'ir for bâïr. /xix/

Arab or Tamashek Words Used in this Study

***Abetor'*** ..... Waterskin.
***Abser'*** ..... Acacia arabica.
***Afezzou*** ..... Panicum turgidum. Graminaceae.
***Aguezzeram*** .. Star lizard.
***Ahal*** ..... Musical meeting.
***Akh.*** ..... Milk.
***Alhinen*** ..... Genii.
***Amenokal*** ... Chief of a confederation of Tuareg tribes.
***Amezar'*** ..... Group of several tents, a douar.
***Amr'ar*** ..... Chief of a noble tribe or of an imr'ad fraction.
***Amr'id*** ..... Tributary, bondsman, client. Subject to a noble to whom he pays a tribute. In the plural: imr'ad.
***Amz'ad*** ..... A kind of violin with a single string.
***Anou*** ..... A well.
***Ar'ata*** ..... Varan, a large lizard. Synonym: ourane, uran.
***Aremmas*** .... Atriplex halimus. Salsolaceae.
***Ar'er*** ..... Shield.
***Az'ekka*** ..... Grave.
***Bazina*** ..... Ancient grave, shaped like a small tower.
***Bechna*** ..... White-grain sorghum. Graminaceae.
***Berdi*** ..... Typha angustifolia. Typhaceae.
***Bir*** ..... A well.
***Botta*** ..... Box of hide made in the A'ir. It is made in all sizes. /xxii/

104

*Chegga*.....Blue cotton cloth, dyed with indigo which comes off easily.
*Chemma*.....Snuff.
*Chih*.....Artemisia herba-alba. Composeae.
*Chouchat*....Ancient grave in the shape of a truncated cone.
*Diss*.....Imperata cylindrica. Graminaceae.
*Djinns*.....Genii.
*Djohala*.....Pagans.
*Dobb*.....Star lizard.
*Drinn*.....Arthraterum pungens. Graminaceae.
*Ethel*.....Tamarix articulata. Tamaricaceae.
*El yatil*.....A kind of acacia.
*Gueto/*.....Atriplex halimus. Salsolaceae.
*Guerba*.....Waterskin.
*Had*.....Cornulaca monacantha. Salsolaceae.
*Haïk*.....Garment. A long, narrow piece of woolen cloth.
*Haouli*.....Synonym for haïk.
*Harratine*..Colored men, mulattoes. In the singular: hartani.
*Hegueb*.....Camel-hair rope which serves to hold on a mehari saddle.
*Ibiiar'*.....Waterskins.
*Ihaggaren*..Nobles.
*Ihallen*.....Musical meetings. Plural of ahat.
*Ikerhi*.....Tuareg woman's veil.
*Imr'ad*.....Clients, tributaries, who pay a tribute to the nobles. In the singular: amr'id.
*Imz'aden*...Plural of amz'ad, a kind of violin with a single string.
*Inelli*.....White-grain sorghum. Graminaceae.
*Ir'atimen*...Sandals made in the Aïr. Habitual Tuareg footgear.
*Izabbaren*..Ogres. Plural of zabbar.
*Iz'ekouane*..Graves. Plural of az'ekka.
*Kehal*.....Black material which is used for face veils.
*Ket Esouf*...People of the void, or ghosts. /xxiii/

*Kessa* .....Synonym for haïk.
*Mahmoudi*...White cotton cloth.
*Malti*.....Unbleached calico.
*Merokba*.....Panicum turgidum. Graminaceae.
*Mezoued* .....Leather bag in the shape of a waterskin for holding food provisions.
*Mitqal*.....Piece of money. Value 2.50 francs.
*Oudi*.....Butter.
*Ourane* .....Varan, a large lizard.
*R'ouaouet* ...Pagans.
*Sebkha*.....Salt lake, salt pit. /Also sebka in English./
*Taba* .....Smoking tobacco.
*Tadjart* .....A kind of acacia.
*Tadjethé*.....Violin, "amz'ad," bow.
*Tagalt*.....Bride price.
*Taheli*.....Typha angustifolia. Typhaceae.
*Takouba* ....Large double-edged Tuareg saber.
*Tamaheq* ....Name of the language spoken by the northern Tuareg.
*Tamat* .....A kind of acacia.
*Tanekfaït*....Diplotaxis duveyrierana. Cruciferae.
*Tchoqqit*.....Name for chegga in Tamashek.
*Teborak*.....Balanites aegyptica. Simaroubaceae.
*Teheredjelé*...Artemisia herba-alba. Composeae.
*Terik* .....Mehari saddle.
*Tidjelmoust*..Face veil.
*Tifinar's* .....Term for the symbols of the Tamashek language.
*Tikamarine*..Dry cheeses from the Aïr.
*Tioussé*.....Tribute paid by the imr'ad to the nobles.
*Tobol*.....Group of tribes subject to the authority of the same chief. The right to command over the imr'ad and to the collecting of the tioussé.
*Toulloult*...Arthraterum pungens. Graminaceae.
*Tounine*....A well.
*Zabbar*.....Ogre.

Book One

The Tuareg in their Private and Public Life

Part One

The Tuareg in their Private Life

Chapter I

Birth. Childhood

In Tamashek, birth is called "tiouit" ⵜⵉⵡⵉⵜ. There is no 844
special observance to note concerning the birth of a child
among the Tuareg. However, there is greater joy if it is a [842]
boy. People come to congratulate the parents and, seven days 851
later, the latter serve a more or less lavish feast, depending
on their means, the feast being preceded by the recitation of
the "fatiha" (first sura of the Koran). Those present who do [788]
not know Arabic limit themselves during this recitation to
holding their open hands together like a book. It is on this [533]
day that the child is given its name.

On this subject, I think I should note that especially 551
among the Kel R'ela (a noble tribe of the Ahaggar), many [565]
children were given the names of wild beasts or animals.

Examples of Men's Names

Amellal, addax, meha /?/
Abeggui, jackal
Amayas, cheetah
Akhou, wild animal

551

Anr'eroubou, lion
Ahar, lion
Eknissi, hedgehog /4/
Akouti, rat
Amadjour, camel
Amder', giraffe, etc.

Examples of Women's Names
Tamerouelt, hare
Tahenkatt, gazelle
Tinirt, mohr antelope
Tamer'ouant, cowrie shell
Tadar'ine, grains (of wheat, barley, etc.)

In the course of this study there will be found many proper names of men and women which might give rise to interesting comparisons with names used among other Berber tribes of North Africa.

The Tuareg child is brought up heedlessly, with the 854
negresses' children. It is chiefly the negress who takes care of him. He lives out-of-doors, often quite naked or hardly dressed, and his body is toughened early. During the nursing period the negress makes a kind of hammock out of an old haïk, the two ends of which are fastened to tree branches or to the tent pegs, and this kind of cradle is called "taoulioula" .||:||:+ (from the verb "eouilaouel" ||: ||: , to swing).

While he is still very young, barely seven years old, the 857
child is employed as a shepherd and acquits himself very well at his task.

Then, as soon as possible, he is perched on a mehari [492
(racing camel), for he must know his regular mount thoroughly. 868]
Young Harendou, an orphan of the Aoulimmiden /Aulliminden/, taken in by Moussa ag Amastane, the amenokal of the Ahaggar, was already an excellent meharist at the age of ten. At his side he wore a "takouba" .□•:+ (saber) larger than himself of which he was very proud. /5/

## Chapter II

## Circumcision

In Tamashek, "azemhoud-n-baradhen" (circumcision of children) from the verb "ezmahad" , to circumcise. 304 852

There is no set age for circumcision; generally it is carried out after the age of five.

The operator is summoned to the amazar' (douar), and all the people present take part in the operation, carried out as follows:

The operator holds the foreskin with a bit of "saâf" (djerid or palm leaf) and cuts it with a well-sharpened knife. To cicatrize the wound, it is dusted with leaves of atle (Tamarix articulata) and skins of dried pomegranates ground to powder. [278] Then it is washed with camel urine, and all painful contact is avoided by means of splints held by strings fastened behind the back. [237]

Then there is a feast: a sheep's throat is cut, and it is eaten by the guests.

## Chapter III

## Puberty

In Tamashek, "tamendjott" . As soon as he is of an age to fast, that is to say, as soon as he has reached puberty, the boy begins to wear the "tidjelmoust" veil which he will never leave off thereafter. 882 291

As to the girl, a celebration is held as soon as she reaches 881
the age of puberty, that is to say, at the start of her menses,
in Tamashek /6/ "ba-n-amoud" ⵎⵏ ⵍ ⵎⵓⴷ (literally,
"cutting of prayer," since during her indisposition the woman [841]
is in a state of impurity and cannot pray). The young girl is [291]
dressed in her prettiest clothes, and on her head is placed a
black veil, "ikerhi" ⵉⴽⵔⵀⵉ, which falls on either side of
her face without hiding it. She also never leaves it off.

If her parents are well-to-do, she will learn to play the 883
amz'ad ⴰⵎⵣⴰⴷ, an instrument which has an important [556]
place in Tuareg life. It is a kind of violin with a single string 534
whose box is made of a large "kabouia," or a dried and
scooped-out gourd, covered with a stretched hide and pierced
with two holes, which is provided with a handle. The string
is made of horsehair, "az'iou" ⴰⵣⵉⵡ, as are the strings
of the bow, "tadjelhé" ⵜⴰⴷⵊⵍⵀⵉ, made of a stick bent into
an arc.

It is chiefly an instrument to accompany singing. The [533]
woman slides her fingers over the string without pressing,
while working the bow; she prolongs the final phrases, which
are drawn out.

If a young girl knows how to play, she may shine at the [832]
musical gatherings, where she will be courted.

## Chapter IV

## Musical Gatherings

A young man and a young girl often go to meet together, 533
and this occurs especially in those gatherings which, to be 584
accurate, we will if you permit call "musical gatherings," and 832
which the Tuareg call "ahal" ⵄⵀⴰⵍ, plural "ihallen" ⵉⵀⴰⵍⵍⴰⵏ.

/7/

The ahal takes place very often. All that is needed is for 533
a group of men and women to be gathered together in a camp. 584
Often a man comes from a considerable distance to court the 832
girl of his choice. When the year is good, that is to say, when [361]
the rains have brought the pastures to life and the camels are
giving much milk, several camps are set up close to each other,
and the ahal begins right after sunset.

The men of the camps gather with those who have come
especially because some woman attracts them. The women
bring their "imz'aden" violins. All those attend the ahal who [602]
are not afraid to be in the presence of one of their relatives
to whom they owe respect, such as a father, uncle, older
brother, etc. Young girls, married women, divorcées or widows,
all attend the ahal.

[361]

Dautheville

Tuareg Troup at Amr'a (Black Tifedest)

Gallantry, "asri" ⵄⵔⵉ is required, and jealousy [577]
strictly prohibited. Besides, this latter feeling is unknown [626]
among the Tuareg, and if one of them should think of showing it, he would be booed and everyone would make fun of him.

When a Tuareg arrives at the ahal near a woman whom he wishes to court, he approaches her with his veil carefully lowered and does not greet her with the usual "essalamou r'

533
584
832
[576]

laïkoum" (May the greeting be on you!). Silently he holds his hand out to the woman in the Tuareg manner (that is to say, holding his hand /8/ out open flat and sliding it over the open hand of the woman), and he sits down, saying: "iselane" (What news?). If the woman answers: "elouane" (There is a lot), he begins to pay his court. The Tuareg are not very religious, and it sometimes happens that the woman asks such questions as: "Whom do you love more, God or me?"

The songs begin, and the imz'aden play the accompaniment. The men sing in snatches lines that they have composed on the charms of the ladies of their dreams, the feats that they have done, the raids in which they have taken part, or else satires on their enemies. The women extol courage. In general, a noble woman does not sing, but only plays the amz'ad.

There are three musical rhythms:

The "seyenine" /.|ξ ⊙ rhythm, lively and quite fast, used among the Kel R'ela and the Taïtoq.

The "ahinena". /|ξ ⁝ rhythm, slow and drawn out like a chant, used especially among the Kel R'ela.

The "asaher'" ⁝⁝ ⊙ rhythm, used among the Tuareg of the Azdjer /Azjer/ confederation.

524
533
584
832

Then there are simple games. The women elect a "sultana," or queen; the men a "sultan," or king, who will inflict the punishments incurred and will set the fines to be paid. It is a context of wits. A man must be able to answer the questions asked. If, for example, to this question: "Whom do you like better, this one or that one?," he answers: "I prefer this one," he would be booed, would incur a punishment or pay a fine, and the woman who is preferred would be ridiculed by her companions, for one must not show preference openly but must answer, "I like them both."

Another kind of question: "What would you do if you found yourself in the following situation: /9/

4: Benhazera--7 G-5 (1905) 1908 MS25 Tuareg MS25
Hoggar

524
533
584
832
[539]

"Tamott tekness
"Ehere iouof
"Tathett ter'tess
"Tir'irt touoss"

which means:

The woman who argues.
Flocks that scatter.
The she-ass that breaks her tether.
The pot that tips over.

In a joking way, to be a real wit, the man could answer: "If I should find myself in this situation, I would first gather the flock, I would re-tether the ass, I would put the pot back on the fire, and only then would I pay attention to the woman, " and there would be a chorus of indignant protests.

The woman makes it a point of honor to have as many admirers as possible. This is a proof that she is pretty and will not have trouble in getting married. 584 832

The ahal, begun after sunset, lasts quite late into the night, and the pale light that is shed by the stars allows shamelessness to have free rein. Although the married women joke and take part in the games, they behave themselves comparatively well. The others, however, may sit on the knees of their admirers. They kiss, but in a special way. Since the man must never uncover his mouth, he lowers his veil under his nose, and he piously smells the nose! of his loved one, who herself may kiss him. Even intimate handling (proh pudor! /oh, shame/) is allowed, which is never seen among the Arabs. 533 584 832

During these gatherings, when the amz'ad is played, it is listened to with great pleasure. This instrument has a way of exciting /10/ the Tuareg, who utter "Ouh! ouh!" as a sign of pleasure. They have even made a verb of it: isouhouh. [201]

But now is the time when the camels come from the pasture. They must be milked: that is the az'ouz'edj ' ' # # (from ez'edj ' ' # , to milk). The women get up, and those present are given milk to drink. They will have to disperse. [272]

The men leave, the women go back into the tents, but 832
the fortunate ones who have succeeded by means of assiduous 836
courtship to touch the heart of their love, will soon come back secretly or will go to the place which has been appointed for them. Let us draw a veil!...

One might wonder what can become of the virtue of 585
young girls with such customs. Almost always it has gone up 836
in the air. But a Tuareg will not pay attention to this detail when it is a matter of getting married. He knows with what to be content: he has often profited by it. It is all the same to him.

The ahal is one of the reasons for late marriages among the 582
Tuareg. Marriage requires expenditures upon which one does 836
not decide until one has been able to acquire a little means, and that is why it is not unusual among the Tuareg to see men marry at the age of forty. With all he finds to entertain him, the Tuareg does not feel the need to get married. This does not mean that many do not marry around twenty-five, but in general a man marries quite late.

Farther on, in the little collection of songs, will appear 000
the qualities which a man must have in order to succeed at the ahal, as well as the kind of songs which are sung there. /Not translated./ /11/

## Chapter V

## The Role of the Woman in Tuareg Society

At every step one sees the influence of the woman in 562
Tuareg society. In Tuareg history, the inheritance, the life, the thought, and the behavior, everywhere her influence is felt.

In the matter of history, it is from her that the Tuareg 173
says he is descended. Thus the nobles of the Ahaggar will tell 562

us that they are the descendants of a woman by the name of 173
Tin Hinane. In the war which brought Azdjer and Ahaggar to 562
arms, the tears of the Imanan women were the deciding factor
in the Ahaggar taking up arms.

As to inheritance, it is known that this is handed down 428
through the woman. It is from his mother that the son holds 562
the right to command and to the collection of the "tioussé, "
or tribute from the "imr'ad, " or serfs. Not only is the son [611
noble or serf according as his mother is noble or serf regardless 565]
of the father's status, for "it is the womb that holds the child, "
but he also changes his tribe and becomes a member of his
mother's tribe if she does not belong to the same one as her
husband.

In life, the woman enjoys a freedom of conduct which is 562
not customarily allowed in Moslem countries. [171]

She does not veil her face like Moslem women except [576]
as a sign of respect, when she draws her veil, "ikerhi, " over
her face.

She goes freely to pay visits to her parents, uncles, aunts, [574
etc., and since she sees them seldom because of the distances 431]
between camps, custom decrees that the relative who receives
her visit should make her a present.

She has succeeded in maintaining monogamy, which is [595]
the rule among the Tuareg even though they are Moslems. /12/

Even though married she may have a man friend, "amidi" 562
.V] , who sings her praises and makes verses for her, 572
while she gives him something for his personal use. He is,
in a way, her knight. Thus, although married, Dassine
embroidered for her cousin, Moussa ag Amastane, the amenokal
of the Ahaggar, the bridle and breast strap of his horse, while
Moussa, without hesitation, recited before everyone the lines
which he composed in her praise, and often received her visits.

In the absence of her husband she may receive a man [574]
who comes to chat with her and pay her a visit, without the
husband, on his return, dreaming of being annoyed. Only [837
adultery in flagrante delicto can justify the anger of the husband. 593]

4: Benhazera--10 G-5 (1905) 1908 MS25 Tuareg MS25
Hoggar

A married woman has possessions independent of those of her husband. Her camels bear her special mark, different from that of her husband. She does not take part in household work unless she wishes to do so. 422 562 592

She has the right not to follow her husband immediately after her marriage, but to camp near the tent of her parents for a year after her union, so that she can accustom herself gradually to the idea of separation. 562 591

To obtain a divorce, it is enough for her to refuse herself to her husband and to take refuge with her parents. 586

Almost all women, except the poor, have meharis as mounts and their individual saddles. 422 492 562

At the ahal, as we have seen, she rules as mistress.

Noble or serf, she has one or more negresses reponsible for the heavy work of the household and for the preparation of food. 357 562

It is she who is the more educated, for she knows better than her husband how to write and read the "tifinagh's" (names of the characters of Tamashek writing), and it is she who teaches her children to read. 212 562 868

She plays the amz'ad, the instrument for which the Tuareg have such a lively predilection. "When two groups come to blows and one of them is defeated, the victors cry to the vanquished this wild cry peculiar to the Tuareg: /13/ 533 562 726

'Hia! hia! hia!

'So there will be no amz'ad!'

"At the threat of the silence of the 'imz'aden' the vanquished return to the charge, so great is the fear of the women's unfavorable opinion." (Duveyrier).

Nothing gives the Tuareg as much pleasure as for one to be interested in the deeds and ways of the women of their tribes. Thus one has only to speak of Dassine or of Mellouka, women who enjoy a great reputation for beauty and intelligence in the Ahaggar, to see a stiff attitude give way to great good humor 521 562 602

and gaiety, always on condition that the conversation does not take place in the presence of relatives to whom the Tuareg who is addressed owes respect. 521 562 602

The Tuareg woman intervenes effectively in quarrels between the men of her family and, in order to please her, reconciliation takes place. Thus it was thanks to Rakhma, sister of Moussa ag Amastane, that the latter became reconciled with his brother-in-law, Anaba ag Amellal. 562 [593 578]

In short, one may say that nothing is ever done or said among the Tuareg in which the influence of the woman is not found, always and everywhere, and this will be seen as the reading of this article continues. /14/

## Chapter VI

## Proposal of Marriage

Proposal of marriage, "ibadrahen" ⵉⴱⴰⴷⵔⴰⵀⴻⵏ, is governed by a definite rule of procedure. 584

The suitor for a woman's hand sends marabouts, if there are any, to her parents, or tolbas, or, lacking these, influential people who state his request.

The proposal must be known to all the relatives of the woman without exception; they must all be notified and

their permission asked, even those who are far away. It would 584
be very bad to marry a young girl without the knowledge of one
of the members of her family.

Since a girl usually marries at twenty to twenty-five years, [582]
she is consulted. Even if she is a virgin and, as such, subject
to parental authority according to Moslem law, she is usually
not forced to marry against her will. If the case arises, she
has only to refuse herself to her husband, and he does not insist
but sends her back to her parents.

Just as among the Arabs, a woman who has already been [587]
married must give her consent.

## Chapter VII

## Marriage

Marriage, "adouben" ⵏⵓ ⵎ or "tedout" ⵜⵉⵎⵜ 585
has some quite curious features.

The proposal of marriage has been accepted. The day
of the wedding has been set. If a quite influential noble is [554]
getting married, the wedding /15/ will have many guests.
If it is an "amr'id" (serf), the celebration will be much simpler
and more private, but the ceremonies and songs will be the
same.

The men guests, mounted on their best meharis, arrayed
in their most beautiful clothes and finest arms, arrive at the
bride's camp where the wedding is to take place. The women
go to the bride's home with their "imz'aden" (violins) and
their "tobol" (drums).

If the women are poor they go there by donkey; if they [492
are rich they arrive by mehari, in their saddles which are 556
shaped like sedan chairs and of which we will find a description 562]
below.

4: Benhazera--13 G-5 (1905) 1908 MS25 Tuareg MS25
Hoggar

The celebration begins about one o'clock in the afte- 585
noon. The men saddle their meharis and the camel-back [541]
games, "iloudjan foull imnas" ⵍⵓⴷⵊⴰⵏ ⴼⵓⵍ ⵉⵎⵏⴰⵙ , will begin.
The women gather, beat their tobol, sing and play the amz'ad [533]
to excite the riders. The latter, in groups of two or more, abandon themselves to a wild race on their meharis, which they throw into a gallop.

During this time the bride, hidden at the home of her maternal aunt or a relative on the maternal side, must veil her eyes and not watch the games. If by mischance she should [752]
look at one of the riders, he would fall, and there would be an accident.

As to the groom, he does not take part in the games. Mounted on a white mehari, "ebidedj" ⵉⴱⵉⴷⵊ , he is present beside one of his friends, but he must remain impassive, his face carefully veiled.

The games last until sunset.

At this point two "tolbas" and two friends of the groom go to find the bride's father, if she is still a virgin, or the woman herself if she has already been married, to ask him or her to name a representative. The groom is also asked to name his representative.

These two representatives meet with the tolbas and the 583
friends, and the marriage is contracted. It is at this time that 585
the bride price, /16/ "tagalt" ⵜⴰⴳⴰⵍⵜ , is set. For nobles [554]
it consists, as a rule, of seven camels; for imr'ad it may consist, depending on their means, of one camel or several sheep or goats. The groom pays part of the bride price: one or two camels if he is a noble; three or four sheep if he is an amr'id and if he is not rich; the rest he owes. The animals which have been paid have their throats cut and provide the wedding feast. Then the "fatiha" (first sura of the Koran) is read to [782]
call divine blessing on the newlyweds.

After the contract the women meet, the amz'ad is played 585
for a moment, but the bed of the newlyweds must be prepared.

4: Benhazera--14 G-5 (1905) 1908 MS25 Tuareg MS25
Hoggar

The women get up and make a sort of mattress of sand or earth, 585
which is called "adebel" ⵍⵍ ⵉⵏⵎ and which is covered with
a haïk. Over it will be set the skin tent on two wooden arches,
"idjedjan" ⵍ ⵉⵏⵏ , and the usual pegs.

But at this point the men intervene and seize the tent
cover. Two on one side and two on the other, they throw it [777]
back and forth three times, calling "Saoula iaoulit (throw and
send back)." This brings good fortune.

Then the tent is finally set up. The men lead the groom
to the tent. He is made to go around it three times; then he [777]
enters, taking care to put his right foot in first, again because
this brings good fortune.

The groom is in the tent with his friends. The women 585
then accompany the bride while singing: 533
539

"Bismillaten ar essa .ⵉⵓⵍⵜⵍⵏⵉⵏⵏ
"Se iz'ar isem n yalla .ⵍⵣⵍⵏⵉⵓⵔⵎⵣⵉ
"Foall ilik ner' as tedoua".ⵏⵍⵜⵍⵍⵉⵍⵏⵔⵏⵏⵣⵍⵍⵏⵏ

which means:

"In the name of God on them up to seven times,
"Preceding the name of God,
"On our daughter who left in the evening (for her
husbands's home)." /17/

A few meters from the tent the son of the bride's maternal 585
aunt comes forward and wants to hold the bride back, telling 431
her: "I will not let you leave before receiving my gift, my
sandals. Aouid ir'atimen (give me my sandals)." The groom
or his friends then pass him a pair of sandals which were set
aside for this purpose or, lacking these, another gift.

Then the women in chorus ask questions to which the men 585
reply in chorus: 533
539

Women's chorus:

Nellouz ⵏⵍⵍⵓⵣ We are hungry.

Men's chorus:

Atekchimet ⵜⵍⵉⵣⵎⵉⵜ You will eat.

Women's chorus:

Ner'loul ⵏⵍⵔⵍⵍⵓⵍ We are naked.

Men's chorus: 585

Atelsimet ⵜⵍⵙⵉⵎⵉⵜ You will be clothed. 533 539

Women's chorus:

Nerdjih ⵏⵔⵊⵉⵀ We are afoot.

Men's chorus

Atar'ermet ⵜⵄⵔⵎⵉⵜ You will be mounted.

Then the bride and the women, addressing the groom, sing these two lines:

Outterir' inelli n isakan ⵓⵜⵜⵔⵉⵔ ⵉⵏⵍⵍⵉ ⵏ ⵉⵙⴰⴽⴰⵏ

Essoufeq inelli n foudan ⵉⵙⵙⵓⴼⵉⵇ ⵉⵏⵍⵍⵉ ⵏ ⴼⵓⴷⴰⵏ

"I do not want any bechna (carried by) young camels.

"I prefer bechna (carried by) strong and solid camels, " meaning by this that she expects of her husband the deeds of a strong, brave man and not the behavior of a child. /18/

Then the bride enters the tent, and the guests withdraw 585 and go to feast.

For seven days the groom's food is provided by the bride's relatives. During this time the newlyweds do not leave their tent, but people go there to entertain and visit them.

Custom decrees that the newly weds live beside the wife's 591 parents for a year in order to give her time to get used to separation from them, which they call "az'alaï" ⴰⵣⵄⵍⴰⵢ (from the verb "ez'li" ⴰⵣⵄⵍⵉ, to separate).

Monogamy is the absolute rule. 595

We have said that the ahal is one of the reasons for late 582 marriages. Another reason lies in the fact that many Tuareg 595 are satisfied with Negro concubines.

## Chapter VIII

## Divorce

Divorce, in Tamashek "tellef" ⵜⵍⵍⵉⴼ or "ouloufi" 586 (from the verb "ellef" ⵍⵍⵉⴼ, to divorce), ⵍⵍⵉⴼ

occurs quite often, but most generally on the initiative of the 586
wife, for the husband who gives notice of repudiation is bound to pay her the remainder due on the bride price, while when it is the wife who initiates the break by refusing herself to him and taking refuge with her parents, her husband owes her nothing.

Sidi ag Keradji, the amenokal of the Taïtoq and Kel Ahnet, could never keep a wife with him. He divorced very often. Each time he went back to his negresses, whom he held in high regard. Meanwhile, he tried to remarry ( he was [581
seventy to seventy-five years old), but it seems he had some 587]
difficulty, considering his matrimonial past. /19/

## Chapter IX

## Adultery

Adultery, in Tamashek "tikra". O·:+ (from the verb 837
"ouker" O ·· , to steal), is certainly common. 684

The Tuareg may say that in a case of adultery they do not hesitate to kill the woman, but I asked them to cite me such a case which had occurred within the past several years, and they admitted that they could not cite any, adding that this was just because no act in flagrante delicto had ever been established. Others told me that many are satisfied to get [586]
divorced and that some even say no more about it

4: Benhazera--17G-5(1905) 1908 MS25 Tuareg MS25

## Chapter X

## Games

Children play a game with a ball, "tekerikera", O·:O·:+, which they hit with curved sticks /20/ ("iggaten tekerikera," they hit the ball). Two camps are formed and the ball must be made to go into the opposing camp. 526 857

But their greatest amusement is to make out of clay little sticks and stones, all kinds of animals and people, which they call "isounar" O|⊙ . Thus they make a mehari with its saddle, a camel with its young, a horse, etc., or they may make a mehari with a man on it, "aknar" O|·: , or a woman in her bassour, "taknart" ⊕|·:+ ; here are a bride and groom. These young sculptors, it seems, are very skillful. 524 532 857

Sometimes they hang a swing, "taoulioula", ||:||:+ , on a tree. 524 857

## Chapter XI

## Death. Burial. Graves

If death ("tamettant" ⵜⵎⵜⵜ ) takes place near an 764
"ar'erem" (village), burial is carried out at the cemetery. Otherwise, the deceased is buried where he died.

The corpse is washed with warm water, according to Moslem custom, and dressed in his shroud "tifit" ⵜⵉⵜ . Tolbas come to say the prayers of the dead. The grave "az'-ekka" ⵄⵣⵇⵇⴰ , plural "iz'ekouan" ⵉⵄⵣⵇⵇⴰⵏ , is dug. The pit /23/ is one span and four fingers wide for, as among all Moslems, the corpse is laid on the right side, the face turned toward "kiblah" (the direction of Mecca). The depth is only 60 to 70 centimeters. It is covered with flat stones cemented with wet clay. They place markers ("chouahed" in Arabic, "ihalissen" ⵉⵀⴰⵍⵉⵙⵙⴻⵏ in Tamashek), that is, stones set on end: one at the head, one at the feet if it is a man; one at the head, two at the feet if it is a woman, parallel or perpendicular to the direction of the grave according to whether it is a man or a woman.

Then a circle of stones is made around the grave, with an opening for entry and exit, and to the east, opposite the door, is the place of prayer, according to the following plan. a

The expression of condolence used is the following: "iha ner' irah yalla ierhak, " which corresponds to the Arabic وجايك [576]
الله يخلف علينا and which means, "May God repay the loss which you and we have suffered. "

The visitor goes around the grave saying, "kel irkhem [788]
yalla (May God grant you mercy!), " says his prayer and leaves.

A funeral feast is given for the tolbas and the poor. /24/

## Chapter XII

## Mourning

Mourning, "oudhouf" ⵓⴷⵀⵓⴼ , does not have 765
any very outstanding features for a man.

In general a man must stay shut in his tent for three days.

The widow goes into mourning and remains in mourning for four months and ten days. She must hide her hair [303]
with a black veil and not comb it for the duration of her mourning; enclose her feet in high footgear instead of the usual sandals; withdraw her hands from view or show only their tips. In short, as in "Miss Helyett":

Plan

[764]

Teddeqqirt Wadi (Immidir)

To show none of those charms
Which would give arms
To the wicked liar.

At the end of mourning, the women of the camp lead the 765
widow out to see the sunrise; the Koran is held open before
her and she is made to look at salt. Upon her return, she may
dress as before and make herself pretty. A collection is taken [768]
up for her. /25/

## Chapter XIII

### Inheritance. Succession

Inheritance, "takasit" +⊡∴+ , (from the verb 428
"ekkous," to inherit) is of two kinds: political inheritance,
if I may so express it, and private inheritance.

The first is the right to command and to the collection of
the "tiousse," or tribute from the "imr'ad." This is handed
down according to the laws of inheritance of which we will
speak later.

As to private inheritance, it is collected by the natural
heirs according to Moslem laws of rights, which means that the
son has a right to an amount double that of the daughter. The
animals left as inheritance are assessed and are divided ac-
cording to this assessment. These shares are then chosen by
lot.

## Chapter XIV

### The Home. The Tent

All the tents of the Tuareg of the Ahaggar confederation 281
are made of the hides, "ilmaouen" ⁝:⊐|| , of goats or sheep, 342

tanned and sewed together. The assemblage of these hides [281]
constitutes the cover, the essential part of the tent, and is 342
called "ehakit" .

The tent is supported by a central master beam called
"tamankaït" .

A pole, "idjem" , is placed at the entrance
of the tent and is flanked right and left by poles called
"madar'en" . /26/

Other poles are used to hold up the edges: these are the
"tissedass" . The little pegs that hold the tent
to the ground are called "tisselitaï" . Some-
times bows are also used, called "adjedjou" ,
plural "idjedjan" .

The tent is surrounded by mats of "afezzou" [285
(Panicum turgidum, Graminaceae), called "asabar" 824]
plural "isebran" , which are pulled back in the
day and drawn close at night, to close the tent.

In the tent one finds first that which concerns water, that 352
is, waterskins, "abeïor'" , plural "ibiyar'" - 415
, hung on forked sticks, "tidjettaouin" .
They are filled by means of a funnel, "asegueffi" ,
plural "isegueffa", . To water the camels, the 231
Tuareg use troughs of hide supported by hoops at the top and
called "tafaraout" , plural "tiferouin" .
They also use these troughs for the harvest of "toulloult" grain 243
(Arthraterum pungens, Graminaceae) or of "afezzou" (Panicum
turgidum, Graminaceae).

For milk and butter, they have a waterskin for milk, 415
"tanouart" , plural "tinouarin" , and
a kind of porous water jug made of a hollowed gourd and called
"az'enou" . To ladle the milk, serve it or pour it,
they use a wooden vessel with one handle called "asoukal"
. To store and transport melted butter, "oudi," they
have waterskins of various shapes, the most common being the
one called "tahattint" , but they also sometimes [281]
use the tanned hide of a camel's thigh. /27/

4: Benhazera--23 G-5 (1905) 1908 MS25 Tuareg MS25
Hoggar

To feed young camels and lambs, they use a kind of 231
nursing bottle of wood shaped like a cup equipped with a tube. 415
This utensil is called "ar'alala" .

For dishes, one finds in the tent wooden bowls of all sizes, 415
called "akous" , plural "ikassen" ,
large wooden dishes, "tar'elalt" , and smaller dishes
used as plates and called "tar'ehout" , plural
"tireha" . To ladle milk or gruel, the Tuareg use
a large ladle, "temoulat" , plural "timoulatin"

[361]

Dautheville

Tuareg Camp at Tazerouk

, and for eating they have ordinary wooden spoons
called "tesoukalt" , plural "tsoukaline" .

To separate the grains of "toulloult" and "afezzou" from 252
their hulls, they use small trays of afezzou called "tissiit" 415
, plural "tissiin" .

They also use a great deal the wooden mortar, "akabar" 415
, with its pestle, "ihar'en" .

Finally, they have hide sacks to hold dates or grains, which 281
they call "adjera" , plural "idjerouen" 415

All the above utensils are made of the wood of the 415
"teborak" (Balanites aegyptiaca, Simaroubaceae) and of the 824
abser', or "tamat," (Acacia arabica).

The donkey carries the waterskins from the well to the [312]
tent, and on its back is placed a packsaddle made of curved 492
pieces of wood bound together, which is called "eroukou."

Let us not forget the Tuareg's saddle, "terik," and if the master of the tent is well-to-do, his wife's saddle, "tekhaouit." /28/

The tent is divided in two: one side for the man and 342
the other for the woman. On the man's side are his saddle, 592
his arms, and the things used for eating. On the woman's side are her saddle, her "amz'ad," and the cooking utensils.

Custom decrees that the man choose the east part for his side, and the woman the west part.

A group of tents is called "amezar" [192]
a single tent "ehan" , plural "ehanan" .

## Chapter XV

## Food

The main meal takes place at noon and is called 264
"tarout" . In the evening the Tuareg is

usually satisfied with milk, "akh, " fresh ("akh oua kefaïen" 264
[illegible] ) or sour ("akh iezza", [illegible] ), at
the hour when the camels, sheep, or goats come in from
pasture.

The basic food of the Ahaggar Tuareg consists of bechna, 262
"inelli" (white-grain sorghum, Graminaceae), dates, "teïni, "
and milk, "akh. " [illegible]

But their country provides them with many resources 22
which they are careful not to neglect, especially the poor, 556
the "tileqqiouin" [illegible] , who constitute the majority.

All the "imr'ad" go to harvest the grains of "toulloult" 243
and "afezzou. " Women, children, youths, negroes and 221
negresses go into the wadis
to gather the harvest, which
takes place from May to June
for "toulloult" and from July
to the end of September for
"afezzou. " /29/

[000]

Dautheville

Ideles (Koudia)

Usually, before the
harvest several wadis are for-
bidden territory, and camels
are not led there until the
harvest is finished.

The produce is gathered
and put into hide sacks. After the grains have dried, they 252
need only to be put onto small trays of "afezzou, " called
"tissiin, " which are shaken, and the hulls fall off and remain
on top. The grains are ground to powder, and a kind of gruel
is made with water or butter.

The Tuareg are also very fond of "tikamarin" [illegible] 234 252 262
, cheeses as hard as wood which they get from Aïr. They 438
grind them in mortars and mix them in their food.

They very seldom eat meat, except that of game which 262
they can kill in a hunt: gazelles, mountain sheep, and 224
antelopes. But often they prefer to smoke this game in order 251
to go and sell it in the Tidikelt. 438

262
The nobles eat better, at least those who are well-to-do. 243
In the Ahaggar especially they own cultivated land in the 556
"ar'erems" (villages), where they grow wheat, "ired," barley, 565 423
"timzin," and bechna, "inelli"; but usually they sell their 438

[137]

Dautheville

Trees Called "Ahatés" (Acacia Albida) at the Tillemas of the Tessht Wadi (Koudia).

wheat and barley to the natives of the Tidikelt and are content with bechna, of which they are very fond. They claim that [824] bechna is less heating to the stomach than wheat or barley.

The rich allow themselves the luxury of drinking tea, but 272
tea and sugar are very expensive, and they do not misuse them. 556
On the other hand, they do not hesitate to beg for them shame- 263
lessly.

When the year is bad anything seems good to the poor to 222
assure their subsistence. In such years one sees them eating 262
/30/ "berdi," or "taheli," (Typha angustifolia, Typhaceae); 735
ground carob seeds of "talhas," or gum trees, which they call 252
"tahaha" • ⁝⁝ + ; "tanékfaït (Diplotaxis duveyrierana, Cruciferae); fruit of the "teborak" (Balanites aegyptica), which they steep to take out the bitterness; and even leaves of the "aremmas" (Atriplex halimus, Salsolaceae), which they boil.

In short, nature keeps food resources for them which prevents even the poorest from dying of hunger.

The laws of hospitality, "amedjarou," are observed as 574
among all Moslems. The guest, "amadjar," is always well
received.

## Chapter XVI

## Hygiene. Diseases

133
516

Dautheville
Dr. Dautheville in the Abezzou
Wadi (White Tifedest)

We know that the Tuareg have a horror of water. They do 515
not wash themselves on the pretext that this would make them
sick, but it is essentially because they are very sensitive to [151]
cold. To say their prayers, they do not indulge in the pre- [782
scribed ablutions, even when they are at home and have water 788]
at their disposal. They are content with "taïmoum" (an
imitation of washing with sand), which they call "ettamine."
The amenokal Moussa ag /31/ Amastane is the only Tuareg
whom I have seen making his ablutions with water.

This is also doubtless due to the fact that the Tuareg like 291
to keep the tint of indigo, "sedjeni" ⵙⵉⵏⵉ , on their 302
skins, the result of wearing "chegga," or blue cotton, which 386
runs a great deal and of which they make their clothes. They 515

claim that this blue tint is excellent for the health. As in the Tidikelt, a white garment is not fit to wear until it has been sufficiently tinted blue by contact with "chegga." 291 302 386 515

The Tuareg value our medicines, "asafar" ⵓⵙⴼⴰⵔ 177 plural "isefran" ⵉⵙⴼⵔⴰⵏ , and believe in their efficacy. 278 This is also due to the fact that they are given to them free, [432 556] for under no circumstances does the Tuareg like to loosen his purse strings, and he never ceases to beg for anything he sees that he hopes to get for nothing.

However this may be, it is good to note that he comes very [648 willingly to be treated by us. A French doctor would certainly 757] be very well received by the Tuareg.

The most usual diseases among them are fever, "tazzaq" 164 ...ⵅⵜ , gonorrhea, "talaoalt;" rheumatism, "tessemdhi" ⵉⵎⵎⴷⵀⵉ ; and headaches, "tekmou-n-ir'ef" ⵜⴽⵎⵓ-ⵏ-ⵉⵔⴼ

## Chapter XVII

## Negroes and Negresses

There is no Tuareg tent which has not at least its negro 563 567 and negress. The frequent raids that the Ahaggar made in the [721] Niger and in the Sudan procured them all the slaves they have.

They devoted themselves greatly to the Negro trade, which [439] brought them fine profits since they had only to take the negroes without expense.

The conquest of the Sudan and the Saharan Oases gave 118 them a terrible blow from that standpoint. Besides, with the 567 progressive pacification of their territory and that of the neighboring tribes subject to them, they would soon have to renounce all hope of new raids, and one may say that the Negro trade, if not entirely destroyed, will at least be considerably diminished.

4: Benhazera--29 G-5(1905) 1908 MS25 Tuareg MS25
Hoggar

The negroes and negresses are well treated by the Tuareg, 563
who do not impose hard labor upon them. The negroes are pri- 567
marily busy with the flocks, which they drive to pasture and water. [233]
The negresses are concerned with the kitchen; they go after [357]
water and take care of the children.

[231
291
312]

Tuareg Watering their Sheep at the Tin Zaouaten Well

Negroes and negresses also gather the harvest of "toulloult" and "afezzou" grains, but this is more fun than work, for everyone takes part in it with them, in gay groups.

Many negroes eventually become the trusted men of their masters, who put them in charge of caravans or even of responsible missions. Thus, the amenokal Moussa had a trusted negro, Chernach, whom he regarded highly, for, he said, "I know that this man would have himself killed for me." Moreover, he gave him a gun, a spear, and a saber. /33/ These negroes are very happy and can consider themselves as freed.

Besides, there are few negroes who are not armed by their 411
masters with a "tar'da" (spear with a wooden shaft) and with a 563 567
"takouba" (saber), of which they are very proud. The best are 726
sent on raids, and it seems that they acquit themselves very well in combat.

As to the negresses, there are some who confine themselves 563
to attending to the care of the household and the tent, but there 567
are quite a few others who are raised to the dignity of con- 595
cubines. A noble Tuareg prefers to share his bed with a negress rather than to marry a "tamr'idt" (serf). He marries late, and when he decides to, he looks especially for a woman who, by her /34/ birth, will give his children future rights to command. The negress profits from this.

The negroes and negresses are not, as a rule, mistreated 563
by the Tuareg. Besides, if the case should arise, they know 567
how to use the following curious custom in use among the 685
Tuareg.

When a slave, negro or negress, becomes too unhappy with his master and wishes to become the slave of another master, he splits the ear of a child or a horse or hamstrings a mehari; in short, damages anything valuable that belongs to the master he wishes to have; then he stays beside his deed. Naturally, in reparation for the harm done, the negro is given in full possession to the injured master. There may be protest, if there was connivance between the slave and the master he wishes to have, and, in this case, the oath is deferred and the case [692]
brought before a marabout or a cadi.

Thus the negress Tenoufek, who belonged to Semana, sister of Bika ag Moumou of the Kel Ahnet, slit the ear of a mare belonging to Sidi ag Keradji, the amenokal of the Taïtoq and the Kel Ahnet. In reparation the negress was given to Sidi, with whom she still remains.

Another example: the negro of El Biodh ould Settafi of the Settaf, hamstrung two camels belonging to Ibedi ag Bassi of the Ir'echoumen. In reparation El Biodh had to give Ibedi the negro and a camel besides. /35/

## Chapter XVIII

## Clothing. The Veil

The Tuareg are very clothes conscious. They love 291
beautiful clothes and do not fail to put the best they have in their wardrobes on their backs every time the occasion arises.

The more garments they can put on, one over the other, the better it is. Even in midsummer if a Tuareg has a wool burnoose, he does not hesitate to put it over his shoulders if he is to attend a palaver or present himself to a chief, though he suffer from it.

Their clothes are almost all made of dark-blue cotton, "tchoqqit" (a word which seems to be a [192]
variation of the word "chegga" used by the Arabs).

White cotton is not fashionable and is not worn except by [556]
those who do not have the means to buy dark-blue cotton, which looks black and, from a distance when they are in a group, gives them a slight resemblance to crows.

Their costume consists of:

The "takarbast" , a sleeveless gandurah slit at the sides and sewed only at the bottom, so that when they raise onto their shoulders the panels that fall to their wrists, the entire bare chest is seen through the opening.

The "karteba" , trousers à la hussarde, or full like the Arab "seroual," tight at the ankle.

The "takammist" , a gandurah with large wide sleeves and a large pocket on the left side of the chest, "el hib" . The "takammist," which is usually made of cotton with small blue /36/ and white squares or with dark-blue and mauve stripes, is decorated on the shoulders with white embroidery. This garment is expensive and is only worn [556]
by well-to-do Tuareg.

An "abrour" , a haïk of wool bought in the Tidikelt or the Touat, and worn only in winter.

4: Benhazera--32 G-5(1905) 1908 MS25 Tuareg MS25
Hoggar

The "tidjelmoust" ⊕⊐ǁ'|'+ , or veil. The veil 291
is made of a single strip of dark-blue or black cotton. To put it on, the end is placed on top of the head, then it is first wrapped around at the bottom to hide the lower part of the face. Then it is brought back up to hide the upper part of the face, and the head is wound with the rest of the strip to hold it in place.

The upper part of the veil is called "amaoual-oua-n-afella," the lower part "amaoual-oua-n-aris." The top of the [302]
head remains uncovered to leave free the hair, which is braided in small strands or cut in the shape of a cock's comb, or just cut short. The part of the veil which covers the nape of the neck is called "adjedellehouf."

When the veil is on the forehead is bound with white or colored material, "asaded" ΛΛ⊡ , and to be pleasing a bright-colored ribbon or cloth, "itelli" ⊂ ǁ+ , can be added.

The young people some time ago imported a fashion which 177
they borrowed from the Kel Fedé of the Aïr and which consists 291
of a kind of diadem of this shape:

It is placed on the forehead and is covered and hidden by the veil, which holds it in place.

This diadem, which is called "tadebanat" +|⊠V+ , [84]
is not liked by the "old Tuareg" party, who have not adopted it. Sidi ag /37/ Keradji told me that he preferred the old fashion which consisted of slipping under the "assaded" amulets enclosed in silver plaques, called "tira-n-azerouf." But the "young Tuareg" party is not of this opinion and considers the new fashion not lacking in elegance.

Sometimes they cross a white sash on the chest, 291
"tirezzemine" |⊐# O+ .

Finally, they wear around their necks thick cords of red 291
or green silk or braided wool, which they call "el mejdoud" 789
and which are used to suspend a Koran, a book dealing with
cabalistic matter, or amulets.

Amulets (everyone has some) are worn on the back or on 789
the chest. They are enclosed in a leather or metal sheath.
I saw one Tuareg who had some twenty that he wore, all
gathered together, on his chest.

Finally, they are shod with large flat sandals from the Aïr, 291
"ir'atimen" ⵉⵔⵄⵜⵉⵎⵏ , or with leather sandals made on [439]
the spot and called "imerkaden" ⵉⵎⵔⴽⴰⴷⵏ .

Let us not forget the arm bracelet "ahbedj" ⴰⵀⴱⴷⵊ , 301
plural "ihebdjan" ⵉⵀⴱⴷⵊⴰⵏ , like a snake, which, they 789
say, gives strength to the biceps when one strikes a blow.

At rather important meetings and palavers, the richest 292
come dressed in burnooses bought at Ghat and decorated on [556]
the shoulders with attractive silver embroidery. Sometimes it
also happens that if the burnoose has no embroidery, the owner
prefers to wear it inside out, so as to display the yellow and
green silk lining which decorates the edge and lower corner of
the burnoose. Where will vanity stop?

The burnoose is not put on, but just put over the shoulders.

Some poor Tuareg are dressed in clothes of tanned leather. 291
/38/ 556

The woman's dress consists chiefly of:

A sort of skirt, called "asedjebes"
A shirt with sleeves, "takammist"
A woolen haïk, "abrou'"
A veil placed on her head, "ikerhi"

According to her means, she wears the following jewelry: 301
556

Silver bracelets, "ihebdjan-oui-n-azerouf"
Glass bracelets, "tahouka," plural "tahoukaouin"
Glass-bead bracelets, "denguela," plural "denguelaten"
Blacelets of the horns of goats or gazelles, made
in two halves which are encased one in the other
with copper and which are called "iouakane"

Earrings in the shape of large rings, "tizabbatine" 301 [55-6]
Rings, "tisseq, " plural "tisser'ine"

Also, like the men, she wears amulets, "tira." [789]

Finally, in summer she wears a large parasol hat ("medols" 291 in Arabic), which she sometimes decorates with red wool and which is called "tili" (shade).

Concerning the veil: whence comes this use of the veil among the Tuareg? Even those involved do not know.

Sidi ag Keradji, however, gave me an explanation which 173 is quite without validity but shows the craze which the Tuareg 291 have to attribute an Arab origin to themselves. This is his story:

"At the caputre of Mecca, the Prophet Mohammed was mounted on a 'cidah' (female mehari). He had wrapped his head with his 'ihram' (a garment peculiar to the pilgrim who enters the sacred territory of Mecca). It is since this time that the Tuareg have worn the veil."

What is certain is that this is a very old custom, since Arabian writers have for several centuries called /39/ the Tuareg by the name of "Ahl-el-Litham," or "people of the veil."

Did they adopt this custom for utilitarian reasons, to pro- 173 tect their sight from the brilliance of the sun's rays and to 183 insure their eyes against the dust which rises from the sand? 291 To this question they reply in the negative. It is primarily, they say, a question of modesty and dignity. A Tuareg must never show his mouth, the door through which he introduces food into his body. That is shameful. Even at night he does not take off his veil. When he enters a camp foreign to his 183 tribe, he must lower his veil completely over his eyes so as 291 not to be suspected of having come to seduce. In meetings 76 he also veils himself completely, perhaps in order better to hide his feelings.

It is probably because of this custom that the Tuareg 182 shaves his mustache and he finds it strange that we wear them. 291 302 On the other hand, he wears a full beard.

## Chapter XIX

## The Woman's Saddle

I think it well to give below the following description of 492 the very unusual mehari saddle of Tuareg women.

I had the opportunity to see one, of which I was able to get a sketch (see the accompanying illustration). /40/

It seems that many other saddles are handsomer, with painted wood, and they say that the beautiful Dassine suffered considerable distress when she learned that a beautiful saddle belonging to her had been plundered by one of the insurrectionists at the beginning of our establishment in the /Saharah? Oases.

The woman's saddle, which somewhat resembles a sedan chair, is placed over the hump of the mehari without touching it. It consists of the following essential parts: a rectangular seat of netted strands, supported by four uprights to which are fastened four cushions with holes in the center which rest, two on each side, on the flanks of the mehari. These cushions A are called "afelledoud" ⵎⵎ ⵍⵍ ⵊⵅ , plural "ifelledad" ⵎⵎ ⵍⵍ ⵊⵅ .

The uprights are fastened to each other by two transverse bars on each side.

A chain of iron links B called "imetredj" ⵉⵎⵜⵔⵉⵊ goes around the saddle and passes through the ring of the girth C, which is called "ahif"

Onto the upright with the rear cushion, which is hidden in the picture, is attached an embroidered ornament which has hanging from it strands of wool or colored leather. This ornament D is called "tegarsim"

4: Benhazera--35a G-5 (1905) 1908 MS25 Tuareg MS25
Hoggar

Tuareg Woman's Saddle (Drawn by Corporal Malroux) [41]

Extending the seat there are four small bars, E, one at each corner. Finally, there are four other small perpendicular bars F on the seat. 492

In order to mount, with the camel kneeling, the woman takes the bridle in her hands and sits on the bare withers of the camel (in the place where the man's saddle rests) and, in this position, her legs on the neck of the mehari, she makes it get up. When the animal is standing, the woman places both hands on the two small front bars, E, of the saddle, and, with a slight adjustment, she sits in the saddle, her legs hanging on the withers of the camel.

The top of the saddle is generally covered with a /42/ haïk which is fastened to the four perpendicular bars F, so that the woman is sitting in a sort of hammock.

This saddle is called "tekhaouit" ⵜⴽⵀⴰⵡⵉⵜ . The de luxe saddle, more decorated, is called "araguen" ⵉⵔⴰⴳⵏ .

## Chapter XX

## Education

One cannot say that the knowledge of reading and writing 212 "tifinagh," or symbols for the Tamashek language, is a proof of education, for this knowledge does not have any practical use.

The Tuareg very seldom use the symbols for their language, and use them largely for little inscriptions of no great significance (of a kind which we will see later) on boulders or on the inside of arm bracelets.

When there are letters to be written, they have them written in Arabic, for they fear, with reason, being misunderstood if they should write them in "tifinagh." In fact,

because of the lack of vowels, the "tifinagh" are guessed rather 212
than read, and this system of writing has remained quite primitive.

However, among the Ahaggar Tuareg some know how to [177
read and write Arabic, especially the Issoqqamaren, almost all 191]

[291
643]

The Amenokal Sidi ag Keradji Reading the
Address of a Letter Sent to Him.

of whom understand Arabic because of their frequent relations with the Tidikelt, where they must have lived for a long time (1). It is the same for the Ta'ttoq and the Kel Ahnet, many

1. See section on history /not translated/.

of whom speak Arabic. /43/

Knowledge of the "tifinagh" is rather a diversion for the Tuareg than a useful study. They like to try to decipher inscriptions or to show you, on the sand, the exact orthography of a word.

They have no numbers, and they do not use the Arabic 802
numbers. They prefer to make holes in the sand, and by this rather long process succeed in figuring just the same. A Tuareg, moreover, cannot talk for five minutes without emphasizing his recitation with dots or lines on the sand. If he is asked, "How many days' march are there between this point and that one," he cannot answer any number without marking on the ground as many dots as there are days in his answer.

A Tuareg who has been made to sit on the ground on a [516
blanket, before he begins to talk raises the edges of the 521]
blanket /44/ so as to indulge in his favorite occupation. Certainly if he were transported to France, into a well-waxed apartment, he would be very unhappy and would quickly ask for sand or earth so as to be able to draw his dots and lines.

But this custom has its use when one wishes to have an 487
idea of the road one must travel. The Tuareg who, like all 823
nomads, has a very accurate sense of direction, will draw an over-all map of the route to be followed, with the wadis and landmarks which would be met.

The Tuareg do not have words in their language to denote 177
the days of the week. Those that they use have been borrowed 192
from the Arabic and changed. 805

On the other hand, for their months they have kept some truly Tamashek names, while others are definitely taken from the Arabic. Thus:

1. "Tamessedek," corresponding to Muharram and which seems to be derived from the Arabic "sedeq" صدق "to give alms." It is said that this name means "zekkat" زكاة, or "legal alms."

2. "Talilt tassettafet" (corresponding to Safar). This 773
means "the black month." Here is why this month is so 776
called: "Sidna Slimane (Solomon) was in command of the 805
genii and demons. One day when he was standing leaning on his cane, the "djinns" (genii) told a termite to eat out the bottom of the cane. The termite did the job so well that the

cane broke at the bottom, and poor Solomon fell over, all 773
fours in the air, and was killed in his fall. His death was the 776
signal of liberty for the genii and demons, who spread through- 805
out the world, precisely in that month which was later called the "black month."

3. "Talilt tarer'ert," that is, the "yellow month," 177
(corresponding to Rabia I, or Mouloud, the month of the 805
Prophet's birth), so called, it is said, because it is lighted,
منوّر by the birth of the Prophet. /45/

4. "Aouhim oua izzaren," that is, "the first Aouhim," 825
(corresponding to Rabia II). Aouhim means "fawn of a gazelle." [821]
This is also the name of a star.

5. "Aouhim oua ilkamen," that is, "the next Aouhim," (corresponding to Jumada I).

6. "Sarat" (corresponding to Jumada II). The Tuareg have been unable to give me any explanation of this name.

7. "Tin tineslimine," that is, "the month of the marabouts," (corresponding to Rajab). In the time of the Kharijite doctrine, the Ramadan was put back to the month Rajab, and it is known that the Tuareg espoused this doctrine (1).

1. See Essai sur l'Histoire de l'Islamisme /Essay on the History of Islamism/ by Dozy.

8. "Amezzehel," that is "he who runs," (from the root "zehel," to run), thus named because it has only 29 days and it precedes the arrival of Ramadan. It corresponds to Shaban.

9. "Azzoum," that is, "the fast" (corresponding to the [177
month of Ramadan), a name taken from the Arabic word 192]
الصوم "essoum," the fast.

10. "Tessessi," that is, "act of drinking" or "libations," because one may drink after the fast. It corresponds to Shawwal, the month in which the feast called "A'id Ser'ir" takes place.

11. "Djer mouhaden," that is, "between prayers," because it comes between the feasts. It corresponds to Zu'lkadah. 805

12. "Tafaski," that is, "the sacrifice." It corresponds to Zu'lhijjah, in which the feast called "Aïd el Kebir," also called by the Arabs "Aïd el Adha" عيد الأضحى, or "feast of sacrifices," takes place. [177]

There is no book in Tamashek, at least that is what was told me. However, the secretary of the amenokal Moussa /46/ ag Amastane informed me that there was, at the Ahaggar, a book written in the Tamashek language, but with Arabic characters, which was the translation of a work on law of which Ibn Achir was the author (1). 177 213

1. This book is at present in the possession of someone called Salakh ag Meguemmed of the Isoqqamaren. /47/

## Part Two

## The Tuareg in their Public Life

### Chapter I

### Nobles and Imr'ad

Duveyrier has described so well the characteristics which distinguish a noble from an amr'id (1) that I think it 114 565

1. Les Touareg du Nord /The Northern Tuareg/, pages 331 to 335.

unnecessary to review this matter after him. I want to limit [114]
myself simply to noting some observations which I was able 565
to make in the course of my stay among the Tuareg of the Ahaggar confederation.

First of all, the striking thing is that at the end of a short period of contact, one can easily guess if one is in the presence of a noble or of an amr'id. His look, his walk, his carriage, his features (if the veil is lifted to the forehead), an indefinable something, all lead correctly to the conclusion that the Tuareg before you is really a noble. However, in the course of palavers im'rad, many of whom are rich, often come as well dressed as the nobles. But their features are less fine, their bearing less easy, their look less assured, and one thinks, "This is an amr'id."

Furthermore, the Tuareg will tell you, "An amr'id may /48/ act well, dress in fine clothes, and bear fine arms, but he is still 'iamir'ed, '" that is to say, "he lacks something," [196]
and it is from this verb that they have derived the name amr'id, plural imr'ad.

Should it be thought that the imr'ad are a less pure race 173
than the nobles because of long-ago crossings with the Negro 174
race? The sheik Ben Djellas states that the mother of the 565
Issoqqamaren (an imr'ad tribe of the Ahaggar) was bought by the first inhabitants of Es-Souk. On the other hand, we will see how the Adjouh-n-Taheli and the Tedjehé-n-Efis came from Aïr to place themselves under the protection of the noble Kel R'ela and Taïtoq.

Should the admitted differences be attributed to the state of subjection and dependence in which the imr'ad have been for a long time in relation to the nobles? I would be tempted to accept this second hypothesis as more in line with the facts of history.

And from what I have seen and ascertained, I cannot 565
bring myself to translate the word "amr'id" as "serf," a word 631

which brings to our minds the idea of the serf attached to the 565
glebe and sold with the domain which he cultivated, but rather 631
as "client, bondsman, tributary."

In fact, if the amr'id pays the "tioussé," or tribute, to the noble, if he "lets him taste a little of what he has," according to his expression, if he is dependent on the noble, he nevertheless enjoys a freedom of action which the serf of the Middle Ages did not know. He has a right to the noble's protection if he is attacked, but he marches and fights with him [701]
armed with the same arms. In a raid he also shares with him [727]
and receives his portion of the loot, a portion which varies according to the tribe and which seems to have been fixed according to an ancient contract, in exchange for the protection granted.

And we will find the most convincing proof in the appoint- 565
ment of the amenokal. The imr'ad take part in this: it is 631
they who speak first and state whether they accept the new 643
amenokal, whether they have confidence in him, whether they promise /49/ faithfully to pay him the "tioussé." And he, on his part, promises to give them help and protection against all.

The noble makes it a point of honor to keep this promise. 558
It would be a shame, "el r'ar," according to his expression 565
(from the Arab word "el aâr" , not to avenge an insult 577
or an injury rendered to one who pays him the "tioussé." 631

## Chapter II

## The Tobol. Inheritance

Concerning the tobol. The "tobol" originally was a drum 202
made of a large gourd and covered with stretched hide, which 534
the chief of the tribe sounded to gather his clients /dependents/ 643
to tell them that pastures must be changed, etc. It was the 565
insignia of command.

Duveyrier has told us that the Imanan (Cheurfa) sultans 534
entrusted their tobols to a marabout tribe, the Ifor'as-oui-n- 565
Tobol. This practice is maintained: noble chiefs pretend to keep the tobols with them, but they do not use them any more.

It is said that the nobles have access to the tobols because 534
some day, according to the law of inheritance practiced among 565
the Tuareg, they or their descendants may have the hope of 643
obtaining the tobol, that is, the right to rule.

On the other hand, it is said that a noble has lost his rights [558]
to the tobol if, through a misalliance, his children are no longer of a pure noble line /race/. For example, the Kembiben, the Oulad El Goute, and the Oulad Ibra (among the Kel R'ela of the Ahaggar) can no longer hope to have the right to rule, to the tobol. Similarly, the son of a noble and a "tamr'idt" (feminine /50/ of "amr'id") is an amr'id and loses all right to the tobol which his father had.

From this first meaning, the word "tobol" ended by mean- 534
ing the group of nobles and imr'ad tribes who answered the call 565
of the tobol, and one might, for example, say, "The tobol 631
of the Kel R'ela (a noble tribe) includes such-and-such imr'ad tribes, " or again, "A certain proportion of imr'ad makes up the tobol of the noble Kel R'ela. "

The word "tobol" is certainly not of Tamashek origin, but [192]
definitely Arabic. In fact, "tobol" طبل in literary Arabic means: 1) drum, 2) kettledrum, 3) tribute, tax; and in order to say "I do not know who that man is, " the early Arabs said, ما ادري اي الطبل هو I do not know of what tobol he is" (1).

1. Arab-French dictionary by
A. de Biberstein-Kazimirski.

Thus I believe that this usage was introduced by the early [174
Arabs who, in the first century after the hegira, pushed their 797]
conquest through the country inhabited by the Tuareg in order to convert them to Islamism.

Concerning inheritance. We have seen that private in- [428]
heritance is passed on to the natural heirs, according to the 611
rules of Mohammedan law. As for political inheritance, that 631
is to say, the right to the title of chief of a tobol and to the collection of the "tioussé," or tribute from the imr'ad, this is handed down according to special rules.

Duveyrier has told us that these rights are handed down [114]
"to the oldest son of the oldest sister." I would never have dared to go on record as disagreeing with a statement from such an authority if I did not have complete assurance that the order of inheritance is not exactly that which Duveyrier indicated, and I will furnish proofs of this assurance in the chapter entitled "Genealogy" in the second book of this study /not translated/.

I would therefore say that with the Tuareg when a tobol chief dies there are to succeed him: /51/

1. His brother (the oldest of those living, if there are several)
2. The oldest son of his maternal aunt
3. The oldest son of his oldest sister

This last one is only the third in line.

It is the ancestress, it is her daughters who hand down to their children the right to the "tobol." At present the Kel [173]
R'ela trace back their laws of inheritance and of access to the tobol to Kella, their ancestress, and the Taïtoq to Sakina, a contemporary of Kella and a collateral relative.

The son follows the tobol of his mother. Thus, if the father belongs to the tobol of the Kel R'ela, for example, and the mother to the tobol of the Taïtoq, the son would belong to the tobol of his mother. This is what happened to Sidi ag Keradji, the present amenokal of the Taïtoq and the Kel Ahnet, whose father was of the tobol of the Kel R'ela and whose mother was of the tobol of the Taïtoq. The same applies to Attici ag Amellal and his brother Anaba, whose father belonged to the tobol of the Tedjehé Mellet, and who /themselves/ at present belong to the tobol of the Kel R'ela.

## Chapter III

### The Amenokal. The Amr'ar

The northern Tuareg, after the downfall of the Imanan 173
sultan, who held absolute rule over them, regained their inde- 631
pendence. Then two confederations were formed: that of the Azdjer and that of the Ahaggar, each including several noble tribes. /52/

We will see later ("Origin of the Tuareg" /not translated/) 631
that among the Berbers several tribes often formed a confed- 643
eration under the supreme rule of a single chief and that the right to rule belonged specifically to certain tribes who held a kind of supremacy over the others. And this is what we will find again. Among the Azdjer the tribe that held this kind of supremacy was that of the Orar'en; among the Ahaggar, it was that of the Kel R'ela. The amenokal of the Ahaggar was always chosen from the tobol of the Kel R'ela.

The title of amenokal, although subject primarily to the 643
laws of heredity which we have mentioned, had to be ratified by the delegates of the nobles of all the tribes and by those of the imr'ad of all fractions of the confederation. The inheritance must be confirmed by election, and this agrees well with the democratic spirit of all the Berbers and with all that is known of their history and of the theories introduced to them by Kharijism, of which they were adherents.

As we have said, the imr'ad had to speak first, to say if [565]
they would accept the amenokal designated by heredity, and agree to pay him the "tioussé." The nobles spoke later. The discussion was open and an agreement was reached. Sometimes it was not reached. We saw an example of this at the death of the amenokal of the Ahaggar, Aïtar'el ag Biska, in 1900. The law of heredity called Mokhammed ag Ourzig as amenokal, but the latter, opposed by the imr'ad and the majority of the nobles, was not elected and saw his rival, Attici ag Amellal, preferred.

The amenokal, who at first had supreme command, later 643
had to yield some power to the benefit of some chiefs and to 642
give them special "tobols" with some amr'id tribes, which
did not pay the tioussé to him but paid it to the chiefs of the
new "tobols." This was a source of continual arguments and [668]
wars (see the historical section, Book Two /not translated/),
and one thinks in spite of oneself of, "Who made you a count?"
and the answer, "Who made you king?" /53/

Before the French occupation of the Saharan Oases, each tobol had its own independant life, and the amenokal, or supreme chief, did not interfere in any way in the internal government of the "tobols." He only intervened, with the agreement of the djemaâ, to straighten out disagreements which might arise between tribes or to call to arms all tribes of the confederation against a common enemy, as during the war between Azdjer and Ahaggar.

The chief of each "tobol," of each noble tribe, or of 631
each imr'ad fraction, all indiscriminately bore the title of 643
"amr'ar" , which means primarily "old man,"
like the Arab word "cheikh," all the meanings of which it carries. Thus, the chief of the tobol of the Ta'ltoq bore the title of amr'ar. For reasons of a political nature, the title of amenokal was conferred on him, which brings to two the number of amenokal of the Ahaggar confederation.

Thus the amenokal was the supreme chief of the confederation, and at the same time chief of his "tobol," while the amr'ar was the chief of a less important "tobol" of an imr'ad tribe.

## Chapter IV

## The Tiousse

We know that the "tiousse" is the tribute that the imr'ad 651
must pay to the nobles in exchange for the protection which they receive.

This "tiousse" is of two kinds: the first is that which is paid to the chief of the tobol, who may at the same time be the amenokal. This "tiousse" is fairly well fixed, but it varies /54/ nevertheless according to whether the year is good or bad. It is usually paid in autumn, after the date harvest in the oases of the Touat or of the Tidikelt. It may consist of a certain amount of dates or bechna, camel calves, sheep, melted butter, etc., a share of what is brought back by the imr'ad who go in caravans, or finally a share of the loot taken by the imr'ad on raids.

In some fractions, a few groups do not pay the "tiousse" to the chief of the tobol, but to a noble of some ancient tribe, extinct today, which had formerly acquired a small fief, for example, the fraction of the Aït-Loaïn (of the tobol of the Kel R'ela).

There is, as a result, an amazing complexity in which, nevertheless, the Tuareg find their way.

The other kind of "tiousse" is that to which the imr'ad are daily subjected. Each of them and each family among them knows that the maintenance of such-or-such a noble devolves upon them, and he continually comes to beg something. Sometimes the amr'd gives; at other times he gives less. When the noble knows that an amr'id has returned from a caravan and has brought good things, dates for example, he comes and demands his share.

I saw a camp of Iouarouaren (an imr'ad fraction of the Ta'ltoq tobol), established near the tents of Ta'ltoq nobles, move in order to settle farther away. They had come from the Tidikelt with dates and other produce, and the noble women were continually coming to beg something at the imr'ad camp. So their chief In Chikadh gave the signal to leave and said that this was in order to put an end to the importunities of the nobles. /55/ 166 651

## Chapter V

### The Raid. The Loot. Its Restitution

The raid is the life of the Tuareg. He needs it. Here it is that he, the noble especially, seeks part of his means of subsistence. The favorite raids used to be those made against the Sudan, the A'ir, and the Niger, because of the negros and negresses who were captured. But the Tuareg is well aware now that French authority surrounds him on all sides, to the north and to the south, and that that system has ended. This is one of the reasons that make him regret his surrender. 648 721

The Chaânba were as predatory and as independent as the Tuareg. They also raided continually. Since their surrender, it is known what a considerable change has taken place, and we have every reason to believe that this will happen among the Tuareg under our influence.

Usually when a tribe has been raided, unless a state of war has been declared, it sends a deputation, a "miâad," to demand from the djemâa of the raiding tribe the loot which was taken from them. The envoys must make their mounts kneel before the tents of the notables of the djemâa and beg for restitution. 728

As a rule, an amicable solution is finally reached, but the 728
part of the loot which is returned to the deputation is always
far less than that which was taken. The Tuareg say, "Alal
ouala," that is, "the restitution is never complete."

It may also happen that the raiders refuse to return anything. 721
The raided tribe, if it [701]
considers itself too weak, 728
solicits the support of
another tribe with which
it has good relations, and
then there is fighting. /56/

[411]

Dautheville
Tuareg Shield

When caravans of 484
traders have been raided, 486
since these caravans have 721
usually placed themselves
under the protection of
noble tribes to which they
pay dues, the controversy
is settled between the pro-
tecting tribe and the
raiders' tribe.

In the Ahaggar it seems that the old amenokal, Altar'el, 728
established the restitution of loot taken from caravans protected
by the Azdjer in the following manner:

1. Complete restitution of the pack camels taken from the caravans

2. For each load of merchandise taken, one "amadjour" camel for each man who took part in the raid and rode a mehari of his own

3. One "aleggues" (a young camel of three years) or a half-grown camel for each man who borrowed or hired the mehari which he rode in the raid.

The arms of a Tuareg and the harness for his mount have 114
been described in detail by Duveyrier, and there is no need to
review them here. /57/

## Chapter Vi

## War

This is a big word to use for a series of fights, raids, and 721
battles without great losses, but I still cannot find another to describe, for example, the struggle which engaged the two confederations of the Azdjer and of the Ahaggar and which lasted almost three years, with long intermissions.

No description could give a more accurate idea of it than the detailed account of this struggle which was told to me and which may be read later in the chapter dealing with the history of the Ahaggar /not translated/.

## Chapter VII

## Religion. Marabouts. The Fast. Religious Orders

The Tuareg, taken as a whole, are not at all religious. 779
This is due first to the fact that almost none know Arabic and 77
consequently the Koran, which may not be translated. Be- 795
sides, it is known that the Tuareg, like all Berbers, espoused the doctrines of Kharijism in the eighth and ninth centuries of our era, and that it has taken a long time to guide them back to orthodoxy.

During this period, Salih, son of Tarif, put out a Koran in 795
the Berber language, which was destroyed at the time of the 797
repression, and we will see that the Tuareg have kept among their superstitions "survivals" of the teachings of this Salih.

An example will illustrate well the present state of mind of the Tuareg from the religious point of view: /58/

I was told in the Ahaggar that youths may not say their 561
prayers in the presence of women for, in the course of genu- 562
flections and prostrations, they have to show their posteriors, 782
which is very "shocking"! On the other hand, old men can 834
pray before women without being indecent.

Many, besides, in order to say their prayers place them- 782
selves behind the imam (either an Arabian taleb or a Tuareg 788
who knows a little Arabic), and they make their genuflections, 793
saying, "Allahou akber" (God is the greatest) every time they
hear it said by the imam. That is all of their prayer.

There were many who told me that they did not observe 785
the fast of Ramadan, among others Badjloud, the amr'ar of 771
the Kel Ahnet. On the other hand, the Issoqqamaren
(fractions who have long been in contact with the Arabs and
still are) are more religious, and they all observe the fast.

Among the Ahaggar Tuareg there are, nevertheless, some 792
truly religious men, but they are known and pointed out and
pass for marabouts, for example, Moussa ag Amastane, Beketa
ag Ibrahim, and the Oulad El Mir'da and Oulad Mokhammed ag
Sadik.

Although the Tuareg is not religious, he nevertheless
has great respect for the marabouts whom he naively admires,
always on condition that these marabouts do not interfere with
him. Thus the marabout Beketa ag Ibrahim stated that the
dates coming from the Tidikelt, recently occupied by the
French, were forbidden by the religion. He changed his mind
later. But now, every time that he goes to ask an amr'id for
dates, the latter comments that they came from the Tidikelt
and are therefore forbidden by the religion, and Beketa answers,
"No. All that is over now," and accepts the dates.

Religious orders are quite widespread, especially among
the Issoqqamaren. Going by caravan to the Tidikelt or the
Touat, the Ahaggar have joined the order of the Tijaniyyah,
which numbers most of its adherents among them, and that
of the Qādiriyyah. Others (usually they all are those who have

made the pilgrimage /59/ to Mecca), have joined the order 792
of the Senusi /Sanusiyyah. Ed./ on their way to Djer'boub.

But I doubt whether this affiliation is really sincere. All the members do not want to wear their beads around their necks, but keep them in their pockets or in their luggage while they are traveling. They say that if they wear them openly they would be accused of wanting to seduce women! Finally, they are not allowed to wear them any time that they do a reprehensible deed, that they have relations, even with their lawful wives, etc.

On the other hand, having remained naive and super- 789
stitious, they all believe in the efficacy of amulets, "tira," with which they are covered. There are even some who hang them on the necks of their meharis.

At each new moon the Tuareg says his prayer. His hands 782
open like a book, he looks at the evening star and expresses 788
the wish that he may be alive at the next moon.

At the feast of Mouloud (birth of the Prophet), they hold out their hands, saying, "Asarouf" (pardon), in order to have their sins forgiven. But if there is no taleb in the tribe to remind them of the exact date, they forget and do not think of it.

## Chapter VIII

### Superstitions. Beliefs

The Tuareg are very superstitious. Everywhere they see 771
genii and demons, in the mountains, in the trees, in water- 776
skins, etc.

Thus, in camp they do not want to go to bed beside water-skins or ashes, because of the genii, "alhinen" /ⵍⵃⵉⵏⵏ, /60/
or ghosts, "kel esouf" ⵇⵍ ⵙⵓⴼ (people of the void), who live there.

When they want to stretch out at the foot of the tree called "el yatil" in Arabic and "tadjart" ⊕ⵜⵜ in Tamashek (a kind of acacia), which is inhabited by jinn, they must first wound it with a stone, and stones are always to be found at the foot of these trees. One can also see the wounds made in the bark. 776 824 789

The "teborak" (Balanites aegyptica) is also a haunted tree. If one wants to rest under its shade, it is first necessary to break seven of the tree's thorns.

There are also "kel esouf" in the place where an animal has had its throat cut. 776

Mount Oudane is haunted, as are many others. [823]

These superstitions are probably survivals of their old religion, before their conversion to Islamism. Like them, "The Arabs of the pre-Islamic period worshipped jinn, or genii. The deserts and mountains where one sometimes gets lost for entire weeks are full of beings of this kind.... They can do much harm and much good.... They live in rocks, trees, or statues. Each tribe, or sometimes a group of tribes, had its special jinni; its rock, its tree, its own image, before which an appointed family carried out priestly duties" (1). 174 771 776

1. Essai sur l'Histoire de l'Islamisme, by R. Dozy, pages 5 and 6.

The Tuareg have many other superstitions. Thus nobles would never kill a "uran" (varanus), which in Tamashek is called "ar'ata" •+⁝ , and a fortiori would not eat it. Sidi ag Keradji and Aziouel ag Ser'ada told me that the uran is the maternal uncle of the Tuareg, and Sidi told me the following legend: "Seven nobles had killed a camel belonging to Sidna Nouh (Hoah). Among them there was a noble Tuareg. To punish them God changed them, one into an uran, another into a jackal, a third into a chameleon, etc. /61/ The uran was the noble Tuareg. The camel that was killed is now in the sky: it is the Great Bear. The Polar Star, 'Bel Hadi', is its head." 565 825 773 784 [821]

Should one see here some agreement with what we have 114
read in Dozy, or might the uran have been a "totem" among 825
the Tuareg, as among the Redskins of America?

Nobles do not eat the "dobb" (star lizard) either, which 262
is called "aguezzeram" in Tamashek. As a reason for this 565
abstinence, they quoted me these two lines of nine syllables: 825

Our ekcher' aguezzeram idit [539]
Iladhou ichchaden ilir'it.

This means:

"I do not eat the aguezzeram because it smells bad and has a rough skin" (1).

1. Iladhou is put instead of "ili adhou." Similarly, ilir'it is put for "ili ir'it." Ir'it, plural ir'ten, means hide (of beef, camel, etc.).

Finally, they firmly refuse to eat chickens and eggs, and chickens are found nowhere among the Tuareg, except among [231] some "harratine" /Haratin/ Arabs of the Ahaggar villages. They claim that this abstinence dates back for a long time. Azioueel ag Ser'ada when pressed ended by telling me that it was because chickens seek their food in manure. In the Niger, according to a study by officer-interpreter Merle, the French are called egg eaters. But I believe that the following is the 262
real reason for this abstention: The Tuareg, like all the 565
Berbers, had embraced Kharijism. Among the chiefs who took 825
part in the insurrection of the Kharwarij /plural of Kharijite. 773
Ed./ was Tarif, who made the first invasion into Spain (the city of Tarifa still bears his name). His son Salih, or Salah, claimed to be a prophet and composed a new Koran. Elijah, or Elias, son of /62/ the latter, openly remained Moslem, and it was only Salih's grandson, Jonah, or Younes, (end of the eighth century), who spread the new doctrine, which was a much modified Islamism. According to one of the precepts of

this doctrine, the scholar Dozy tells us: "There was no muezzin, 262
or crier, to call to prayer; people were governed by the crow 565
of the rooster; so no one, except in case of dire necessity, 825
might kill roosters or hens or eat eggs" (1). 773

1. Essai sur l'Histoire de l'Islamisme,
by R. Dozy, pages 348 and 349.
Neither mosques nor muezzins are [171]
found in Tuareg country. See also
l'Histoire de l'Afrique Septentrionale
/History of North Africa/, by E.
Mercier, pages 228 and 255. Volume 1.

Legends and stories are also known on the subject of 773
Ahmamellen and his nephew Elias. Hanoteau told them to us. 823
At Tamanrasset (Ahaggar) the Tuareg showed us a curious
breech in a large "gara" that bounds the horizon to the east.
They call it "Tiouit-n-Elias" (Elias' cut), and they say that
Elias made this breech with one stroke of the "takouba." The
piece removed, an enormous rock, lodged in a wadi three kilo-
meters from there, and we were shown it in passing. The
breech has also been named "Elias' Breech."

Elias is the Arabic translation of Elijah, and Younes that of [551]
Jonah. These two proper names are still used among the Tuareg. [174]
Might there not be a relationship between this Elias and Elijah,
son of Salih?

The Tuareg say that Ahmamellen was a man of extraordinary 174
size and strength, and that he was the equal of an army. Might 773
it have been Salih himself who claimed to be a prophet, then
disappeared in the east after having told his followers that he
was the Mahdi and that he would come back to fill the world
with justice when the seventh king should be mounted on the
throne?

There are also lucky or unlucky days. The lucky days, 777
those which are recommended for starting on a journey, are [484]
Friday after prayer, Saturday morning, and Monday. /63/
For the lucky day of the month one first counts 2 from the
index finger and, coming back to the index finger, 7, 12,
17, 22, 27.

The unlucky days are Sunday and Wednesday.

The Tuareg also believe in the evil eye, "tahott." 754

An eclipse is the sun's raid on the moon, and vice versa. 821

Finally, there is a very curious custom of which Duveyrier 769
has spoken, which is that of consulting old graves. Usually 787
it is the women who go to consult them. They dress well
and must avoid having on themselves anything of iron or steel,
even a needle. They lie down near the grave, and the
"zabbar" (ogre) inhabiting the grave appears to them in the
form of a giant with eyes as large as a camel's, and gives
them the answers they want. They are consulted especially
in order to get news of absent ones, people gone on a raid
or in a caravan, from whom there has been no news.

## Chapter IX

### Stock Raising. Flocks

Camels, sheep, and goats constitute the chief resource 233
of the Tuareg, as of all nomads. Camels especially are the
object of all their care, since these give them the greatest
service. They rely greatly on camels, ewes, and goats be- [234]
cause of the milk, of which they drink a great deal, and melted
butter, ʔoudi," which they make.

They use all the hides: those of camels for sandals, 237
containers for butter, watering troughs, etc.; those of sheep 281
or goats for waterskins and the manufacture of tents, leather
clothes, etc. /64/

Hoggar

000

Aïn Redjem in the Botha Wadi
(Immidir)

233
312

Tuareg Watering Their Sheep at the Tin-Zaouaten Well

They use camel hair to make rope. They are fond of 237 283
camel meat, and it is they who supply the markets of the 262
Tidikelt with it. 439

There are very few cattle in the Ahaggar, barely thirty, 233
and almost all these belong to Si Mokhammed ag Otsmane, 492
of Tazerouk. They are used to draw water from the wells [312]
into the ar'erems. The pasture is scanty, and besides the
cattle easily wear out their hooves on the rocks and stones.

In the Koudia, because of the cold which prevails there 233
and the high altitude, there are many small turrets of dry 343
stones, /65/ empty inside, in which the Tuareg confine lambs
and kids at night to shelter them from the cold.

The Ahaggar do not have a large number of meharis, and 233
they do not like to sell them, especially the good ones. Among [435]
themselves, to set the value of a mehari, they say, "Such a
mehari is worth two, three, or four camels." All their meharis
are trained to start at a gallop. The Tuareg has great patience
with the training of his mehari and never mistreats it. He
confines himself to persuading it by voice and foot, and it is
perhaps for this reason that the Tuareg mehari is much more
silent than the Arab mehari.

The foundation of the pastures of the Ahaggar is aremmas 137
(Atriplex halimus, Salsolaceae). This plant is quite laxative. 233
So when the year is bad and drought prevails, the Ahaggar are
found emigrating toward the Adhar'. There are fine pastures
of "had" (Cornulaca monacantha, Salsolaceae) in the south of
Tin R'arhou, but there is no water. Moussa ag Amastane /66/ [312
intends to have wells dug there and has requested our help and 648]
advice for this purpose.

As a rule the Tuareg let their camels out to pasture with- 233
out herders, and they find them again at the well or by track-
ing, unless they entrust the herding to children or negroes.

/67/ A young camel is called "abal" without designating 192
its age. A camel in general is called "amadjour," plural 233
"imoudjar," or else "amiss," plural "imnass." A female is

called "talemt, " plural "tillemine"; one that has calved within [192] 233
in a year is "t-n-aouara"; one that is heavy with calf is "timettirout." A stud camel is called "amali, " plural "imoulaï."

The wool-bearing sheep does not exist in the Ahaggar. There is only the hairy sheep which the Tuareg call "ekrer, " plural "ikraren." This sheep is covered with a pelt of long, rough hair, and its legs are longer than those of wool-bearing sheep. This is why it got the name ovis longipes, or sheep with long legs. The meat of this sheep is good and does not have the smell characteristic of the wool-bearing sheep of Algeria.

On the oases of the Tidikelt and Touat, only this kind of sheep is found.

As to the goats, they are of two kinds: those with long hair and those with short hair. They have no characteristics which distinguish them noticeably from the goats of Algeria.

## Chapter X

### Trade. Caravans. Market Prices

The Ahaggar Tuareg have trade relations with: 1. the 439
Saharan Oases (Tidikelt and Touat) for dates, "chegga" (blue cotton), "malti" and "mahmoudi" (white cotton), "chach" (white muslin), haïks, smoking tobacco, "taba, " and snuff, "chemma, " tea, and sugar. /68/

They bring in male and female camels, hairy sheep, goats, donkeys, melted butter, and sometimes products that they have brought back from the Aïr.

2. Aïr and Damergou. Having no industry, they buy all manufactured goods from the Aïr. Thus, by means of barter (aside from bechna) they acquire arms: spears, daggers, sabers,

and shields; mehari saddles, saddlebags in all shapes of carved 439
and colored leather, little leather boxes, glossy blue cloth, "ilechchane," gandurahs with sleeves, black cloth ("kehal") for veils, and finally "tikamarine," or dry cheeses. In the Aïr saddles for horses are made, shaped like Mexican saddles and having round stirrups of heavy copper covered with leopard-skin (the Amenokal Moussa ag Amastane has one).

To the Aïr, and sometimes to the Damergou, they bring salt taken from the sebka of Amadr'or, "chegga bought in the Tidikelt, camels, donkeys, dates bought in the Tidikelt, "teheredjlé" (Hartemisia herbalba, Composeae), etc.

[133]

Crater of the
Ouksem Volcano

3. Adhar and Niger, from which they get bechna, rice, sheep, and camels. They bring in salt, "chegga," and dates.

4. Ghat and Ghadames, but seldom. There they buy extra fine burnooses, sabers, sugar, tea, and "chegga." They bring in camels, waterskins, camel-hair ropes, and sheep. /69/

In addition, the people of the Tidikelt, especially the Ahl-Azzi, come to buy wheat and barley on the spot, which they gather into their "ar'erems."

The Tuareg of the Ahaggar would like very much to have, 439
like the Azdjer, the protection of the big caravans which go 484
from Tripoli to Ghat, to the Aïr, and to the Sudan. Thus they 427
would hire out their camels to traders, and this would be an important source of revenue for them (the Aï-Loa'in already hire out their camels toGhat traders). They would very much like to see this current turned toward the Ahaggar, and we have the greatest interest in urging them on this course.

All the transactions that they make take place by means 437
of barter. The most important profits that they realize result 439
from barter carried on in the Aïr and the Niger with the salt, "chegga," and dates that they take there.

## Market Prices in the Ahaggar

There are no set prices for meharis, or male or female 435
camels. However, the prices for young camels are fixed and known. Thus:

A four-year-old camel, "aqnefoud," is worth 100 francs
" three-year-old " , "aleggues," " " 75 "
" two-year-old " , "aledjoudh," " " 50 "

For sheep and goats, the price basis is the goat, which is worth 3 mitqals, or 7.50 francs. A ewe is worth a goat and a half, or 11.25 francs, and a ram, two goats, or 15 francs.

A load of dates sells in the Ahaggar for 75 francs.

Barley sells for 1 franc per "guessaâ" or 60 francs for a load of 60 "guessaâs." Wheat is 1.25 francs per "guessaâ," or 75 francs per load.

"Chegga" sells for 1.25 per meter. /70/

Melted butter is sold at 7 "mouddas" (a small wooden measure) for a goat, or 7.50 francs.

## Market Prices in the Ahnet

One female camel, 50 to 60 mitqals (125 to 150 francs)
One load of dates, 30 mitqals (75 francs)
One sheep, 7.50 francs
One goat, 10 francs
Melted butter, 7 "mouddas" for 7.50 francs
One donkey, 25 francs

4: Benhazera--61G-5(1905) 1908 MS25 Tuareg MS25
Hoggar

It is to be noted that the Tuareg fasten their camels 233
one behind the other, Indian file, when they go on cara- 484
vans. Thus they are more orderly than /71/ Arab caravans.
In particular, fewer shouts, oaths, etc., are heard. The
Tuareg caravan passes almost silently, without disorder,
and this is all to the good.

Tuareg Caravan

## Chapter XI

### Industry. Blacksmiths

There is no industry in the Ahaggar. They do not exist. 433
One cannot describe as an industry the minor arms repair that 326
a few blacksmiths make, nor the little wooden implements that the Tuareg make for their personal use.

We have seen above that the Ahaggar Tuareg buy all 326
their arms in the Aïr. They are not made at home. [439]

In the Ahnet I watched a blacksmith, Eg Ahnet, work. He was mending spears, sabers, and daggers, and he told me that he also made some jewelry when they were ordered from him. He asked for preserve cans to make his settings. His tools were quite primitive. He had:

A bellows, "tissedhi" , made of two iron tubes set into a hollowed piece of wood onto which were fitted two waterskins open at the ends. These openings were held by rings and furnished with handles. The iron tubes blew the air into a clay furnace, "anefif" , set before the fire. /72/

An anvil, "tahount"
Files, "azezoua"
Pliers, "ir'emdane"
A large hammer, "afadhis"
A small hammer, "tafadhist"
Tin-snips, "timouda"
A small hatchet, "tetaout" , which he had made from a bent branch.

Finally, a rake, "asekredh" , which he hafted with two wooden handles each time he wished to use it.

He also made locks and keys of copper. He complained [414]
of hard times and how the craft no longer prospered. Where [178]
was the age of the great raids, the expeditions from which arms were brought back to him to repair and sharpen! Where are we going? Times have really changed!

Many legends circulate about blacksmiths. They say that 326
because they work with iron and fire, they will go into the fire 565
of hell. They are scorned, first because they devote themselves
to a manual craft, a disgrace in the eyes of a Tuareg, and
secondly because it is said that they are of Negro origin. It is
also claimed that they were pagans and that their conversion
to Islamism is not sincere. They are also taken for sorcerers. [754]
The sheik Ben Djellas (see the Appendix /not translated/) says
of them: "Blacksmiths hate God and his Prophet, and they
betray God and his Prophet." Their ancestor was called
Tamamenet.

The blacksmith does not belong to any tribe. He goes
where he pleases, wherever he finds work. Sometimes he goes
to war, and he is said to fight well, but a noble Tuareg will not
cross swords with him.

In the Ahaggar a blacksmith is called "mr'allem," variation 326
of the Arab "maâlem." However, there is a word in Tamashek [192]
for him, "inedh," plural "inedhane," but it is not used. /73/

At Tamanrasset I was shown many ancient graves (of the [764]
"chouchat" shape) which, it seems, were the burial places of
a tribe of blacksmiths said to have been massacred and died of
starvation a very long time ago.

The gardens of the Ahaggar "ar'erems" are worked by the 241
Harratine of the Touat and the Tidilkelt, who bring their tools 312
with them. It is they also who dig the "foggaras," or covered 565
wells, and all the tools that they use come from the Saharan Oases.

## Chapter XII

## Agriculture. Ar'erems

While in all of the Ahnet no trace of agriculture is to be 241
found, however small, because of the scarcity of wells, whose 361
312

241
312
361

output is only enough to water the flocks, in the Ahaggar, on the contrary, a mountainous country where there is some water everywhere, a number of small villages called "ar'erem" ⵄⵔⵔⵉⵎ, plural "ir'ermane" ⵉⵄⵔⵔⵉⵎⵏ, have been built.

312
565
361
463

Since the Tuareg, nobles or imr'ad, dislike all manual work, these villages could not have been built without the indispensible help of the Harratine of the Touat and the Tidikelt, whom the Tuareg call "Izeggar'en" ⵉⵣⵖⵄⵔⵏ, meaning "mulattoes." Everything was made by the latter: the wells, /74/ "tounine," which are used for irrigation, as at Tazerouk; the "foggaras," or covered wells, "ifelane," and their irrigation canals as at Abalessa, Tit, and Tamanrasset; the fitting up of springs, as at Tadjemout. The Harratine made the gardens and became khammes of the Tuareg, landowners. They settled in these villages and there built huts of "diss" (Imperata cylindrica) or of "berdi" (Typha angustifolia) and little houses of baked earth.

[342
824]

241

The Harratine grow wheat, barley, and bechna in these gardens. These are the three essential crops, to which they add some vegetables: onions, kabouyas, or gourds, watermelons, and "guerroum" (a kind of long melon which is eaten green, like a cucumber, before it is ripe). Finally, at Tit they /75/ have planted some fine fig trees and a vine which yields a grape that seems delicious at this latitude. Similarly, at Abalessa, there are some vine slips and a fine palm.

Ideles (Koudia)

The gardens, or rather the fields, are enclosed by a hedge to prevent the depredations of the camels that graze free at night. But there are some that do not have this protective barrier, and the Harratine are forced to stand guard at night, turn, and turn about, lighting fires to drive the camels away from the crops.

4: Benhazera--64a G-5(1905) 1908 MS25 Tuareg MS25
Hoggar

137
291

A Fig Tree at Abalessa

241 Usually, there are six khammès per field, and each of
312 them has a right to water for one night and one day. The water, brought from the foggara, spreads into the "madjens," or reservoirs, as on the oases, there to be divided among the gardens by means of saguias, or irrigation canals.

[764]

Herhafok Region

In the Left Foreground an Ancient
Grave in the Chouchat Form
(Koudia)

241 The khammès receives as his pay:

1. A fifth of the crop
2. The barley which he sowed in the irrigation canals
3. A load of wheat in winter and a half load in summer, for his personal consumption.

245 In the Ahaggar there are also small oases of palms which were planted by no one knows whom, for example, at Tibedjehine and at Silet (Ahaggar), at Djor'raf, Tafarakrak,
[423] and Teguift (Immidir). The Tuareg who own them leave them untended and are satisfied to go and gather the dates when they choose. These palms, which get no care, also have a great mass of dry djerids hanging to the ground, which makes it very difficult to climb them. Perhaps this is to prevent theft of the dates? /76/

From the fact that these palms, even though not cared for, produce dates which, if not of good quality, are still quite

edible, and considering also that there is a very fine palm at 245
Abalessa (which could become a splendid oasis since there is
no lack of water), one may ask if the creation of an oasis of
palms in the Ahaggar might not be tried with success. But the [438]
Ahl Azzi and all the inhabitants of the Tidikelt, who live
entirely on the sale of their dates to the Tuareg, have persuaded

[361]

Haratine Gourbi at Ideles
(Koudia)

the latter to the contrary, that the climate of their country is
not suited to growing palms. Besides, the Ahaggar do not in [185]
the least wish to undertake plantations from which one could
expect no profit for several years, and they prefer to stay with
growing wheat, barley, and bechna, which pay at once.

The Amenokal Moussa ag Amastane, realizing that the era 643
of raids will soon be ended forever, sees that it will be necessary 185
to demand from the soil the means of subsistence which raids 176
formerly procured. So he has announced his intention of having
a foggara dug at "Endid" and of having gardens made there,
and his example will very probably be followed. This is an
undertaking which will certainly be encouraged and supported,
and which shows the slow evolution which is beginning to take
place among the Tuareg, in the best interests of peace and
civilization.

## Chapter XIII

### Ancient Graves. Upright Stones

Ancient graves. Almost everywhere, in the Ahnet, Adhar', 172
Ahaggar, Immidir, and even on the banks of the wadis that 764
cross Tanezrouft, are found many ancient graves shaped either like a truncated cone, or "chouchat," or like a little turret, or "bazina," like those found everywhere in North Africa.

I saw one, however, at Tamanrasset (right next to the grave of the Tamenokalt Taber'ourt oult Akhalakham of the Imanan) which had a special shape. It was a pile of stones in the shape of a rectangular parallelepiped, four meters long by one meter wide, and one meter high.

172
173
764
[192]

The Tuareg say that these graves, which they call "adebni," plural "idebnane" (a word which seems to be derived from the Arab word "beni," building), are those of the "Izabbaren" ⵉⵣⴱⴰⵔⵏ . Then, too, this word in Tamashek means "ogres" and in the singular is "zabbar" ⵣⴱⴰⵔ , "ogre." The Ahaggar and the Ta'toq refuse to admit that these were perhaps their ancestors at the time of paganism who had graves of this kind. "The Izabbaren," they say, "have nothing in common with us. They are not our ancestors." It was for this reason that Professor Gautier could explore some of these graves without opposition on their part.

Meanwhile, there is also another kind of grave which still 172
has a circular shape but with the "chouahed," or markers, custom- 764
ary with all Moslems, while the "chouchat," or "bazina," graves are without them. This kind of grave is more unusual. It seems to be a form intermediary between the "Izabbaren" graves and the present graves.

On the other hand, the Tuareg will show you the grave of 172
Tin /78/ Hinane, the ancestress from whom they claim to be 173
descended, which is located at the junction of the Tefirt wadi 764

and the Abalessa wadi. Now, this grave has the shape of an 172
enormous circular wall and is surrounded by other graves of the 173
"chouchat" shape which are those of Tin Hinane's servants. 764
Beside her grave is that of Takamat, the woman whom the Kel Ahnet claim as their ancestress. All these graves resemble those of the "izabbaren" so closely as to be confusing. Why do the Tuareg disclaim these while they acknowledge those of Tin Hinane, Takamat, and their servants?

We saw in the chapter "Superstitions, Beliefs" that the 769
Tuareg go to consult the Izzabaren graves to obtain news of 787
those absent.

In the Tafidjiq wadi (about four hours' walk from Ideles) there is a grave which is the object of great veneration on the

[342]

Harratine Huts at Ideles
(Koudia)

part of the Ahaggar Tuareg. It is that of Adjadj Alemine [797
(probably the missionary who converted them to Islamism; see 174]
the chapter on the origin of the Tuareg /not translated/). The Ahaggar say that this Adjadj Alemine was a marabout, a saint, and they call on him in their prayers when they are in trouble or grief, as the Arabs, under the same circumstances, call on Sidi Abdelkader el Djillali. I have not seen his grave, but I was told that it has "chouahed" like all Moslem graves.

Upright stones. Following the directions of the guide 172
Deguemma ag Chikat of the Adjouh-n-Taheli, I found, in the Koudia of the Ahaggar, a place where there was a collection of some ten upright stones of which only one remained /79/

standing. The others had fallen, and one could definitely see 172
the marks of the holes into which they had been set, as well as
of the stones placed at the base to hold them erect.

The stone that remains erect is covered on one side with [532]
symbols cut deeply into the stone, next to others which are al-
most effaced. It is about 2.60 meters high and about 25 cm.
wide on each of its four sides, which are smoothed and polished.

The other stones that are fallen to the ground have about the
same dimensions, and one of them also has engraved inscriptions.

I took rubbings of the inscriptions cut into the stone still
standing.

Near by in the rocks of the footpath by which it is reached,
I also saw some engraved drawings of which I also took rubbings.

The location of these stones is right next to the trail from
Tiltekine, not far from the spring of the In Dalladj wadi, about
1,700 meters in altitude (in the Koudia of the Ahaggar), on
the road which leads from Tamanrasset to the sebkha of
Amadr'or, by way of Ideles.

I questioned the guide and the Tuareg who know these
stones, and of course they could give me no explanation for
them. "We call them the standing stones, 'ebdaden' ⵍⵎⵎ
ⵜⵜ . Those of old made them," they told me. "It is very
old. That is all we know."

# PRÉFACE

Cet ouvrage est le premier qui, depuis celui d'Henri DUVEYRIER, ait été écrit par un Européen ayant vécu au milieu des Touareg.

Pendant six mois, du 3 mai au 29 octobre 1905, M. BENHAZERA a vécu pour ainsi dire constamment au milieu des campements des Touareg, Ahaggar et Taïtoq ; pendant les déplacements indispensables pour passer d'un groupe de campements à un autre, il a voyagé entouré de Touareg appartenant aux fractions visitées et n'a pas perdu le contact ; enfin, pendant un mois et demi, du 1er septembre au 16 octobre, il a eu la chance de pouvoir stationner au milieu des campements des Dag-R'ali et s'est trouvé dans d'excellentes conditions pour gagner la confiance de ces nomades et pénétrer leur vie intime.

De ce fait seul, le travail de M. BENHAZERA présente un intérêt tout particulier et vient prendre place à côté de celui de DUVEYRIER.

Il est forcément très supérieur à ceux de ses autres devanciers. Ces derniers peuvent se ranger en deux catégories : les uns ont été obligés de se fier à quelques informants arabes ou touareg et ont exécuté leur travail dans leur bureau, en dehors du milieu. Ce travail a beau avoir été consciencieux et intelligemment conduit, il porte une double tache originelle : nombre forcément limité des informants, difficulté de se faire une idée exacte d'un milieu que l'on n'a jamais vu.

Les autres, officiers en tournée de police, ont bien pris contact avec le milieu, mais ont manqué de temps pour l'étudier en détail. Absorbés par les soucis du commandement, par la

direction politique et militaire de leur mission, par leurs travaux topographiques, géologiques, etc., ils n'ont pu s'occuper des mœurs et de l'histoire des tribus touareg que tout à fait accidentellement.

M. Benhazera, au contraire, faisait partie d'une mission organisée, dont le chef, M. le capitaine Dinaux, l'avait spécialement chargé de l'étude des populations. Dégagé de tout souci étranger à cette étude, il a pu s'y consacrer entièrement.

De plus, cet officier-interprète était préparé d'une façon parfaite à la tâche qui lui était confiée. Non seulement il connaissait à fond la langue arabe et l'histoire de l'Afrique du Nord, mais ses études antérieures de kabyle et de berbère lui permirent d'acquérir rapidement d'excellentes notions de tamaheq lui permettant de causer sans intermédiaire avec les Touareg qui ne comprenaient pas l'arabe. Il a su tirer de ces connaissances inappréciables tout le parti possible en adoptant une excellente méthode de travail : au lieu de faire table rase des ouvrages déjà publiés, sur les Touareg en particulier et les Musulmans en général, il les a pris pour base même de son étude.

Au lieu de s'astreindre à nous dépeindre dans tous leurs détails les mœurs et les institutions des Touareg, il s'est attaché à ne décrire que les points par lesquels ces mœurs et ces institutions diffèrent de celles des autres musulmans déjà étudiées et connues. Bien souvent même, quand il a reconnu la scrupuleuse exactitude d'un chapitre de Duveyrier il y renvoie simplement ; en revanche, il insiste d'une façon toute particulière sur les détails non donnés par cet explorateur ou non conformes à ses descriptions.

Ainsi compris, le travail de M. Benhazera, débarrassé de tout ce qui n'est pas inédit, gagne énormément en clarté et en intérêt.

La connaissance de ce travail devient indispensable à tous ceux qui, par devoir et par goût, s'occupent des Touareg.

On ne peut le considérer comme une œuvre définitive :

4: Benhazera MS25 Tuareg

beaucoup de points d'histoire ou de mœurs ont dû échapper à M. Benhazera ; mais il constitue, avec celui de Duveyrier, une base précieuse pour ceux qui continueront ces études spéciales, non seulement sur les Ahaggar et les Taïtoq, mais sur l'une quelconque des tribus touareg.

Rien ne facilite ce genre de travail comme de posséder une base de comparaison que l'on n'a plus qu'à compléter ou à modifier ; c'est en cherchant à savoir si certains détails des mœurs des Azdjer, décrits par Duveyrier, étaient communs à cette confédération et aux Ahaggar que M. Benhazera s'est trouvé amené à découvrir et à décrire certains usages particuliers à ces derniers. Son ouvrage peut et doit rendre un service analogue à ceux qui étudieront les mœurs des Aoulimmiden ou des Tademekket.

Adrar, le 31 janvier 1907.

Lieutenant-Colonel H. LAPERRINE,

*Commandant militaire du territoire des Oasis Sahariennes.*

# INTRODUCTION

Duveyrier, dont la belle exploration de 1861 a fait connaître les Touareg de la confédération des Azdjer, nous a donné sur eux, dans son ouvrage *Les Touareg du Nord*, des renseignements qui, jusqu'à ce jour, étaient restés les seuls documents sérieux que nous possédions sur cet énigmatique peuple au visage voilé. Ce grand explorateur, qui a passé près de deux ans chez les Azdjer, nous a initiés à la vie targuie et nous a donné le désir de la connaître davantage et de la pénétrer plus intimement.

Mais Duveyrier n'avait pu, pour des raisons de sécurité, étudier également chez eux les Touareg de la confédération du Ahaggar et il avait dû se borner à recueillir sur eux des renseignements qui, pour être exacts dans leur ensemble, étaient bien incomplets et n'avaient pas la valeur de documents étudiés sur place et de visu.

Il nous représente les Ahaggar comme braves, mais farouches et cruels et possédant dans les montagnes du cœur de leur pays un refuge inaccessible.

Cette réputation de cruauté fut confirmée par l'horrible drame de Bir-el-Gherama, perpétré par eux (1881). Le malheureux Flatters et tous les membres de sa mission, massacrés par les Tedjehé-Mellet, sous la conduite du féroce Ettici, ne furent pas vengés immédiatement. Notre base d'opérations était trop éloignée. En outre, le pays et ses habitants nous étaient trop peu connus pour risquer une poursuite qui, cependant, eût

[p. XI]
[p. X is blank]

probablement réussi, si on avait laissé marcher le goum d'Ouargla, comme l'avait proposé alors le Khalifa de l'agha d'Ouargla, Mohammed ben Belkassem.

Depuis, la question targuie, demeurée presque stationnaire, malgré de nombreuses tentatives de rapprochement pacifique, s'est trouvée nettement posée par la conquête des Oasis Sahariennes provoquée par l'attaque de la mission Flamand-Pein (1900).

Cette conquête, qui nous rendait maîtres des marchés fréquentés par les Ahaggar, nous mettait en mesure de dominer ces derniers, de les amener à composition et finalement de les soumettre.

Cliché du Dr Villa.

LES OFFICIERS D'IN-SALAH INITIENT
UN GROUPE DE TOUAREG AUX BEAUTÉS DU GRAMOPHONE

Pendant deux ans, on les observa et on chercha à les attirer à nous. Le vigoureux contre-rezzou du lieutenant Cottenest qui se termina par le combat de Tit (avril 1902), où plus de 100 Touareg trouvèrent la mort, produisit sur les Ahaggar un effet considérable et eut pour résultat de faire tomber la légende qui représentait les Touareg comme imprenables dans leur pays désertique.

De nouvelles reconnaissances effectuées par les admirables compagnies sahariennes du Tidikelt et du Touat, sous l'énergi-

que impulsion de M. le lieutenant-colonel Laperrine, nous firent connaître plus complètement le pays des Ahaggar et ses habitants et démontrèrent également à ces derniers qu'ils n'avaient plus qu'à déposer les armes et à faire leur soumission.

Le parti de la paix, à la tête duquel se trouvait Moussa ag Amastane, gagnait chaque jour du terrain. Son chef, habilement amené à In-Salah par le caïd Billou, des Ahl-Azzi (In-Salah), mit son influence à notre service. Enfin, en avril 1905, l'ancien chef des Taïtoq, Sidi ag Keradji, vint à In-Salah faire sa soumission officielle et recevoir l'investiture.

On put songer dès lors à étudier plus à fond les Ahaggar, ce que les premières reconnaissances rapides n'avaient pas permis de faire. On pouvait même envisager la possibilité de les obliger au paiement d'un impôt de principe qui rendrait leur soumission plus effective et plus complète.

Tel est le rôle qui fut dévolu à M. le capitaine Dinaux, chef de l'annexe d'In-Salah et commandant la compagnie saharienne du Tidikelt.

Le 3 mai 1905 il quittait In-Salah à la tête du peloton mobile de la compagnie du Tidikelt. M. le lieutenant Clor lui était adjoint, pour la partie topographique et photographique, ainsi que pour le commandement du peloton.

Je fus appelé à faire partie de la reconnaissance en qualité d'interprète, et M. le Lieutenant-colonel Laperrine commandant militaire du territoire des Oasis Sahariennes, voulut bien me charger de recueillir tous les renseignements possibles sur les Touareg de la confédération du Ahaggar.

Au cours de cette reconnaissance qui dura six mois (du 3 mai au 29 octobre 1905), j'eus la bonne fortune de conserver presque constamment le contact avec les Taïtoq et les Ahaggar et surtout de pouvoir stationner, durant plus d'un mois, au milieu des campements des Dag-R'ali, des Adjouh-n-Taheli et des Tedjehé-n-Efis, installés dans les environs de Taman-r'asset. Cela me fournit l'occasion de pousser plus à fond

4: Benhazera MS25 Tuareg

l'étude de la langue tamaheq, dont la connaissance m'était de

DANSES DES HARRATINES DU TIDIKELT DANS LA KASBA DE LA Cie SAHARIENNE A IN-SALAH

première nécessité pour l'exactitude et la sûreté des renseignements que je désirais recueillir.

L'étude que je présente aujourd'hui est le résultat de mes recherches et de mes investigations. Elle est certes loin d'être complète et ne peut être considérée que comme la base de nouvelles recherches plus complètes et plus parfaites. On voudra bien m'excuser en pensant combien il est malaisé d'obtenir tous les renseignements qu'on désire de peuplades primitives et encore animées à notre égard d'une méfiance instinctive. J'ajouterai que cette méfiance se justifiait par la certitude de la fixation d'un impôt qu'elles allaient être tenues de verser pour confirmer leur soumission à la France. Je me suis surtout efforcé de ne fournir que des documents inédits et de rectifier ou de compléter ceux déjà acquis.

Tel qu'il est, cet essai, avec ses imperfections et ses lacunes remplira, je le souhaite, le but utile que je me suis proposé. C'est mon seul désir.

Qu'il me soit permis en terminant d'exprimer ici mes sentiments de profonde reconnaissance et de gratitude envers M. le lieutenant-colonel Laperrine et M. le capitaine Dinaux, dont la bienveillance et les conseils éclairés m'ont facilité si grandement l'accomplissement de ma tâche.

Je n'aurais garde d'oublier de remercier vivement mes informateurs les plus précieux : Moussa ag Amastane, Amenokal du Ahaggar ; Sidi ag Keradji, Amenokal des Taïtoq et Kel-Ahnet ; Ba-Hammou El Ansari, khodja de l'Amenokal du Ahaggar ; Mohammed ben Messis, mehariste de la compagnie du Tidikelt, d'origine targuie par sa mère ; Azioual ag Ser'ada et son frère Tacha, des Taïtoq ; Aïtar'el ag Ablinkiouodh, des Taïtoq ; Azengui, des Tedjehé-n-Efis ; Deguemma ag Chikat, des Adjouh-n-Taheli ; Doua ag Iklane, Amr'ar des Dag-R'ali..... et tant d'autres, pour ne citer que les principaux, qui ont bien voulu, avec une patience et une bonne volonté que je ne saurais trop louer se prêter aux nombreuses interwiews que je leur ai demandées.

Enfin, je ne saurais trop reconnaître l'extrême obligeance de MM. le lieutenant-colonel Laperrine, le lieutenant Cannac, le

4: Benhazera MS25 Tuareg

médecin aide-major de 1re classe Dautheville et le lieutenant Voinot qui ont bien voulu, par l'aimable entremise du R. P. de Foucauld, m'autoriser à me servir de leurs clichés photographiques et collaborer ainsi à mon étude en lui donnant, par l'image, la vie qui lui manquait.

Les Touareg disent qu'on ne sait bien lire en tamaheq que lorsqu'on parvient à déchiffrer sans faute les vers suivants :

Fadhimata oult Our'ennis.
Ar'ebbir ennit our itioudhiss.
Tagalt ennit meraou iisane d sedhiss.

Ce qui signifie :

« On ne peut palper les hanches de Fadhimata oult Our'eniss qu'en lui donnant en dot seize chevaux ».

# TECHNOLOGIE ARABE OU TAMAHEQ

## DONT IL EST FAIT USAGE DANS CETTE ÉTUDE

---

*Abetor'* ..... Outre.
*Abser'* ..... Acacia arabica.
*Afezzou* ..... Panicum turgidum. Graminées.
*Aguezzeram*.. Lézard stellion.
*Ahal* ..... Réunion musicale.
*Akh.* ..... Lait.
*Alhinen* ..... Génies.
*Amenokal* ... Chef d'une confédération de tribus touareg.
*Amezar'* ..... Groupe de plusieurs tentes, douar.
*Amr'ar* ..... Chef d'une tribu noble ou d'une fraction d'*imr'ad*.
*Amr'id* ..... Tributaire, homme-lige, client. Soumis au noble à qui il paie un tribut. Au pluriel : *imr'ad*.
*Amz'ad* ..... Sorte de violon à une seule corde.
*Anou* ..... Puits.
*Ar'ata* ..... Varanus, gros lézard. Synonyme : *ourane*.
*Aremmas* .... Atriplex halimus. Salsolacées.
*Ar'er* ..... Bouclier.
*Az'ekka* ..... Tombe.
*Bazina* ..... Tombeau ancien, en forme de petite tour.
*Bechna* ..... Sorgho à graines blanches. Graminées.
*Berdi* ..... Typha angustifolia. Typhacées.
*Bir* ..... Puits.
*Botta* ..... Boîte en peau fabriquée à l'Aïr. Se fait en toutes dimensions.

*Chegga*..... Cotonnade bleue, teinte à l'indigo et déteignant beaucoup.
*Chemma*..... Tabac à priser.
*Chih*..... Artemisia Herba-Alba. Composées.
*Chouchat*.... Tombeau ancien, de forme tronconique.
*Diss*..... Imperata cylindrica. Graminées.
*Djinns*..... Génies.
*Djohala*..... Païens.
*Dobb*..... Lézard-Stellion.
*Drinn*..... Arthraterum pungens. Graminées.
*Ethel*..... Tamarix articulata. Tamariscinées.
*El yatil*..... Sorte d'acacia.
*Guetof*..... Atriplex halimus. Salsolacées.
*Guerba*..... Outre.
*Had*..... Cornulaca monacantha. Salsolacées.
*Haïk*..... Vêtement. Pièce de laine longue et étroite.
*Haouli*..... Synonyme de haïk.
*Harratine*... Hommes de couleur, mulâtres. Au singulier : *hartani*.
*Hegueb*..... Corde en poil de chameau qui sert à maintenir la selle du mehari.
*Ibiiar'*..... Outres.
*Ihaggaren*... Nobles.
*Ihallen*..... Réunions musicales. Pluriel de *ahal*.
*Ikerhi*..... Voile de la femme targuie.
*Imr'ad*..... Clients, tributaires, qui paient un tribut aux nobles. Au singulier : *amr'id*.
*Imz'aden*.... Pluriel d'*amz'ad*, sorte de violon à une seule corde.
*Inelli*..... Sorgho à graines blanches. Graminées.
*Ir'atimen*.... Sandales fabriquées dans l'Aïr. Chaussure habituelle des Touareg.
*Izabbaren*... Ogres. Pluriel de *zabbar*.
*Iz'ekouane*... Tombes. Pluriel de *az'ekka*.
*Kehal*..... Etoffe noire qui sert pour les voiles du visage.
*Ket Esouf*.... Gens du vide ou revenants.

*Kessa* ..... Synonyme de haïk.
*Mahmoudi*... Toile de coton blanche.
*Malti*..... Calicot écru.
*Merokba*..... Panicum turgidum. Graminées.
*Mezoued*..... Sac en cuir en forme d'outre pour renfermer les provisions de bouche.
*Mitqal*..... Pièce de monnaie. Valeur 2 fr. 50.
*Oudi*..... Beurre.
*Ourane*..... Varanus, gros lézard.
*R'ouaouet*... Païens.
*Sebkha*..... Lac salé, saline.
*Taba*..... Tabac à fumer.
*Tadjart*..... Sorte d'acacia.
*Tadjethé*..... Archet du violon «*amz'ad*».
*Tagalt*..... Dot.
*Taheli*..... Typha angustifolia. Typhacées.
*Takouba*.... Large sabre targui, à deux tranchants.
*Tamaheq*.... Nom de la langue parlée par les Touareg du Nord.
*Tamat*..... Sorte d'acacia.
*Tanekfaït*.... Diplotaxis Duveyrierana. Crucifères.
*Tchoqqit*..... Nom de la chegga, en tamaheq.
*Teborak*..... Bâlanites ægyptiaca. Simaroubacées.
*Teheredjelé*... Artemisia-Herba-Alba. Composées.
*Terik*..... Selle du mehari.
*Tidjelmoust*.. Voile du visage.
*Tifinar's*..... Nom des caractères de la langue tamaheq.
*Tikamarine*.. Fromages secs de l'Aïr.
*Tioussé*..... Tribut payé par les imr'ad aux nobles.
*Tobol*..... Groupe de tribus soumises à l'autorité d'un même chef. Droit au commandement des imr'ad et à la perception de la tioussé.
*Toulloult*.... Arthraterum pungens. Graminées.
*Tounine*..... Puits.
*Zabbar*..... Ogre.

## CHAPITRE Ier

### Naissance. — L'Enfance

En tamaheq, la naissance s'appelle « tiouit » + : +. Rien de bien particulier à signaler au sujet de la naissance d'un enfant chez les Touareg. La joie est cependant plus grande lorsque c'est un garçon. On vient féliciter les parents et, sept jours après, ceux-ci offrent un repas plus ou moins plantureux, suivant leur fortune, repas précédé de la récitation de la « fatiha » (1re sourate du Coran). Ceux des assistants qui ne savent pas l'arabe, se bornent pendant cette récitation, à tenir accolées leurs mains ouvertes comme un livre. C'est ce jour là que le nom est donné donné à l'enfant.

A ce propos, je crois devoir faire remarquer que, chez les Kel R'ela surtout (tribu noble du Ahaggar), beaucoup d'enfants ont reçu des noms d'animaux sauvages ou de bêtes.

*Exemples de noms d'hommes :*

***Amellal***, antilope addax, meha.
***Abeggui***, chacal.
***Amayas***, guépard.
***Akhou***, bête sauvage.
***Anr'eroubou***, lion.
***Ahar***, lion.
***Eknissi***, bérisson.

*Akouli*, rat.
*Amadjour*, chameau.
*Amder'*, girafe, etc.

*Exemples de noms de femmes :*

*Tamerouelt*, lièvre.
*Tahenkatt*, gazelle.
*Tinirt*, antilope-mohor.
*Tamer'ouant*, coquillage-cauri.
*Tadar'ine*, grains (de blé, d'orge, etc.).

On trouvera, au cours de cette étude, quantité de noms propres d'hommes et de femmes qui pourront donner lieu à des comparaisons intéressantes avec les noms en usage chez les autres tribus berbères de l'Afrique du Nord.

L'enfant targui est élevé à la diable, avec les enfants des négresses. C'est surtout la négresse qui en a soin. Il vit au grand air, souvent tout nu ou à peine vêtu, et de bonne heure son corps s'endurcit. Pendant la période de l'allaitement, la négresse fabrique une sorte de hamac, fait avec un vieux haïk, dont les deux bouts sont attachés à des branches d'arbres ou à des piquets de la tente, et cette sorte de berceau s'appelle « taoulioula » . ⵍ : ⵍ : + (du verbe « eouilaouel » ⵍ : ⵍ :, se balancer).

Tout jeune encore, à peine âgé de sept ans, on emploie l'enfant comme berger et il s'acquitte fort bien de sa tâche.

Puis, aussitôt que possible, on le juche sur un mehari (chameau coureur), car il lui faudra connaître à fond sa monture habituelle. Le jeune Harendou, orphelin des Aoulimmiden, recueilli par Moussa ag Amastane, l'amenokal du Ahaggar, âgé d'une dizaine d'années, était déjà un excellent mehariste. Il portait au côté une « takouba » . ⵓ • : + (sabre) plus grande que lui, dont il était très fier.

# CHAPITRE II

## Circoncision

En tamaheq, « azemhoud-n-baradhen », (circoncision des enfants) ⵍⵎⴰⵣⵎⵀⵓⴷ ⵏ ⴱⴰⵔⴰⴷⵀⴻⵏ, du verbe « ezmahad » ⴰⵣⵎⴰⵀⴰⴷ, circoncire.

Il n'y a pas d'âge bien fixé pour la circoncision ; généralement, elle est pratiquée à partir de 5 ans.

L'opérateur est appelé à l'amezar' (douar) et toutes les personnes présentes assistent à l'opération pratiquée ainsi :

L'opérateur attache le prépuce avec un peu de « saâf » (feuille de djerid ou palme) et le coupe avec un couteau bien affilé. Pour cicatriser la plaie on saupoudre, avec des feuilles d'ethel (tamarix articulata) et des écorces de grenades sèches réduites en poudre. Puis, on lave avec de l'urine de chameau, et à l'aide d'attelles, retenues par des fils attachés derrière le dos, on évite tout contact douloureux.

On donne ensuite un repas : un mouton est égorgé et mangé par les invités.

---

# CHAPITRE III

## Puberté

En tamaheq, « tamendjott » ⵜⴰⵎⴰⵏⵊⵓⵜ. Dès qu'il est en âge de jeûner, c'est-à-dire dès qu'il est pubère, le garçon commence à porter le voile « tidjelmoust » ⵜⵉⵊⵍⵎⵓⵙⵜ qu'il ne quittera plus.

Pour la fille, on donne une fête lorsqu'elle atteint l'âge de puberté, c'est-à-dire à l'apparition des menstrues, en tamaheq

« ba-n-amoud » ⋀ ⊐ ǀ ◫ (mot à mot : « coupure de la prière », car la femme, pendant son indisposition, est en état d'impureté et ne peut prier). On revêt la jeune fille de ses plus beaux atours et on lui place sur la tête un voile noir, « ikerhi », ⋖ ⁞ O ·:· qui retombe des deux côtés du visage, sans le cacher. Elle aussi ne le quittera plus.

Si ses parents sont à l'aise, elle apprendra à jouer de l'amz'ad, V # ⊐, instrument qui occupe une place importante dans la vie targuie. C'est une sorte de violon à une seule corde dont la boîte est formée d'une grande « kabouia » ou calebasse séchée et creusée, recouverte d'une peau tendue et percée de deux trous, et qui est munie d'un manche. La corde est faite avec des crins de cheval, « az'iou » : ⋖ #, ainsi que les cordes de l'archet, « tadjeïhé », . ⁞ ⋖ T +, fait avec un bâton recourbé en arc.

C'est surtout un instrument d'accompagnement du chant. La femme glisse les doigts sans appuyer sur la corde, en faisant courir l'archet ; elle prolonge les périodes finales qui sont traînantes.

Si la jeune fille sait jouer, elle pourra briller aux réunions musicales, où on ira la courtiser.

---

## CHAPITRE IV

### Réunions musicales

Le jeune homme et la jeune fille vont se fréquenter souvent et cette fréquentation se produit surtout dans ces réunions que, pour être correct, nous appellerons, si vous le voulez bien, « Réunions musicales » et que les Touareg appellent « Ahal », ll ⁞, pluriel « ihallen », / ll ⁞.

L'ahal a lieu très souvent. Il suffit pour cela, qu'un groupe d'hommes et de femmes se trouve réuni dans un campement. Souvent, l'homme vient d'assez loin pour courtiser l'élue de son choix. Quand l'année est bonne, c'est-à-dire quand les pluies ont vivifié les pâturages et que les chamelles donnent beaucoup de lait, plusieurs campements s'installent à proximité les uns des autres et l'ahal commence aussitôt après le coucher du soleil.

Les hommes des campements et ceux venus exprès, si quelque femme les y attire, se réunissent. Les femmes apportent leurs violons « imz'aden ». A l'ahal, assistent tous ceux qui ne craignent pas de se trouver en présence d'un de leurs parents à qui ils doivent le respect, comme le père, l'oncle, le frère aîné, etc. Jeunes filles, femmes mariées, divorcées ou veuves, toutes assistent à l'ahal.

Cliché DAUTHEVILLE

GROUPE TARGUI A AMR'A (TIFEDEST NOIRE)

La galanterie, « asri », ⵔⵙⵔⵉ, est de rigueur et la jalousie sévèrement proscrite. Du reste, ce dernier sentiment est inconnu chez les Touareg, et si l'un d'eux s'avisait d'en faire montre, il serait conspué et tout le monde se moquerait de lui.

Quand un Targui arrive à l'ahal, auprès d'une femme qu'il désire courtiser, il s'approche d'elle, le voile soigneusement baissé et il ne la salue pas de l'habituel « essalamou r'laïkoum » (Que le salut soit sur vous !). Silencieusement, il tend la main à la femme, à la mode targuie (c'est-à-dire en offrant la main

ouverte à plat et en la faisant glisser sur la main ouverte de la femme), et il s'asseoit en disant : « iselane » (Quelles nouvelles?). Si la femme répond : « elouane » (elles abondent), il commence à faire sa cour. Les Touareg sont peu religieux et il arrive quelquefois que la femme pose des questions dans le genre de celle-ci : « Qui aimes-tu mieux? Dieu ou moi ? »

Les chants commencent, les imz'aden accompagnent. Les hommes chantent, en petites pièces de vers qu'ils ont composées, les mérites de leurs dulcinées, les exploits qu'ils ont accomplis, les razzias auxquelles ils ont pris part, ou bien ce sont des satires contre leurs ennemis. Les femmes vantent le courage. En général, la femme noble ne chante pas : elle joue de l'amz'ad seulement.

Il y a trois rythmes musicaux :

Le rythme « seyenine » ⵊ ⵍ ⵣ ⵙ, vif et assez rapide, employé chez les Kel R'ela et les Taïtoq.

Le rythme « ahinena » . ⵊ ⵍ ⵣ ⵎ, lent et traînant comme une mélopée, en usage surtout chez les Kel R'ela.

Le rythme « asaher' » ⵎ ⵎ ⵙ, en usage chez les Touareg de la Confédération des Azdjer.

Puis ce sont les jeux innocents. Les femmes élisent une « soltana », reine ; les hommes un « soltan », roi, qui infligera les punitions encourues et fixera les gages à donner. C'est un assaut d'esprit. Il faut que l'homme sache répondre aux questions posées. Si, par exemple, à la question suivante : « Qui aimes-tu mieux, une telle ou bien une telle ? », il répondait : « Je préfère une telle », il serait conspué, encourrait une punition ou paierait un gage et la femme, objet de cette préférence, serait ridiculisée par ses compagnes, car on ne doit pas manifester ouvertement de préférence et répondre : « Je les aime toutes deux ».

Autre genre de question : « Que ferais-tu si tu te trouvais dans » la situation suivante :

» *Tamott tekness* ⊡ ⁞ ·: + ⊕ ⊐ +

» *Eheré iouof* ⌶ : ⋖ . ○ ⁞

» *Taïhett ter'tess* ⊡ + ⁞ + ⊕ ⁞ ⋖ +

» *Tir'irt touoss* » ⊙ : + ⊕ ⁞ +

ce qui signifie :

La femme qui dispute.
Les troupeaux qui se dispersent.
L'ânesse qui coupe son entrave.
La marmite qui se renverse.

En manière de plaisanterie, pour faire l'esprit fort, l'homme pourra répondre : « Si je me trouvais dans cette situation, je rassemblerais d'abord les troupeaux, je rattacherais l'ânesse, je remettrais la marmite sur le feu et alors seulement je m'occuperais de la femme », et ce sera un concert de protestations indignées.

La femme met son point d'honneur à avoir le plus d'adorateurs possible. C'est une preuve qu'elle est jolie et elle ne sera pas embarrassée pour se marier.

L'ahal, commencé après le coucher du soleil, se prolonge assez tard dans la nuit et la pâle clarté qui tombe des étoiles permet à l'impudeur de se donner libre cours. Si les femmes mariées plaisantent et prennent part aux jeux, elles se tiennent relativement assez bien. Mais les autres peuvent s'asseoir sur les genoux de leurs adorateurs. On s'embrasse, mais d'une façon particulière. Comme l'homme ne doit jamais découvrir sa bouche, il abaisse son voile sous son nez et il sent religieusement le nez ! de sa préférée qui, elle, peut l'embrasser. Les attouchements même intimes (proh pudor !) sont permis, ce qui ne se voit jamais chez les Arabes.

Pendant ces réunions, quand l'amz'ad joue, on l'écoute avec beaucoup de plaisir. Cet instrument a l'heur d'enthousiasmer

les Touareg qui poussent des ouh ! ouh ! en signe de joie. Ils en ont même fait un verbe : *isouhouh*.

Mais voici l'heure où les chamelles arrivent du pâturage. Il faut les traire : c'est *l'az'ouz'edj* ⊤ # # (de *ez'edj* ⊤ #, traire). Les femmes se lèvent et on donne à boire du lait aux assistants. Il va falloir se séparer.

Les hommes s'en vont, les femmes rentrent dans les tentes, mais les heureux, ceux qui ont réussi par une cour assidue à toucher le cœur de leur belle, reviendront bientôt en cachette ou se rendront à l'endroit qui leur a été fixé. Jetons un voile !.....

On se demandera ce que peut devenir la vertu des jeunes filles avec des mœurs pareilles Presque toujours elle s'est envolée par dessus les moulins. Mais le targui ne se préoccupera pas de ce détail quand il s'agira de se marier. Il sait à quoi s'en tenir : il en a profité souvent. Cela lui est égal.

L'ahal est une des causes des mariages tardifs chez les Touareg. Le mariage impose des dépenses auxquelles on ne se résoud que lorsqu'on a pu acquérir un peu d'aisance et c'est pour cela que chez les Touareg, il n'est pas rare de voir les hommes se marier à 40 ans. Tant qu'il trouve à se distraire, le Targui n'éprouve pas le besoin de se marier. Cela ne veut pas dire que beaucoup ne convolent pas vers 25 ans, mais en général, l'homme se marie assez tard.

On verra plus loin, dans le petit recueil de chansons, les qualités que doit avoir l'homme pour réussir à l'ahal, ainsi que le genre de chansons qu'on y chante.

---

# CHAPITRE V

## Rôle de la femme dans la Société Targuie

On retrouve à chaque pas l'influence de la femme dans la Société Targuie. Dans l'histoire, dans l'hérédité, dans la vie, dans la pensée, dans la conduite des Touareg, partout son influence se fait sentir.

Dans l'histoire : c'est d'elle dont le targui dira descendre. Ainsi les nobles du Ahaggar nous diront qu'ils sont les descendants d'une femme du nom de Tin Hinane. Dans la guerre qui a mis aux prises Azdjer et Ahaggar, les pleurs des femmes des Imanan ont été la cause déterminante de la prise d'armes des Ahaggar.

Dans l'hérédité : on sait que c'est par la femme qu'elle se transmet. C'est de sa mère que le fils tient le droit au commandement et à la perception de la « tioussé » ou tribut des « imr'ad » ou serfs. Non seulement, le fils est noble ou serf, suivant que sa mère est noble ou serve, sans tenir compte de la qualité du père, car « c'est le ventre qui teint l'enfant », mais encore il change de tribu et fait partie de la tribu de sa mère, si celle-ci n'appartient pas à la même tribu que son mari.

Dans la vie : la femme jouit d'une liberté d'allures qu'on n'est pas accoutumé à constater en pays musulman.

Elle ne se voile pas la figure, comme les musulmanes, excepté en signe de respect : elle ramène alors son voile, « ikerhi », sur la figure.

Elle va librement rendre des visites à ses parents, oncles, tantes, etc., et comme elle les voit rarement, à cause de l'éloignement des campements, la coutume veut que le parent qui reçoit sa visite lui fasse un cadeau.

Elle a réussi à maintenir la monogamie, qui est de règle chez les Touareg, bien qu'ils soient musulmans.

Elle peut avoir, bien que mariée, un ami, « amidi » - ⵎⵉⴷⵉ, qui chantera sa louange, fera des vers pour elle, tandis qu'elle lui donnera un objet à son usage personnel. C'est en quelque sorte son chevalier. Ainsi, Dassine, quoique mariée, a brodé pour son cousin, Moussa ag Amastane, l'amenokal du Ahaggar, la bride et le poitrail de son cheval, tandis que Moussa, sans se faire prier, récitera, devant tous, les vers qu'il a faits à sa louange et recevra souvent sa visite.

Elle peut recevoir chez elle, en l'absence de son mari, un homme qui viendra causer avec elle, lui rendra visite, sans que le mari, à son retour, songe à s'en froisser. Seul, le flagrant délit d'adultère peut autoriser la colère du mari.

Mariée, elle a ses biens indépendants de ceux de son mari. Ses chameaux portent sa marque particulière, différente de celle de son mari. Elle ne participe aux charges du ménage que si elle veut bien y consentir.

Elle a obtenu de ne pas suivre son mari, aussitôt après son mariage, mais de camper près de la tente de ses parents pendant un an après son union, pour pouvoir s'habituer lentement à l'idée de la séparation.

Pour divorcer, il lui suffit de se refuser à son mari et de se réfugier chez ses parents.

Presque toutes, sauf les pauvres, ont pour monture un mehari et une selle spéciale.

A l'ahal, nous l'avons vu, elle règne en maîtresse.

Noble ou serve, elle a une ou plusieurs négresses chargées des gros travaux du ménage et de la préparation des aliments.

C'est elle qui est la plus instruite, car elle sait, mieux que l'homme, écrire et lire les « tifinar's » (noms des caractères de l'écriture de la langue tamaheq) et c'est elle qui apprend à lire à ses enfants.

Elle joue de l'amz'ad, instrument pour lequel les Touareg ont une si vive prédilection. « Quand deux partis en sont venus » aux mains, et que l'un d'eux est battu, les vainqueurs crient » aux vaincus, de ce cri sauvage particulier aux Touareg :

» Hia ! hia ! hia ! hia !

» Il n'y aura donc pas d'amz'ad !

» A la menace du silence des « imz'aden », les vaincus » reviennent à la charge, tant est grande la crainte du juge- » ment défavorable des femmes ». (Duveyrier).

Rien ne fait tant plaisir aux Touareg que de s'intéresser aux faits et gestes des femmes de leur tribu. Ainsi, on n'a qu'à parler de Dassine ou de Mellouka, femmes qui jouissent au Ahaggar d'une grande réputation de beauté et d'intelligence, pour voir l'attitude compassée faire place à la bonne humeur et à la gaîté, à la condition toutefois que la conversation n'ait pas lieu en présence de parents auxquels le Targui, à qui l'on s'adresse, doive le respect.

Cliché Dautheville

GROUPE TARGUI DANS L'OUED TI-N-AMADAL SETTAFEN (TIFEDEST)

La femme targuie intervient efficacement dans les brouilles entre hommes de sa famille et, pour lui être agréable, la réconciliation a lieu. Ainsi, c'est grâce à Rakhma, la sœur de Moussa ag Amastane, que celui-ci s'est réconcilié avec son beau-frère, Anaba ag Amellal.

Bref, on peut dire que rien ne se fait, rien ne se dit chez les Touareg qu'on n'y trouve l'influence de la femme, toujours et partout, et on s'en apercevra en poursuivant la lecture de cette étude.

# CHAPITRE VI

## Demande en Mariage

La demande en mariage, « ibadrahen » ⵉⴱⴷⵔⴰⵀⴻⵏ est soumise à un certain protocole.

Le candidat à la main d'une femme envoie aux parents de celle-ci des marabouts, s'il y en a, des tolbas ou à défaut des gens influents qui présentent sa requête.

La demande doit être connue de tous les parents de la femme sans exception ; tous doivent être prévenus et sollicités, même ceux qui sont loin. Ce serait très mal de marier une jeune fille à l'insu de l'un des membres de sa famille.

Comme la fille se marie en général de 20 à 25 ans, elle est consultée. Ordinairement, même lorsqu'elle est vierge et, comme telle, soumise à l'autorité paternelle, d'après la loi musulmane, on ne l'oblige pas à se marier contre son gré. Si le cas se produit, elle n'a qu'à se refuser à son mari et celui-ci n'insiste pas et la renvoie à ses parents.

Ainsi que chez les Arabes, la femme qui a déjà été mariée doit donner son consentement.

---

# CHAPITRE VII

## Mariage

Le mariage « adouben » ⵉⴷⵓⴱⴻⵏ ou « tedïout » ⵜⴰⵜⵓⵜ présente des particularités assez curieuses.

La demande en mariage a été agréée. Le jour de la noce a été fixé. Si c'est un noble assez influent qui se marie, la noce

aura de nombreux invités. Si c'est un « amr'id » (serf), la fête sera beaucoup plus simple, plus intime, mais les cérémonies et les chants seront les mêmes.

Les invités hommes, montés sur leurs meilleurs mehara, revêtus de leurs plus beaux vêtements et de leurs plus belles armes, arrivent au campement de la mariée où doit avoir lieu la noce. Les femmes se rendent chez la mariée avec leurs « imz'aden » (violons) et leurs « tobol » (tambours).

Si elles sont pauvres, elles y vont à âne ; si elles sont riches, elles arrivent à mehari, dans leur selle qui a la forme d'une chaise à porteurs, et dont nous verrons la description plus loin.

La fête commence vers une heure de l'après-midi. Les hommes sellent leurs mehara et la fantasia à mehari « iloudjan foull imnas » ⊙ ⵍ ⵓ ⵍⵍ ⵊⵔ ⵍ ⵜ ⵗ ⵍⵍ va commencer. Les femmes se groupent, frappent leurs tobols, chantent et jouent de l'amz'ad pour exciter les cavaliers. Ceux-ci, par groupes de deux ou plusieurs, se livrent à une course effrénée sur leurs mehara qu'ils font galoper.

Pendant ce temps, la mariée, cachée chez sa tante maternelle ou chez un parent de la ligne maternelle, doit se voiler les yeux et ne pas regarder la fantasia. Si, par malheur, elle regardait un des cavaliers, celui-ci tomberait et un accident se produirait.

Quant au mari, il ne prend pas part à la fantasia. Monté sur un mehari blanc « ebidedj » ⵉⵃⵉⴷⵉⵊ, il y assiste aux côtés d'un de ses amis, mais il doit rester impassible, le visage soigneusement voilé.

La fantasia dure *jusqu'au coucher du soleil.*

A ce moment, deux « tolbas » et deux amis du marié vont trouver le père, si la fiancée est encore vierge, ou la femme elle-même, si elle a déjà été mariée, pour lui demander de désigner son mandataire. On demande aussi au fiancé de désigner son représentant.

Ces deux mandataires se réunissent avec les tolbas et les amis et le mariage est contracté. C'est à ce moment que la dot,

« tagalt » ⵜⴳⵍⵜ, est fixée. Pour les nobles, elle est, en principe, de 7 chamelles ; pour les imr'ad, elle peut consister, suivant leur fortune, en une chamelle ou plusieurs moutons ou chèvres. Le marié remet une partie de la dot : une ou deux chamelles, s'il est noble ; 3 ou 4 moutons, s'il est amr'id et s'il n'est pas riche ; le reste est dû par lui. On égorge les animaux qui ont été donnés et qui serviront au repas de noce. Puis on lit la « Fatiha » (1re sourate du Coran) pour appeler la bénédiction divine sur les nouveaux époux.

Après le contrat, les femmes se réunissent, on joue de l'amz'ad un moment, mais il va falloir préparer la couche des nouveaux conjoints. Les femmes se lèvent et fabriquent une sorte de matelas en sable ou en terre, qui s'appelle « adebel » ⵍⵍⵉⵎⵍ, et qu'on recouvre d'un haïk. Au-dessus, on va édifier la tente en peaux, sur deux arcs en bois, « idjedjan » ⵉⵜⵜ, et les piquets habituels.

Mais, à ce moment, les hommes interviennent ; ils se saisissent du velum de la tente. Deux d'un côté, deux de l'autre, ils se lancent la tente et se la relancent trois fois en criant : « *Saoula iaoulit* » (lancez et renvoyez). Cela porte bonheur.

Puis la tente est montée définitivement. Les hommes amènent le marié à la tente. On lui en fait faire le tour trois fois ; il y pénètre ensuite en ayant soin de poser le pied droit le premier, toujours parce que cela porte bonheur.

Le marié est dans la tente avec ses amis. Les femmes accompagnent alors la mariée en chantant :

« *Bismillaten ar essa* . ⵓⵔⵏⵉⵙⵙⵉ
» *Se iz'ar isem n yalla* . ⵙⵉⵣⵔⵏⵉⵙⵉⵎⵏⵉⵍⵍⵉ
» *Foull ilik ner' as tedoua* . ⴼⵓⵍⵍⵉⵍⵉⴽⵏⵔⵙⵜⵉⴷⵓⵉ

c'est-à-dire :

« Au nom de Dieu sur eux jusqu'à sept fois,
» Précédant le nom de Dieu,
» Sur notre fille qui est partie le soir (chez son mari) ».

A quelques mètres de la tente, le fils de la tante maternelle de la mariée s'avance et veut retenir la mariée, en lui disant : « Je ne te laisserai pas partir avant d'avoir reçu mon cadeau, mes sandales », « *Aouid ir'atimen* » (donne-moi mes sandales). Le marié ou ses amis lui font alors passer une paire de sandales mises de côté à son intention ou, à défaut, un autre cadeau.

Alors, les femmes, en chœur, vont poser des questions auxquelles, en chœur, les hommes vont répondre :

Chœur des femmes :

*Nellouz* Nous avons faim.

Chœur des hommes :

*Atekchimet* Vous mangerez.

Chœur des femmes :

*Ner'loul* Nous sommes nues.

Chœur des hommes :

*Atelsimet* Vous serez habillées.

Chœur des femmes :

*Nerdjih* Nous sommes à pied.

Chœur des hommes :

*Atar'ermet* Vous serez montées.

Puis la mariée et les femmes, s'adressant au mari, chantent ces deux vers :

*Outterir' inelli n isakan*
*Essoufeq inelli n foudan*

« Je ne veux pas du bechna (porté par) des jeunes chameaux »
« Je préfère du bechna (porté par) de forts et solides chameaux », voulant faire entendre par là qu'elle attend de son mari des actes d'un homme fort et brave et non une conduite d'enfant.

La mariée pénètre alors dans la tente et les invités se retirent et vont festoyer.

Pendant sept jours, la nourriture du mari est assurée par les parents de la mariée. Pendant ce temps, les nouveaux époux ne quittent pas leur tente : on vient les y distraire et leur rendre visite.

La coutume veut que les nouveaux mariés habitent à côté des parents de la femme pendant un an pour donner à celle-ci le temps de s'habituer à leur séparation, qu'ils appellent « *az'alaī* » ⵣ ⵍ ⵉ (du verbe « *ez'li* » ⵣ ⵍ ⵉ, séparer).

La monogamie est la règle absolue.

Nous avons dit que l'ahal était une des causes des mariages tardifs. Une autre cause réside dans ce fait que beaucoup de Touareg se contentent de négresses concubines.

---

## CHAPITRE VIII

### Divorce

Le divorce, en tamaheq « tellef » ⵜⵍⵍ ⵓ ou « oulouf » ⵜⵍⵍ (du verbe « ellef » ⵜⵍⵍ, divorcer), se produit assez souvent, mais le plus fréquemment du fait de la femme, car le mari prononçant la répudiation est tenu de lui payer le restant exigible de sa dot ; tandis que si c'est la femme qui a provoqué la rupture, en se refusant à lui et en se réfugiant chez ses parents, le mari ne lui doit rien.

Sidi ag Keradji, l'amenokal des Taïtoq et Kel Ahnet, n'a jamais pu garder une femme chez lui. Il a divorcé très souvent. Et chaque fois il revient à ses négresses, auxquelles il tient beaucoup. Il cherche cependant à se remarier (il a de 70 à 75 ans), mais il semble qu'il éprouve certaines difficultés, étant donné ses antécédents conjugaux.

---

## CHAPITRE IX

### Adultère

L'adultère, en tamaheq « tikra » . O ·: + (du verbe « ouker » O ·: voler), est certainement fréquent.

Les Touareg disent bien qu'en cas d'adultère ils n'hésitent pas et tuent la femme ; mais je leur ai demandé de me citer un cas semblable s'étant produit depuis plusieurs années et ils ont avoué n'en pouvoir citer aucun, ajoutant que cela tenait simplement à ce que le flagrant délit n'avait pas été constaté. D'autres m'ont dit que beaucoup se contentaient de divorcer et que même quelques-uns passaient l'éponge.

---

## CHAPITRE X

### Jeux

Les enfants s'amusent au jeu de la boule, « tekerikera » . O ·: O ·: +, qu'ils frappent avec des bâtons recourbés

ASSAUT D'ARMES ENTRE AZOUEL ET TAGHA (TOUAREG TAÏTOQ)
(1re Phase)

(« iggaten tekerikera », ils frappent la boule). Deux camps sont

(2e Phase)

formés et il faut s'efforcer de faire rentrer la boule dans le camp opposé.

(3e Phase)

Mais leur plus grande distraction est de fabriquer avec de l'argile, des petits bâtons et des pierres, toutes sortes d'animaux et de bonshommes qu'ils appellent des « isounar » O | ⊙. Ils fabriquent ainsi un mehari avec sa selle, une chamelle avec ses chamelons, un cheval, etc., ou bien ils font un mehari avec

(4e Phase)

un homme dessus, « aknar » O | •:, ou une femme dans son bassour, « taknart » ⊕ | •: +; c'est le marié et la mariée, et ces jeunes modeleurs sont, paraît-il, très adroits.

Quelquefois, ils accrochent une balançoire, « taoulioula » . ‖ : ‖ : +, à un arbre.

Quant aux hommes, ils s'exercent à lancer la lance le plus loin possible contre un objet déterminé. Ils font des combats simulés à la « takouba » (sabre) et au bouclier, « ar'er »; ou

(5e Phase)

bien, ils roulent des chiffons et ils s'appliquent à les couper d'un seul coup de leur large « takouba ».

---

## CHAPITRE XI

### Mort, — Enterrement, — Tombeaux

Si la mort (« tamettant » ⵜⵎⵓⵜⵜⴰⵏⵜ) a lieu près d'un « ar'erem » (village), la mise en terre est faite au cimetière. Sinon, le défunt est enterré là où il est mort.

Le mort est lavé à l'eau chaude, suivant la coutume musulmane, et revêtu de son linceul « tifit » ⵜⵉⴼⵉⵜ. Des tolbas viennent dire les prières des morts. La tombe, « az'ekka » ⴰⵣⵇⵇⴰ, pluriel « iz'ekouan » ⵉⵣⵇⵇⴰⵏ, est creusée. La fosse

a comme largeur un empan et quatre doigts, car, comme chez tous les musulmans, le mort est couché sur le côté droit, le visage tourné vers la « Quibla » (direction de La Mecque). Comme profondeur, 60 à 70 centimètres seulement. On recouvre à l'aide de pierres plates, cimentées avec de l'argile mouillée. On place les témoins (« chouahed » en arabe, « ihalissen » ⵍ ⵓ ⵍⵍ ⵉ en tamaheq), c'est-à-dire des pierres debout : une à la tête, une aux pieds, si c'est un homme ; une à la tête, deux aux pieds, si c'est une femme, parallèlement ou perpendiculairement au sens de la tombe, suivant que c'est un homme ou une femme.

Autour de la tombe, on fait ensuite un entourage en pierres, avec une ouverture pour l'entrée et la sortie, et vers l'Est, à l'opposé de la porte, l'emplacement pour la prière, suivant le le schéma suivant :

SCHÉMA

Cliché DAUTREVILLE

TOMBE TARGUIE DANS L'OUED TEDEQQIRT (IMMIDIR)

La formule de condoléances employée est la suivante : « iha ner' irah yalla ierhak », qui correspond à l'arabe الله يخلف علينا وعليك et qui signifie : « *Que Dieu compense la perte que vous et nous avons éprouvée* ».

Le visiteur fait le tour de la tombe, en disant « keï irkhem yalla ». *Que Dieu te fasse miséricorde !* fait sa prière et s'en va.

Un repas de funérailles est donné pour les tolbas et les pauvres.

---

# CHAPITRE XII

## Deuil

Le deuil, « oudhouf » ⵄⵓⴹⵀⵓⴼ, ne présente pas, pour l'homme, de particularité bien saillante.

En principe, l'homme doit rester enfermé dans sa tente pendant trois jours.

La veuve prend le deuil et le porte pendant quatre mois et dix jours. Elle doit se cacher les cheveux avec un voile noir et ne pas les peigner pendant la durée de son deuil ; enfermer ses pieds dans des chaussures montantes, au lieu des sandales habituelles ; soustraire ses mains aux regards ou n'en montrer que l'extrémité, bref, comme dans « Miss Helyett » :

Rien montrer de ces charmes
Qui font prendre les armes
Au perfide malin.

A la fin du deuil, les femmes du campement emmènent la veuve *voir le lever du soleil* ; on tient le Coran ouvert devant elle et *on lui fait voir du sel*. Au retour, elle peut s'habiller, comme par le passé, se faire belle. Une collecte est faite à son profit.

## CHAPITRE XIII

### Héritage, — Succession

L'héritage « takasit » ⵜⴽⵙⵉⵜ, (du verbe « ekkous », hériter) est de deux sortes : l'héritage politique, si je puis m'exprimer ainsi, et l'héritage privé.

Le premier est le droit au commandement et à la perception de la « tioussé » ou tribut des « imr'ad ». Il se transmet suivant les lois d'hérédité dont nous parlerons plus loin

Quant à l'héritage privé, il est recueilli par les héritiers naturels, suivant les lois du droit musulman, c'est-à-dire que le fils a droit à une part double de celle de la fille. On estime les animaux laissés en succession et on en fait des parts, suivant cette estimation. Ces parts sont ensuite tirées au sort.

---

## CHAPITRE XIV

### L'Habitat, — La Tente

Toutes les tentes des Touareg de la confédération du Ahaggar sont faites en peaux, « ilmaouen » ⵍⵎⴰⵡⵏ, de chèvres ou de moutons, tannées et cousues ensemble. L'assemblage de ces peaux forme le velum, la partie essentielle de la tente, et s'appelle « ehakit » ⵜⵅⴰⴽⵉⵜ.

La tente est supportée par une poutre centrale et maîtresse appelée « tamankaït » ⵜⵎⴰⵏⴽⴰⵢⵜ.

Une perche, « idjem » ⵉⵊⵎ, est placée à l'entrée de la tente et flanquée à droite et à gauche des perches dites « madar'en » ⵎⴰⴷⴰⵔⵖⵏ.

D'autres perches servent à soulever les bords : ce sont les « tissedass » ⊡ V ⊙ +. Les petits piquets qui fixent la tente au sol s'appellent les « tissetitaï » ⵉ + + ⊙ +. Quelquefois, on se sert aussi d'arcs appelés « adjedjou » ⵏ ⵜ ⵜ, pluriel « idjedjan » ⵍ ⵜ ⵜ.

La tente est entourée par des nattes en « afezzou » ⵏ # ⵅ (Panicum turgidum. Graminées), appelées « asabar » ⵓ ⵎ ⊙, pluriel « isebran » ⵍ ⵓ ⵎ ⊙, qu'on recule le jour et qu'on rapproche la nuit, pour fermer la tente.

Cliché Dautreville
CAMPEMENT TARGUI A TAZEROUK

On trouve dans la tente : d'abord tout ce qui a trait à l'eau, c'est-à-dire des outres, « abeïor' » ⵉ ⵉ ⵎ, pluriel « ibiyar' » ⵉ ⵉ ⵎ, suspendues à des piquets fourchus, « tidjettaouin » ⵍ ⵏ + ⵓ ⵜ +. On les remplit à l'aide d'un entonnoir, « aseguefli » ⵉ ⵅ ⵅ ⊙, pluriel « iseguefla » . ⵅ ⵅ ⊙. Pour abreuver les chameaux, les Touareg se servent d'auges en peau, maintenues dans leur partie supérieure par un cerceau, et qu'ils appellent « tafaraout » + ⵏ ⵓ ⵅ +, pluriel « tiferouin » ⵍ ⵏ ⵓ ⵅ +. Ces auges leur servent aussi pour la cueillette des graines du « toulloult » (Arthraterum pungens, Graminées) ou de « l'afezzou » (Panicum turgidum, Graminées).

Pour le lait et le beurre, ils ont : l'outre à lait, « tanouart » ⊕ ⵏ ⵍ +, pluriel « tinouarin » ⵍ ⵓ ⵏ ⵍ + ; une sorte de gargoulette, faite avec une courge évidée et appelée « az'enou » ⵏ ⵍ #. Pour puiser le lait, le partager ou le verser, ils se servent d'un vase en bois à une anse appelé « asoukal » ‖ ⵏ ⊙, Pour conserver et transporter le beurre fondu, « oudi », ils ont des outres de plusieurs formes : la plus commune est celle appelée « tahattint » ⵜ + ⵉ +, mais ils emploient aussi quelquefois la peau d'une cuisse de chameau tannée.

Pour faire têter les jeunes chamelons, les agneaux, ils utilisent une sorte de biberon en bois, affectant la forme d'un quart muni d'une canule. Cet ustensile s'appelle « ar'alala » ⵔ ⵍⵍ ⵍⵍ ⵏ.

Comme vaisselle, on trouve dans la tente des bols en bois de toutes dimensions appelés « akous » ⵇ ⵓ ⵙ, pluriel « ikassen » ⵉ ⵇ ⵙ; — de grands plats en bois, « tar'elalt » ⵜⵜ ⵍⵍ ⵏ +; — des plats plus petits servant d'assiettes appelés « tar'ehout » + ⵏ ⵏ +, pluriel « tireha » . ⵏ ⵏ +. Pour puiser le lait, la bouillie, les Touareg se servent d'une grande cuiller à pot, « temoulat » + ⵍⵍ ⵓ +, pluriel « timoulatin » ⵉ + ⵍⵍ ⵓ +, et pour manger, ils ont des cuillers en bois ordinaires appelées « tesoukalt » ⵜⵜ ⵙ ⵇ +, pluriel « tsoukaline » / ⵍⵍ ⵙ ⵇ +.

Pour séparer les graines du « toulloult » et de « l'afezzou », de leur enveloppe ils se servent de petits plateaux, en afezzou, appelés « tissiit » + ⵣ ⵇ +, pluriel « tissiin » ⵉ ⵣ ⵇ +.

Ils emploient aussi beaucoup le mortier en bois, « akabar » ⵇ ⵓ ⵙ, avec son pilon, « ihar'en » ⵉ ⵏ ⵏ.

Enfin, ils ont des sacs en peau pour serrer les dattes ou les grains et qu'ils appellent « adjera » . ⵇ ⵜ, pluriel « idjerouen » ⵉ ⵓ ⵇ ⵜ.

Cliché Dautheville

TENTE D'UN TEDJEHE-MELLET A AM'RA (TIFEDEST NOIRE)

Tous les ustensiles qui précèdent sont fabriqués avec du bois de « teborak » (Balanites aegyptiaca. Simaroubacées) et d'abser' ou « tamat » (Acacia arabica).

C'est l'âne qui transporte les outres du puits à la tente et on lui met sur le dos un bât, fabriqué avec des bois recourbés et liés ensemble, appelé « eroukou ».

N'oublions pas la selle du Targui, « terik », et si le maître de la tente est à son aise, la selle de la femme, « tekhaouit ».

La tente est partagée en deux : un côté pour l'homme et l'autre, pour la femme. Du côté de l'homme, se trouvent sa selle, ses armes et les objets qui servent à la nourriture. Du côté de la femme se trouvent sa selle, son « amz'ad » et les ustensiles de cuisine.

La coutume veut que l'homme choisisse pour son côté *la partie Est* de la tente et la femme, *la partie Ouest*.

Un groupe de tentes s'appelle « amezar' » ⵉ ⵣ ⵔ ; — Une seule tente, « ehan » ⵍ ⵉ, pluriel « ehanan » ⵎⵍ ⵉ.

---

## CHAPITRE XV

### Nourriture

Le repas principal a lieu à midi et s'appelle « tarout » ⵜ ⵓ ⵔ ⵜ. Le soir, le Targui se contente généralement de lait, « akh », frais (akh oua kefaïen ⵍ ⵅ ⵇ ⵓ ⵓ ⵓ) ou aigre (« akh iezza » ⵅ ⵉ ⵓ ), à l'heure où les chamelles, les brebis ou les chèvres rentrent du pâturage.

Le fond de la nourriture des Touareg du Ahaggar est constitué par le bechna, « inelli » (sorgho à graines blanches, Graminées), les dattes, « teïni », et le lait, « akh ».

Mais leur pays leur fournit de nombreuses ressources qu'ils n'ont garde de négliger, surtout les pauvres, les « tileqqiouin » ⵍ ⵓ ⵏ ⵍⵍ ⵜ, qui forment la majorité.

Tous les « imr'ad » s'en vont faire la cueillette des graines du « toulloult » et de l'afezzou ». Femmes, enfants, jeunes gens, nègres et négresses s'en vont dans les oueds faire la récolte, qui a lieu, pour le « toulloult », de mai à juin, et pour « l'afezzou », de juillet à fin septembre.

Généralement, avant la récolte, plusieurs oueds sont mis en interdit et les chameaux n'y sont pas conduits jusqu'à ce que la récolte soit terminée.

Les provisions sont faites et enfermées dans des sacs en peau. Les graines ayant séché, il suffit de les mettre dans des petits plateaux en « afezzou », dits « tissiin » qu'on secoue et l'enveloppe se détache et reste au-dessus. Les graines sont réduites en poudre et on en fait une sorte de bouillie avec de l'eau ou du beurre.

Les Touareg aiment beaucoup aussi les « tikamarin » ⵜⵉⴽⴰⵎⴰⵔⵉⵏ, fromages durs comme du bois qu'ils rapportent de l'Aïr. Ils les pilent dans le mortier et ils les mélangent à leur nourriture.

Cliché Dautreville

IDELÈS (KOUDIA)

Ils mangent très rarement de la viande, excepté celle du gibier qu'ils peuvent tuer à la chasse : gazelles, mouflons, antilopes. Mais souvent, ils préfèrent faire boucaner ce gibier pour aller le vendre au Tidikelt.

Les nobles se nourrissent mieux, du moins ceux qui sont aisés. Au Ahaggar, notamment, ils possèdent des terrains de culture dans les « ar'erems » (villages), où ils font cultiver du blé, « ired », de l'orge, « timzin », et du bechna, « inelli » ; mais ordinairement, ils vendent leur blé et leur orge aux indigènes du Tidikelt et ils se contentent du bechna qu'ils aiment beaucoup. Ils prétendent que le bechna est moins échauffant pour l'estomac que le blé ou l'orge.

Les riches se paient le luxe de boire du thé ; mais le thé et le sucre sont très chers et ils n'en abusent pas. Par contre, ils n'hésitent pas à en mendier sans vergogne.

Quand l'année est mauvaise, tout est bon aux pauvres pour assurer leur subsistance. On les voit ces années-là manger du

« berdi » ou « taheli », (Typha angustifolia. Typhacées) ; les graines pilées des caroubes de « talhas » ou gommiers, qu'ils appellent « tahaha » • ⁝ ⁝ + ; du « tanékfaît » (Diplotaxis Duveyrierana. Crucifères) ; les fruits du « teborak » (Balanites Ægyptiaca) qu'ils font macérer pour en enlever l'amertume, et même les feuilles de l'« aremmas » (Atriplex Halimus. Salsolacées) qu'ils font bouillir.

Cliché Dautreville

ARBRES DITS « AHATÉS » (ACACIA ALBIDA) AUX TILLEMAS DE L'OUED TESSIT (KOUDIA)

Bref, la nature leur réserve des ressources alimentaires qui permettent, même aux plus pauvres, de ne pas mourir de faim.

Les lois de l'hospitalité, « amedjarou », sont observées, comme chez tous les musulmans. L'hôte, « amadjar », est toujours bien accueilli.

---

## CHAPITRE XVI

### Hygiène. — Maladies

On sait que les Touareg ont horreur de l'eau. Ils ne se lavent pas, sous prétexte que cela les rendrait malades, mais c'est surtout parce qu'ils sont très frileux. Pour faire leurs prières, ils ne se livrent pas aux ablutions prescrites, même quand ils sont chez eux et quand ils ont de l'eau à leur disposition. Ils se contentent du « taïmoum » (simulacre de l'ablution avec du sable) qu'ils prononcent « ettamine ». L'amenokal Moussa ag

Amastane est le seul Targui que j'ai vu faisant ses ablutions avec de l'eau.

Cela tient sans doute aussi à ce que les Touareg aiment à conserver sur la peau la teinte de l'indigo « sedjeni » ⵙⵉⵜⵓ, résultat du port de la « chegga » ou cotonnade bleue qui déteint beaucoup et dont sont faits leurs vêtements. Ils prétendent que cette teinture bleue est excellente pour la santé. Comme au Tidikelt, un effet blanc n'est beau à porter que lorsqu'il a été suffisamment teint en bleu par le contact avec la « chegga ».

Les Touareg recherchent nos médicaments, « asafar » ⵓⵙⵓ, pluriel « isefran », ⵉⵓⵙⵓ, et ils croient en leur efficacité. Cela tient aussi à ce qu'ils leur sont délivrés gratuitement, car le Targui, en toutes choses, n'aime pas délier les cordons de sa bourse et il ne cesse de mendier tout ce qu'il voit et qu'il espère avoir pour rien.

Cliché Dautheville
LE DOCTEUR DAUTHEVILLE DANS L'OUED ABEZZOU (TIFEDEST BLANCHE)

Quoiqu'il en soit, il est bon de constater qu'il vient très volontiers se faire soigner par nous. Un médecin français serait certainement très bien accueilli par les Touareg.

Les maladies les plus fréquentes chez eux sont : la fièvre, « tazzaq ... ⵜⵣⵣⴰⵇ ; la blennhoragie, « talaoaït » ; les rhumatismes, « tessemdhi » ⵜⵙⵎⴷⵀⵉ et les maux de tête, « tekmoun-ir'ef » ⵜⴽⵎⵓⵏ ⵉⵔⵖⴼ.

# CHAPITRE XVII

## Les nègres et les négresses

Il n'y a pas de tente de targui qui n'ait au moins son nègre et sa négresse. Les razzias fréquentes que les Ahaggar ont faites au Niger et au Soudan leur ont procuré tous les esclaves qu'ils ont.

Ils se livraient beaucoup à la traite des nègres, qui leur rapportait de beaux bénéfices, puisqu'ils n'avaient eu qu'à enlever les nègres, sans bourse délier.

La conquête du Soudan et des Oasis sahariennes leur a porté un coup terrible à ce point de vue. En outre, avec la pacification progressive de leur territoire et de celui des tribus voisines qui ont fait leur soumission, ils devront renoncer bientôt à tout espoir de razzias nouvelles et l'on peut dire que la traite des nègres sera, sinon totalement enrayée, du moins considérablement diminuée.

Les nègres et négresses sont bien traités par les Touareg qui ne leur imposent pas de travaux fatigants. Les nègres s'occupent surtout des troupeaux qu'ils mènent au pâturage et à l'abreuvoir. Les nègresses s'occupent de la cuisine ; elles vont à l'eau et soignent les enfants.

Nègres et négresses font aussi la récolte des graines du « toulloult » et de l' « afezzou », mais c'est plutôt une distraction qu'un travail, car tout le monde y participe avec eux, par bandes joyeuses.

Beaucoup de nègres finissent par devenir les hommes de confiance de leurs maîtres qui les chargent de conduire des caravanes ou même de missions de confiance. Ainsi, l'amenokal Moussa a un nègre de confiance, Chernach, qu'il estime beaucoup, car, dit-il, « je sais que cet homme se ferait tuer pour moi ». Aussi, lui a-t-il donné un fusil, une lance et un sabre.

Ces nègres-là sont très heureux et ils peuvent se considérer comme affranchis.

Du reste, rares sont les nègres qui ne sont pas armés par leurs maîtres de la « tar'da » (lance avec manche en bois) et de

TOUAREG ABREUVANT LEURS MOUTONS AU PUITS DE TIN ZAOUATEN

la « takouba » (sabre), dont ils sont très fiers. Les meilleurs sont emmenés en rezzou, et il paraît qu'ils se conduisent très bien au combat.

Quant aux négresses, s'il y en a qui se bornent à vaquer aux soins du ménage et de la tente, il y en a d'autres, en assez grand nombre, qui sont élevées à la dignité de concubines. Le Targui noble préfère partager sa couche avec une négresse que de se marier avec une « tamr'idt » (serve). Il se marie tard, et lorsqu'il s'y décide, il recherche surtout une femme qui, par sa

naissance, donnera à ses enfants des droits futurs au commandement. La négresse en profite.

Les nègres et négresses ne sont, en général, pas maltraités par les Touareg, et, du reste, lorsque le cas se produit, ils savent se servir de la curieuse coutume suivante, en usage chez les Touareg :

Lorsqu'un esclave, nègre ou négresse, se trouve trop malheureux chez son maître et désire devenir l'esclave d'un autre maître, il va fendre l'oreille d'un enfant, d'un cheval, ou couper le jarret d'un mehari, bref, abîmer toute autre chose précieuse appartenant au maître qu'il désire avoir ; puis, il reste là auprès de son ouvrage. Naturellement, en dédommagement du préjudice causé, le nègre est donné en toute propriété au maître lésé. Il peut y avoir contestation, s'il y a eu connivence entre l'esclave et le maître qu'il désire avoir et, dans ce cas, le serment est déféré et la cause portée devant un marabout ou un cadhi.

Ainsi, la négresse Tenoufek, appartenant à Semana, sœur de Bika ag Moumou, des Kel Ahnet, avait été fendre l'oreille d'une jument appartenant à Sidi ag Keradji, l'amenokal des Taïtoq et Kel Ahnet. En dédommagement, la négresse fut donnée à Sidi, chez qui elle est encore.

Autre exemple : Le nègre d'El Biodh ould Settafi, des Settaf, avait coupé le jarret à deux chameaux appartenant à Ibedi ag Bassi, des Ir'echoumen. En dédommagement, El Biodh dut donner à Ibedi le nègre, plus un chameau.

---

# CHAPITRE XVIII

## Habillement, — Le voile

Les Touareg sont d'une coquetterie extrême. Ils adorent les beaux vêtements et ne manquent pas de se mettre sur le dos ce qu'ils ont de mieux dans leur garde-robe, chaque fois que l'occasion s'en présente.

Plus ils peuvent mettre de vêtements les uns sur les autres, mieux cela vaudra ; et même en plein été, si le Targui a un burnous en drap, il n'hésitera pas à le mettre sur ses épaules, s'il doit assister à un palabre ou se présenter à un chef, dût-il en souffrir.

Leurs vêtements sont presque tous faits avec de la cotonnade bleu foncé, « tchoqqit » +...⊐+ (mot qui paraît être une altération du mot « chegga », employé par les Arabes).

La cotonnade blanche est peu en faveur et n'est portée que par ceux qui n'ont pas les moyens de se payer de la cotonnade bleu foncé, qui paraît noire et leur donne, de loin, quand ils sont en groupe, une vague ressemblance avec des corbeaux.

Leur costume se compose :

De la « takarbast » ⊕ ▣ O ·: +, gandoura sans manches, fendue sur les côtés et cousue seulement dans le bas, de sorte que lorsqu'ils relèvent sur l'épaule les pans qui retombent jusqu'aux poignets, on leur voit à nu toute la poitrine, par l'ouverture ;

Du « karteba » . ▥ + O ·:, pantalon à la hussarde, ou bouffant comme le « seroual » arabe, étroit à la cheville ;

De la « takammist » + ⊙ ⊐ ·: +, gandoura à grandes manches pagode avec, sur le côté gauche de la poitrine, une grande poche, « el hib » ▣ ⁞ ‖ . La « takammist » qui se fait le plus souvent avec une cotonnade à petits carreaux bleus

et blancs ou à raies bleu foncé et mauve, est ornementée sur les épaules de broderies blanches. Ce vêtement coûte cher et n'est porté que par les Touareg à l'aise ;

D'un « abrour' » ⁝ O ⊡, haïk en laine acheté au Tidikelt ou au Touat et porté l'hiver seulement ;

Du « tidjelmoust » ⊕ ⊐ ‖ ⊤ +, ou voile. Le voile est formé d'une seule bande de cotonnade bleu foncé ou noire. Pour le mettre, on place l'extrémité sur le sommet de la tête, puis on le fait tourner d'abord en bas, pour cacher la partie inférieure du visage. On le ramène ensuite vers le haut, pour cacher la partie supérieure de la figure et l'on entoure la tête avec le restant de la bande pour la fixer.

La partie supérieure du voile s'appelle « amaoual-oua-n-afella » ; la partie inférieure, « amaoual-oua-n-aris ». Le sommet de la tête reste découvert, pour laisser sortir les cheveux qui sont nattés en petites tresses ou coupés en forme de crêtes de coq ou tout simplement coupés ras. La partie du voile qui recouvre la nuque s'appelle « adjedellehouf ».

Le voile mis, on serre le front avec une étoffe blanche ou de couleur, « asaded » ∧ ∧ ⊡, et pour être coquet, on peut y ajouter un ruban ou une étoffe de couleur vive, « itelli » ⊂ ‖ +.

Les jeunes gens ont importé depuis quelque temps une mode qu'ils ont empruntée aux Kel Fedé de l'Aïr, et qui consiste en une sorte de diadème, ayant la forme suivante :

Il se pose sur le front et il est recouvert et caché par le voile, qui le retient.

Ce diadème, qui s'appelle « tadebanat » + ⊥ ⊡ V +, ne plaît pas au parti « vieux targui » qui ne l'a pas adopté. Sidi ag

Keradji me disait qu'il préférait l'ancienne mode qui consistait à glisser sous « l'assaded » des amulettes enfermées dans des plaques d'argent, appelées « tira-n-azerouf ». Mais le parti « jeune targui » n'est pas de cet avis et trouve que la nouvelle mode ne manque pas d'élégance.

Quelquefois, ils entrecroisent une ceinture blanche sur la poitrine, « tirezzemine » ⵍ ⵊ # ⵓ +.

Enfin, ils portent en sautoir de grosses cordes en soie ou en laine tressée, rouges ou vertes, qu'ils appellent « el mejdoud » et qui servent à suspendre, soit un Coran, soit un livre où il est question de pratiques cabalistiques, soit des amulettes.

Les amulettes (tous en ont) se portent dans le dos ou sur la poitrine. Elles sont enfermées dans une gaîne en cuir ou en métal. J'ai vu un Targui qui en avait une vingtaine qu'il portait, réunies ensemble, sur la poitrine.

Enfin, ils sont chaussés des larges sandales plates de l'Aïr « ir'atimen » ⵍ ⵊ + ⵗ, ou de sandales en peau, fabriquées sur place et appelées « imerkeden » ⵍ ⵎ ·: ⵓ ⵊ .

N'oublions pas le bracelet de bras « ahbedj » ⵄ ⵓ ⵗ pluriel « ihebdjan » ⵍ ⵜ ⵓ ⵗ, en serpentine, qui, disent-ils, donne plus de force au biceps, quand on assène un coup.

Dans les réunions un peu importantes, dans les palabres, les plus riches arrivent revêtus de burnous achetés à R'at et ornementés sur les épaules de broderies en argent d'un joli effet. Quelquefois aussi, il arrive que, si le burnous n'a pas de broderies, le propriétaire préfère le porter à l'envers ! pour laisser voir les doublures en soie jaune et verte qui ornent le bord et le coin inférieur du burnous. Où la coquetterie va-t-elle se nicher ?

Le burnous n'est pas endossé, mais simplement posé sur les épaules.

Quelques Touareg pauvres sont habillés avec des vêtements en peau tannée.

Le costume de la femme se compose principalement :

D'une sorte de jupe, dite « asedjebes » ;
D'une chemise à manches « takammist » ;
D'un haïk en laine « abrour' » ;
Et du voile placé sur la tête « ikerhi ».
Suivant leur fortune, elles portent les bijoux suivants :
Des bracelets en argent, « ihebdjan-oui-n-azerouf » ;
— en verre, « tahouka », pluriel « tahoukaouin » ;
— en verroterie « denguela », plur. « denguelaten » ;
— en cornes de chèvres ou de gazelles, faits de deux moitiés qu'on emboîte l'une dans l'autre avec du cuivre et qui s'appellent « iouakane » ;
Des boucles d'oreilles, en forme de grands anneaux « tizabbatine » ;
Des bagues « tisseq », pluriel « tisser'ine ».
Elles portent aussi, comme les hommes, des amulettes « tira ».
Enfin, l'été, elles se coiffent toutes de grands chapeaux-parasols (medols, en arabe) qu'elles ornent quelquefois de laine rouge et qui s'appellent « tili » (ombre).

---

*Du voile.* — D'où vient cet usage du voile chez les Touareg ? Les intéressés eux-mêmes l'ignorent.

Sidi ag Keradji m'en a fourni, cependant, une explication qui n'a aucune valeur, mais qui démontre la manie qu'ont les Touareg de vouloir se donner une origine arabe. Voici son histoire :

« Le Prophète Mohammed, à la prise de la Mecque, était » monté sur une « cidah » (femelle du mehari). Il s'était enve- » loppé la tête avec son « ihram » (vêtement particulier du » pélerin qui entre sur le territoire sacré de la Mecque). C'est » depuis ce temps que les Touareg portent le voile ».

Ce qu'il y a de certain, c'est que cet usage est très ancien, puisque les auteurs arabes ont désigné depuis plusieurs siècles

les Touareg sous le nom d' « Ahl-el-Litham » ou « Gens au voile ».

Ont-ils adopté cette coutume par raison d'utilité, pour protéger leur vue de l'éclat des rayons solaires et pour garantir leurs yeux de la poussière qui s'élève des sables ? A cette question, ils répondent négativement. C'est surtout, disent-ils, une question de pudeur, de dignité. Un Targui ne doit jamais montrer sa bouche, la porte par laquelle on introduit la nourriture dans le corps. C'est honteux. Même la nuit, il ne se débarrasse pas de son voile. Quand il se présente dans un campement étranger à sa tribu, il doit abaisser complétement son voile sur les yeux pour ne pas être soupçonné de venir chercher à séduire. Dans les assemblées, il se voile aussi complétement, peut-être pour mieux dissimuler ses impressions.

C'est probablement à cause de cet usage que le Targui se rase les moustaches et il trouve bizarre que nous les portions. Par contre, il porte la barbe entière.

---

## CHAPITRE XIX

### La Selle de Femme

Je crois bon de donner ci-dessous la description de la selle de mehari, si originale, de la femme Targuie.

J'ai eu l'occasion d'en voir une dont j'ai pu prendre un croquis.

*(Voir la planche ci-contre)*

SELLE DE FEMME TARGUIE
(Dessiné par le Caporal Malroux)

Il paraît que beaucoup d'autres selles sont plus jolies, avec des bois coloriés, et la belle Dassine éprouva, dit-on, un chagrin sensible lorsqu'elle apprit qu'une belle selle lui appartenant avait été razziée par un des contre-rezzous du début de notre installation aux Oasis.

La selle de femme, qui ressemble un peu à une chaise à porteurs, se place au-dessus de la bosse du mehari, sans la toucher. Elle comprend comme parties essentielles : un siège rectangulaire, à mailles entrecroisées, porté par quatre montants auxquels sont fixés quatre coussins, vides au milieu, qui reposent, deux de chaque côté, sur les flancs du mehari. Ces coussins *A* s'appellent « afelledoud » ⵎⵎⵍⵍⵓⴷ, pluriel « ifelledad » ⵎⵎⵍⵍⴰⴷ.

Les montants sont fixés entre eux par deux barres transversales, de chaque côté.

Une chaîne à anneaux en fer *B* appelée « imetredj » ⵉⵎⵜⵔⵉⵊ, fait le tour de la selle et vient passer dans l'anneau de la sangle *C* qui s'appelle « ahif » ⴰⵃⵉⴼ.

Au montant du coussinet arrière, qui est caché dans le dessin, est accroché un ornement brodé, laissant pendre des lanières en cuir colorié ou en laine. Cet ornement *D* s'appelle « tegarsim » ⵜⵗⴰⵔⵙⵉⵎ.

Prolongeant le siège, 4 petits montants *E*, un à chaque coin. Enfin, 4 autres petits montants *F* perpendiculaires au siège.

Pour monter, le chameau étant agenouillé, la femme, prenant en main la bride, s'asseoit sur le garrot nu et libre de l'animal (à l'emplacement où porte la selle d'homme) et, dans cette position, les jambes sur le cou du mehari, elle le fait lever. La bête étant debout, la femme met les deux mains sur les 2 petits montants *E* du devant de la selle et, par un petit rétablissement, elle s'asseoit en selle, les jambes pendantes sur le garrot de l'animal.

On recouvre généralement le dessus de la selle avec un

haïk qui est attaché aux 4 montants perpendiculaires *F*, de sorte que la femme se trouve assise dans une espèce de hamac.

Cette selle s'appelle « tekhaouit » ⵜⵅⴰⵡⵉⵜ. La selle de de luxe, plus ornementée, s'appelle « araguen » ⵏ ⵅ ⵓ.

---

## CHAPITRE XX

### Instruction

On ne peut pas dire que la connaissance de la lecture et de l'écriture des « tifinar's » ou caractères de la langue « tamaheq » soit une preuve d'instruction, car cette connaissance n'a pas une utilité bien pratique.

Les Touareg se servent très peu des caractères de leur langue et ils les emploient surtout pour de petites inscriptions sans grande valeur (du genre de celle que nous verrons plus loin), sur les rochers ou à l'intérieur des bracelets de bras.

Quand ils ont des lettres à écrire, ils les font écrire en arabe, car ils craindraient trop, avec raison, d'être mal compris, s'ils les écrivaient en « tifinar's ». En effet, par suite du manque de voyelles, on devine les « tifinar's », plutôt qu'on ne les lit, et ce système d'écriture est resté bien primitif.

Cependant, parmi les Touareg du Ahaggar, quelques-uns savent lire et écrire l'arabe, surtout les Issoqqamaren qui presque tous comprennent l'arabe, à cause de leurs relations fréquentes avec le Tidikelt, où ils ont dû habiter longtemps (1). Il en est de même pour les Taïtoq et les Kel Ahnet dont beaucoup parlent l'arabe.

---

(1) Voir l'Historique.

La connaissance des « tifinar's » est plutôt une distraction pour les Touareg qu'une étude utile. Ils aiment bien essayer de déchiffrer des inscriptions ou vous indiquer, sur le sable, l'orthographe exacte d'un mot.

L'AMENOKAL SIDI AG KERADJI
LISANT LA SUSCRIPTION D'UNE LETTRE A LUI ADRESSÉE

Ils n'ont pas de chiffres et ils ne se servent pas des chiffres arabes. Ils préfèrent faire des trous dans le sable et ils arrivent, par ce procédé un peu long à compter tout de même. Du reste, le Targui ne peut parler cinq minutes sans accentuer son discours de points ou de traits sur le sable. Si on lui demande : « Combien de jours de marche y a-t-il entre tel point et tel autre ? » il ne pourra pas répondre un chiffre quelconque sans marquer sur le sol autant de points qu'il y a de jours dans sa réponse.

Un Targui qu'on fait asseoir à terre sur une couverture soulève, dès qu'il commence à causer, les bords de la couver-

ture pour se livrer à son occupation favorite. Certainement, s'il était transporté en France, dans un appartement bien ciré, il serait très malheureux et il demanderait vite du sable ou de la terre pour pouvoir y tracer ses points et ses traits.

Mais cette habitude a son utilité quand on désire avoir une idée du chemin que l'on va avoir à parcourir. Le Targui, qui possède, comme tous les nomades, un sentiment très juste de l'orientation, vous dessinera sur le sable un plan sommaire de la route à suivre, avec les oueds et les accidents de terrain qu'on rencontrera.

Les Touareg n'ont pas de mots dans leur langue pour désigner les jours de la semaine. Ceux qu'ils emploient ont été empruntés à l'arabe et altérés.

Par contre, ils ont conservé, pour leurs mois, certains noms bien « tamaheq », tandis que d'autres sont certainement tirés de l'arabe. Ainsi :

1° « Tamessedek « correspondant à Moharrem et qui paraît tiré de l'arabe « sedeq » صدق « faire l'aumône ». Ils disent que ce nom signifie « zekkat » زكاة ou « aumône légale » ;

2° « Talilt tassettafet » (correspondant à Safar). C'est « le mois noir ». Voici pourquoi ce mois aurait été appelé ainsi : « Sidna Slimane (Salomon) commandait aux génies et aux » démons. Un jour qu'il était debout, appuyé sur un bâton, » les « djinns » (génies) dirent au termite d'aller ronger le bas » du bâton. Le termite s'acquitta si bien de sa tâche que le bâton » se cassa par la base et que le pauvre Salomon s'écroula, les » quatre fers en l'air et se tua dans sa chute. Sa mort fut le » signal de la liberté pour les génies et les démons qui se » répandirent dans le monde, précisément dans ce mois-là qui » fut depuis appelé « le mois noir » ;

3° « Talilt tarer'ert », c'est-à-dire « le mois jaune » (correspondant à Rebiâ el Ouel ou Mouloud, mois de la naissance du Prophète), ainsi nommé parce que, disent-ils, il est illuminé, منوّر, par la naissance du Prophète.

4° « Aouhim oua izzaren », c'est-à-dire « le premier Aouhim », (correspondant à Rebiâ tsani). Aouhim signifie « faon de gazelle ». C'est aussi le nom d'une étoile.

5° « Aouhim oua ilkamen », c'est-à-dire l' « aouhim suivant », (correspondant à Djoumada el Oula).

6° « Sarat » (correspondant à Djoumada tsania). Les Touareg n'ont pu me donner aucune explication au sujet de ce nom.

7° « Tin tineslimine », c'est-à-dire « le mois des marabouts », (correspondant à Redjeb). Du temps de la doctrine kharedjite, le Ramadhan avait été reporté au mois de Redjeb, et l'on sait que les Touareg avaient épousé cette doctrine (1).

8° « Amezzehel », c'est-à-dire « celui qui court », (de la racine « zehel », courir), ainsi nommé parce qu'il n'a que 29 jours et qu'il prévient de l'arrivée du Ramadhan. Il correspond à Chaâbane.

9° « Azzoum », c'est-à-dire « le jeûne » (correspondant au mois de Ramadhan), nom tiré du mot arabe الصوم « essoum », le jeûne.

10° « Tessessi », c'est-à-dire « action de boire » ou « libations », parce qu'on peut boire après le jeûne. Il correspond à Choual, mois pendant lequel a lieu la fête dite « Aïd Ser'ir ».

11° « Djer mouhaden », c'est-à-dire « entre les prières », parce qu'il arrive entre les fêtes. Il correspond à Dou-el-Qaâda.

12° « Tafaski », c'est-à-dire « le sacrifice ». Il correspond à Dou-el-Hidja, dans lequel a lieu la fête dite « Aïd el Kebir », appelée encore par les Arabes « Aïd el Adha » عيد الاضحى ou « fête des sacrifices ».

Il n'existe pas de livre en tamabeq, du moins c'est ce qui m'a été répondu. Cependant, le secrétaire de l'amenokal Moussa

---

(1) Voir *Essai sur l'Histoire de l'Islamisme*, par Dozy.

ag Amastane m'a appris qu'il existe, au Ahaggar, un livre écrit en langue tamaheq, mais avec des caractères arabes, et qui serait la traduction d'un ouvrage de droit dont l'auteur serait Ibn Achir (1).

---

(1) Ce livre est actuellement en la possession du nommé Salakh ag Meguemmed, des Issoqqamaren.

[p. 47]

# DEUXIÈME PARTIE

## LES TOUAREG DANS LEUR VIE EXTÉRIEURE

---

## CHAPITRE Ier

### Nobles et Imr'ad

Duveyrier a si excellemment décrit les caractéristiques qui différencient le noble de l'amr'id (1) que j'estime inutile de revenir après lui sur cette question. Je veux me borner simplement à noter les quelques remarques que j'ai pu faire au cours de mon séjour au milieu des Touareg de la confédération du Ahaggar.

Tout d'abord, ce qui frappe, c'est qu'au bout de peu de temps de contact, on arrive à deviner très facilement si l'on se trouve en présence d'un noble ou d'un amr'id. L'allure, la marche, le port, les traits (lorsque le voile est remonté sur le front), un je ne sais quoi qu'on ne peut exprimer, tout fait supposer, avec raison, que le Targui qui se présente à vous est bien un noble. Et cependant au cours des palabres, les im'rad, dont beaucoup sont riches, arrivent souvent aussi bien habillés que les nobles. Mais leurs traits sont moins fins, leur démarche moins dégagée, leur regard moins assuré, et l'on se dit : c'est un amr'id.

Les Touareg vous diront du reste : « Un amr'id aura beau

---

(1) Les Touareg du Nord, pages 331 à 335.

» faire ; il pourra se revêtir de beaux effets, porter de belles » armes, toujours « iamir'ed », c'est-à-dire « il lui manque quel- » que chose », et c'est de ce verbe qu'ils font dériver ce nom d'amr'id, au pluriel imr'ad.

Faut-il penser que les imr'ad sont d'une race moins pure que les nobles, par suite de croisements lointains avec la race nègre ? Le cheikh Ben Djellas déclare que la mère des Issoqqamaren (tribu d'imr'ad du Ahaggar) a été *achetée* par les premiers habitants d'Es-Souk. D'autre part, nous verrons comment les Adjouh-n-Taheli et les Tedjehé-n-Efis sont venus de l'Aïr se placer sous la protection des nobles Kel R'ela et Taïtoq.

Faut-il attribuer simplement les différences constatées à l'état de sujétion, de dépendance dans lequel se trouvent depuis longtemps les imr'ad vis-à-vis des nobles ? Je serais tenté d'admettre cette deuxième hypothèse plus conforme aux données de l'histoire.

Et de ce que j'ai vu et constaté, je ne peux me résoudre à traduire le mot « amr'id » par « serf », mot qui rappelle à notre esprit l'idée du serf attaché à la glèbe et vendu avec le domaine qu'il cultivait ; mais plutôt par « client, homme-lige, tributaire ».

En effet, si l'amr'id paie la « tioussé » ou tribut, au noble ; s'il « lui fait goûter un peu de ce qu'il a », suivant son expression ; s'il est sous la dépendance du noble, il jouit cependant d'une liberté d'allures que ne connaissait pas le serf au moyen âge. Il a droit à la protection du noble, s'il est attaqué, mais il marche et combat avec lui, armé des mêmes armes. En rezzou, il part aussi avec lui et il reçoit sa part de butin, variable suivant les tribus, part qui paraît avoir été fixée, suivant un contrat ancien, en échange de la protection accordée.

Et la preuve la plus convaincante, nous la trouverons dans la nomination de l'amenokal. Les imr'ad y prennent part : ce sont eux qui parlent les premiers, qui déclarent s'ils acceptent le nouvel amenokal, s'ils ont confiance en lui, s'ils s'engagent

à lui payer fidèlement la « tioussé » et celui-ci, de son côté, s'engage à leur donner aide et protection envers et contre tous.

Le noble met son point d'honneur à tenir cette promesse. Ce serait une honte « el r'ar », suivant son expression (d'après le mot arabe « el aâr » العار), que de ne pas venger une insulte faite ou un dommage causé à celui qui lui paie la « tioussé ».

---

## CHAPITRE II

### Le Tobol. — L'Hérédité

*Du Tobol.* — Le « Tobol », à l'origine, était un tambour formé d'une grande calebasse, recouverte d'une peau tendue, que le chef de la tribu faisait résonner pour rassembler ses clients, les prévenir qu'on devait changer de pâturages, etc. C'était l'insigne du commandement.

Duveyrier nous a dit que les sultans Imanan (Cheurfa) avaient confié leurs tobols à une tribu maraboutique, les Ifor'as-oui-n-Tobol. Cet usage s'est maintenu : les chefs nobles se flattent de conserver chez eux des tobols, mais ils ne s'en servent plus.

On dit que les nobles ont accès au tobol, parce qu'un jour ou l'autre, suivant la loi d'hérédité en usage chez les Touareg, eux ou leurs descendants peuvent avoir l'espoir d'obtenir le tobol, c'est-à-dire le droit au commandement.

Au contraire, on dit qu'un noble a perdu ses droits au tobol quand, par une mésalliance, ses enfants ne seront plus de race noble pure, exemple : les Kembiben, les Oulad El Goute, les Oulad Ibra (chez les Kel R'ela du Ahaggar), et ceux-là ne peuvent plus espérer avoir droit au commandement, au tobol. De même, le fils d'un noble et d'une « tamr'idt » (féminin

d'amr'id) est amr'id et perd tous les droits au tobol que son père avait.

De cette première acception, le mot « tobol » a fini par désigner l'ensemble des nobles et des tribus imr'ad répondant à l'appel du tobol et l'on dira, par exemple : « le tobol des Kel R'ela (tribu noble) comprend telles et telles tribus imr'ad » ou bien « telle fraction d'imr'ad fait partie du tobol des Kel R'ela nobles ».

Ce mot « tobol » n'est certainement pas d'origine tamaheq, mais bien arabe. En effet, « Tobol » طبل, en arabe littéraire, signifie : « 1° Tambour ; 2° Timbale ; 3° Tribut, contribution », et pour dire : « Je ne sais quel homme c'est », les premiers Arabes disaient : ما ادري اي الطبل هو « Je ne sais de quel tobol il est » (1).

Je crois donc que cette coutume a été introduite par les premiers Arabes qui, dès le premier siècle de l'hégire, se sont avancés en conquérants dans le pays parcouru par les Touareg, pour les convertir à l'islamisme.

*De l'hérédité.* — Nous avons vu que l'héritage privé se transmet aux héritiers naturels, d'après les règles du droit musulman. Quant à l'héritage politique, c'est-à-dire le droit au titre de chef de tobol et à la perception de la « tioussé » ou tribut des imr'ad, il se transmet d'après des règles particulières.

Duveyrier nous a appris que ces droits se transmettaient « au fils aîné de la sœur aînée ». Je n'aurais jamais osé m'inscrire en faux contre une affirmation émanant d'une pareille autorité si je n'avais pas acquis la certitude absolue que l'ordre d'hérédité n'est pas précisément celui qu'a indiqué Duveyrier, et cette certitude, j'en apporte les preuves, dans le chapitre intitulé « Généalogie », du 2e livre de cette étude.

Je dirai donc, avec les Touareg : Quand un chef de tobol meurt, c'est :

---

(1) Dictionnaire arabe-français de A. de Biberstein-Kazimirski

1° Son frère qui est appelé à lui succéder (l'aîné de ceux qui restent, s'il en a plusieurs).

2° A défaut, le fils aîné de sa tante maternelle.

3° A défaut, le fils aîné de sa sœur aînée.

Ce dernier ne vient donc qu'en troisième ligne.

C'est l'aïeule, ce sont ses filles qui transmettent à leurs enfants le droit au « tobol ». Actuellement, les Kel R'ela font remonter leurs droits d'hérédité et d'accès au tobol à Kella, leur aïeule, et les Taïtoq à Sakina, contemporaine de Kella et sa parente collatérale.

Le fils suit le tobol de sa mère. Ainsi, si le père appartient au tobol des Kel R'ela, par exemple, et la mère au tobol des Taïtoq, le fils fera partie du tobol de sa mère. C'est ce qui est arrivé pour Sidi ag Keradji, l'amenokal actuel des Taïtoq et Kel Ahnet, dont le père était du tobol des Kel R'ela et la mère du tobol des Taïtoq. Même remarque pour Attici ag Amellal et son frère Anaba, dont le père appartenait au tobol des Tedjehé Mellet, et qui font partie actuellement du tobol des Kel R'ela.

---

## CHAPITRE III

### L'Amenokal. — L'Amr'ar

Les Touareg du Nord, après la déchéance des sultans Imanan, qui exerçaient sur eux le commandement suprême, reconquérirent leur indépendance. Puis on vit se former deux confédérations : celle des Azdjer et celle des Ahaggar, comprenant chacune plusieurs tribus nobles.

Nous verrons plus loin (Origine des Touareg), que chez les Berbères, plusieurs tribus formaient souvent une confédération soumise au commandement suprême d'un même chef et que le droit au commandement appartenait spécialement à certaines tribus qui exerçaient une sorte de suprématie sur les autres. Et c'est ce que nous allons retrouver. Chez les Azdjer, la tribu qui exerçait cette sorte de suprématie était celle des Orar'en ; chez les Ahaggar, c'était celle des Kel R'ela. L'amenokal du Ahaggar a toujours été choisi dans le tobol des Kel R'ela.

La désignation de l'amenokal, bien que soumise d'abord aux lois d'hérédité que nous avons indiquées, devait être ratifiée par les représentants des nobles de toutes les tribus et ceux des imr'ad de toutes les fractions de la Confédération. L'hérédité devait être confirmée par l'élection et cela répond bien à l'esprit démocratique de tous les Berbères et à tout ce que l'on sait de leur histoire et des théories introduites chez eux par le kharedjisme dont ils ont été les adeptes.

Ainsi que nous l'avons dit, les imr'ad devaient parler les premiers, dire s'ils acceptaient l'amenokal désigné par l'hérédité et s'engager à lui payer la « tioussé ». Les nobles parlaient ensuite. La discussion était ouverte et l'accord se faisait. Quelquefois il ne se faisait pas. Nous en avons pu voir un exemple à la mort de l'amenokal du Ahaggar, Aïtar'el ag Biska, décédé en 1900. La loi de l'hérédité appelait à l'amenokalat Mokhammed ag Ourzig, mais celui-ci, combattu par les imr'ad et par la majorité des nobles, ne fut pas élu, et il se vit préférer son concurrent, Attici ag Amellal.

L'amenokal qui, au début, exerçait le commandement suprême, fut obligé par la suite de se dépouiller au profit de certains chefs et de leur donner des « tobols » particuliers avec des tribus imr'ad qui ne lui payaient pas la tioussé, mais qui la payaient aux chefs des nouveaux « tobols ». Ce fut une source de discussions et de guerres continuelles (voir l'Historique, 2e livre) et l'on se prend à penser, malgré soi, au « Qui t'a fait comte ? » et à la réponse « Qui t'a fait roi ? ».

Avant l'occupation française des Oasis sahariennes, chaque tobol avait sa vie propre et indépendante et l'amenokal, ou chef suprême, ne s'immisçait en rien dans l'administration intérieure des « tobols ». Il n'intervenait que pour régler, avec le concours de la djemaâ, les différends qui pouvaient survenir entre tribus ou pour appeler sous les armes toutes les tribus de la Confédération contre l'ennemi commun, comme pendant la guerre entre Azdjer et Ahaggar.

Le chef de chaque « tobol », le chef de chaque tribu noble ou celui de chaque fraction d'imr'ad, tous portaient indifféremment le titre d'« amr'ar », ⵄⵎⵔⵄⵔ, qui signifie surtout « vieillard », comme le mot arabe « cheikh », dont il a toutes les significations. Ainsi, le chef du tobol des Taïtoq portait le titre d'amr'ar. Pour des raisons d'ordre politique, le titre d'amenokal lui a été conféré, ce qui porte à deux le nombre des amenokals de la Confédération du Ahaggar.

L'amenokal était donc le chef suprême de la Confédération, en même temps que le chef de son « tobol », tandis que l'amr'ar était le chef d'un « tobol » moins important ou d'une tribu d'imr'ad.

---

## CHAPITRE IV

### La Tioussé

Nous savons que la « tioussé » est le tribut que les imr'ad doivent payer aux nobles en échange de la protection qu'ils en reçoivent.

Cette « tioussé » est de deux sortes : la première est celle qui est payée au chef du tobol, qui peut être en même temps l'amenokal. Cette « tioussé » est à peu près fixe, mais elle varie

cependant suivant que l'année est bonne ou mauvaise. Elle se paie généralement à l'automne, après la récolte des dattes dans les oasis du Touat ou du Tidikelt. Elle peut consister en une certaine quantité de dattes ou de bechna, de chamelons, de moutons, de beurre fondu, etc.; en une part prélevée sur ce que rapportent les imr'ad qui sont allés en caravanes ; ou enfin, en une part sur le butin fait par les imr'ad dans les razzias.

Dans certaines fractions, quelque groupes ne paient pas la « tioussé » au chef du tobol, mais à un noble d'une certaine tribu ancienne, disparue aujourd'hui, et qui avait obtenu anciennement un petit fief, ex. : la fraction des Aït-Loaïn (du tobol des Kel-R'ela).

Il en résulte une complication extrordinaire dans laquelle cependant les Touareg se reconnaissent.

L'autre sorte de « tioussé » est celle à laquelle sont soumis journellement les imr'ad. Chacun d'eux ou chaque famille d'entre eux sait que l'entretien de tel ou tel noble lui incombe et celui-ci vient constamment mendier quelque chose. Quelquefois, l'amr'id donne ; d'autres fois il donne moins. Lorsque le noble sait que l'amr'id rentre de caravane et qu'il a rapporté de bonnes choses : des dattes, par exemple, on le voit arriver et demander sa part.

J'ai vu un campement d'Iouarouaren (fraction d'imr'ad du tobol des Taïtoq), installé à proximité des tentes de nobles Taïtoq, décamper pour aller s'installer plus loin. Ils venaient d'arriver du Tidikelt avec des dattes et d'autres produits et les femmes nobles venaient constamment mendier quelque chose au campement des imr'ad. Aussi leur chef In Chikadh donna le signal du départ et il disait que c'était pour mettre un terme à l'importunité des nobles.

---

# CHAPITRE V

## La Razzia. — Le Butin. — Sa restitution

La razzia, c'est la vie du Targui. Il en a besoin. C'est là qu'il cherche, surtout le noble, une partie de ses moyens d'existence. Les razzias préférées étaient celles qui étaient faites vers le Soudan, l'Aïr et le Niger, à cause des nègres et négresses qu'on enlevait. Mais le Targui se rend bien compte maintenant que l'autorité française l'enserre de tous côtés, par le Sud et par le Nord, et que c'en est fini de ce régime. Et c'est une des causes qui lui font regretter sa soumission.

Les Chaânba étaient aussi pillards et aussi indépendants que les Touareg. Eux aussi razziaient constamment. Depuis leur soumission, on sait quel changement considérable s'est produit et ce changement nous avons tout lieu de croire qu'il se produira chez les Touareg, sous notre influence.

En général, quand une tribu a été razziée, à moins que l'état de guerre soit déclaré, elle envoie une députation, un « miaâd », réclamer à la djemaâ de la tribu des razzieurs le butin qui lui a été enlevé. Les envoyés doivent venir faire agenouiller leurs montures devant les tentes des notables de la djemaâ et solliciter la restitution.

Généralement, une solution amiable finit par intervenir, mais la partie du butin razzié qui est rendue à la députation est toujours bien inférieure à ce qui a été pris. Les Touareg disent : « Alaï ouala », c'est-à-dire « la restitution n'est jamais complète ».

Il arrive aussi que les razzieurs refusent de rien rendre. La tribu razziée, si elle se sent trop faible, sollicite l'appui d'une autre tribu avec qui elle a de bonnes relations et alors les hostilités se produisent.

Quand ce sont des caravanes de commerçants qui sont razziées, comme, le plus souvent, ces caravanes se sont placées sous la protection de tribus nobles, à qui elles paient une redevance, le différend se règle entre la tribu protectrice et la tribu des razzieurs.

Cliché du Dr Dautheville.

BOUCLIER TARGUI

Au Ahaggar, l'ancien amenokal, Aïtar'el, avait, paraît-il, fixé de la façon suivante la restitution du butin pris aux caravanes protégées par les Azdjer :

1° Restitution complète des chameaux porteurs pris à la caravane ;

2° Pour chaque charge de marchandises prises, un chameau « amadjour » par homme ayant fait partie du rezzou, montant un mehari lui appartenant en propre ;

3° Un « aleggues » (jeune chameau de 3 ans) ou un demi-chameau par homme ayant emprunté ou loué le mehari qu'il montait pendant la razzia.

L'armement du Targui et le harnachement de sa monture ont été décrits en détail par Duveyrier et il est inutile d'y revenir ici.

# CHAPITRE VI

## La Guerre

C'est un bien grand mot pour désigner une série d'hostilités, de razzias, de combats sans grandes pertes ; mais cependant, je n'en trouve pas d'autre pour qualifier, par exemple, la lutte qui mit aux prises les deux confédérations des Azdjer et du Ahaggar et qui dura près de trois ans, avec de longs intervalles.

Nulle description n'en donnerait une idée plus exacte que le récit détaillé de cette lutte qui m'a été raconté et que l'on pourra lire plus loin au chapitre traitant de l'Historique du Ahaggar.

---

# CHAPITRE VII

## La Religion. — Les Marabouts. — Le Jeûne. — Les Ordres Religieux

Les Touareg, pris dans leur ensemble, sont très peu religieux. Cela tient d'abord à ce que presque tous ne connaissent pas l'arabe, et, par suite, le Coran qui ne doit pas être traduit. Ensuite, l'on sait que les Touareg, comme tous les Berbères, ont épousé les doctrines du Kharedjisme aux VIIIe et IXe siècles de notre ère et qu'il a fallu longtemps avant de les ramener à l'orthodoxie.

A cette époque, Salih, fils de Tarif, rédigea un Coran en langue berbère qui fut détruit au moment de la répression, et nous verrons que les Touareg ont conservé, dans leurs superstitions, des « survivances » de la doctrine de ce Salih.

Un exemple donnera bien l'état d'esprit actuel des Touareg au point de vue religieux :

On m'a dit au Ahaggar que les jeunes gens ne doivent pas faire leur prière en présence des femmes, car, au cours des génuflexions et prosternations, ils sont obligés de montrer.... leur postérieur, ce qui est très « shocking » ! ! Au contraire, les vieillards peuvent sans inconvénient prier devant les femmes.

Beaucoup du reste, pour faire leur prière, se mettent derrière l'imam (soit un taleb arabe, soit un Targui connaissant un peu l'arabe), et ils font des génuflexions en disant : « Allahou akber » (Dieu est le plus grand !) chaque fois qu'ils l'entendent dire par l'imam. C'est là toute leur prière.

Nombreux sont ceux qui m'ont dit ne pas observer le jeûne du Ramadhan, entr'autres Badjloud, l'amr'ar des Kel Ahnet. Par contre, les Issoqqamaren (fractions qui ont été longtemps en contact avec les Arabes et qui le sont encore) sont plus religieux et ils observent tous le jeûne.

Parmi les Touareg du Ahaggar, on trouve cependant des hommes vraiment religieux, mais on les connaît et on les cite et ils passent pour marabouts, exemples : Moussa ag Amastane, Beketa ag Ibrahim, les Oulad El Mir'da, Mokhammed ag Sadik.

Si le Targui n'est pas religieux, il a néanmoins beaucoup de respect pour les marabouts qu'il admire naïvement, à la condition toutefois que ces marabouts ne le gênent pas. Ainsi, le marabout Beketa ag Ibrahim avait déclaré que les dattes provenant du Tidikelt, récemment occupé par les Français, étaient défendues par la religion. Il a changé d'avis depuis. Mais maintenant, chaque fois qu'il va demander des dattes à un amr'id, celui-ci lui fait remarquer qu'elles viennent du Tidikelt et sont, par suite, défendues par la religion, et Beketa répond : « Non. Tout cela, c'est fini maintenant »... et il accepte les dattes !

Les ordres religieux sont assez répandus, surtout chez les Issoqqamaren. En allant en caravane au Tidikelt ou au Touat, les Ahaggar se sont fait affilier à l'ordre des Tidjania, qui compte le plus d'adhérents parmi eux, et à celui des Kadrya. D'autres (en général, ce sont tous ceux qui ont fait le péleri-

4: Benhazera MS25 Tuareg

nage de La Mecque), se sont fait affilier à l'ordre des Senoussia, à leur passage à Djer'boub.

Mais je doute que cette affiliation soit bien sincère. Tous les affiliés ne veulent pas porter au cou leur chapelet qu'ils gardent dans la poche ou dans leurs bagages quand ils sont en route. Ils disent que s'ils le portaient ostensiblement, ils seraient accusés de vouloir séduire les femmes! Enfin, ils ne doivent pas le porter sur eux chaque fois qu'ils commettent une action répréhensible, qu'ils ont des relations, même avec leurs femmes légitimes, etc.

Par contre, restés naïfs et superstitieux, ils croient tous à l'efficacité des amulettes, « tira », dont ils sont couverts. On en voit même qui en suspendent au cou de leurs mehara.

A chaque nouvelle lune, le targui fait sa prière. Les mains ouvertes, comme un livre, il regarde l'astre de la nuit et formule le vœu d'être en vie à la prochaine lune.

A la fête du Mouloud (naissance du Prophète), ils se tendent la main, en se disant : « asarouf », pardon, pour se faire pardonner leurs fautes, mais s'il n'y a pas de taleb dans la tribu pour leur rappeler la date exacte, ils l'oublient et n'y pensent pas.

---

## CHAPITRE VIII

### Superstitions. — Croyances

Les Touareg sont très superstitieux. Ils voient partout des génies, des démons : dans les montagnes, dans les arbres, dans les outres, etc.

Ainsi, ils ne veulent pas coucher au campement à côté des outres ou des cendres, à cause des génies « alhinen »

ou des revenants « kel esouf » ⵍⵅ ⵙⵓⴼ ⵏ ·: (gens du vide), qui y habitent.

Quand ils veulent s'étendre au pied de l'arbre appelé en arabe « el yatil » et en tamaheq « tadjart » ⵜⴰⵊⵔⵜ (sorte d'acacia), qui est habité par les djinns, ils doivent d'abord le blesser avec une pierre et l'on trouve toujours des pierres au pied de ces arbres. On voit aussi les blessures faites à l'écorce.

Le « teborak » (Balanites Ægyptiaca) est aussi un arbre hanté. Quand on désire se reposer sous son ombre, il faut d'abord casser sept épines de l'arbre.

Il y a aussi des « kel esouf » à l'endroit où l'on a égorgé une bête.

Le mont Oudane est hanté, ainsi que beaucoup d'autres.

Ces superstitions sont probablement des *survivances* de leur ancien culte, avant leur conversion à l'islamisme. Comme eux, « les Arabes de la période ante-islamique honoraient les Djinns » ou génies. Les déserts et *les montagnes* où l'on erre parfois » des semaines entières sont remplis d'êtres de ce genre..... » Ils peuvent faire beaucoup de mal et beaucoup de bien..... » Ils habitent des pierres, des *arbres* ou des statues. Chaque » tribu, ou parfois un ensemble de tribus, avait son Djinn » particulier, sa pierre, *son arbre, son image propre*, auprès » desquels une famille déterminée remplissait les fonctions » sacerdotales » (1).

Les Touareg ont bien d'autres superstitions. Ainsi, les nobles ne tueront jamais un « ourane » (varanus) qui s'appelle en tamaheq « ar'ata » . + ⁝, et à fortiori ils n'en mangeront pas. Sidi ag Keradji et Azioual ag Ser'ada me disaient que l'ourane est *l'oncle maternel* des Touareg et Sidi me raconta la légende suivante : « Sept hommes nobles avaient tué une chamelle appartenant à Sidna Nouh (Noé). Parmi eux était un noble targui. Pour les punir, Dieu les métamorphosa, l'un en ourane, l'autre en chacal, le troisième en caméléon, etc.

(1) *Essai sur l'Histoire de l'Islamisme*, par R. Dozy, pages 5 et 6.

L'ourane était le noble targui. La chamelle tuée est au ciel maintenant : c'est la Grande Ourse. L'étoile polaire « Bel Hadi », est sa tête ».

Faut-il voir là quelque rapport avec ce que nous venons de lire dans Dozy ou bien l'ourane aurait-il été, chez les Touareg, un « totem », comme chez les Peaux-Rouges de l'Amérique ?

Les nobles ne mangent pas non plus le « dobb » (lézard stellion) qui s'appelle en tamaheq « aguezzeram ». Comme motifs de cette abstention, ils m'ont cité ces deux vers de 9 pieds :

Our ekcher' aguezzeram idit
Iladhou ichchaden ilir'it.

c'est-à-dire :

« Je ne mange pas l'aguezzeram parce qu'il sent mauvais et qu'il a la peau rugueuse » (1).

Enfin, ils refusent énergiquement de manger des poules et des œufs et l'on ne trouve nulle part de poules chez les Touareg, excepté chez quelques « harratine » arabes des villages du Ahaggar. Ils prétendent que cette abstention remonte à bien longtemps. Azioual ag Ser'ada, poussé dans ses retranchements, finit par me dire que c'était parce que les poules cherchaient leur nourriture dans le fumier. Au Niger, d'après une étude de M. l'officier-interprète Merle, les Français sont appelés *les mangeurs d'œufs*. Mais je crois que la vraie raison de cette abstention est la suivante : Les Touareg, comme tous les Berbères, avaient embrassé le Kharedjisme. Parmi les chefs qui prirent part au soulèvement des Kharedjites se trouvait Tarif, qui fit la première invasion en Espagne (la ville de Tarifa porte encore son nom). Son fils Salih ou Salah se donna pour prophète et composa un nouveau Coran. Elie ou Elias, fils de

(1) Iladhou est mis pour « ili adhou ». De même ilir'it est mis pour « ili ir'it ». Ir'it, pl. ir'iten signifie peau (de bœuf, de chameau, etc.).

ce dernier resta musulman en apparence et ce n'est que le petit-fils de Salih, Jonas ou Younes (fin du 8e siècle) qui répandit la nouvelle doctrine, laquelle était un islamisme fortement modifié. Suivant un des préceptes de cette doctrine, nous dit le savant Dozy : « il n'y avait pas de muezzin ou crieur pour appeler à la prière ; on se réglait *d'après le chant du coq ;* aussi ne pouvait-on, sauf le cas d'extrême nécessité, *tuer des coqs ou des poules, ni manger des œufs* (1). »

On connaît aussi les légendes et les histoires au sujet d'Ahmamellen et de son neveu Élias. Hanoteau nous les a racontées. A Tamanr'asset (Ahaggar), les Touareg nous ont montré une brèche curieuse dans une grande « gara » qui borne l'horizon à l'Est. Ils l'appellent « Tiouit-n-Élias » (le coup d'Élias) et ils disent que c'est Élias qui d'un coup de « takouba » a fait cette brèche. Le morceau enlevé, un énorme rocher, est allé se ficher dans un oued, à 3 kilomètres de là et on nous l'a montré en passant. La brèche a été aussitôt baptisée « Brèche d'Élias ».

Élias est la traduction en arabe de Élie et Younes, celle de Jonas. Ces deux noms propres sont encore employés chez les Touareg. N'y aurait-il pas un rapport entre cet Elias et Elie, fils de Salih ?

Les Touareg disent qu'Ahmamellen était un homme d'une taille et d'une force extraordinaire et qu'à lui seul, il valait une armée. Serait-ce Salih lui-même qui se donna pour prophète, puis disparut en Orient après avoir dit à ses fidèles qu'il était le mahdi et qu'il reviendrait pour remplir le monde de justice quand le septième roi serait monté sur le trône ?

Il y a aussi des jours heureux ou néfastes. Les jours heureux, ceux qui sont recommandés pour se mettre en voyage, sont le vendredi, après la prière, le samedi matin et le lundi.

---

(1) *Essai sur l'Histoire de l'Islamisme*, de R. Dozy, pages 348 et 349. On ne trouve, en pays targui, ni mosquées ni muezzins. Voir aussi l'*Histoire de l'Afrique Septentrionale*, de E. Mercier, pages 228 et 255. Tome Ier.

Pour les quantièmes heureux, on compte à partir de l'index, d'abord le 2 et en revenant à l'index 7, 12, 17, 22, 27.

Les jours néfastes sont le dimanche et le mercredi.

Les Touareg croient aussi au mauvais œil « tahott ».

Une éclipse, c'est la razzia du soleil sur la lune et réciproquement.

Enfin, il existe une coutume fort curieuse, dont a parlé Duveyrier, et qui est celle de la consultation des anciens tombeaux. Généralement, ce sont les femmes qui vont les consulter. Elles s'habillent bien et elles doivent éviter de porter sur elles quoique ce soit en fer ou en acier, pas même une aiguille. Elles se couchent près du tombeau et le « zabbar » (ogre), habitant du tombeau, leur apparaît sous la forme d'un géant, avec des yeux grands comme ceux d'un chameau, et il leur donne la réponse qu'elles désirent. On va les consulter surtout pour avoir des nouvelles des absents, des gens partis en rezzou ou en caravane et dont on n'a pas de nouvelles.

---

## CHAPITRE IX

### L'Élevage — Les Troupeaux

Les chameaux, moutons et chèvres constituent la principale ressource des Touareg, comme de tous les nomades. Les chameaux principalement sont l'objet de tous leurs soins, car ils leur rendent les plus grands services. Ils tiennent beaucoup aux chamelles, brebis et chèvres à cause du lait, dont ils font une grande consommation, et du beurre fondu « oudi » qu'ils fabriquent.

Ils utilisent toutes les peaux : celles des chameaux, pour des sandales, des récipients pour le beurre, des auges pour l'abreuvoir, etc. ; celles des moutons ou chèvres, pour les outres, la confection des tentes et des vêtements en peau, etc.

Ils se servent du poil des chameaux pour fabriquer des cordes. Ils apprécient la viande de chameau et ce sont eux qui en approvisionnent les marchés du Tidikelt.

AÏN REDJEM DANS OUED BOTHA (IMMIDIR)

Il y a très peu de bœufs au Ahaggar : une trentaine à peine et encore presque tous appartiennent à Si Mokhammed ag Otsmane, de Tazerouk. Ils sont employés à tirer l'eau des puits dans les ar'erems. Les pâturages sont insuffisants et en outre, les bœufs s'usent facilement la corne dans les rochers et les cailloux.

Dans la Koudia, en raison du froid qui y règne, à cause de l'altitude élevée, on trouve quantité de petites tours en pierres

TOUAREGS ABREUVANT LEURS MOUTONS AU PUITS DE TIN-ZAOUATEN

sèches, vides à l'intérieur, où les Touareg enferment la nuit les agneaux et les chevreaux pour les mettre à l'abri du froid.

Les Ahaggar n'ont pas énormément de mehara et ils ne tiennent pas à les vendre, surtout les bons. Entre eux, pour se fixer sur la valeur d'un mehari, ils disent : « Tel mehari vaut 2, 3 ou 4 chameaux ». Tous leurs mehara sont dressés aux départs au galop. Le Targui a beaucoup de patience pour le

OUED IN-TEKOUFI (TIFEDEST)

dressage de son mehari : il ne le rudoie jamais ; il se borne à l'exciter de la voix et du pied et c'est peut-être pour cette raison que le mehari targui est beaucoup plus silencieux que le mehari arabe.

La base des pâturages du Ahaggar est l'aremmas (Atriplex halimus. Salsolacées). Cette plante est assez laxative. Aussi, quand l'année est mauvaise et que la sécheresse règne, voit-on les Ahaggar émigrer vers l'Adhar'. Il existe de beaux pâturages de « had » (Cornulaca monacantha, Salsolacées) au sud de Tin R'arhou, mais il n'y a pas d'eau. Moussa ag Amastane a

l'intention d'y faire creuser des puits et il a sollicité pour cela notre aide et nos conseils.

D'habitude, les Touareg laissent leurs chameaux au pâturage sans gardiens et ils les retrouvent au puits ou à la trace. Sinon, ils en confient la garde à des enfants ou à des nègres.

TOUAREGS ABREUVANT LEURS MOUTONS AU PUITS DE TIN-ZAOUATEN

| NOMS DES CHAMEAUX EN TAMAHEQ (suivant leur âge) | NOMS DES CHAMEAUX EN ARABE (AU TIDIKELT) |
|---|---|
| 1re année : *Aouara.* | de 1 à 6 mois : *H'ouar.* |
| 2e année : *Aledjoudh.* | de 6 mois à 1 an : *Mekkloul.* |
| 3e année : *Aleggues.* | 2 ans : *Ould lebboun.* |
| 4e année : *Aqnefoud.* | 3 ans : *H'eugg.* |
| 5e année : *R'aïr.* | 4 ans : *Djedaâ.* |
| 6e année : *Eg essine.* | 5 ans : *Teni* |
| 7e année : *Eg okkoz.* | 6 ans : *Rebaâ.* |
| 8e année : *Amessedis.* | 7 ans : *Sedass.* |
| 9e année : *Tahellat.* | 8 ans : *Bou fettra.* |
| | 9 ans : *Bou fettertine.* |

Un jeune chameau, sans fixer l'âge, s'appelle « abal ». Un chameau, en général, s'appelle « amadjour », pluriel « imoudjar » ou bien « amiss », pluriel « imnass ». Une chamelle se dit « talemt », pluriel « tillemine », Celle qui a mis bas depuis un an « ti-n-aouara ». Une chamelle pleine « timettirout ». Un chameau-étalon s'appelle « amali » pluriel « imoulaï ».

Le mouton à laine n'existe pas au Ahaggar. On ne trouve que le mouton à poil que les Touareg appellent « ekrer », pluriel « ikraren ». Ce mouton est couvert d'une toison à poil long et rude et ses membres sont plus hauts que ceux des moutons à laine. C'est pourquoi il a reçu le nom d'*ovis longipes* ou mouton à longues jambes. La viande de cet ovin est bonne et n'a pas l'odeur caractérisque de celle du mouton à laine d'Algérie.

On ne trouve dans les oasis du Tidikelt et du Touat que cette espèce de mouton.

Quant aux chèvres, elles sont de deux espèces : celle à poils ras et celle à longs poils. Elles n'ont pas de caractéristiques qui les différencient notablement des chèvres d'Algérie.

---

## CHAPITRE X

### Le Commerce. — Les Caravanes. — Mercuriales

Les Touareg du Ahaggar sont en relations commerciales : 1° Avec les Oasis Sahariennes (Tidikelt et Touat) pour les dattes, la « chegga » (cotonnade bleue), le « malti » et le « mahmoudi » (cotonnade blanche), le « chach » (mousseline blanche), les haïks, le tabac à fumer « taba » et à priser « chemma », le thé, le sucre.

Ils y importent des chameaux ou chamelles, des moutons à poils, des chèvres, des ânes, du beurre fondu et quelquefois des produits qu'ils ont rapportés de l'Aïr.

2° Avec l'Aïr et le Damergou.

N'ayant pas d'industrie, ils achètent tous les produits de l'industrie de l'Aïr. Ils acquièrent ainsi, par voie d'échanges, (indépendamment du bechna) des armes : lances, poignards, sabres, boucliers ; des selles de mehara, des sacoches de toutes formes en cuir découpé et colorié, des petites boîtes en peau, des étoffes bleues lustrées, « ilechchane », des gandouras à manches, de l'étoffe noire « kehal » pour les voiles et aussi des « tikamarine » ou fromages secs. On fabrique dans l'Aïr des selles pour chevaux, ayant la forme des selles mexicaines, avec étriers ronds en cuivre massif, et recouvertes en peau de guépard. (L'Amenokal Moussa ag Amastane en a une).

CRATÈRE DU VOLCAN OUKSEM

Ils importent à l'Aïr et quelquefois au Damergou du sel, tiré de la sebkha d'Amadr'or, de la « chegga » achetée au Tidikelt, des chameaux, des ânes, des dattes achetées au Tidikelt, du « teheredjlé » (Hartemisia Herba-alba. Composées), etc.

3° Avec l'Adhar' et le Niger. d'où ils tirent du bechna, du riz, des moutons et des chameaux.

Ils y importent du sel, de la « chegga », des dattes.

4° Avec R'at et R'adamès, mais peu fréquemment.

Ils y achètent des burnous de luxe, des sabres, du sucre, du thé et de la « chegga ».

Ils y importent des chameaux, des outres, des cordes en poil de chameau, des moutons.

En outre, les gens du Tidikelt, et en particulier les Ahl-Azzi, viennent leur acheter sur place le blé et l'orge qu'ils récoltent dans leurs « ar'erems ».

Les Touareg du Ahaggar désireraient vivement avoir, comme les Azdjer, la protection des grandes caravanes qui vont de Tripoli à R'at, à l'Aïr et au Soudan. Ils loueraient ainsi leurs chameaux aux commerçants et ce serait pour eux une source de revenus importants (Déjà les Aït-Loaïn vont louer leurs chameaux aux commerçants de R'at). Ils voudraient bien voir détourner ce courant vers le Ahaggar et nous avons le plus grand intérêt à les pousser dans cette voie.

Toutes les opérations qu'ils font ont lieu par voie d'échanges. Les bénéfices les plus importants qu'ils réalisent résultent des échanges qu'ils font à l'Aïr et au Niger avec le sel, la « chegga » et les dattes qu'ils y importent.

*Mercuriale du Ahaggar*

Il n'y a pas de prix fixes pour les mehara, chameaux ou chamelles. Toutefois, pour les jeunes chameaux, les prix sont fixes et connus. Ainsi :

| | | | | |
|---|---|---|---|---|
| Un chameau de | 4 ans, « aqnefoud », | vaut | 100 | francs. |
| — | 3 ans, « aleggues », | » | 75 | » |
| — | 2 ans, « aledjoudh », | » | 50 | » |

Pour les moutons et chèvres, la base du prix est la chèvre qui vaut 3 mitqals ou 7 fr. 50. Une brebis vaut une chèvre et demie, soit 11 fr. 25 et un bélier, deux chèvres, soit 15 francs.

Une charge de dattes se vend au Ahaggar 75 francs.

L'orge se vend 1 franc la « guessaâ » ou 60 francs la charge de 60 « guessaâs ». Le blé, 1 fr. 25 la « guessaâ », soit 75 francs la charge.

La « chegga » s'y vend 1 fr. 25 le mètre.

Le beurre fondu est vendu sept « mouddas » (petite mesure en bois) pour une chèvre, soit 7 fr. 50.

*Mercuriale de l'Ahnet*

Une chamelle, 50 à 60 mitqals (125 à 150 francs).
Une charge de dattes, 30 mitqals (75 francs).
Un mouton, 7 fr. 50.
Une chèvre, 10 francs.
Le beurre fondu, sept « mouddas » pour 7 fr. 50.
Un âne, 25 francs.

CARAVANE TARGUIE

A noter la façon dont les Touareg attachent leurs chameaux les uns derrière les autres, en file indienne, quand ils vont en caravanes. Aussi celles-ci sont-elles mieux ordonnées que les

caravanes arabes. On y entend surtout moins de cris, de jurons, etc. La caravane targuie passe presque silencieusement, sans désordre, et cela n'en vaut que mieux.

---

## CHAPITRE XI

### Industrie. — Les Forgerons

L'industrie est nulle au Ahaggar. Elle n'existe pas. On ne peut qualifier d'industrie les petites réparations aux armes que font quelques forgerons peu nombreux, ou les petits ustensiles en bois que les Touareg fabriquent pour leur usage personnel.

Nous l'avons vu plus haut : les Touareg des Ahaggar vont acheter toutes leurs armes à l'Aïr. On n'en fabrique pas chez eux.

J'ai vu travailler, dans l'Ahnet, un forgeron, le nommé Eg Ahnet. Il réparait des lances, sabres ou poignards et il me disait qu'il fabriquait aussi quelques bijoux quand on lui en commandait. Il sollicitait des boîtes de conserves pour faire ses soudures. Ses outils étaient assez primitifs.

Il avait :

Un soufflet « tissedhi » . ⵉ ⵙ ⵜ, composé de deux tubes en fer encastrés dans un morceau de bois creusé auquel étaient adaptées deux outres ouvertes aux extrémités. Ces ouvertures étaient maintenues par des baguettes et munies d'anses pour les mains. Les tubes en fer envoyaient l'air dans un fourneau en argile « aneffi » ⵍ ⵉ ⵍ ⵏ placé devant le feu.

Une enclume « *tahount* » + ⁞ : ⁞ +
Des limes « *azezoua* » . : X X
Des pinces « *ir'emdane* » ⁞ V ⊐ ⁞
Un gros marteau « *afadhis* » ⊙ ∃ I
Un petit marteau « *tafadhist* » ⊕ ∃ I +
Des cisailles « *timouda* » . V ⊐ +

Une hachette « *tetaout* » + : + + qu'il avait fabriquée avec une branche d'arbre coudée.

Enfin, une racloire « *asekredh* » ∃ O ·: ⊙ qu'il emmanchait dans deux poignées en bois, chaque fois qu'il voulait s'en servir.

Il fabriquait aussi des cadenas et des clefs en cuivre. Il se plaignait de la dureté des temps : le métier n'allait plus. Où était l'époque des grands rezzous, des expéditions, où on lui apportait quantité d'armes à réparer, à aiguiser ! Où allons-nous ? Les temps sont bien changés !

Il court sur les forgerons quantité de légendes. On dit que, parce qu'ils travaillent avec le fer et le feu, ils iront dans le feu de l'enfer. On les méprise, d'abord parce qu'ils se livrent à un métier manuel, déchéance aux yeux d'un Targui ; ensuite parce qu'on dit qu'ils sont d'origine nègre. On prétend aussi qu'ils étaient païens et que leur conversion à l'islamisme n'est pas sincère. Ils passaient aussi pour sorciers. Le cheikh Ben Djellas (voir l'Appendice) dit d'eux : « Les forgerons haïssent Dieu et son Prophète et ils trahissent Dieu et son Prophète ». Leur aïeule s'appelait Tamamenet.

Le forgeron ne compte dans aucune tribu. Il va où bon lui semble, là où il trouve de l'ouvrage. Il va quelquefois au combat et l'on dit qu'il se bat bien ; mais un Targui noble ne croisera pas le fer avec lui.

Au Ahaggar, le forgeron s'appelle « mr'allem », altération du mot arabe « maâlem ». Il existe pourtant un mot en tamaheq pour les désigner : « inedh », pl. « inedhane », mais il n'est pas employé.

On m'a montré à Tamanr'asset de nombreux tombeaux anciens (de forme « chouchat ») qui, paraît-il, seraient les sépultures d'une tribu de forgerons qui aurait été massacrée et serait morte de faim, il y a très longtemps.

Les jardins des « ar'erems » du Ahaggar sont cultivés par les Harratine du Touat et du Tidikelt qui apportent avec eux leurs outils. Ce sont eux aussi qui creusent les « foggaras » ou puits à galerie et tous les outils dont ils se servent viennent des Oasis Sahariennes.

---

## CHAPITRE XII

### Agriculture. — Ar'erems

Tandis que dans tout l'Ahnet on ne trouve aucune trace d'agriculture, si petite soit-elle, à cause de la rareté des puits dont le débit suffit seulement à l'abreuvage des troupeaux, au Ahaggar au contraire, pays montagneux, où l'eau se trouve un peu partout, il s'est créé un certain nombre de petits villages, appelés « ar'erem » ⵔⵗⵔⵉⵎ, pl. « ir'ermane » ⵉⵔⵗⵔⵎⵏ.

IDELÈS (KOUDIA)

Les Touareg, nobles ou imr'ad, répugnant à tout travail manuel, ces villages n'auraient pu être créés sans le concours indispensable des Harratine du Touat et du Tidikelt que les Touareg appellent les « Izeggar'en » ⵉⵣⵗⵔⵏ c'est-à-dire les « mulâtres ». Tout a été fait par ces derniers : les puits

« tounine » qui servent à l'irrigation, comme à Tazerouk ; les « foggaras » ou puits à galerie, « ifélane », et leurs canaux d'irrigation, comme à Abalessa, Tit, Tamanr'asset; l'aménagement des sources, comme à Tadjemout. Les Harratine créèrent les jardins et devinrent khammès des Touareg, propriétaires du sol. Ils se fixèrent dans ces villages et y élevèrent des huttes en

FIGUIER À ABALESSA

« diss » (Imperata cylindrica) ou en « berdi » (Typha angustifolia) et des maisonnettes en terre battue.

Les Harratine font pousser dans ces jardins du blé, de l'orge et du bechna. Ce sont les trois cultures essentielles, auxquelles ils adjoignent celle de quelques légumes : oignons, kabouyas ou citrouilles, pastèques et « guerroum » (sorte de melons longs qui, verts et n'ayant pas atteint encore leur développement normal, se mangent comme des concombres). Enfin, à Tit, ils

ont planté quelques beaux figuiers et de la vigne qui produit un raisin qu'on trouve délicieux à cette latitude. A Abalessa également, il y a quelques plants de vigne et un beau palmier.

Les jardins, ou plutôt les champs, sont enclos d'une haie pour éviter les déprédations des chameaux qui pâturent en liberté la nuit. Mais il y en a qui n'ont pas cette barrière protectrice et les Harratine sont obligés de monter la garde la nuit, à tour de rôle, en allumant des feux, pour éloigner les chameaux des récoltes.

RÉGION DE L'HERHAPOK
AU 1er PLAN A GAUCHE UNE TOMBE ANCIENNE
DE FORME CHOUCHAT
(KOUDIA)

En général, il y a six khammès par champ et chacun d'eux a droit à l'eau pendant une nuit et un jour. L'eau amenée de la foggara se déverse dans des « madjens » ou bassins-réservoirs, comme dans les oasis, pour de là être répartie entre les jardins à l'aide de saguias ou canaux d'irrigation.

Le khammès reçoit pour son salaire :

1° Le cinquième de la récolte ;

2° L'orge qu'il a semée dans les saguias d'irrigation ;

3° Une charge de blé, en hiver, et une demi-charge en été, pour sa consommation personnelle.

Il existe aussi, au Ahaggar, de petites oasis de palmiers qui ont été plantées on ne sait par qui, par exemple à Tibedjehine et à Silet (Ahaggar), à Djor'raf, Tafarakrak et Teguift (Immidir). Les Touareg, qui en sont propriétaires, les laissent à l'abandon et se contentent d'y venir récolter les dattes au moment voulu. Aussi ces palmiers, qui ne reçoivent aucuns soins, laissent-ils retomber jusqu'au sol une abondante chevelure de djerids secs qui en rend l'ascension très difficile. Peut-être est-ce pour éviter les vols de dattes ?

Du fait que ces palmiers, bien que non entretenus, produisent des dattes qui, si elles ne sont pas de bonne qualité, sont cependant très comestibles ; considérant aussi qu'un très beau palmier existe à Abalessa (qui pourrait devenir une superbe oasis, car l'eau n'y manque pas), on peut se demander si la création d'oasis de palmiers au Ahaggar ne pourrait pas être tentée avec succès. Mais les Ahl Azzi et tous les habitants du Tidikelt qui ne vivent que de la vente de leurs dattes aux Touareg ont, au contraire, persuadé à ces derniers que le climat de leur pays ne convenait pas à la culture du palmier. Les Ahaggar, du reste, ne tenaient pas du tout à se lancer dans des plantations dont on ne pouvait espérer tirer profit qu'après plusieurs années et ils préférèrent s'en tenir aux cultures de blé, d'orge et de bechna qui rapportent immédiatement.

GOURBI DE HARATINE A IDELÈS (KOUDIA)

L'Amenokal Moussa ag Amastane, se rendant bien compte que l'ère des rezzous sera bientôt close pour toujours, s'aperçoit qu'il faudra demander à la terre les moyens de subsistance que les courses procuraient anciennement. Aussi a-t-il annoncé son intention de faire creuser une foggara à « Endid » et d'y créer des jardins et son exemple sera très probablement suivi. Il y a là une tentative qui sera certainement encouragée et appuyée et qui démontre l'évolution lente qui commence à se produire chez les Touareg, pour le plus grand bien de la paix et de la civilisation.

---

# CHAPITRE XIII

## Les Tombeaux anciens, — Les Pierres dressées

*Tombeaux anciens.* — On trouve un peu partout, dans l'Ahnet, dans l'Adhar', au Ahaggar, dans l'Immidir, et même aux bords des oueds qui traversent le Tanezrouft, des quantités d'anciens tombeaux affectant, soit la forme tronconique ou « chouchat », soit la forme d'une petite tour ou « bazina », semblables à ceux qu'on trouve dans toute l'Afrique du Nord.

J'en ai vu cependant un, à Tamanr'asset (tout près de la tombe de la tamenokalt Taber'ourt oult Akhlakham, des Imanan), qui avait une forme spéciale. C'était un amas de pierres en forme de parallélipipède rectangle de 4 mètres de long sur 1 mètre de large et 1 mètre de haut.

Les Touareg disent que ces tombeaux, qu'ils appellent « adebni », pluriel « idebnane » (mot qui paraît dériver du mot arabe « beni », construction), sont ceux des « Izabbaren » ⵉⵣⴱⴱⴰⵔⵏ. Or, ce mot signifie, en tamaheq, « ogres » et il fait au singulier « zabbar » ⵣⴱⴱⴰⵔ, « ogre ». Les Ahaggar et Taïtoq refusent d'admettre que ce sont peut-être leurs ancêtres, à l'époque du paganisme, qui avaient des tombeaux de cette forme. « Les Izabbaren, disent-ils, n'ont rien de commun avec nous. Ce ne sont pas nos ancêtres ». C'est pour cette raison que M. le professeur Gautier a pu fouiller quelques-uns de ces tombeaux, sans opposition de leur part.

Cependant, on trouve également une autre sorte de tombeaux, ayant encore la forme circulaire, mais avec les « chouahed » ou témoins en usage chez tous les musulmans, tandis que les tombeaux « chouchat » ou « bazina » en sont dépourvus. Cette sorte de tombeaux est plus rare. Elle paraît être une forme intermédiaire entre les tombes des « izabbaren » et les tombes actuelles.

D'autre part, les Touareg vous montrent le tombeau de Tin

Hinane, l'aïeule dont ils prétendent descendre et qui est situé au confluent de l'oued Tefirt et de l'oued Abalessa. Or, ce tombeau affecte la forme d'un immense mur circulaire et il est entouré d'autres tombeaux de forme « chouchat » qui sont ceux des serviteurs de Tin Hinane. A côté du tombeau de cette dernière se trouve celui de Takamat, cette femme que les Kel Ahnet revendiquent pour leur aïeule. Tous ces tombeaux ressemblent à s'y méprendre à ceux des « izabbaren ». Pourquoi les Touareg renient-ils ceux-ci tandis qu'ils reconnaissent ceux de Tin Hinane, de Takamat et de leurs serviteurs ?

Nous avons vu au chapitre « Superstitions, Croyances » que les Touareg vont consulter les tombeaux des izzabaren pour avoir des nouvelles des absents.

Dans l'oued Tafidjiq (à 4 heures de marche d'Idelès) se trouve un tombeau, objet d'une grande vénération de la part des Touareg du Ahaggar. C'est celui d'Adjadj Alemine (probablement le missionnaire qui les a convertis à l'islamisme. Voir chapitre de l'origine des Touareg). Les Ahaggar disent que cet Adjadj Alemine était un marabout, un saint, et ils l'invoquent dans leurs prières quand ils se trouvent dans l'embarras ou dans la peine, comme les arabes invoquent, dans les mêmes circonstances, Sidi Abdelkader el Djillali. Je n'ai pas vu son tombeau, mais on m'a affirmé qu'il a les « chouahed », comme toutes les tombes des musulmans.

HUTTES DE HARRATINE A IDELÈS (KOUDIA)

*Pierres dressées.* — J'ai trouvé dans la Koudia du Ahaggar, d'après les indications du guide Deguemma ag Chikat, des Adjouh-n-Taheli, un point où se trouvaient rassemblées une dizaine de pierres dressées dont une seulement restait encore

debout. Les autres étaient tombées et on voyait encore, pour certaines, la trace du trou dans lequel elles étaient fichées, ainsi que les pierres placées à la base pour les maintenir debout.

La pierre qui reste debout est couverte, sur une de ses faces, de caractères rupestres profondément gravés, à côté d'autres presque effacés. Elle a une hauteur de 2 m. 60 et une largeur de 25 cent. environ sur chacune de ses quatre faces unies et lisses.

Les autres pierres, tombées sur le sol, ont à peu près les mêmes dimensions et l'une d'elles a aussi des inscriptions rupestres.

J'ai pris des estampages des inscriptions gravées dans la pierre restée encore debout.

Tout près, dans les rochers de la gara au pied de laquelle elle se trouve, j'ai vu aussi un certain nombre de dessins rupestres dont j'ai pris également des estampages.

L'emplacement de ces pierres se trouve exactement près de la gara de Tiltekine, non loin de la source de l'oued In Dalladj, à 1700 mètres d'altitude environ (dans la Koudia du Ahaggar), sur le chemin qui conduit de Tamanr'asset à la sebkha d'Amadr'or, par Idelès.

J'ai interrogé le guide et les Touareg qui connaissent ces pierres et, naturellement, ils n'ont pu me fournir à leur sujet aucune explication. « Nous les appelons *les pierres debout*, « ebdaden » » ⵍ ⴰ ⴰ ⵎ. Ce sont les anciens qui ont fait cela, m'ont-ils » dit. C'est très vieux. C'est tout ce que nous en savons ».

# *Political Systems Of Pastoral Tuareg In Air And Ahaggar.*

By Johannes Nicolaisen

The Tuareg are Berber-speaking, nomadic stock-breeders who live in an extensive area of the Western Sahara and adjacent regions of the Sudan. The territory dominated by the Tuareg lies between 14° and 30° North Latitude and between 5° West Longitude and 10° East Longitude. They fall into seven main groups or major political units (fig. 1) comprising 240,000–300,000 individuals, their negro slaves excluded. The two northernmost groups (the Kel Ahaggar and the Kel Ajjer) live in the true desert country and number less than 10,000 or about 3% of all Tuareg. In Ahaggar the number according to statistics of 1950 is 4,611. The Air Tuareg further south are more numerous and seem to comprise more than 20.000 individuals (cf. Lhote 1947, p. 15f. & 1955, p. 157).

This study of Tuareg political systems has as its foundation a part of my own field material collected in 1951 (in Ahaggar), 1952 (in Tassili-n-Ajjer), 1953 (in Ahaggar), and 1954–55 (in Ahaggar including Ahnet, and in Air). I have spent about two years in these Tuareg countries living most of the time in Ahaggar and adjacent regions, while my stay further south in Air was limited to six months.

It is my intention here to describe the political systems of Air and Ahaggar, but as my final task is concerned with their origin I find it necessary to take up also more general aspects of Tuareg culture and the distribution of certain cultural traits. I shall make use also of Tuareg oral traditions and of the very comprehensive material on Tuareg history gathered by Arab historians and geographers of the Middle Ages. Thus I do not follow the ordinary lines of any particular anthropological school.

I am much indebted to Dr. Birket-Smith (University of Copenhagen) from whom I acquired my general anthropological knowledge together with a keen interest in historical problems, and to Professor Daryll Forde and Dr. Phyllis Kaberry of the London University where I have learnt what I know about social anthropology. Dr. Phyllis Kaberry has taken a profound interest in my studies, and I feel grateful for her kind help and assistance in all matters concerning Tuareg political systems and Tuareg social structure in general.

My journeys among the Tuareg were carried out by means of grants from various Danish foundations, notably Statens Almindelige Videnskabsfond, Carlsberg Fondet, Knud Rasmussen Fondet, and Jens Lohmand Rasmussens Rejselegat. During my last journey The University College London assigned me a grant without which I should not have been able to gather the material here presented

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25

on the Air Tuareg. I wish to express my sincere thanks to the above mentioned foundations and their directors. 122

For the transcription of Tuareg letters I have on the whole adopted Foucauld's system (cf. Foucauld 1920 & 1951–52):– 104 212

| Tuareg Letters (*Tifinar*) | Transcription And Value In Arabic Letters | | Notes |

128 For certain geographical names the mode of spelling is in accordance with that of the maps edited by Institut Géographique National. The pronunciation of vowels is not indicated. At the end of words the Tuareg sometimes indicate vowels [212] with a dot, which may stand for any vowel.

*Pastoral Ecology in Ahaggar and Air.*

[361] The Tuareg of the true desert country have their camps in or close to mountain [131] massifs of which the more important are Ahaggar and Tassili-n-Ajjer. Geographically these two regions have many traits in common. In Ahaggar, which rises to 132 3000 metres above sea level, the annual precipitation according to official statistics is between 20 mm and 40 mm. These figures are extremely low, but more characteristic of the desert country is the irregularity of the rainfalls. In some years there may fall no rain at all, while in others precipitation is much bigger than appears from the figures above. Several dry years may follow each other alternating with periods of abundant rainfall. According to investigations by Dubiéf four years out of ten are so dry that rainfall is of no importance for the regeneration of pastures (Dubiéf 1947, p. 7–23). Owing to the scarcity and the fluctuations of precipitation 137 in Ahaggar a persistent vegetation cannot generally exist outside river valleys and depressions which are flooded during heavy rain. In the valleys perennial plants comprise not only grasses and herbs but also tall trees among which tamarisk and acacia are prominent. In dry years the perennial plants have little value as fodder 233 for the domestic animals of the Tuareg. A great many goats may then die from 221 hunger, and to avoid such a disaster some Tuareg take their flocks to the plains of Tamesna or to the Adrar-n-Iforas Mountains where rain is normally more plentiful and grazing better than in Ahaggar. However, even in dry years the majority of Ahaggar Tuareg will remain in their native country with their goat-flocks. For although they run the risk of losing a great many goats during a drought in Ahaggar

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25

Fig. 1.–Map of the central parts of the Western Sahara and the adjacent Sudanese zone inhabited by the Tuareg, who fall into eight major political groups or federations. These groups as mentioned in the text are sub-divided into the politically very important drum-groups. The geographical position of the eight groups is roughly indicated by Roman numerals. – The Tadmekket Tuareg (VIII) from about A.D. 1800 were subjected to the Ioullemmeden Kel Ataram (VII) (cf. Richer 1924, p. 96). Scale, 1 centimetre = 160 kilometres.

those surviving, although emaciated, will quickly recover as soon as the rainfall starts again. In addition it is often very difficult to take goats through the barren desert country south of Ahaggar without severe loss. With camels, which are also very important domestic animals, things are different. Camels make a great demand on fodder, they are very valuable, can be sold for rather high prices in the oases, and they have a very slow increment compared with goats. For these reasons it is necessary or desirable to keep herds of camels in the south when pastures are dry in Ahaggar, and camels can be taken through the barren desert country without much difficulty. In dry years many Ahaggar Tuareg have their camel-herds in Tamesna, about 500 kilometres from the camps in Ahaggar, and there are even nomads who keep their she-camels constantly in these regions, where the animals are guarded by herdsmen whomen frequently slaves.

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Ahaggar
Air

During drought periods the uttermost powerty is the lot of the Ahaggar Tuareg, who must then rely almost exclusively on agricultural products for their nourishment. But in years of abundant rainfall they have much milk during the winter, and they make butter and cheese to be used during the hot season when milk even in good years is scarce. They then also have meat for their sustenance but this is less important than milk-food.

In good years the perennial plants do not form the most important fodder of the domestic animals. For heavy rainfall will as if by magic change the barren country outside the valleys. An extremely rich vegetation of annual grasses and herbs springs up, and these tender plants constitute the very best fodder. But as, owing to the irregularity of the rainfall, annual pastures will not appear every year, it is difficult to breed other animals than goats and camels to which can be added donkeys used exclusively as beasts of burden and for riding. It is true that most Ahaggar Tuareg have a few sheep but none of them have cows (zebus). Cow-breeding and also effective sheep-breeding cannot be practised in a country like Ahaggar where for a period of years there may be no pastures of annual plants. In dry years the thorny acacias form the most important fodder of camels and goats, but the leaves of these trees cannot be eaten by cows and only with great difficulty by sheep.

In Ahaggar rain may fall at most seasons as the country is situated on the frontier of two different rainfall belts, namely that of the Mediterranean where rain occurs mainly in winter, and that of the Sudan where rain will fall late in summer. For a long period of years rain has fallen most abundantly late in summer, but according to Dubiéf this has not always been so. Not many years ago rainfall was almost equally common at all seasons ((Dubiéf 1947, p. 7–23), and Ahaggar still has the characteristics of two distinct climatic zones, likewise as botanically it belongs both to the Mediterranean and to the Sudan.

On my camel journey from Ahaggar to Air via the wells of In Ebeggi and In Azaoua in April 1955 I experienced a rapid change of climatical and botanical conditions. At the outskirts of the southern slopes of the Ahaggar Mountains a persistent vegetation is very scarce in the valleys, and between the two above-mentioned wells there are practically no permanent plants. Broadly speaking the desert region between Ahaggar and Air is nothing but plains of gravel and stone interspersed with rocks and hills. But a little scattered rain will occur even in these regions and gives rise to annual pastures which are utilized by passing caravans. Otherwise the country is uninhabitable.

In the northernmost part of the Air massif acacias and tufts of perennial grasses grow in most valleys as in the lower parts of the Ahaggar Mountains. But compared with Ahaggar permanent vegetation is very rich and in places forms almost impenetrable jungles of trees and brushwood. Further south in Air perenniel plants including trees are very common also outside the valleys, and the country south of the massif very rapidly changes into a kind of steppe or open savannah. The com-

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Ahaggar
Air

paratively rich vegetation of Air contains species found also in Ahaggar, but 137
Ahaggar has Mediterranean plants including several saline species which do not thrive in Air, where there are tropical or Sudanese species unknown to Ahaggar.

Botanically Air is very closely connected with the Sudan, and the mountain 132
massif is within the Sudanese zone of summer rain. It is true that rain at the 137
northern outskirts of Air occasionally falls in winter and may then give rise to scattered pasture of annual plants, but these rains are of no real importance. The important rainfalls of Air occur in the period June–September, and particularly in July and August. As may be gathered from the description of botanical conditions, Air has a much bigger annual precipitation than has Ahaggar. Thus the village of Iferouan in Northern Air has 74 mm, while Agadez at the southern slopes of the massif has 179 mm. Precipitation will of course vary from one year to the other, but rain will always fall sufficiently for the spring of annual plants. This is the reason for a type of stock-breeding different from that of Ahaggar. In Air the [233]
Tuareg are richer in camels, they do not possess so many goats but are very rich in sheep, and most of them have zebus.

The climatic and botanical differences of Air and Ahaggar can be seen more 132
directly from the division of the year into seasons (fig. 2). Air has a summer and a 805
winter season between which there are two seasons termed *akasa* and *ṛarat*. These two words as seasonal terms express the fact that rain and annual pastures in Air are recurrent events, as the word *akasa* literally means "green annual plants", and the word *ṛarat* refers to "dry annual plants". Both words are known also to the Ahaggar Tuareg but are by them not applied as seasonal terms, for in their country rain will not occur every year and may fall at most seasons.

Conditions for stock-breeding are very much better in Air than in Ahaggar, 233
but the latter country has a few superior qualities:– 1) Part of the year Ahaggar [122]
has a comparatively cool climate which is said to have a positive influence on the lactation of domestic animals. 2) In Ahaggar all over the country there are saline [135]
pastures which play an important part in stock-breeding – not because these plants [137]
are very nourishing but the animals do not thrive without salt. In Air saline plants are very rare and found mainly to the south and south-west of the massif where water and soil also contain salt. Many pastoralists will migrate to these regions [221]
shortly after the rains, while people who do not undertake such migrations feed their domestic animals with salt. Camels and cows have a particular need for fodder with a salt content. 3) Ahaggar has richer wells and a greater number of 312
permanent ponds than Air. This may seem rather peculiar as precipitation is much bigger in the south than in the north. In Ahaggar and Tassili-n-Ajjer some ponds may contain fish apparently unknown in Air. In the latter country there are a [136]
great many ponds or even small lakes during the rains but they dry out very quickly when rainfall ceases. Water in Air most of the year is drawn from wells many of which go dry during the hot season; this will frequently lead to quarrels [578]
between nomads.

Ahaggar
Aïr

262 Even when grazing is good stock-breeding products are less important for food
In Ahaggar than in Air as is illustrated in fig. 3 depicting the relative importance
[222] of milk food and vegetable food. A small part of the vegetable food is provided by collecting seeds of grasses and herbs, while roots, stems, and berries of wild plants are less significant. The bulk of Tuareg plant food consists of millet, barley, wheat,
[241] and dates. In Ahaggar many Tuareg have gardens with wheat and barley cultivated
[563] for them by black-skinned agriculturists generally known by the Arab word *Haratin* (*Izzegaren* to the Tuareg). But most Ahaggar Tuareg acquire the bulk of
438 their plant food from caravan trading with the oases of Tidikelt (dates) and with
262 Sudanese villages as far south as Zinder (millet). Even in years of drought they can obtain millet from the Sudan in exchange for rock-salt broken at Amadror north-east of Ahaggar. In Air caravan trading with salt seems less necessary to Tuareg subsistence, although there are also in this country Tuareg who trade with salt from Amadror or Bilma. Most pastoral households however have a fairly regular
[234] surplus of livestock, butter, and cheese which can provide for the necessary amount
[563] of millet bought in Agadez or south of the massif in Damergou. There are also
241 in Air a great many negroid agriculturists from whom pastoral Tuareg can buy
262 vegetable products. But millet, which forms the prominent part of Tuareg plant
[438] food, is grown to a very slight extent by the agriculturists of Air. Dates are important in particular to the Ahaggar Tuareg who acquire large quantities from the oases of Tidikelt. There are also a few Ahaggar clans the members of which own half-wild palms with dates of an inferior quality, as there are Tuareg who have a few palms growing in their garden plots. In Air dates are not so important for food but even there pastoral Tuareg may have some palms. Among the Tuareg of Tassili-n-Ajjer it is very common for pastoralists to sow wheat and barley in the river valleys when these have been heavily flooded (Nicolaisen 1954, p. 83, 88), and this primitive agricultural method was apparently known also to the Ahaggar Tuareg in the past (Duveyrier 1864, p. 372). More recently many pastoral Tuareg
[312] of Ahaggar and Air have taken up agriculture by means of irrigation. There seems
[221] to be a tendency towards semi-nomadism among the Tuareg who are very dependent on vegetable food derived from agriculture.

### *The Negroes Of The Sahara.*

136 In the above section on Tuareg ecology it is stated that Air climatically and botanically is closely linked with the Sudan. This is true also zoologically as the Air fauna contains a great many species of birds and mammals characteristic of tropical Africa. The bird life of Air seems very akin to that of the Sudanese savannah, and, for instance, guinea fowls are extremely common even in valleys of the northernmost parts of the massif. As examples of tropical mammal life in Air we may here mention that the wart-hog lives in Central Air, and that oryx antelopes

Ahaggar
Air

and giraffes are found in the plains immediately south and west of the massif. I do not wish here to compare in detail the natural history of Air and Ahaggar. But I wish to emphasize the fact that climatically, botanically, and zoologically an important dividing line runs between these two Tuareg countries. This should not be overlooked in an anthropological description of these parts of Northern Africa.

At present both fair-skinned Europids and black-skinned negroid people live all over the Sahara, and are frequently mixed. There seems to be little doubt that in the north most negroes have come in with the slave trade. We cannot entirely exclude the possibility that part of the northern negroes constitutes an ancient population of the Sahara (cf. Capot-Rey 1953, p. 167 ff.), but in Ahaggar the negroes seem to have arrived later than the fair-skinned Berbers. Until a hundred years ago all negroes of Ahaggar where apparently Tuareg slaves bought or captured in the Sudan, but the negroid Haratin then immigrated from Tidikelt to make gardens for the Tuareg. They introduced the irrigation systems known to the Tuareg as *eseli*, to the Arabs as *foggara* (i.e. irrigation by means of subterranean aqueducts), but the solid houses built of mud *(tarahant)* so characteristic of the northern oases were apparently not introduced by the first immigrants of Haratin, but later. Another immigration of negroid agriculturists came from Tassili-n-Ajjer and in particular from the oasis of Djanet. It is not quite certain whether they came before or after the Haratin. They are said to have introduced irrigation by means of wells *(tawout)* from which water is drawn by zebus (or donkeys), and two particular types of dwellings are also ascribed to them, namely a subterranean or semi-subterranean dwelling *(edamous)* and a square hut *(ekeber)* covered with straw or rushes. Immigrations of predominantly negroid agriculturists from Tidikelt and Djanet take place also in modern times, but all the present agriculturists do not descend from immigrants of these regions. A large part of them are descendants of Tuareg slaves manumitted by their masters.

Negro slaves have also been introduced from the Sudan to Air by pastoral Tuareg, but there is no doubt that Air originally was a pure Sudanese country anthropologically, as it is Sudanese with regard to climate, botany, and zoology. In other words, the oldest known inhabitants of Air were negroes while the fair-skinned Berbers have arrived at a later date. It is stated both by Nicolas and Urvoy that Air before the Tuareg was inhabited by negroid Hausa or Proto-Hausa (Nicolas 1950a, p. 45. – Urvoy 1936, p. 138 ff.), and Barth claims the word *Air* to be relatively late and of Tuareg origin, the word *Azben* also used as a name of the massif to be of Hausa origin and older (Barth 1857, I, p. 369). My investigations fully confirm these statements. All Tuareg questioned about the history of Air seem to admit that the negroid agriculturists have lived in the country before the Tuareg, and there are in the Berber dialect spoken by these people a great many Hausa words. It is, I think, of particular interest that the negroid village population of Air is said to have a kinship system quite distinct from that of all true Tuareg while

Ahaggar
Air

563 601 akin to the system in use among the black-skinned citizens of Agadez. These people draw no distinction between parallel cousins and cross-cousins, while distinct terms for these relatives are characteristic of true Tuareg systems (fig. 8 9).

563 342 The material culture of the Air negroes is marked by both northern and southern traits. The most common type of dwelling is a beehive hut *(tatrami)*, which I have also seen south of Air in the savannah, while similar huts are unknown to the north in Ahaggar and Tassili-n-Ajjer. The huts are often placed within round enclosures which are possibly of Sudanese origin (cf. fig. 15). There are however other types of dwellings in the Air villages. Very common is a square straw hut *(tchira)* with a slightly elevated saddle-roof. It is built by the men while the beehive hut is made by women, and both types are frequently used by one and the same household. This square hut differs constructionally from the straw huts used among settled agriculturists in the north. Also rather common is a barrel-vaulted hut *(chen)* covered with mats (fig. 14). It has the same name and is of much the same construction as the movable huts or tents used by most pastoral Air Tuareg (fig. 5 & 13). It is built by women and seems to have been introduced by pastoral [462] women married to settled agriculturists. Finally there is in some villages a rectangular house *(tarachami)* with a flat roof. It has very solid walls generally built from stones inserted in and covered with mud. It has various sub-types more elaborately described by Rodd, who considers these houses to be of northern origin (Rodd 1926a, p. 240ff.). They have most probably been introduced from Tassili-n-Ajjer 177 312 or the Fezzan from which regions came also the irrigation system now forming the basis of agriculture all over Air, namely the drawing of water from shallow wells *(anou)* by means of zebus. This system is extremely common in the Fezzan and Tassili-n-Ajjer from where, as mentioned, it was introduced also to Ahaggar. It is not known when it came to Air, but in many villages it has been adopted only very recently. Not so many years ago water for irrigation in most villages was apparently raised by human power, namely by the pole and bucket provided with a counterweight *(aroudit)* (cf. Capot-Rey 1933, p. 322), but this method has now disappeared. It can be considered the oldest irrigation machine and it is no doubt [174] of very great age in Northern Africa including the Sudan. The method however 241 involves much strenuous work and in view of this it may seem quite natural that agriculture in Air was in the past also practised as shifting cultivation without any irrigation. Rodd states that in certain areas of Air rain-grown crops could be raised most years and that in the past a fair amount of cereals seems to have been produced in this way (Rodd 1926a, p. 139). I think this is correct. Certain crops as for instance millet has a very short period of growth; in Ahaggar (Abelessa) millet is sown in June-July and harvested in September, and it is said that it is not watered very much and never to the same extent as wheat grown in winter. It would no doubt be possible to grow millet in many parts of Air without artificial irrigation during the rains, and in fact millet was grown by shifting cultivation not far from Agadez as recently as up to the French occupation. But nowadays agri-

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Ahaggar
Air

241 culture is never practised without irrigation. Rodd thinks that the Air agriculturists
[114] gave up shifting cultivation because they are too poor to-day to risk losing their
[174] seed in the event of inadequate or irregular rainfall (Rodd 1926a, p. 133). I rather think the reasons are that the agriculturists of the massif nowadays grow very little millet and have a better irrigation system than in the past. In summer maize forms by far the most important crop, and it needs irrigation which is comparatively easy when using zebus for drawing water. However this may be we can assume that a type of agriculture related to Sudanese shifting cultivation was formerly important to the Air agriculturists, and although irrigation is nowadays used everywhere agriculture in certain places of Air is still a kind of shifting cultivation. Many agriculturists do not resort to manuring nor do they carry fresh soil to the gardens as in Ahaggar. With crop rotation they utilize one and the same plot for a few years but then have to cut trees and brush-wood somewhere else to make a new
[312] garden. A new well must then also be dug, but as irrigation wells are rather shallow this work is comparatively easy.

171 There are in Air certain agricultural implements related to those of Sudanese
412 farming cultures. We must mention in particular a small hoe hafted by means of a thong *(tagoumit)*. It is unknown both in Ahaggar and Tassili-n-Ajjer as well as further north in the desert while extremely common among Sudanese shifting cultivators. Feilberg has classed it with the so-called Old Sudanese Culture es-
[114] tablished by Baumann (Feilberg 1934, p. 260ff. – Baumann 1940, p. 50ff.; 1944, p. 213ff.). Baumann claims that this culture did not know the sickle, considered by him an implement of the so-called Young Sudanese Culture (Baumann 1940, p. 56ff.; 1944, p. 283ff.). The sickle (Air: *ělegesouar*, Ahaggar: *amreh*) is in fact unknown in many Air villages, and is according to my investigations not generally used for the harvesting of crops but for cutting annual grasses to be stored for
241 fodder. In Air the harvesting methods are as follows:– millet is cut with a knife,
171 maize is cut at the root by means of the above-mentioned hoe, while wheat and barley are pulled up with the hands. Similar harvesting methods seem to be known in the Sudan (Baumann 1944, p. 295ff.). As a Sudanese trait we can
[415] perhaps also recognize the large clay amphoræ used for the storage of cereals (Rodd 1926, p. 317. – Nicolas 1950a, p. 146).

174 We can conclude this section as follows:– While the negroes of Ahaggar ap-
144 parently have arrived in that country later than the fair-skinned Berbers the oldest
563 known population in Air were Hausa-speaking negroes subsisting predominantly as agriculturists. Their original culture apparently was closely related to that of Sudanese shifting cultivators. Contacts with the north and in particular invasions of fair-skinned Tuareg have changed their cultural position. Mixing with the Tuareg they have also changed their physical type, but they are still predominantly negroid. They have adopted a Tuareg dialect but have retained part of their old vocabulary.

Air

*Tuareg Invasions into Air.*

174 The connection between the Mediterranean and the Sudan by means of caravans through the Sahara is of very great but unknown age. Caravans have crossed the Sahara as far back as historical knowledge reaches (cf. Bates 1914, p. 101 ff. – Gsell 1920–28, I–VIII – Bovill 1958, p. 24). At the beginning donkeys and oxen were probably used as beasts of burden and the latter animals were employed also as draught animals for carriages as were horses at a later date (cf. Lhote 1953, p. 1138–1228). With the introduction of the camel, caravan trading through the desert was no doubt highly intensified. For although donkeys and also oxen can cross the Sahara in winter without much difficulty camels are better suited to desert journeys.

The first Tuareg who came to Air may have been caravan traders attracted by the excellent grazing grounds of this country. When they arrived we do not know but it seems possible to follow in broad outline the history of the Air Tuareg a thousand years back in time and to distinguish between several invasions. It must be admitted that these cannot be precisely dated and that our historical knowledge is on the whole very fragmentary. It is derived partly from oral traditions, partly [127] from written historical sources among which the so-called Agadez Chronicle is of particular value. It consists of various Arabic manuscripts in the care of the Sultan [114] of Agadez. They have been published in translation and abstracts (Palmer 1910; 1928; 1936. – Urvoy 1934). Several authors have made valuable contributions to the history of the Air Tuareg (Barth 1857, I. – Rodd 1926a, 1926b, 1938. – Palmer 1936. – Urvoy 1936. – Nicolas 1950a; 1950b), but to my mind the best general account is given by Urvoy whom I follow in outline.

As early as the 7th century A.D. extensive migrations of pastoral Berbers including the two important tribal groups of Lemta and Zaraoua passed through the desert. The Lemta settled around the Niger and gave rise to the Sonrai Empire, while the Zaraoua reached the Lake Tchad country where the state of Kanem-Bornou was created. At this time pastoral Berbers also arrived in Air where new states were created. The name of one of them is known, namely the Hausa state of Gober or Gobir which existed in Air up to the 12th century A.D.

New invasions took place in the following centuries. The ancestors of the clans of Igdalen (now in Tegama and Damergou south of the massif) and Iberkhoreen (now in Azaoua north of Tahoua) have probably immigrated before the year 1000 A.D. as may also be the case of the Kel Tamgak clan in Northern Air.

As mentioned the excellent grazing grounds of Air were probably the reason for the first Tuareg invasions. From the 11th century A.D. another factor seems to have been responsible, namely the arrival in North Africa of the Arab bedouins of Beni Hilal and Beni Soleim. Nomads of the latter group invaded the Tuareg countries of Tripolitania and Fezzan (Ibn Khaldoun, I, p. 134 ff.) with the result [614] that Tuareg clans migrated southwards to Air. Among them was a group of seven clans (Itesen, Ijadaranein, Ifadalen, Tamakou'at, Tamaga'azellet, Iza'aran, and

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Air

Ibrazouen) descending from daughters of one and the same mother. The Itesen clan had as its particular ancestress the oldest daughter. The clans were united into a federation also named the Itesen, as its supreme chief known as the *Aremboloui* was elected from this clan. The Itesen group settled in Central Air, where for a long time it held an extremely powerful position. At a certain date a group named Immikitan was separated from the Itesen federation to form an independent or semi-independent political unit with its own chief by the title of *Emekki*. Tuareg of the Itesen-stock including the Immikitan are nowadays very few in number and mainly live in the savannah south of the massif where most of them took refuge owing to wars with later immigrants. Two of the oldest clans mentioned still exist, namely the Ifadalen in Damergou, and the Iza'aran partly in Damergou, partly in Air.

According to tradition the Itesen Tuareg came from the oasis of Aouidjila (Aujila) in Libya, and we may assume that they have immigrated from Tassili-n-Ajjer, the Fezzan or adjacent parts of the northern desert. The group of Tuareg known as the Kel Geres is said to have come also from Aouidjila. They invaded Air at a time between the 12th and the 14th century.

At the end of the 14th century both the Kel Geres and the Itesen came under the pressure of Tuareg invaders known as the Kel Ooui who are said to have had Aouidjila as their original homeland like the Itesen and the Kel Geres. They fought these two groups and in particular the Kel Geres who left Air finally in the 18th century to take up grazing grounds in the region of Madoua of the Nigerian borderlands. There were originally seven clans of Kel Ooui Tuareg, and five of them still exist. Like the Itesen and other Tuareg they claim descent from a common ancestress. The Kel Ooui pastoralists have largely mixed with the negroid village population also now known as Kel Ooui. Barth mentions that the true Kel Ooui clans are related to the very powerful clan of Oraren of Tassili-n-Ajjer (Barth 1857, I, p. 372).

At the same time as the Kel Ooui, or somewhat later, a clan or a group of clans known as the Kel Ferouan came to Air from the north. Their name is derived from the village of Iferouan (Kel Ferouan = "the people of Iferouan") but they were nevertheless true nomads roaming the northern parts of Air until the 17th century when they moved southwards to live around the city of Agadez. There are different traditions about their origin. One mentioned by Urvoy claims Egypt as their home-land; this probably implies immigration from or via Tripolitania (Urvoy 1936, p. 150). Barth says they are related to the Oraren clan (Barth 1857, I, p. 385). According to my own investigations they claim to have lived originally in Ahaggar as close kinsmen to the dominating Kel Rela clan of that region. Some Kel Ferouan Tuareg will even go so far as to hold that even after their arrival in Air they continued to intermarry with the Kel Rela of Ahaggar. According to Nicolas their ancestress in named Tadaouelt (Tadawelt) (Nicolas 1950b, p. 474), while I have been told her name was Sabenas.

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Air

Later than the Kel Ferouan other clans or groups arrived in Air from the north. 114 Prominent were the Kel Fadei who are said to be related to the Taitoḳ clan of 174 Ahaggar (Duveyrier 1864, p. 322. – Urvoy 1936, p. 150. – Nicolas 1950b, p. 472). Barth however is of the opinion that they came from different regions but in particular from Tassili-n-Ajjer (Barth 1857, I, p. 384). The Kel Fadei Tuareg first lived in Northern Air and their name is derived from the mountains of Fadei in these regions. At the end of the 18th century they migrated towards the south-west to the region of In Gall where they still have grazing grounds.

Still later immigrants are the Kel Tamat who came possibly three or four centuries ago. Urvoy mentions Ahaggar as their homeland (Urvoy 1936, p. 150), while Nicolas says they are related to the Oraren clan of Tassili-n-Ajjer (Nicolas 1950b, p. 471). Even later came the Ikaskazan Tuareg who in Air attached themselves to the Kel Tamat. According to Urvoy they came from Ahaggar (Urvoy 1936, p. 151), according to Nicolas they descend partly from the Taitoḳ of Ahaggar, partly from the Imenrasaten and the Oraren of Tassili-n-Ajjer (Nicolas 1950b, p. 472). Tuareg of the Ikaskazan told me that they are related to the Oraren.

It is well known that all over Northern Africa numerous Arabs and Berbers 173 claim relationship with the Prophet and his family. Most of these traditions seem to be mere fake. We may, to mention an extreme example, take the negroid blacksmiths of Ahaggar who firmly hold that their ancestor lived in Mekka as the blacksmith of the Prophet. All traditions relating clans to Islam have been omitted in [128] this brief account of Tuareg history in Air. This does not mean, of course, that we can rely on the above traditions which are very often contradictory. An obvious case is that of the Kel Ferouan. In literature there are traditions of Tripolitania or Tassili-n-Ajjer as their homeland, while I have been constantly told that they came from Ahaggar as close kinsmen of the Kel Ṛela. I think this latter tradition gathered by myself does not contain much historical truth but perhaps reflects political relations of the past. The Kel Ferouan apparently were on quite good terms with 174 the Kel Ṛela of Ahaggar whom they admired because of their power. The Kel Ṛela had many quarrels with the Taitoḳ and also with the Kel Fadei, and the latter Tuareg again were enemies of the Kel Ferouan. As the Kel Fadei claimed themselves related to the Taitoḳ it may have been quite natural for the Kel Ferouan (the most important clan in Air) to claim relationship to the Kel Ṛela (the most important clan of Ahaggar).

We can never rely on oral traditions of origin, but they may contain some historical truth. All traditions mentioned point to a northern origin of the Air Tuareg and in particular to Tassili-n-Ajjer, the Fezzan, and adjacent regions. In support of these traditions we can refer to the fact that the most important northern trade road from Air leads to the oasis of Ghat, Tripolitania, and the Fezzan.

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Air

*The Sultanry of Air.*

The Agadez Chronicle referred to above gives an interesting description of the establishment of the Air Sultanry in 1405 A.D. Before that time, it is said, a growing anarchy reigned all over the country, and the Arombolou, supreme chief of the Itesen, therefore took the initiative to elect a Sultan to act as an arbitrator among the various groups of Tuareg. 175

According to tradition representatives of the Itesen clans were sent to the Sultan of Constantinople to persuade one of his sons to become the first Sultan of Air. After eight years' absence the deputation returned with a slave who became the ruler over the Air people. This peculiar story as stated by Urvoy is not mentioned in the Agadez Chronicle nor in any other written account (Urvoy 1936, p. 162), and I shall add to this that although even nowadays it is told all over Air, there are many Tuareg who consider it spurious. Actually we do not know from which country the Sultan came nor can we know if he was in fact a slave. But according to the Tuareg all known Sultans have been black-skinned. Even to-day it is claimed that although the Sultan can take a fair-skinned Tuareg woman as one of his wives the descendants of such a marriage are never elected Sultans. Individuals who have ties of kinship with a particular Tuareg group are never chosen for that office. 173 643

Although the Sultanry was created by the initiative of the Itesen, the Sultan was also recognized by the Kel Geres who then lived in Air, by the Kel Ooui, and later by other Tuareg groups. At first he had no permanent residence but led a nomadic life in the region of Tadeliza. It did not take long before he became permanently settled at Ti-n-Chamane from where he moved to Agadez which was founded at the middle of the 15th century A.D. as a centre of the then extremely flourishing trade through Air (cf. Rodd 1926a, p. 102, 364f., 409. – Urvoy 1936, p. 164). To the Tuareg the Sultan is known by the title *Amenokal* – a word used for supreme chiefs by most Tuareg. The meaning of this word is not exactly clear. Foucauld does not discuss its origin but only identifies its meaning as "a chief who is not subjected to any other chief" (Foucauld 1951-52, III, p. 1213f.). According to Duveyrier *Amenokal* means literally "the owner of the land" (Duveyrier 1864, p. 331), and this meaning is also ascribed to the word by Lhote (Lhote 1955, p. 189) and Blanguernon (Blanguernon 1955, p. 47). It is my own view that although there can be no doubt that *Amenokal* is connected with *akal* meaning "land", it may perhaps be doubted whether it contains the meaning of "ownership". 643 114

In practise the Sultan had little power. The Agadez Chronicle refers to Sultans who acted as war leaders of all Air Tuareg against foreign Tuareg groups or the forces of Sudanese states, but within Air it was difficult for a Sultan to maintain his power over certain warlike groups of Tuareg. Leo Africanus writes that the inhabitants of the desert depose and elect Sultans whenever they like (Leo Africanus III, 175 643

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Air

175 p. 828), and so it has been right up to modern times. Many Sultans have had only
643 very short periods of reign.

Although the Sultan had but little real power he had a high prestige and was very rich. He had the right to dues from goods passing through Agadez, as men-
[651] tioned already by Leo (Leo Africanus III, p. 828f.), and he was also entitled to dues from the Bilma salt trade. But the Sultan had under his direct command only the negroid populations of Agadez and the villages of In Gall and Teguidda-n-Tecem. The people of Agadez, said to be members of the religious *Ineslemen* class, have never paid any tribute to the Sultan, whereas he received annual payments from the two villages mentioned. All other people of Air apparently had no fixed economic obligations to the Sultan.

The Sultan had the direct jurisdiction over the negroes under his command. He was the arbitrator and supreme judge in disagreements between the different Tuareg groups to be mentioned below. But he could not meddle in their internal affairs, and rarely was so influential that he could stop the frequent quarrels.

As we have seen the dominant Tuareg group at the establishment of the Sultanry was the Itesen most of whom left the massif long before the arrival of the French. We have also seen that the Kel Geres owing to wars with the Kel Ooui in the 18th century went southwards to the Nigerian borderlands where they became politically independent. In the 19th century the important political groups of the Air Sultanry were the following:–

The Kel Ooui occupying the eastern and most mountaineous parts of the
162 massif. According to figures given by Nicolas for clans and villages of the Kel Ooui
175 (Nicolas 1950b, p. 465ff.) their total number seems now to be about 8000.

The Kel Tamat including the Ikaskazan. The group judged by the figures for
631 some of the clans (Nicolas 1950b, p. 471f.) has about 4000 individuals most of whom originally lived west of the Kel Ooui. Contrary to the two following groups they were placed under the authority of the supreme Kel Ooui chief, the *Anastafidet*.

The Kel Fadei in the region of In Gall. Their total number according to Nicolas is 2341 (Nicolas 1950b, p. 474).

The Kel Ferouan comprising clans in the western parts of the massif including the region of Agadez, and also south of the massif towards Damergou. They number about 5000.

The Kel Ooui group was for periods of the past very important politically. But
175 its political system apparently differed from that of other Tuareg groups which
184 may be explained by the fact that a large number of them were settled agri-
565 culturists. The other Tuareg groups mentioned, on the contrary, were made up exclusively of pastoralists who roamed in the lower parts of the massif and the adjacent plains. In these groups there were two important classes which seem to have been of little importance among the Kel Ooui. The two classes in literature
175 are known as "noble Tuareg" *(Imacheren* sing. *Amacher)* and "vassal Tuareg"
565 *(Imrad,* sing. *Amrid)*. The vassal class in all groups was more numerous than that

[533] Fig. 4.–The palace of the Sultan of Air at Agadez. – The Sultan has just returned from a short journey out of town and musicians including three drummers mounted on camels (left) are playing in his honour. The drummers beating two drums each and musicians blowing [534] various wind-instruments accompany the Sultan when he leaves his palace. The drums of the Sultan are different from that of the Kel Ferouan drum-chief (fig. 6). They are larger and deeper, have their skin fastened in a different manner, and are beaten with sticks.

175 of noble Tuareg from whom the supreme chief of the group was elected. The chief
565 had as his sole insignia a drum named *ettebel*, or *arazou*. The name of the drum
631 *ettebel* was and is still used as the name and title of the chief who is adressed by this very word, and *ettebel* is also used as a name of the group under his command. I therefore use the word "drum-group" for such groups of Tuareg as the Kel Tamat, the Kel Fadei, and the Kel Ferouan, and the word "drum-chief" for their chiefs. There were also in the past smaller drum-groups as for instance the Echchikhen of Damergou to whom I shall refer below.

175 The Sultan was elected by the leaders of the Tuareg groups mentioned but
643 they did not all take part in his official instalment. The instalment ceremony is described by Barth as follows:– From his private room in the palace (fig. 4) the Sultan was led to the public hall. Here the chiefs of the Itesen and the Kel Geres asked him to sit down upon a bed made from ribs of palm leaves covered with mats, but he was not allowed to lift his feet and sit in Oriental fashion until permission was given by the Kel Ooui (Barth 1857, I, p. 461f.). Jean who gives a more [114] detailed account says that the Kel Geres did not participate, and had no voice of election (Jean 1909, p. 159ff.). It is noteworthy that the chiefs of such important drum-groups as the Kel Fadei and the Kel Ferouan did not participate in the ceremony, which dates from the time when the Itesen, the Kel Geres, and the

Fig. 5.–Mat-covered tent typical of the pastoral Air Tuareg. The tent in this photograph is inhabited by the Kel Ferouan drum-chief. It is a very simple dwelling compared with the Sultan's palace containing two storeys and several rooms. Nevertheless the Kel Ferouan drum-chief in the time preceding the French occupation was politically more important than the Sultan. The photograph is taken in the plains north of Aderbissinat at the end of the rains. Annual grasses of a high value for fodder are growing between the scattered trees and bushes of thorny acacias, which are also valuable fodder-plants for camels and goats. [643] [137]

Kel Ooui formed the important political units of Air. The Kel Fadei and the Kel Ferouan at the establishment of the Sultanry had not yet arrived or lived at the northern outskirts of the massif. 175 643

In the 19th century the Kel Fadei and the Kel Ferouan paid very little respect to the Sultan. At the time of the French occupation the Kel Fadei even had the impertinence to collect the Sultan's dues from the village of In Gall (Jean 1909, p. 162), and Barth mentions that the Sultan was afraid that the Kel Fadei would detach themselves from him to make an alliance with the Ioullemmeden (Barth 1857, I, p. 478). As for the Kel Ferouan their chief was the most prominent leader of all Air. This is clearly documented by Jean (Jean 1909, p. 103f.) and it is told over and over again by all Air Tuareg to-day. Barth states that the Sultan when away from Agadez on journeys was replaced by the Kel Ferouan drum-chief, and he thinks that the Kel Ferouan originally formed the noble family from which the Sultan or Amenokal was chosen (Barth 1857, I, p. 385). This agrees with informations I have gathered among the noble Kel Ferouan, who will also claim that their clan came to Air before all other Tuareg. The truth however seems to be that they had originally nothing to do with the Sultanry. They took up grazing 175 642 643 [114]

175 grounds round Agadez in the 17th century, and were probably called to this
642 region by a Sultan who needed them to keep order in the country. The actual
643 power then passed into the hands of the Kel Ferouan drum-chief.

### *The Kel Ferouan Tuareg.*

114 Lists of clans which belong to the Kel Ferouan drum-group have already been
614 published. Jean has fourteen clans in his list (Jean 1909, p. 104), Rodd and Abadie have fifteen (Rodd 1926a, p. 427f. – Abadie 1927, p. 391f.), while Nicolas refers twenty-two clans to the group (Nicolas 1950b, p. 474f., 480). My own list comes
614 close to that of Nicolas but contains a few additional names which however may
127 refer to sections of the other clans. In my list I have indicated the relationship
162 between the clans and their traditional grazing grounds. I have not been able to
[631] get precise particulars about the size of clans, and I therefore quote the figures

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Air

given by Nicolas (Nicolas 1950b, p. 474f.). The clans differ greatly in size ranging from 653 to 42 individuals. The average figure for a clan is about 250. 614 [127] [162]

A clan is generally termed *tassit* which seems to have the meaning of "a palm from which fingers issue". Many clans have an ancestress whose name is known to the members. The Kel Ferouan Tuareg however have very little genealogical knowledge. They rarely know their kinsmen more than three or four generations back, and they cannot trace the relationship between all clan members and their ancestress. Traditionally a clan is a group of matrilineally related persons, but there is nowadays a strong tendency to acknowledge the patrilineal principle for clan-membership. A more detailed description of Tuareg clans will be given in the later chapter on the Ahaggar Tuareg. [196] [611]

To-day the Air Tuareg live most of the year in camps consisting of three to five barrel-vaulted tents covered with mats (fig. 5 & 13). The inhabitants of these small camps generally form an extended family, e.g., 621 596 [342]

1) husband, wife, married sons, and their children.
2) two brothers, their wives, married sons, and their children.
3) a brother and a sister together with their spouses and children.
4) husband, wife, unmarried children, husband's mother and mother's sister, and his sister's daughter with her husband.

In the rainy season *(akasa)* and in the beginning of the following dry season *(ranat)* several small camps of extended families may camp together. The only reason for this is said to be that kinsmen appreciate each other's company. I have myself never seen such big camps. During my visit to Air 1955 the annual pastures were not so well developed as to allow the concentration of many domestic animals in one and the same place. It is said that camps in the past were bigger than nowadays. The Air Tuareg were then constantly running the risk of being raided by pastoral Arabs, Tebu, or Tuareg from other groups. 221 361 621 [173]

Clan-endogamy is claimed an ideal by many Air Tuareg, but exogamous marriages are common and have occured also in the past. The members of two clans hold that they have intermarried since the remote date of their establishment. They claim descent from a brother and a sister who married two cross-cousins, and the preferred type of marriage among the Kel Ferouan Tuareg is in fact that to a cross-cousin – ideally to a mother's brother's daughter. This may be seen from the composition of 38 marriages which were as follows:– 582 614 582

| | |
|---|---|
| Mother's brother's daughter | 7 |
| Father's sister's daughter | 4 |
| Classificatory cross-cousins | 6 |
| Other kinswomen | 13 |
| No blood-relationship between husband and wife | 8 |
| Marriages total | 38 |

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Air

Marriages to cross-cousins are justified by myths telling that as long as there
582 have been Tuareg there have also been marriages of this type. There are also
[773] legends or stories to prove that such marriages have always been good, other types of marriages bad. Cross-cousin marriage is further said to be preferred because it
[581] results in an exchange of individuals and livestock between two families. Finally
[605] cross-cousin marriage is considered the best type of marriage because institutional joking exists between cross-cousins. For although joking between cross-cousins will stop with marriage, the mere fact that there has once been joking between husband and wife is said to reduce troubles and quarrels between them.

Among the Kel Ferouan joking between cross-cousins goes together with
605 joking between brothers-in-law and sisters-in-law, and also with avoidance be-
606 tween children-in-law and parents-in-law. Radcliffe-Brown has explained these
221 two different types of behaviour as parts of one and the same system within which they have an identical social function, namely that of preventing conflicts (Radcliffe-Brown 1950, p. 56ff.; 1952, p. 90 ff.). I have elsewhere treated this theory (Nicolaisen 1957a, 1957b, 1959b). Here I shall content myself with the statement that my Tuareg material seems to confirm the theory set forth by Radcliffe-Brown, the more so as I have been able to find cases of transition between the two outwardly most different modes of behaviour. The extent to which joking is carried on between partners of the same sex is always dependent on age. Between two male cross-cousins or two brothers-in-law there will be little or no joking if they are of very different age, and in very extreme cases joking may in fact change into avoidance. It is also interesting that in most Kel Ferouan clans there is institutional joking between a man and his mother's brother's wife. According to the rules of preferential mating she may later become his mother-in-law, whom in that case he must avoid very strictly. This custom, however, does not seem to be found in
[184] the Iforas clans which were adopted into the Kel Ferouan drum-group about a hundred years ago. I think that Radcliffe-Brown's theory on joking and avoidance is very important, and I shall later in this study present material to support it.

The particular position of cross-cousins is indicated in the kinship system (fig. 8)[1]
601 which also shows that there are particular terms for children of cross-cousins and for certain matrilineal relatives. As clans, according to traditional rules, are groups
614 of matrilineally related persons it would seem natural that succession to clan chieftainship followed the maternal line. This is also stated by Nicolas, who claims the line of succession to be as follows:– 1) the brother of the deceased chief; 2) his mother's sister's son; 3) his sister's son. According to Nicolas this rule of succession also holds for the Ahaggar Tuareg and for the Kel Geres (Nicolas 1950c, p. 492 f.). Rodd states the traditional rule of succession in Air as matrilineal. But he claims
614 that the deceased chief's sister's son is the first in line, and he refers to the fact that
643 this rule has often been followed at the election of Sultans (Rodd 1926a, p. 151 f., 463 ff.).

It is frequently mentioned in the literature on various Tuareg groups that the

[1] [p. 102, categor 116.—Analyst]

5: Nicolaison E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Air
Ahaggar

sister's son is first in the line of succession. Already Ibn Batutah mentions that among a southern Tuareg people known as the Mesoufa a man was inherited by his sister's son, and he also states that the Sultan of Tecadda (possibly Tegguida-n-Adrar immediately south of the Air massif) was succeeded by his sister's son (Ibn Batutah IV, p. 388, 443). According to Barth a sister's son was preferred as chief in Air and in Tassili-n-Ajjer (Barth 1857, I, p. 374f.). For the Tuareg of Ghat (Rat) (Tassili-n-Ajjer) Richardson states that chiefs and Sultans are succeeded by their sister's sons (Richardson 1848, II, p. 65f.), and for the Northern Tuareg in general we have the statement of Duveyrier that this principle was valid not only for succession to chieftainship but also for rights to blood-wealth, which should be given to a slain man's sister's son. It is very remarkable that Duveyrier also relates in detail a Tuareg myth about the origin of the sister's son's right to succession (Duveyrier 1864, p. 356, 397ff.). Again, we find that among the Tuareg of Ahnet (the Ahaggar Tuareg) a chief should be succeeded by his full brother or a maternal half-brother, and then by his sister's son (Bissuel 1888, p. 23). From the Ioullemmeden Tuareg who long ago have adopted patrilineal succession (Nicolas 1950a, p. 213; 1950c, p. 492f. – Richer 1924, p. 3, 52) an interesting matrilineal custom has been described by Feral. He states that in certain Tuareg clans round Gao property considered indivisible is still inherited by the sister's son (Feral 1955, p. 21f.). Thus Rodd's statement about the sister's son's right of succession is confirmed by many authors, but there is also in literature information to confirm the statement of Nicolas, that a sister's son comes next to a maternal cousin in the line of succession. This is claimed for the Ahaggar Tuareg by Benhazera (Benhazera 1908, p. 51, 97f.), Foucauld (Foucauld 1951–52, I, p. 152f., II, p. 916f.), and by Lhote, who refers to the statement of Benhazera (Lhote 1955, p. 189). Dubiéf has further explicitly stated that the priority of maternal cousins is acknowledged by the Tuareg of Tassili-n-Ajjer (Dubiéf 1956, p. 89).

In Ahaggar I have been told by many Tuareg that a maternal cousin is the proper successor next to a brother of the deceased chief, and genealogies prove that a maternal cousin has more frequently been elected chief than has a sister's son. Nevertheless, Tuareg whom I consider extremely versed in traditional custom claim the priority of a sister's son. In connection with Duveyrier's statements this makes me believe that the Northern Tuareg originally preferred sister's sons to succeed as chiefs, while preference to maternal cousins is a custom more recently adopted.

The Kel Ferouan Tuareg have not followed any particular rule of succession in recent times. For in most clans there is now very little prestige attached to chieftainship, and chiefs are said to have much trouble with the collecting of taxes. In many vassal clans chiefs are changed very frequently as qualified people often refuse election or retire after a few years. Many Air Tuareg whom I asked about the rule of succession in the past all agreed that the sister's son had the right to succeed; they never referred to rights of maternal cousins, and claimed that in the

778

Fig. 6.–The drum which is the only insignia of the Kel Ferouan drum-chief. Similar drums are found in all Tuareg groups.

614 past, as nowadays, the proper successor to chieftainship was the deceased chief's son. This rule of succession is no doubt due to Islamic influence which, as mentioned, [174] has introduced patrilineal succession among the Ioullemmeden Tuareg and also in various clans of the religious class of *Ineslemen* (sing. *Aneslem*). I think there can be no doubt that succession among the Air Tuareg was originally matrilineal and that most possibly a sister's son was considered the proper successor to chieftainship.

### *The Political System of the Kel Ferouan.*

634 The important noble clans of the Kel Ferouan drum-group, namely the true Kel [614] Ferouan (or Iraouatten) and the Kel Azel, are said to be matrilineally related, as [173] the ancestress of the Kel Azel was a woman of the Kel Ferouan clan. She married, tradition says, an Arab who was killed at her own request.

The chief of the noble Kel Ferouan clan had the only drum of the whole group [202] of which he was the supreme chief. The drum followed him on journeys, and there were various signals used to summon his subjects. It is said that these signals should be obeyed not only by members of all vassal clans but also by the noble Kel Azel. 778 The drum, which may still be seen in the camp of the Kel Ferouan drum-chief, is 534 made of wood and covered with skin (fig. 6). It is believed that it has a mystic power. Therefore, when the skin was worn and had to be replaced the man charged with this task would do it looking away from the drum lest he might be struck

blind. It is also said that the drum must never come into contact with soil or water, 778 534 and that it must never be touched by women.

Matrilineally related to the Kel Ferouan are also the Echchikhen clan of Damergou, as its ancestress was a noble woman from the Kel Ferouan. But patrilineally 634 [614] the Echchikhen seem to be related to Iforas Tuareg of religious status. The chief of the Echchikhen has a drum of his own as he has the right over a few vassal clans of Damergou, namely the Imasoren, Khamedan, Ekanaouen, and Iraouelen – clans said to be poor and in part subsisting as hunters. Among the Echchikhen I was able to collect a list of drumchiefs who have been chosen mainly according to the patrilineal principle (fig. 7). A new chief of the drum-group had just been elected, and he had no ties of kinship with the Echchikhen. He belonged to the Kel Geres group, and the prominent noble Echchikhen Tuareg were very sorry and infuriated about his election, as they wanted a man from their own clan to take over the leadership of the whole drum-group. But they could do nothing about it as the chief can be elected only by his vassals.

This same principle is and was valid for the election of drum-chiefs in the Kel Ferouan group – they have always been elected exclusively by the vassals, who [177] after the French occupation have also elected drum-chiefs who did not belong to the noble Kel Ferouan clan. Most probably it was not so in pre-European times, 173 but the noble Kel Ferouan unfortunately have a very fragmentary knowledge of their 634

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Air

173 drum-chiefs in the past. They say that fifty chiefs have reigned over the group
634 until now. This figure, of course, should not be taken too literally, although there have most certainly been many chiefs of whom nothing is known. The present drum-chief and his brother know the names of the first four chiefs who are said to have reigned over the group in the very remote past, but the more recent chiefs are not known further back than the latter half of the 19th century.

The first drum-chiefs were the following:–

*Sabenas,* the ancestress of the noble clan and the first ruler of the Kel Ferouan drum-group. Her drum was made of iron, they say.

*Amenokal,* the elder son of Sabenas.

*Mohammed Aman,* the younger brother of Amenokal.

*Elkarebi,* the brother of Mohammed Aman.

The drum-chiefs known to have reigned more recently are the following:–

*Boboker,* who was installed in the latter half of the 19th century. He belonged to the Kel Ferouan clan and was of pure noble origin.

*Rali,* who was the younger brother of Boboker. He was drum-chief when the French arrived. He is said to have reigned for 55 years and to have died about 30 years ago. He was considered a very skillful and wise chief, and is remembered by all Tuareg of the Kel Ferouan drum-group with profound respect. Rali's tomb is
769 south of the massif somewhat north of Aderbissinat where the present drum-chief most frequently camps. On Rali's death-day the drum-chief, his family, and his slaves visit the tomb for a sacrificial feast in which I had the opportunity to partic-
[782] ipate in 1955. A sheep was ritually killed by the chief and eaten close to the tomb. Later there was a prayer led by the chief, who thereupon entered the tomb to take soil which was distributed between all worshippers. They put the soil on the top of their heads and also in their mouths to benefit from the sacred power of the
[177] deceased chief. – Ancestral worship of this type is most probably no traditional custom of the Tuareg, but has been introduced with Islam. Tuareg are generally afraid of deceased persons and will avoid their tombs.

*Mohammed,* who belonged to the Kel Ferouan clan through his mother, while
175 his father came from the Iforas. After one year he was dismissed by the vassals.
634 Apparently he was no close kinsman of the preceding drum-chief, Rali.

*Ouanarli,* who had no bonds of kinship with the Kel Ferouan clan. His father belonged to the religious and in Tuareg opinion very holy clan of Kel Es Souk. He was dismissed by the vassals after one year's reign.

*Afanou,* who belonged to the Echchikhen. He died after one year's reign.

*Koutia,* who was of noble Kel Ferouan stock being the son of Rali's younger brother.

*Agg Elkher,* of pure noble origin being the son of Rali's daughter. He gave up his office after a period of some years, but was later re-elected. He is the present drum-chief of the Kel Ferouan group.

*Azerhar,* who was the son of Rali.

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Air

*Agg Elkher*, in his second period of reign. He is very old, and the French consider his son the actual representative of the group. [175] 634

On the ceremonial installment of a drum-chief in the past I have gathered conflicting information. People of the noble Kel Ferouan clan claim that the drum-chief should be installed by a vassal Tuareg of the group, who appointing the chief would wrap a new veil or a turban around his head. But there are many vassals who say that a drum-chief should be installed in this way by the Sultan, and that in the past when dissatisfied with a drum-chief they would ask permission of the Sultan to dismiss him. I believe that this latter statement is officially correct, but it is possible that in the 19th century Kel Ferouan drum-chiefs as the most powerful chiefs of Air were installed by vassals. [643]

The drum-chief should sanction the election of all chiefs of clans belonging to his group. He should install them ceremoniously providing them with a veil as at his own installation. When a vassal chief was installed in this way he should give a camel to the drum-chief. At present when the Kel Ferouan drum-chief has little authority while the Sultan has gained prestige and power, the instalment of a vassal chief may be undertaken by the Sultan, but this is against traditional rules. 614 634 [431] [178]

In the past the drum-chief was considered the true owner of the land inhabited by his vassals. The drum-chief, it is said, would allot a particular area to each clan of vassals, but members of a vassal clan were not allowed to defend their territory against other vassals of the same group, as all land belonged to the drum-chief. 423 634 565

The drum-chief had the right to half of the bride-wealth *(taggalt)*, or one camel, from any vassal marriage, and he should receive or inherit a camel at any death among his vassals. These payments seem to have been the true marks of vassalship, but the vassals had many other obligations towards their drum-chief. 565 634 651 [583]

One of the very important functions of the drum-chief was his position as the war-leader of the whole Kel Ferouan group. In battle the noble Kel Ferouan Tuareg with the drum-chief would keep behind the vassals who formed the true soldiers of the group. The drum-chief would lead the battle and he alone could decide on war and peace. It was also his right to undertake the division of war-booty for which there were three distinct terms:- 634 701 634 727

1) *Temargedas*, that is booty taken on raids organized by the drum-chief. The term refers to any kind of booty, e.g. riding camels, she-camels, horses, cattle, etc. Half of such booty according to the noble Tuareg was the right of the drum-chief while the other half should be given to the vassals. Vassal Tuareg nowadays know extremely little about these old rules, but I met one vassal Tuareg who claimed that one seventh of the booty should go to the drum-chief.

2) *Teouit*, that is booty taken from foreign groups of Tuareg, or from Arab and Tebu pastoralists attacking camps of the Kel Ferouan group. In other words this kind of booty comprises riding camels and horses taken from assailants who run away, are killed, or are made prisoners. Under such circumstances it is said that the drum-chief would take a number of riding animals at his discretion. A

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Air

634 particular case is related of a group of Ioullemmeden Tuareg attacking a camp of
727 Kel Ferouan vassals who made a counterattack and won the battle. They made four prisoners and took as booty two horses and several riding camels (unknown how many). As his part the drum-chief took one horse and five camels. But he also took the four prisoners to his camp. He kept them there for about a month, then they were released, dressed in new clothes, and mounted on excellent riding camels with good saddles.

[565] 3) *Ekachchadi*, that is booty taken by vassals during raids carried out without
[721] the permission of their drum-chief. In this case the drum-chief would take all booty for himself and leave nothing for the vassals who were not allowed to engage in warfare on their own account – unless attacked by foreign raiders.

The drum-chief had other income from his subjects who paid him an annual
634 fee termed *sadaḳa*. This fee, it is said, was paid not only by vassals but also by noble
651 households of the Kel Azel clan. The sadaḳa fees were collected on behalf of the
565 drum-chief by people of the Echchikhen and by negroid blacksmiths, who form a particular and rather numerous caste. There were definite rules for the payment of sadaḳa. It was computed from the size of herds and flocks of all domestic animals with the exception of donkeys for which no payment was made. As an example can here be mentioned the payments for camel herds:–

| *Size of Herd.* | *Sada a.* |
|---|---|
| 10 camels | 2 goats |
| 15 camels | 3 goats |
| 25 camels | 1 young camel |
| 50 camels | 1 full-grown camel |
| 100 camels | 2 full-grown camels. |

The Echchikhen and the blacksmiths took the sadaḳa animals to the drum-chief. He gave some of them to the collectors who were themselves exempted from taxation. The bulk of the animals was sold at the market of Agadez and most of
[735] the proceeds given to poor people by the drum-chief, who would keep a small part for himself.

The drum-chief had the supreme jurisdiction over his group. In all internal
634 matters the drum-chief and not the Sultan was the supreme judge. In difficult
692 cases he would consult Islamic jurists of Agadez or the Echchikhen. All members of the Kel Ferouan group could be fined by the drum-chief and indemnities *(edeiet)* were then given to the chief. In case of murder the killed person's kinsmen
682 had the right of blood-revenge to which the drum-chief could make no objection.
[696] But if the family of the person killed consented, the drum-chief could take all livestock from the murderer and pass it over to the children of the slain man whose
184 kin in that case lost their right of revenge. Apparently there has never been any
682 fixed size of blood-wealth among the Kel Ferouan Tuareg in contrast to the two

Groups of Northern Tuareg and Arab Tribes of The Sahara

5; Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Air

groups of Northern Tuareg and Arab tribes of the Sahara. Punishments for theft 000
are said to have been very severe. A thief who had not stolen previously was put 685
into jail in Agadez; if he stole again after his release one of his hands was cut off, [697]
while for a third theft the penalty was capital punishment said to be carried out at the market place of Agadez in a very cruel way:– pointed sticks were placed under the man's armpits, under his chin, and under the back of his head so that he would die when no longer capable of keeping standing. Punitive measures as imprisonment [177]
and capital punishment are no doubt foreign to traditional Tuareg law and were [681]
in all probability originally practised by the Sultan. As the drum-chief of the Kel [643]
Ferouan was in fact the true master of Air, including the city of Agadez, he may have made use of the prison as he may have imposed capital punishment on thieves. But proper theft is very rare among pastoral Tuareg.

Even vassal Tuareg say that the drum-chief could be very strict and severe 634
with them in the past. But here it should be remembered that there were limits to his [692]
power as he could not refuse his subjects the right of blood-revenge. It should also be reiterated that the drum-chief was elected by his vassals, who could also dismiss him. And strictness or severeness with his vassals was not the drum-chief's normal way of conduct. Like other noble Tuareg he would not only associate with 565
the vassals on intimate terms, but he would also joke with them. A joking relation- 571
ship similar to that of cross-cousins and of brothers and sisters-in-law, including sham-fights and minor "thefts", existed between all noble Tuareg and all vassals of the Kel Ferouan group. They would joke with each other unless there were a great difference in age. But although joking was reciprocal it is said that the drum- [634]
chief could stop joking, in which case the vassals would "be afraid of him". I have already referred to the theory that the social function of joking between cross-cousins and in-laws seems to be the prevention of conflicts. The function of joking between people of different classes is similar, and this should be the more emphasized as this very explanation has frequently been given me by the Tuareg. "People who are different tease each other to prevent troubles", they say. For this very reason there was joking between noble Tuareg and vassals, but joking between members of these two different Tuareg classes did not occur unless they belonged to the same drum-group. Thus there would be no joking between vassals of the Kel Ferouan group and noble Tuareg of the Kel Fadei. In this latter case there would be avoidance or strict reserve.

It is said that marriages between noble Tuareg and vassals would not take place 582
in the past. This is not entirely true, but they seem to have been rare. I think that 607
one reason for this may be due to the fact that marriages between noble Tuareg and [565]
their vassals would tend to break down the structure of the political system. By such marriages the noble Tuareg, including the drum-chief, would acquire a great many relatives-in-law to whom the conduct would be avoidance or institutionally constant joking. For in addition to true in-laws there are numerous classificatory 607
in-laws. Thus a man (or a woman) has all spouses of his brothers and sisters and

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Air

607 of his parallel cousins and cross-cousins as his brothers-in-law *(alegges*, pl. *ilousan)*,
[601] or sisters-in-law *(taleggest*, pl. *tilousin)*, while the spouses of descendants of all
brothers, sisters, and cousins will be his sons-in-law *(aḍeggal*, pl. *iḍoulan)*, or
[606] daughters-in-law *(taḍeggalt*, pl. *teḍoulin)*. These terms are always used reciprocally, and parents-in-law and children-in-law will avoid each other accordingly.

Apparently most vassal clans were faithful to their drum-chief and recognized
634 his authority. But Tuareg pastoralists led a turbulent and warlike life, and the
614 members of certain noble clans, or clans listed as vassals but probably of noble
565 origin, would not accept the leadership of the drum-chief although they belonged to his group. Thus there were many quarrels with the noble Kel Azel Tuareg. It is
[687] said that in the past the drum-chief more than once punished them very severely not only taking all their livestock but also burning down their camps.

The three clans of Kel Tedale in Northern Air were only nominally part of the
634 Kel Ferouan drum-group. My information confirms Joubert's statement that the
614 Kel Tedale paid no tribute to the Kel Ferouan drum-chief or to chiefs of other
565 drum-groups in Air (Joubert 1939, p. 246). The political independence of the Kel
114 Tedale is also stated by Jean (Jean 1909, p. 104). The noble Kel Ferouan Tuareg claim the Kel Tedale to be true vassals of their drum-chief, and both Jean and Nicolas list them as vassals (Jean 1909, p. 104. – Nicolas 1950b, p. 475). Rodd thinks that both noble and vassal Tuareg were originally found in the three clans the homeland of which was probably Ahaggar (Rodd 1926a, p. 427) The Kel Tedale Tuareg I met all emphasized their noble origin, but Rodd's explanation was verified by Kel Ferouan vassals who said that both noble and vassal Tuareg are found among the Kel Tedale. That some of them are noble by origin seems to appear from the statement of Nicolas that the Kel Tedale in part are related to the Ihaḍanaren clan of Tassili-n-Ajjer (Nicolas 1950b, p. 475). For the latter clan is considered noble by all Northern Tuareg.

The Kel Tedale were so numerous, so rich in camels, and lived so remote from
634 the rest of the Kel Ferouan clans that the drum-chief could not maintain his power
614 over them. The drum-chief also had trouble with another clan of his group, the
565 Kel Akarra. This clan is said to have been originally of noble status and to have had as its particular vassals the clan of Ibararochchiten. The drum-chief assisted by
[558] vassals of the whole group in the past imposed vassalship upon the Kel Akarra, who however refused to give him part of their bride-wealth. It is said that the drum-chief three times made war against the Kel Akarra to bring them to submission and each time they were severely beaten. Nevertheless they refused to pay bride-wealth to the chief, who then ceased to claim it. As a result of these wars the Kel Akarra clan became small and insignificant.

A certain discord reigned within the Kel Ferouan group, but the drum-chief
[669] had the support of most clans of vassals who at his order would fight not only foreign Tuareg groups but also quell internal insurrections.

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Air

It is said that in the 19th century all Tuareg groups of Air and adjacent regions paid an annual tribute to the Kel Ferouan drum-chief as follows:– 634 651

| | |
|---|---|
| Kel Ooui | 50 Tuareg veils |
| Kel Fadei | 1 she-camel, 1 riding camel |
| Echchikhen | two groups each giving 3 oryx hides |
| Kel Geres | 1 horse with a saddle |
| Ioullemmeden | 1 she-camel, 1 riding camel |
| Kel Allekot | 150 kg of millet |
| Damergou<br>Katsena | An amount of millet |

The Tuareg name for these payments is *toouse* meaning "annual tribute". The present drum-chief says that this tribute was given by the groups because all land belonged to the Kel Ferouan group. I think that the correctness of this is perhaps to be doubted, and that there may be other possible explanations:– 1) The payments may at some remote date have been made to the Sultan (Amenokal), but later collected by the Kel Ferouan drum-chief who became more important or, more possibly 2) they may have been given to the drum-chief for protection. Thus annual duties, termed *tiouse* by the Northern Tuareg, were formerly given by foreign Tuareg groups to mighty chiefs of Ahaggar to avoid raids (cf. p. 113). [423] [174]

The noble Kel Ferouan Tuareg claim that in the remote past the whole drum-group of Kel Fadei including its noble clan paid bride-wealth to the Kel Ferouan drum-chief as his vassals. This vassalship of the Kel Fadei is said to have ceased in the following way:– The Kel Ferouan drum-chief once sent a blacksmith to a Kel Fadei camp to claim a camel as his part of the bride-wealth from a marriage. But the newly-married man refused to give the camel and furthermore showed his contempt for the drum-chief by cutting off both ears of the blacksmith's riding camel. The blacksmith then returned to the Kel Ferouan drum-chief who became furious at this act. The chief immediately decided to go to the camp to take the bride-wealth camel himself. When he arrived in the Kel Fadei camp a battle developed which was lost by the drum-chief, who had underrated the strength of the Kel Fadei. He was badly wounded in one leg, but was taken well care of by the Kel Fadei so that after a time he could return safely to his own camp. Since then, it is told, the Kel Fadei Tuareg have not paid any bride-wealth to the Kel Ferouan. 173

The political system of the Kel Ferouan group may be characterised as simple, all political rights resting in the hands of the drum-chief. He had no particular ministers or deputies, but he would discuss important matters with noble Tuareg of his camp and with the chiefs of vassal clans. 634

It has been mentioned above that the Kel Akarra clan in the past had one 634 614

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Air

634 vassal clan as its particular vassals. A few vassal clans were also attached to the
565 noble clan Kel Azel. I must admit however that I have not been able to gather very precise information about the relations between the Kel Azel and their vassal clans which were the following: Ijakarkaren, Imezzouren, Ikaoukan, Iforas, and Ikochechiten (a section of the Immezzilalen). The noble Kel Ferouan Tuareg say that these clans lived close to the Kel Azel to protect the latter clan, but they may also have had other obligations. For the noble Kel Ferouan Tuareg also had con-
[463] stantly a few clans of vassals living close to them, and two of these (Iberdianen and Irobouren) are said to have carried out such work which could not be done properly
[701] by black-skinned slaves, while one clan (Igendianen) acted as permanent soldiers and protectors.

Rodd has some very interesting remarks on the position of the vassals *(Imghad)*
114 as camel-herdsmen of the noble Tuareg. He says as follows:—"One of the functions
565 of the Imghad is to take complete charge of and use the camels of their lords for
614 long periods or to trade with them on their behalf. In such cases the Imghad act as the agents of the nobles, each one of whom has a right to ask the servile tribe as a whole to undertake these duties. But such obligations are imposed collectively on the tribe and not on any one Imghad. It is the custom to share the offspring of the
[422] camels thus herded in equal shares, though in the event of any of the animals dying whilst under the charge of the Imghad, the latter are collectively responsible
[672] for making good the loss, save in extenuating circumstances." (Rodd 1926a, p. 141 f.). Rodd however also refers to the importance of slaves as camel-herdsmen
[567] both among noble and vassal Tuareg (Rodd 1926a, p. 136). As far as my own information goes, camel-herding and caravan trading were in the past attended to by slaves, and the noble Tuareg in particular were slave-owners. I have not been able to confirm Rodd's statement that the vassals were formerly the camel-herdsmen of the noble Tuareg, nor have I found any tradition of original cultural distinctions between noble Tuareg and vassals, although I have inquired much about this.

Rodd divides the vassal clan into three groups according to their origin:
174 1) Vassals who were attached to noble clans already before the immigration to Air
565 from the north; 2) Vassals whose ancestors lived in Air before the immigration of
614 noble clans; 3) Vassals who have been subdued in fairly recent wars (Rodd 1926a, p. 138). The vassal clans of Air unfortunately have very little traditional knowledge about their origin, but at least some of them will claim that they came from the north as did all noble Tuareg. It is very probable that the noble Tuareg already before their immigration had vassal clans attached to them as it is claimed by the noble Kel Ferouan Tuareg. In other words: the political system of the Kel Ferouan Tuareg cannot be understood in complete isolation from political systems of the Northern Tuareg groups of Ahaggar and Tassili-n-Ajjer from where the Air Tuareg have emigrated.

### *The Kel Rela Drum-Group in Ahaggar.*

[161] The Ahaggar Tuareg according to statistics from 1950 number 4,611 individuals
565 (Lhote 1955, p. 157) and comprise 26 clans. In addition to the noble class termed
614 *Ihaggaren* (sing. *Ahaggar*), and the vassal class termed *Imrad*, (sing. *Amrid*) or *Kel Oulli* (sing. *Agg Oulli*), there is also a class termed *Isekkemaren* (sing. *Asekkemar*), who can be considered vassals of a somewhat different status. The religious class *Ineslemen* (sing. *Aneslem*) is in Ahaggar represented by a few families without clan organization.

614 There are five noble clans but only three of them have vassals. There are in
565 other words three drum-groups *(ettebel*, pl. *ettebelen)*, namely those of Kel Rela,
634 Taitok, and Tegehe Mellet. The Kel Rela group is by far the most important, and its chief with the title of Amenokal is the supreme head of all three groups which
643 constitute a sort of federation named *tegehe*. In rare cases when the Tuareg of Ahaggar joined forces against foreign Tuareg groups, e.g. the Tuareg of Tassili-n-
[701] Ajjer, the Amenokal was the war-leader of all three drum-groups. But in the past he had often little authority over the two other drum-groups For long periods of the 19th century he had severe troubles with the Taitok, who had acquired a practically independent position, and it seems as if he had no rights over the land inhabited by the Taitok drum-group. The Amenokal as well as the two other drum-chiefs *(Amrar*, pl. *Imrarren)* were elected by the vassals of their respective
[565] drum-groups. It is true that the members of the noble clan had a certain influence,
[614] but – contrary to former opinions on the matter – they did not have any direct voice in elections. The Amenokal was and is ceremoniously installed by a Tuareg of the Isekkemaren class who provides him with a new veil or turban. The two other
634 drum-chiefs should be installed in this way by the Amenokal, who also undertook the installation of all vassal chiefs within his own drum-group. The installment of vassal chiefs within the two other drum-groups were undertaken by their respective drum-chiefs. In the present chapter I shall describe the drum-group of the Kel Rela in some detail.

MS25 Tuareg MS25
Ahaggar

The Ahaggar Tuareg cannot generally trace the exact genealogical relationship between all members of a clan termed *tawsit* as it is in Air. The noble Kel Rela (275 individuals) claim descent from a common ancestress named Kella, who lived seven generations ago. The Dag Rali (386), one of the vassal clans, seems to consist of two matrilineages of seven generations each. The two matrilineages are said to be related to each other, but their exact relationship is unknown. The very numerous vassal clan Agouh-en-Tehele (585) falls into three sub-clans claiming common matrilineal descent. One of these sub-clans, the Isandan, is identical with a matrilineage of six generations, whereto is grafted a smaller matrilineage of four generations related to the Ibettenaten clan. 614 [162] [565] 613 614

Briggs has recently stated that previous authors have attached too much importance to Tuareg matriarchy (Briggs 1958, p. 87), and I agree with his statement. The fact that the Tuareg in important cases acknowledge the matrilineal principle has veiled the other fact that they have patrilineal rules, which are probably genuine to Tuareg social structure. But it must be admitted that influence from Islam and the Arabs makes the study of traditional social structure difficult. 114 611 [177]

The Tuareg of Ahaggar – like those of Air – have terms which in meaning are identical with matrilineage (*tesa* = "the stomach") and patrilineage (*arouri* = "the back"). They follow the matrilineal principle in specific cases, the patrilineal in others, while for rules of residence both principles are acknowledged as will be described below. Traditionally the matrilineal principle is valid for:– 1) succession to chieftainship, 2) succession to land rights, 3) succession to property considered indivisible, 4) in noble clans it is valid for succession to rights and obligations towards vassals, and in vassal clans for rights and obligations towards noble Tuareg. 611 [591] [428] [631]

Islamic rules are valid for inheritance of individually owned property. Children inherit what is left by their parents in such a way that a son gets a portion twice as big as that allotted to a daughter. A man cannot inherit the property individually owned by his mother's brother, whom he can succeed in the above mentioned respects, whereas he can inherit from more distant patrilineal kinsmen. The acknowledgement of the paternal line for inheritance is expressed in the general rule that any person adopts his father's camel-brand and earmarks for other domestic animals. This rule may be pre-Islamic. It may also be a pre-Islamic trait that most Tuareg have much better knowledge of their patrilineage than of their matrilineage. 428 [422] [174]

Clans are predominantly endogamous, but there are marriages between people of different clans, and we can adequately use such unions to illustrate the rather complicated rule of residence:– A man will live together with his father in the territory of his clan as long as his father is alive, while after his father's death he will take up residence in the territory of his mother's clan, to which he himself belongs, and camp there together with his matrilineal kinsmen. A single death may in fact give rise to the change of territory and camp of a great many people, as is illustrated in fig. 10. 614 591 768

Fig. 10.–Illustration of the rule of residence for persons descending from a man of the Agouh-en-Tehele clan ($A^1$) and a woman of the Dag Rali clan ($B^1$).

People living with the Agouh-en-Tehele clan to which all A-persons belong.

At the death of $A^1$ of the Agouh-en-Tehele clan all persons will settle in the territory of the Dag Rali clan with maternal kinsmen of $B^1$, and they will remain there also after the death of $B^1$.

At the death of $B^2$ his wife $A^2$ and her children $A^4$ $A^5$ will go to her father or maternal kinsmen of the Agouh-en-Tehele clan as will be the case with $A^3$ and her child $A^7$ at the death of $B^5$. At the death of $B^6$ his wife $B^6$ and children $B^8$–$B^{10}$ will remain with the Dag Rali.

People living with the Dag Rali clan to which all B-persons belong.

If $B^2$ dies while $A^1$ is still alive, $B^2$ and her children $B^{11}$ $B^{12}$ will go back to the camp of $A^1$ in the Agouh-en-Tehele territory. After the death of $A^1$ they will return to the Dag Rali territory to join the camp of $B^2$, $B^3$, and $B^4$.

[614] [682] If for instance $B^2$ kills a man of a third clan (e.g. the Ait Loaien) the Agouh-en-Tehele and the Dag Rali clans are both responsible for the payment of blood-wealth as long as $A^1$ is alive and $B^2$ lives with the Agouh-en-Tehele clan. If $A^1$ has died and $B^2$ consequently lives with the Dag Rali, this latter clan alone will be responsible for the payment of blood-wealth.

? 582 The matrilineal and patrilineal rules applied among the Ahaggar Tuareg bring us to a consideration of marriage. In Ahaggar as in Air the traditional type of preferential mating no doubt is that with a cross-cousin, and cross-cousin marriage is symmetrical although a mother's brother's daughter is said to be the ideal spouse. This is not only stated by Tuareg particularly versed in their native customs. It is also proved by certain usages connected with marriage, and there are in fact many marriages of this type. But cross-cousin marriage although traditionally the preferential type of mating is apparently not the most common type of marriage. For many Tuareg claim that the very best is to marry a mother's sister's daughter (that is a classificatory sister), or a mother's sister's daughter's daughter (that is a classificatory sister's daughter). My statistical material, which is not very comprehensive, seems

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Ahaggar

to indicate that the two latter types of marriage are more common than are marriages with cross-cousins:– 582

| | |
|---|---|
| Mother's brother's daughter | 3 |
| Father's sister's daughter | 7 |
| Classificatory cross-cousins | 6 |
| Mother's sister's daughter | 11 |
| Mother's sister's daughter's daughter | 9 |
| Other kinswomen | 8 |
| Marriages total | 44 |

The Tuareg claim marriages with a maternal cousin or with her daughter to be superior to cross-cousin marriage because a man and his father will then belong to the same matrilineage.

The clans are divided into sections. There are four of these in the Dag Rali clan 614
and eight in the three sub-clans of the Agouh-en-Tehele. When grazing is good the [361]
sections are identical with camps of 10–20 tents, which otherwise are split up in 621
minor camps of 2–7 tents. A small camp generally consists of an extended family 476
which co-operates in goat-herding and in various other tasks, although all animals [596]
are individually owned and every tent or household is self-supporting. The big [422]
camps formed during good grazing are made up of three or four small camps consisting of extended families related to each other. But the small camps within the bigger camps remain co-operative in goat-breeding, and there is generally a distance of 50–100 metres between each in order that their flocks shall not mix. When the small camps join each other and form bigger camps under favourable grazing conditions, it is not only because kinsmen appreciate each other's company, but also because the big camp is a co-operative unit in camel-breeding and caravan trading, for which the labour cannot be provided by a goat-herding camp. In case the small goat-herding units cannot remain together they camp so close to each other that contact between them is comparatively easy. A big camp will never [613]
correspond to a lineage, but will comprise part of a matrilineage of three to five generations plus people attached to the camp through their fathers and husbands according to the rules of residence outlined above (cf. fig. 11). A big camp or 622
section has a leader, who with the title of *Khalifa* may also be the representative [614]
of the section in relation to the clan chief *(Amgar)*. These khalifas are not necessarily chosen according to any rule of descent, but ideally the succession is matrilineal as it is for clan chiefs.

The kinship system in Ahaggar is different from that in Air (fig. 8–9), but the [184]
rules of kinship behaviour are very much the same. Joking relationship between [601]
cross-cousins, and joking and avoidance between in-laws are practised also in 602
Ahaggar. But joking with a mother's brother's wife seems to be unknown in most clans.

*Sub-Areas of the Territory of the Aǵouh-en-Tehele Clan.*

(The clan is divided into three sub-clans named Kel Tarhaouhaout, Isandan, and Kel Rafia).

| Tenants | Value of Sub-Area | Annual Land-Rent to the Amenokal |
|---|---|---|
| SAMA-ALATOKH, Chief of the Aǵouh-en-Tehele, Chief of the sub-clan Kel Tarhaouhaout, Leader of the section named Kel Tôles. | Cultivation grounds at Tarhaouhaout and In Daledge. Hunting of barbary sheep. Wild donkeys for domestication. | 2 donkeys |
| OMANA, Khalifa of the Ikenkaren section of the Kel Tarhaouhaout sub-clan. | Hunting of barbary sheep. Collecting of wild seeds. | 3 goats |
| ABERGIALI, Khalifa of the Kel Tarien section of the Kel Tarhaouhaout sub-clan. | Hunting of barbary sheep. | 2 goats |
| KHOFA of the Kel Tarien section of the Kel Tarhaouhaout sub-clan. No position as leader. | Cultivation grounds at Inagriouel and In Deledje. Hunting of barbary sheep. Wild donkeys. | 2 donkeys |
| DEINI, Chief of the Kel Rafia sub-clan. | No particular value. | No land-rent. |
| AKAOUALI, Chief of the Isandan sub-clan, Leader of the Kel Afrahaouhine section. | Cultivation grounds at Tahifet. Hunting of barbary sheep. Wild donkeys. | 1 donkey |
| HANOU, Khalifa of the Kel Azernian section of the Isandan sub-clan. | Cultivation grounds at Tamanrasset. In the past wild donkeys. | 1 donkey |
| KHOSENI, Khalifa of the Relaiddin now attached to the Aǵouh-en-Tehele clan. | Khoseni is in command of this area to which all members of the Relaiddin have equal rights. Each of them gives two goats annually to the Amenokal. | |

621 427 614 233 651 224 423.

clans. There are in Ahaggar as in Air joking relationships between Tuareg of different classes, but the two vassal clans considered the oldest in the Kel Rela drum-group, the Dag Ḃali and the Ait Loaien, will never joke with people of other classes. Other vassal clans and in particular the Aǵouh-en-Tehele have joking with noble clans and also with clans of the Isekkemaren class. Between the Aǵouh-en-Tehele and the Isekkemaren clans a fixed rule of gift-exchange is observed when they visit each other. When the Aǵouh-en-Tehele people come to the Isekkemaren they must receive dates, while meat must be given to the Isekkemaren visiting the Aǵouh-en-Tehele. It should be noted in this context that relatives who practise joking and avoidance frequently exchange gifts although in such cases there are no fixed rules for the kind of objects given.

Ahaggar

It is stated in literature that clan territories are grazing grounds reserved exclusively for clan members. Lhote says that nobody has the right to graze flocks and herds in the territories of foreign clans without permission from their chiefs or from the Amenokal (Lhote 1955, p. 279). Kilian also mentions that clan territories are grazing grounds (Kilian 1925, p. 132), and in a study by Malaurie there is a sketch-map of some of the more important territories (Malaurie 1953, p. 339). Nowadays foreign camps are very frequently found in the territory of a clan, and it is said that this might also happen in the past. Possibly the territory of a clan was once reserved as grazing grounds for its members, but clan territories were and are divided into sub-areas the rights to which generally are vested in individual tenants. These sub-areas may be valuable grazing grounds, but most of them have an economic value in other respects also. Some are important hunting grounds for barbary sheep or for the catching of wild donkeys for domestication, others have a value for collecting wild seeds, or they have soil and water suitable for irrigation agriculture. A few areas have all these qualities. I shall briefly mention the sub-areas of the two vassal clans Agouh-en-Tehele and Dag Ɣali. In the lists (p. 108 f.) are indicated the tenants, the value of their sub-areas, and the annual land-rent paid to the Amenokal, who is the true master of the land inhabited by clans of his drum-group.

For the land-rent *(ehare-n-amerdal)* paid to the Amenokal the tenants obtain the following rights over their sub-areas:-

1) They can forbid grazing within their area or in part of it in order that plants may germinate and become fully developed. For plants valuable exclusively for grazing domestic animals the period of protection will be up to two months, but certain plants which have seeds valuable for collecting are protected for three months.

2) They have the right to half of all wild donkeys caught in their areas.

3) They have the right to part of all barbary sheep killed. Foucauld says that in certain hunting grounds the hide and the meat of a slain animal must be given to the tenant while the hunter can keep only the head, the paunch, and the intestines (Foucauld 1922, p. 81. – Foley 1930, p. 43f.). My own information agrees with Lhote's statement that the tenants in general have the right to the hide, the head, and half the meat (Lhote 1955, p. 284), but for certain hunting grounds there are different rules (cf. list p. 109).

4) The tenants have the right to dues from the crops of every garden, but for sub-areas of the Dag Ɣali clan they are now given to the Amenokal. In the Agouh-en-Tehele clan the tenants receive 10 kg per garden from a crop of wheat and barley (grown in winter), 10 kg from a crop of millet (grown in summer), and 4 kg from a crop of tomatos.

Should the rights of tenants be violated, the offenders will be fined by the Amenokal, and the indemnity belongs to him and not to the tenant. In the past there was a fixed indemnity of three goats for violation of protected pastures.

5: Nicolaisen E-4,5 (1951-1955) 1959
MS25 Tuareg MS25
Ahaggar

[685] Nowadays the price is determined by the Amenokal. When a tenant dies his rights
428 and obligations should ideally be taken over by a maternal kinsmen. Traditionally
614 the usufructs of a sub-area are reserved for people of the same matrilineage or section as the tenant, but should the tenant be identical with the chief of the whole clan they belong to all clan members. These traditional rules, however, do not
[178] seem to be observed very strictly nowadays except for hunting of barbary sheep in certain areas. Lhote is wrong in stating that the chief of the clan has the right
114 to forbid grazing and protect pastures in the whole clan territory (Lhote 1955, p.
423 279). In the two clans here described this right is invariably vested in the tenants of sub-areas.

643 As the supreme judge of his drum-group the Amenokal can claim various
692 indemnities *(ediet)* among which have just been mentioned those paid for violation of the rights of his land-tenants. In case of adultery, for instance, the Amenokal can
[684] claim three camels from the seducer and one camel from the unfaithful wife. If a man catches his wife committing adultery he has the right to kill her as well as the seducer on the spot, and formerly the families of persons thus killed had no right
682 to revenge or blood-wealth. Neither was blood-wealth paid in case of murder
628 within the clan, but the Amenokal might then claim an indemnity from the murder-
692 er. When the murderer and the person killed were from different clans, blood-wealth had to be paid to the family of the slain man by the kinsmen of the murderer.
643 The Amenokal could not deny his subjects the right of revenge if they refused to accept blood-wealth, and if blood-wealth was paid he had no right to any part from it. Blood-wealth was fixed at one hundred she-camels for a slain man and fifty she-camels for a woman, but it may be doubted whether so many camels were
[648] ever paid. Revenge and blood-wealth have been abolished by the French admin-
692 istration which has given the Amenokal more power over his subjects than he had in the past. To-day the authority of the Amenokal is almost unlimited. If, for
178 instance, a man will not allow his son to marry the woman he likes, the son may go
643 to the Amenokal and ask him whether he considers the marriage suitable, and if
[584] the Amenokal agrees the father will have to yield to his son. If a man descending from parents of different clans continues to live together with people of his father's
[591] clan after his father's death, the chief of his mother's clan may complain to the Amenokal, who will then order the man to take up residence with his maternal kinsmen. Nowadays the Amenokal can decide on the most personal problems of his subjects, and he is constantly visited by many Tuareg desirous of obtaining his advice.

643 In the past the Tuareg of the Kel Ṛela drum-group are said frequently to have shown disobedient to the Amenokal. But the vassals would generally support him
[701] when he organized raids against other Tuareg as the war-leader of the Kel Ṛela
[727] group. The Amenokal had the right to a tribute named *abellag* comprising half of all booty taken by vassals of his drum-group. The vassals were allowed to engage
[721] in raiding without his consent, but he was the one who decided on war and large-
Scale raiding.

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Ahaggar

scale raiding. He would discuss all important matters with vassal chiefs and with his noble deputies known as *Khalifas*. At present the Amenokal has three Khalifas two of whom live in his own camp, while the third is his representative in Tamesna, where many Tuareg of his drum-group live. 643 [645]

The Amenokal never had the right to part of the bride-wealth from marriages among his vassals, nor did he receive a camel at the death of a vassal as was customary for the drum-chief of the Kel Ferouan in Air. The Amenokal still has the right to the riding camel of any deceased vassal chief within his drum-group, but it should here be mentioned that the chief of the very important vassal clan, the Dag Ṛali, has the right to one of the Amenokal's riding camels on the latter's death. [583] [651] [428]

As the representative of the Kel Ṛela drum-group the Amenokal is in certain cases entitled to property owned individually by his subjects. When a person dies without children or paternal kinsmen, his fortune is divided into six parts one part of which goes to his mother (or his mother's mother) while the remaining five parts are given to the Amenokal. In case the deceased person has no mother or mother's mother alive, the whole fortune of livestock is taken over by the Amenokal. He, however, will not himself make any use of the animals, but will leave them in the clan to which the deceased person belonged. They will there be under the supervision of the clan chief, who also has usufructs of them. Animals taken over by the Amenokal in this way are known as *ehere oua n ettebel* ("the fortune of the drum-group"), or *ehere oua n boutelma* ("the fortune of the public"). 428 643 [614] [422]

The vassal clans of the Kel Ṛela drum-group pay an annual tribute known as *tiouse* to the Amenokal. The size of this payment varies from one clan to another. It is normally collected by the clan chiefs who send it to the Amenokal, but the three subclans of the Agouh-en-Tehele pay their tiouse separately as follows:– 1) The Kel Tarhaouhaout sub-clan: 600 kg of millet and, when grazing is good, 5 goats and 15 kg of butter. The man who brings this payment to the Amenokal is rewarded with a gift of 15 metres of cotton. 2) The Isandan sub-clan: 300 kg of millet and, when grazing is good, 2 goats and 8 kg of butter. The man who brings this receives a gift of 11.5 metres of cotton. 3) The Kel Rafia sub-clan: Like the payments from the Isandan. 643 614 651

The whole Dag Ṛali clan pays its tiouse as follows:– 12 bags of millet corresponding to 6 camel-loads are given to the clan chief, who will send 10 bags to the Amenokal, and keep two for himself. In case of good grazing the whole clan gives 10 goats and 6 containers of butter to the Amenokal.

One vassal clan, the Ait Loaien, does not make its tiouse payment to the Amenokal but to a Tuareg of the Inemba Kel Emori section of the Kel Ṛela. According to Lhote a certain family among the Dag Ṛali makes an annual payment to a noble Tuareg of the Inemba Kel Tahat section (Lhote 1955, p. 224). It is in fact possible that the Amenokal nowadays receives tiouse payments which ought to be made to other noble Tuareg. This I imply from the information from a man who told me that the Isandan sub-clan according to traditional rules should pay tiouse to a 565 614 643 651

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Ahaggar

565 Tuareg of the Iboglan section of the Kel Rela clan, but as he now lives outside of
614 Ahaggar the payment is made to the Amenokal.

643 In the past certain vassal clans or matrilineages of clans paid their tiouse to
651 noble Kel Rela Tuareg other than the Amenokal, while apparently other clans or lineages gave tiouse both to the Amenokal and to other Tuareg of the Kel Rela clan. But according to my investigations this did not apply to vassals of the Isekkemaren class, who should pay tiouse to the Amenokal only. Duveyrier states that three Kel Rela sections (the Iboglan, the Inemba Kel Tahat, and the Inemba Kel Emori) each had their particular vassals constituting clans or parts of clans (Duveyrier 1864, p. 375 ff.). Benhazera gives a more detailed account of relations between noble and vassal Tuareg. According to him most vassal clans paid tiouse to the Amenokal, but some clans or parts of them also gave this tribute to other noble Tuareg. And apparently there might within one and the same noble section be several Tuareg who had their individual vassals from whom they received tiouse payments (Benhazera 1908, p. 139ff.).

643 Whole groups of Tuareg outside of Ahaggar also paid an annual tribute known
651 as tiouse to the Amenokal or to other prominent noble Tuareg of Ahaggar in order to avoid raiding by the Ahaggar Tuareg. Thus the Adrar-n-Iforas Tuareg (the
579 Kel Adrar) gave a skin tent and a camel annually to the Amenokal, but in spite of such annual tributes foreign Tuareg groups were frequently raided. If foreign Tuareg paying tiouse to the Amenokal were raided by people of Ahaggar, the Amenokal, according to Foucauld, had the right to a tribute named *ennehet*, about one third of the booty taken, to be paid him by all raiders whether noble or vassals. But raiders who were vassals of the Amenokal's drum-group should also give him half of the booty left when one third had been given. If the foreign group raided complained to the Amenokal to whom they paid tiouse for protection, he might return some of the animals taken, but never all (Foucauld 1951–52, III, p. 1347f.).

The tiouse paid to the Amenokal and other noble Tuareg by their vassals was
565 also made in order that they should not be attacked or exploited by other Tuareg.
614 But the relation (*temaẓlait* literally meaning "the root of the nail") between vassals
651 and individual noble Tuareg had also an economic function, and was apparently of great value to both noble and vassal Tuareg. To make this clear I shall now briefly return to ecology.

233 In Ahaggar camels and goats are extremely complementary to one another.
511 The camel supplies the Tuareg with milk, but with very few other products. And the Tuareg cannot always get milk from their she-camels which yield very little
[234] when pastures are dry. When grazing is good, camel's milk is important for food,
[262] but it is not well fitted for churning butter, and cannot be used for cheese. Camels are occasionally killed, but as their meat is not very suitable for drying, the Ahaggar
[574] Tuareg will kill camels to utilize their meat only when many people come together,
[281] as for instance at a marriage. Camel's hide is not very important in Tuareg craft,
[237] as tanning is not practised, and Tuareg camels have little hair which is used only for the manufacture of a few insignificant objects.

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Ahaggar

for the manufacture of a few insignificant objects. To most Ahaggar Tuareg the camels have little direct economic value. But in raids of the past camels were very valuable riding animals, and they were then as now extremely important for caravan trading, which provides the Tuareg with most of their vegetable food. 233 511 [492] [439]

The economic role of goat-breeding is very different. Goat-products play a very comprehensive part in Tuareg nourishment. Goat's milk is not only drunk, but is also made into butter and cheese which can easily be stored. Goat's meat is superior to camel's meat, and one goat does not contain more meat than can be eaten quickly by the members of a normal household. Furthermore goats are very important in Tuareg craft; tents, waterbags, and containers for different sorts of liquid and solid food are made predominantly from their skin, which was formerly also employed for whole garments. Goat's hair is extremely useful as material for ropes with which domestic animals are tethered, camel-loads are fastened, and the like. [234] [262] [281] [291] [283]

Pastoral Tuareg could not survive in Ahaggar without goats. They might be able to subsist without camels, which can be replaced by donkeys as beasts of burden. But camels make life much easier to the Ahaggar Tuareg, who nowadays as in the past base their economy mainly on camels and goats. I think it is fairly correct to say that most Ahaggar Tuareg get their milk-food from goats, their vegetable food from caravan trading by camels.

Formerly the true vassal Tuareg of Ahaggar were not allowed to possess camels, which were owned exclusively by noble Tuareg. Foucauld says that 100–1[illegible] years ago the vassals had no camels, but he does not mention his source of information (Foucauld 1951–52, II, p. 534). But it is confirmed by many Tuareg that throughout the 19th century the vassals had not many camels, while they were rich in goats of which the noble Tuareg had very few. Goat products were given to noble Tuareg by vassals. As mentioned, goats and butter form part of the tiouse payments to the Amenokal, and were also an important part of the tiouse paid to other noble Tuareg of the Kel Rela. But the noble Tuareg who were masters of the small temaźlait-units within the drum-group could apparently claim practically whatever they wanted from their vassals. The noble Tuareg, Duveyrier says, in reality had all rights over their vassals' property. But they were themselves interested in having rich vassals, and would not discourage them by claiming too much. When in need of riding camels the noble Tuareg could freely take animals from their vassals. The vassals had also an obligation to feed their noble lords, who at certain times would camp among them (Duveyrier 1864, p. 334ff.). This is also stated by Benhazera, but he claims that the vassals would not necessarily give everything demanded by noble Tuareg (Benhazera 1908, p. 54). The noble Tuareg of to-day have not ceased to claim food products and the like from their vassals. Poor noble Tuareg frequently ask gifts from their vassals, and there are even noble Tuareg who temporarily camp close to rich vassals from whom they acquire part of their food. Vassals may also lend their she-camels to noble Tuareg, who will return the animals when milk-yielding stops, and this is considered an old privilege of the nobility. [422] [565] [114] 565 651 [421] [431]

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Ahaggar
Air

565 The noble Tuareg may ask vassals to render them minor services as, for instance,
651 to guard domestic animals or to look for animals lost in the desert, and one noble Tuareg told me that he had camels guarded by vassals; this was also practiced in the past. But nowadays the noble Tuareg have no rights over their vassals. The
[178] vassals may refuse any gift or service demanded by noble Tuareg, and there are
[789] even noble Tuareg who wear amulettes which are believed to induce vassals to give the things wanted.

565 It is evident that it was very profitable for noble Tuareg to have vassals, but these had also many advantages from their relation to noble masters. The nobility
[721] formed a particular class of warriors and raiders who were constantly roaming the country looking for enemies. They protected the caravan roads, and allowed the vassals to use their camels on trading expeditions. The noble Tuareg would also
[422] leave a surplus of their livestock among the vassals who had usufructs of these animals.

The master of a temażlait-relation might ask his vassals to follow him on raids, but he could not summon them for warfare. This right belonged exclusively to the
[643] Amenokal, who would also receive *abellaɣ* or half of the booty taken by all vassals
[727] of his drum-group. It is interesting to note, however, that if vassals borrowed for
[426] raiding riding camels from their noble masters, the latter received a tribute also known as *abellaɣ*, comprising half of the booty left when one half had already been given to the Amenokal. The temażlait-masters were apparently without any judicial
[692] authority, which rested in the hands of the Amenokal. We may say that the smaller units within the drum-group – the temażlait-relations – were predominantly economic units, but structurally they had traits in common with the political unit, the drum-group.

## *The Origin of Tuareg Political Systems.*

565 This concluding chapter on the origin of Tuareg political systems can adequately
192 open with an analysis of the terms for the classes here referred to as noble and vassal Tuareg.

In Air as well as in other Southern Tuareg groups all Tuareg whatever their social status, are sometimes known as *Imacheyen* (sing. *Amacheɣ*), but correctly this word should be used only for Tuareg of the noble class. Nicolas says that the word refers to such qualities as "vaillance" and "bravade" (Nicolas 1950a, p. 188f.). In Northern Tuareg dialect the equivalent word is *Imohaɣ* (sing. *Amohaɣ*). It is used for both noble and vassal Tuareg, and is probably derived from the verb *aheɣ* meaning "to raid" or "to plunder" (Duveyrier 1864, p. 318. – Foucauld 1951–52, II, p. 665–674. – Prasse 1959, p. 200). Among the Northern Tuareg it may originally have been used for "noble Tuareg", who nowadays both in Ahaggar and in Tassili-n-Ajjer are known as *Ihaggaren* (sing. *Ahaggar*). It is very possible that this latter word is identical with *Hoouara* – a common name for several Berber tribes

MS25 Tuareg MS25
Aggar

173 is recognized by many vassal Tuareg, but they claim their ancestress Takama to
565 be Ti-n-Hinan's younger sister and not her servant.

The other tradition, told mainly among vassals, claims that the oldest inhabitants of Ahaggar were the Isebeten just mentioned. They were goat-breeders and hunters in the mountains, and also bred donkeys. Some Tuareg say that the Isebeten had no tents, but lived in mountain caves. From these pagan Berber-speaking people descend the oldest vassal clans (the Dag Rali and the Ait Loaien). The noble clans came to the country at a much later date. They introduced the camel which made them masters of the country. They conquered the Isebeten, and made them their vassals.

[114] I agree with Foucauld, quoted above, that the latter tradition may contain an important element of historical truth. It explains the origin of vassalship in a logical way, and is in agreement with our linguistic analysis and the fact that vassals in the past were mainly goat-breeders who had no right to possess camels.

Even to-day there is a certain cultural distinction between noble Tuareg and
184 vassals of Ahaggar. Rich noble Tuareg will whenever possible subsist on camel's
565 milk, while vassals although they may be rich in camels will ascribe much import-
492 ance to the breeding of goats and the manufacture of butter and cheese. The noble
[234] Tuareg will use camels for the transportation of tents during nomadic migrations, while even rich vassals will generally use donkeys. Noble women possess special riding saddles for camels, while such saddles are unknown in the class of true vassals. Vassal women will not generally mount camels but donkeys which are never mounted by noble women.

184 Noble Tuareg and vassals of Ahaggar are culturally different in other respects,
565 and I attach a particular importance to the following distinctions:– 1) In noble
[583] clans bride-wealth is seven camels, in vassal clans one to three camels which may be substituted with goats. Among vassals of Tassili-n-Ajjer bride-wealth is 25–30 goats. 2) The noble Tuareg brand camels and donkeys with a red-hot iron, whereas
[422] true vassals use earmarks for donkeys as for goats. Though in one vassal clan, the Dag Rali, donkeys are marked in both ways. 3) Among noble Tuareg the tent belongs to the husband, among vassals it is owned by the wife. 4) The noble
[342] Tuareg frequently use a tent with a central T-shaped post – that is a post on the top of which is placed a very short crossbar to support the sheet of skins sewn together. Although such posts may occasionally be used in vassal tents, they are said to be specific to the tents used by noble Tuareg.

These characteristics of noble Tuareg in Ahaggar are found also in the camel-
[614] breeding clan Iregenaten of Tamesna. This clan is said to descend from mixed
[173] marriages between Tuareg women of the Ibettenaten clan, said to be of noble origin, and Arab men. This is stated in literature (Lhote 1955, p. 238f. – Briggs 1958, p. 100) and confirmed to me by Iregenaten Tuareg met in Air.

342 Various sub-types of Tuareg skin tents with T-shaped posts are frequently
184 referred to in literature on the Northern Tuareg (Feilberg 1944, p. 139ff. – Lhote

5: Nicolaisen E-4, 5 (1951-1955) 1959

Ahaggar
Air

1947, p. 38f., phot. 15, p. 33, p. 117. – Foucauld 1951–52, I, p. 247ff. – Moberg 1927, photographs p. 229 & 257). Among the Southern Tuareg T-shaped posts are used in Air, where, according to my inquiries, they are found notably among the Kel Tedale, the Ikaskazan, and the Kel Fadei – Tuareg who have immigrated fairly recently from the North and are noble or predominantly noble by origin. Air tents with T-shaped posts are published by Lhote and Chudeau (Lhote 1947, fig. 4 p. 39, photo 50 p. 81. – Chudeau 1909, pl. VIII p. 62). T-shaped posts are also said to occur among the Kel Geres, and they are common in skin tents of the Kel Dinnik (Eastern Ioullemmeden) from where detailed descriptions are given by Nicolas (Nicolas 1938, p. 54ff.; 1950a, p. 153ff., p. VIII.). For other Southern Tuareg there seem to be no reliable information on the use of T-shaped posts in skin tents. 342 184

The central T-shaped posts in Tuareg skin tents may probably be considered as related to similar posts in certain black tents (cf. Feilberg 1944, p. 143). This is interesting particularly when viewed in connection with Feilberg's theory that there may perhaps be a certain connection between the black tent and the one-humped camel or dromedary because of approximately similar distributions, and because camels and black tents seem to have arrived in North-Western Africa about the beginning of the Christian era (Feilberg 1944, p. 117, 225ff.) – a view which has also been accepted by Hatt (Hatt 1944–45, p. 260). Obviously a theory connecting camels and black tents in Northern Africa fits very well with our assumption that the camel was introduced to Ahaggar by noble Tuareg among whom we also find the use of central T-shaped posts characteristic of certain black tents. Accordingly we have to test two theories:– 1) The theory that T-shaped posts of Tuareg skin-tents are in fact derived from similar constructions of black tents, and 2) the theory that camels and black tents are historically connected in Northern Africa. 171 342 233 174

I think it can be proved that T-shaped posts of Tuareg skin tents are derived from similar elements in black tents, and my arguments are the following:– 171 342

1) The Tuareg live in contact with Arab pastoralists who have black tents. It is stated in literature that black tents are common among the Northern Tuareg (Zeltner 1914, p. 364. – Campbell 1928, p. 247), but this is not correct. It is true, however, as already mentioned by Duveyrier, that black tents are used by some Northern Tuareg (Duveyrier 1864, p. 403f.). But as far as my knowledge goes they occur only among the northernmost Kel Ajjer, the Iforas clans, who belong to the religious Ineslemen class and by some Tuareg are claimed to be noble. Black tents seem to be used occasionally in the south by Tuareg who live in close contact with Arabs. But these Tuareg apparently use black tents only when travelling, and not in ordinary camps (Delafosse 1912, I, p. 334). Black tents are thus adopted by a few Tuareg, and many Tuareg of the north and the south-west have contact with Arab and Moorish black tent dwellers. [648] [114]

2) The Iforas Tuareg just mentioned use T-shaped posts both in black tents

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Ahaggar
Air

dominating an extensive area of North Africa and particularly in Cyrenaica, Tripolitania, and adjacent regions before the Arab invasion of the 11th century A.D. This theory was set forth already by Ibn Khaldoun, who says that *Hoouara* has changed into *Heggar* (Ibn Khaldoun I, p. 275f.). Nicolas has stated as his opinion that this theory has no other foundation but mere speculation (Nicolas 1953, p. 14). This, however, is not correct as the relationship between the words can be explained on linguistic grounds as claimed by Foucauld. For the letter *ou* when redoubled will as a rule change into *gg*, and *ou* very frequently permutes with *g* (Foucauld 1951–52, II, p. 533). 565 192 [114] [194]

The term used in Air for vassal Tuareg is *Imrad* (sing. *Amrid*), a word which seems to be known to all Tuareg. Foucauld gives no particular explanation of its meaning (Foucauld 1951–52, III, p. 1233f.). Nicolas claims the word related to *ayrid*, literally meaning "a kid" (Nicolas 1950a, p. 189). If this explanation given by Nicolas is correct, *Imrad* refers to goat-breeding. So does another term for vassals used more frequently among the Northern Tuareg and the Ioullemmeden, namely *Kel Oulli* (sing. *Agg Oulli*), which means literally "the goat people". In Air this word is never used as a term for the vassal class, but only as a proper name for one particular vassal clan attached to the Ikaskazan.

One of the terms for vassals and maybe both terms are thus connected with goat-breeding, while one of the terms for noble Tuareg seems to refer to raiding, which among the Tuareg was intimately connected with camel-breeding. Camels were not only the means by which raiding was carried out, but they were also the main object of raiding expeditions as they could be abducted very quickly from foreign camps. So we may perhaps see from some of the terms used for vassal and noble Tuareg that the two classes originated from the meeting of two distinct cultures, a goat-breeding and a camel-breeding culture. And we have already seen that in the past the noble Tuareg of Ahaggar were in particular camel-breeders, the vassals breeders of goats and donkeys. [233] [721] [174] [233]

The Ahaggar Tuareg – in contrast to the Tuareg of Air – have traditions about the origin of the class system. References to these traditions are common in literature (Benhazera 1908, p. 89ff. – Reygasse 1950, p. 88. – Foucauld 1951 – 52, II, p. 533ff. – Lhote 1955, p. 213ff. – Nicolaisen 1954, p. 99f.). There are in fact two conflicting traditions, but some Tuareg will nevertheless acknowledge both. It seems, however, as if one tradition had its origin among the nobility, the other among vassals. The tradition which originated in the noble class says that the dominant noble clans of Ahaggar had a woman named Ti-n-Hinan as their ancestress. She immigrated to Ahaggar from Tafilelt in Morocco together with her servant girl named Takama, who became the ancestress of the oldest vassal clans (the Dag Rali and the Ait Loaien). The two women were both Islamic and belonged to the Beraber tribes. They found the country uninhabited except for the higher parts of the massif, where a pagan people named the Isebeten lived. This tradition 173 565

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25

171 and in skin tents, and according to my investigations this is, or was, also the case of
342 the Arab pastoral tribe Ouled Ba Hamou in Tidikelt.

3) In Northern Africa T-shaped posts are frequently found in permanent dwellings, but they are then solidly embedded in the ground, whereas in Tuareg skin tents and also in black tents they stand on the surface.

4) The use of skin for tents or other movable dwellings is no doubt of very great age (cf. Feilberg 1944, p. 144), while the T-shaped posts can be considered as belonging to a highly developed tent construction. To my mind there is a certain contrast in this, the more so as the posts or poles of other Tuareg skin tents are fixed in the ground.

5) Arab pastoralists now living in Tuareg countries frequently use Tuareg mat-covered huts and skin tents. Of particular interest is the type of skin tent used by the Deremchaka Arabs living among the Eastern Ioullemmeden (the Kel Dinnik). To support the sheet of skin sewn together these Arabs use a very short crossbar resting on the tops of two oblique poles (Nicolas 1950a, p. 154). A similar or related construction is found in black tents of the Brakna Arabs (Caillié 1830, I, p. 190), and is common in black tents of Algeria including the northern parts of Algerian Sahara (cf. Feilberg 1944, p. 46ff.). And according to tradition the Deremchaka Arabs immigrated from these regions (Nicolas 1950a, p. 67ff.). There seems to be little doubt that the Deremchaka Arabs have adopted a mode of construction typical of certain black tents to the Tuareg skin tent, and there may perhaps be another example of this among the Southern Tuareg:– The Tuareg known as Kel Antassar in the region of Timbuktu frequently use a very short crossbar resting on the tops of two central oblique posts to support their skin tents (Lhote 1947, p. 39, 101, 117). The Kel Antassar Tuareg are of religious status;
[174] their presumed Arab origin (cf. Delafosse 1912, I, p. 195. – Mohammed Said 1903, p. 210ff. – Richer 1924, p. 14) gives rise to the supposition that they formerly had black tents.

I think these five arguments support the theory that T-shaped posts are foreign to Tuareg skin tents while customary for black tents in use among certain Arabs of Eastern Algeria, Tunis, Tripolitania, and Eastern Libya (cf. Laoust 1930, p. 209ff. – Feilberg 1944, p. 46ff., 146).

I shall now turn to the other theory to be tested, namely that there is a certain
171 relation between the camel and the black tent. This theory is not easy to prove.
233 The statement that camels and black tents have approximately the same distri-
342 butions is far from convincing even if we keep to their westernmost areas. In Northern Africa camel-breeders over large areas use other types of dwelling, and black tents are very common among settled and semi-nomadic people of the Atlas, where there are no camels. The distribution of the black tent in Africa (cf. Feilberg
171 1944, map. II) comes indeed very close to the distribution of Arabic-speaking
342 people, with the main exception that black tents in the Atlas and elsewhere in the
192 north are also used by Berbers. Laoust has proved that some of these northern

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25

Berbers and particularly those of Central Morocco use for their black tents and for important parts of their tents terms derived from Arabic (Laoust 1930, p. 168f., 227f.). [171] 342 [192]

We cannot disregard the possibility that black tents were known in Northern Africa before the first Arab invasion. But there can be little doubt that outside of the Atlas black tents are characteristic of Arabic-speaking people, and we seem to be on safe ground if we state that the Arabs are responsible for the present fairly large distribution of black tents in the desert regions between the Red Sea and the Atlantic. And the black tent may have been unknown to the Berbers before the Arab invasion. In connection with this I wish to quote the very eminent scholar Stéphane Gsell who states his opinion on the age of the black tent in Northern Africa as follows:– "Cependant elle s'est répandue tardivement chez les Berbères. Ce fut surtout après la conquête musulmane qu'ils l'adoptèrent, à l'exemple de leurs noveaux maîtres: au VIII° siècle, un grand nombre d'entre eux avaient des tentes, semblables à celles des Arabes" (Gsell 1920–28, V, p. 216. – cf. El Bekri p. 139). [174]

In discussing the theory of a connection between camels and black tents, our next task is concerned with the history of the camel. For although camels and black tents have different distributions they may nevertheless be historically connected and introduced together. 171 233 342

Much has already been written on the history of the camel. René Basset's theory that the camel was introduced by Arabs of the first invasion (Basset 1905) is contrary to all historical information. For we know with certainty that the camel was known to the Berbers before the Arabs arrived, though it does not seem to be of very great age, contrary to Cauvet's statement (Cauvet 1925–26). Already Barth suggested that the camel came to North-Western Africa about the beginning of the Christian era (Barth 1849, I, p. 3ff.), and this theory seems to be valid (cf. Gautier 1942, p. 190ff. – Walz 1951). 114 174 233

Gautier claims that there is a certain connection between the introduction of the camel and the immigration to North-Western Africa of Berber tribes known as the Zenata, who lived in the northern steppes and desert regions from Tripolitania to Western Algeria. According to Ibn Khaldoun quoted by Gautier the Zenata had many traits in common with the Arabs: they lived in tents, they were camel-breeders, and they rode on horseback (Gautier 1942, p. 217 ff., 227. – cf. Ibn Khaldoun III, p. 179). The theory that the camel was introduced by the Zenata is accepted by Feilberg, who thinks that these people may have introduced the black tent together with the camel (Feilberg 1944, p. 119f., 226).

A connection between the Zenata and the camel is extremely difficult to prove. Gautier's theories on North African history are frequently very hazardous and very contradictory. Thus in his book *Le Passé de l'Afrique du Nord* we find the following statements about the introduction of the camel:– 1) "A tant de bienfaits Rome en a ajouté un dernier: elle a introduit le chameau, permettant ainsi la mise en

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25

114 valeur d'immenses territoires inutilisés" (Gautier 1942, p. 209f.). 2) "Il est donc
174 légitime d'associer le nom des Zenata à la grande révolution politique et sociale
233 qu'a entraînée au Maghreb l'apparition du chameau. Zénète et chameau apparaissent en même temps, et tout se passe comme s'ils apparaissaient l'un portant l'autre" (Gautier 1942, p. 227). 3) "En effet, quoique Ibn Khaldoun et d'ailleurs tous les historiens arabes nous signalent les Zenata dès le début de la conquête arabe, il semble qu'au VII° siècle les Zenata n'aient pas été encore, aussi exclusivement que plus tard, les représentants du grand nomadisme" (Gautier 1942, p. 227).

Gautier says about the Tuareg: "Ces gens-là sont de grands nomades chameliers; dans nulle autre tribu ce caractère n'est aussi marqué et c'est cela même qui foit leur originalité" (Gautier 1942, p. 240). Most Arab historians confirm that the
175 Tuareg are in particular camel-breeders, and the Tuareg do not belong to the
101 Zenata group. According to Ibn Khaldoun the Berbers fall into two great divisions:
233 1) The *Botr* descending from *Madghis-Ibn-Berr*, and comprising the Zenata group and several other tribes. 2) The *Beranes* descending from *Bernes-Ibn-Berr*. Several Berber tribes and among them most Tuareg belong to this division (Ibn Khaldoun I, p. 168ff.).

It is interesting that Tuareg camels are frequently referred to in Arab literature
175 as being of a particular light and slender breed extremely well fitted for riding
233 (Ibn Khaldoun II, p. 70, 105. – Edrisi p. 11, 67f., 144f. – Leo Africanus p. 940f.). To-day there is a marked distinction between the camels of the north found mainly
171 among Arabs, and the camels of the south among the Tuareg. The Arab camel is
233 heavily built and particularly fitted for luggage, and the Tuareg say it is also superior as a milk-producer. It has a thick covering of wool around the hump and on the forepart of the body. The southern camel as found among the Tuareg is very different. It has a slender built, short hair, and is particularly fitted for riding as mentioned by the ancient Arab authors. These two different camel-breeds apparently exist all over Northern Africa from the Red Sea to the Atlantic, and the heavy and woolly type seems to be characteristic of Arabs (cf. Nachtigal 1879, I, p. 415f. – Murray 1935, p. 92ff. – Cauvet 1925–26, I, p. 79ff.), who are also the
[177] true black-tent dwellers. It is possible that the Arabs have introduced the black
[342] tent into Northern Africa together with a particular breed of camel, while another breed was introduced before the Arabs.

The cultural position of camel-breeding has never been thoroughly studied. As I have pointed out elsewhere (Nicolaisen 1959a), it is peculiar that so many customs connected with camels are also typical of cow-breeding of the East African cattle complex (cf. Baumann 1940. – Herskovits 1926. – Kroll 1928). The common
[462] traits seem to be the following:– 1) All work connected with camels and oxen is
[825] done by men. 2) Camels and oxen have important social functions and their breeders take an interest in these animals beyond their practical importance. Both
[538] camels and oxen play an important part in poetry, which is frequently characterized by a tendency towards identification between man and beast (cf. Evans Pritchard 1940. – Foucauld 1925-30, I-II).

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Air

Pritchard 1940. – Foucauld 1925–30, I–II). 3) As mentioned (p. 119) camel's milk is not well fitted for churning butter, but it can be used as is the case among certain Arab bedouins of the Northern Sahara and according to my investigations possibly also among the Kel Ajjer who live close to Arab pastoralists, and among the Moors (Monteil 1952, p. 73). In most Tuareg groups camel's milk is only occasionally used for butter which is not eaten but employed as a hair ointment. Among some East African cattle breeders butter is also churned for this very purpose. 4) All Tuareg and perhaps all Arab camel-breeders use the stuffed skin of a deceased camel-calf to deceive the mother animal during milking – for camels like cows will not generally yield milk unless their calves are present. This custom is widely distributed among cattle-breeders of the Old World. 5) Camel's urine is considered curative and purifying, although it is not used for cleaning milk bowls or added to milk or butter as among certain East African cattle-breeders. 6) The custom of bleeding living camels to utilize their blood is practised by Tuareg when lost in the desert without water and food. This very custom is also practised by the Tebu and by Arab pastoralists of Arabia. Among the latter camel's blood is apparently used frequently in periods of hunger (Cauvet 1925, I, p. 701. – Finbert 1938, p. 39). This custom may have been more common among camel-breeders previous to Islam which forbids the use of blood. 7) Tuareg camel-calves which are very eager for milk and difficult to wean may be cut in two or three places on the bridge of the nose; the wounds will hurt when the calves try to suckle. On adult animals scars from these wounds will appear as small bumps. They are believed to add to the beauty of riding camels and are nowadays made predominantly for aesthetic reasons. As a means to prevent suckling the same method is also applied to oxen by southern Tuareg, and Mr. Huntingford has informed me that Nilo-Hamites of East Africa have the same custom. 8) In the south camels are not always branded with a red-hot iron as among the Northern Tuareg and the Arabs. Most Kel Ferouan clans use earmarks cut with a knife, and this is the case of other Air Tuareg, e.g. the Kel Fadei, some of the Ikaskazan, and the Ifadeyen. Earmarks are possibly also used by some of the Moors of the Western Sahara, who still use certain Berber words in connection with camel-breeding (Monteil 1952, p. 103).

171 234 [302] [262] 171 237 825 [261] 171 233 [825] 171 233 422

Tuareg camel-breeding has traits in common with cow-breeding, and they may be due to historical relations between breeding of camels and cows. The domestication of the camel may have taken place in a pastoral culture similar of the East African cattle complex. In that case the type of dwelling characteristic of camel-breeding may have been a barrel-vaulted hut or tent. Pastoral cow-breeders of Africa and Asia generally use this type of dwelling, and huts or tents of arch construction are extremely common among the Tuareg. Mat-covered arched huts like those of Air are known also to the Kel Geres, some of the Eastern Ioullemmeden, and to other Tuareg further west in Southern Tuareg country – in particular those living close to the Niger (Lhote 1947, p. 71, 79. – Nicolas 1938, p. 62; 1950a, p. 156f. – Barth 1857–58, I, p. 372f., 597f., V, p. 201. – Delafosse 1912, I, p. 334. –

[171]
342

Mat-covered arched huts or tents are found only among the Southern Tuareg, and as such dwellings are found among many of their Sudanese neighbours it might seem natural to consider them foreign to traditional Tuareg culture. However, the arched mat-covered tent of the Tuareg seems to be constructionally distinct from other barrel-vaulted dwellings. It consists of one to three wooden arches placed parallel to and between a pair of two or three short sticks supporting a horizontal crossbar. A number of very slender curved sticks cover the upper part of this construction. They are fastened to the arches and to the horizontal crossbars (cf. fig. 13). An arched hut of the same type, although more elaborate and solid, is found in certain Kel Owi villages (fig. 13) as already mentioned p. 77, while the use of crossbars is apparently unknown to other peoples who have barrel-vaulted huts (*The Songai:* – Barth 1857–58, V, p. 160, 163, 165f. – Dubois 1897, p. 232f.; 1911, p. 33. – Gabus 1948, p. 10. – Olufsen 1928, p. 137. – Prost 1954, p. 184ff. – Urvoy 1942, pl. Fig. 13.–Tuareg women of Air erecting the skeleton of a mat-covered arched tent. It consists of three wooden arches placed parallel to and between a pair of three short sticks supporting a horizontal crossbar. Curved sticks cover the upper part of this construction. They are fastened to the arches and at their ends to the horizontal crossbars. Tuareg skin tents with the exception of those provided with T-shaped posts have possibly developed from similar constructions. – The erection of tents among the Tuareg is done by women.

171 *the Toucouleurs:* Urvoy 1952, pl. II, 4. – Desplagnes 1907, pl. CVI p. 396. – *The*
342 *Teda or Tebu:*– Le Coeur 1937, p. 39; 1950, p. 192, pl. XXVI; 99. – Despois 1946, pl. XXII. – Kronenberg 1959, pl. III).

Tuareg arched tents may also be covered with skin as they are among the
342 Tengueregui f Tuareg around Timbuktu. These Tuareg have a very peculiar arch construction which also contains crossbars resting on sticks (Lhote 1947, p. 100, photographs 85–93). In Ahaggar arched tents were formerly extremely common, and may occasionally be seen even nowadays. Their construction consists of two arches which may be placed between and parallel to a pair of crossbars each resting on the tops of two sticks (Foucauld 1951–52, I, p. 247. – Benhazera 1908, p. 26. – Lhote 1947, p. 42f.; 1955, p. 256. – Nicolaisen 1954, p. 89, 103f.). In Ahaggar I
[565] have been told that arched skin tents were formerly used by all vassals, who did not have T-shaped posts to support their tents. But arched tents were also used by some noble Tuareg. The mat-covered arched tents among certain Ioullemmeden Tuareg are apparently used particularly by vassals (Barth 1857–58, I, p. 372f. – Gabus 1948, p. 361), but they are also in frequent use among noble Tuareg. In Air the most common type of dwelling to all Tuareg whatever their social class is the

Fig. 14.–The skeleton of an arched mat-covered hut constructionally related to that shown fig. 13 but more elaborately and solidly built. The arches are made from lashed bundles of very slender sticks fastened to short poles embedded in the ground as is the heavy central post supporting the whole construction. – This type of hut is used among settled agriculturists of the Air villages, and is due to influence from pastoral Tuareg.

arched mat-covered tent, and the noble Kel Ferouan claim that they have never used any other type. The Western Ioullemmeden (Kel Ataram) use a skin tent consisting of three or four parallel pairs of posts each pair being connected with a horizontal crossbar (Lhote 1947, p. 85f., photographs 59–64). Gabus claims this dwelling as typical of the noble Tuareg (Gabus 1945, p. 15). I think that most probably it developed from a dwelling constructionally related to the arched mat-covered tent like that of Air. The common type of skin tent nowadays used in Ahaggar and Adrar-n-Iforas is of a somewhat related type (Lhote 1947, p. 42f., photographs 7–8, 11–13, 20–21.; 1955, p. 254ff. – Foley 1930, p. 12f., pl. IV, 6–7. – Briggs 1958, p. 92, fig. 36. – Nicolaisen 1954, p. 103). It is apparently not possible to refer Tuareg arched tents exclusively to vassals, and it should be noted that in Tassili-n-Ajjer the dwelling typical of the vassal class is a straw hut constructionally related to a round house with conical roof (Barth 1857–58, I, p. 257. – Nicolaisen 1954, p. 89, 104).

184 342 [565]

Finally I shall now return to our main problem, namely the history of Tuareg political systems. We have explained their origin from the meeting of two distinct cultures, and we have seen that in the past the noble class was connected with

Fig. 15.–Beehive huts within a round enclosure at the village of Iferouan in Northern Air. The construction seen on this photograph consists of arches made from lashed bundles of slender sticks fastened to poles embedded in the ground. Horizontal sticks are fastened to the arches which are supported by a central forked post with a short crossbar placed on its top. For a detailed description of this construction see Foureau 1905, III, p. 885 f. Beehive huts in Air are also made from boughs embedded in the ground and tied together at the top without a central post.

174 233 camel-breeding. The camel is known to have been very common in Tripolitania in the 4th century A.D. It was introduced to this region a few centuries before that time, and it was known in Egypt about the year 500 B.C. It is therefore probable that the camel was introduced into the Central Sahara even prior to the first Arab invasion of the 7th century. Camel-breeding seems to have certain traits in common with pastoral cow-breeding, and the oldest camel-breeders of Northern Africa may have lived in tents or huts of arch construction – most possibly in so-called barrel-vaulted dwellings, which appear to have been extremely common in Northern Africa throughout Antiquity (cf. Le Coeur 1937. – Feilberg 1944, p. 202 f.).

174 The T-shaped posts of Tuareg skin tents are apparently historically related to similar posts of Arab black tents in Eastern Algeria, Tunis, Tripolitania, and [342] Eastern Libya. Considering the fact that T-shaped posts among the Northern [565] Tuareg are claimed to be characteristic of the noble class, there may be a certain connection between noble Tuareg of the North and Arabs. I have mentioned above [184] that in the North the term for noble Tuareg (*Ihaggaren*, sing. *Ahaggar*) is different [792] from the term used in other Tuareg groups (*Imacheren*, sing. *Amacher*). I have also

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25

174 mentioned that the word *Ihaggaren (Ahaggar)* is perhaps derived from *Hoouara*,
[192] which was a common term for certain Berber tribes particularly living in Tripoli-
tania in the Middle Ages. According to Edrisi the Hoouara Berbers were originally
Arabs who adopted Berber language (Edrisi p. 66ff.). This is not proved by Ibn
[114] Khaldoun's important work on the history of the Berbers. But Ibn Khaldoun
states that the Hoouara came under Arab influence at a very early date, and some
of the pastoral Hoouara people apparently migrated southwards to the desert at a
later date than the Lemta (Ibn Khaldoun I, p. 275ff.).

I think that the ancestors of the noble Tuareg introduced the camel into the Sahara. I think too that this may have happened before the first Arab invasion of the 7th century. But some of the dominating noble Tuareg have emigrated from Tripolitania after the Arabs have arrived. And it is probable that the political systems of the Tuareg already very early were influenced by the Arabs among whom a class system is found even nowadays as described from Cyrenaica by
171 Evans-Pritchard. In that region there are client tribes known as *Marabtin alsaqan*
565 because they pay *sadaka*, a fee, to a free tribe for protection and for the privilege of using the earth and water. Some fragments of client tribes even to-day have a very inferior social position and are forced to make payments to, and to perform services for, the free tribes among whom they live (Evans-Pritchard 1949, p. 53).

The word *sadaqa*, a fee, is known to the Tuareg, and there are other Arabic
171 words connected with their political systems. Here I shall content myself with
192 reference to the word *khalifa* used among the Northern Tuareg for the deputies of a chief, and the very important word *effebel* meaning "drum", "drum-group", and in Air also "drum-chief". Ultimately the history of Tuareg political systems should
174 probably be viewed in connection with those of Arabs.

/9/ Foreword

121 This work was begun four years ago with modest personal observations and was designed to remain at the Tamanrasset school as a record for the information of my successors.

Little by little I realized that Tamanrasset was not the Ahaggar and that many people upon arrival there had preconceived ideas about the country and its inhabitants. These ideas were often inexact and always incomplete. They were defended with the conviction of ignorance and with an often convincing energy; they spread all the more easily when cloaked in mystery and marvels -- and the country, being little known, lends itself to the marvelous. Attention must be called to an entire florid literature which paints the Ahaggar and the Tuareg with a profusion of epithets but which gives no exact information. It has had the merit, however, of getting many Frenchmen interested in this country, so attractive in so many ways.

For the past three years caravans of tourists have come regularly to visit the Ahaggar. Naturally enough the tourists ask numerous questions that the French of Tamanrasset know well and are tired of answering. I believed this work could enlighten the visitors and relieve the residents, who are weary of repeating the same answers.

This work is, of course, incomplete and certainly contains errors, but it has been prepared with all the objectivity I could muster.

/10/ I owe the geological data to M. Lelubre, and the notes on the climate to the Institut de physique du globe /Institute of Global Physics/. The different annual reports of the heads of the Ahaggar annex have furnished me with valuable information. Finally, many Tuareg friends have initiated me into their way of life.

Specialists in all the scientific disciplines come to study the Ahaggar. Their research often remains unknown to the public. I ask their indulgence for this work, which I have intended for travelers and tourists.

## The Ahaggar

131 The Ahaggar annex, whose administrative seat is Tamanrasset, covers an area of about 375, 000 square kilometers. It is bounded approximately by 1° and 8° east longitude and 19° and 27° north latitude. The exact boundaries are shown on the 1/1, 000, 000-scale map of the Sahara.

The Tropic of Cancer cuts the territory of the annex into two almost equal parts.

A glance at the quadrilateral in the 1/1, 000, 000-scale map shows an immense system of mountains, bounded on the north by the absolutely sterile plain, the Tidikelt, and on the southeast and west by the strictly desert plateaus of the Ténéré and the Tanezrouft.

It seems that the Ahaggar, isolated by its girdle of deserts, became a natural reserve, a world apart from the Sahara, aging alone and preserving some of its original character.

Its location relates the Ahaggar to the Sudan; the vegetation proves it and the population bears traces of it.

After having been a break between Algeria and Black Africa before the French occupation, the Ahaggar is now becoming a link between them.

175 648 Less than 70 years ago the Ahaggar was completely unknown. The existence of the /12/ Tuareg was merely suspected from tales told by the Arabs, tales full of error and lacking objectivity.

The advance into Tuareg country was provoked by repeated acts of pillage and destruction by the "blue" men, fierce, independent, and warlike.

The few dates to be found in the appendix show that the French advance into the country was slow and always marked by that humanity which, despite several attacks launched by the Tuareg, never ceased to be the constant concern of all the leaders.

133 /12 cont./ Beyond any doubt the country was destined to fire the imagination. This mass of mountains, rising below the northern Sahara, appears closed and hostile.

The deep gorges which traverse the tassilis /mountains/ are the doors to a region that seems to isolate itself from the world.

Leaving these somber gorges, one enters a domain of stone. Rocks are encountered in the strangest forms imaginable; there are immense domes of granite surging from a sand plain, or monoliths standing like a forest of dolmens; there are curious fissile schist formations, which seem like the leaves of some monstrous book. This landscape continues over hundreds of kilometers, unveiling a desert nature which adorns itself with the most extraordinary rock forms.

But the strangest is yet to be seen, the heart of the country: each valley there is an enigma; the volcanic crags which border the ravines seem to menace the intruder who dares to violate this domain.

The soil shows hues going from a delicate yellow to black, streaked with violet, green, blue, or pink veins. Jagged and smooth boulders pile up in indescribable chaos, and immense stretches of black and swollen stones seem to come from some devil's caldron.

114 The inhabitants once seemed to be as mysterious as the country which sheltered them. Their tall stature, their proud and disdainful bearing, and their faces veiled by the blue taguelmoust /veil/ were so many factors to stimulate the imagination. Stories circulated throughout the Sahara vaunting the warrior virtues of the Tuareg, their courage, their cruelty joined to a /13/ chivalrous sense of honor. They were, for some, the last of the Atlantes, for others, ancient Francs, whose sword in the form of a cross symbolized the lost faith.

However, little by little, explorers, administrative officers, scholars were to bring things into focus and to show the Ahaggar as it really is.

114 /13 cont./ The first clarification in the general knowledge of the region came from the reports of Barth and Duveyrier. Then followed the scientific works of Flamand, Maire, Reygasse, Kilian, Monod, Lelubre, Bordet, Follot, Dubief -- who laid the solid foundations for as exact a knowledge as possible of the country and its people.

The linguistic work of Father Foucauld portrayed in remarkable fashion the Tuareg and their language at the time he knew them.

Many explorers, notably M. Lhote, have left precise observations joined to personal impressions of the country.

Finally, the novel has spotlighted the Ahaggar, and for many of the French, L'Atlantide, that delightful fabrication by Pierre Benoît, furnishes the picture they have of the country. The last books of Frison-Roche also deserve a great deal of credit for the tourist movement which has begun to the Ahaggar.

## Morphology and Relief

133 The mountain system which constitutes the Ahaggar seems, at first view, to lack coherence as an entity; its form is better seen upon closer examination. In order to have a schematic idea of the system, one can divide it into three large concentric zones: a central core, a peripheral trench, and the outside belt of tassilis.

In the center of the Ahaggar is an almost circular massif, a sort of plateau with an average altitude of 2, 000 meters, spiked with peaks reaching nearly 3, 000 meters: this is known to the Tuareg as the Atakor (skullcap). A rocky spur projects toward the north: this is the Tefedest, which reaches /15/ 2, 327 meters with the Garet el Djenoun at its northern extremity.

Around the central core, a sort of circular depression, varying in altitude from 500 to 800 meters, forms an almost perfect crown in which rise, here and there, granite crags of volcanic remains.

133 /14/

Diagram showing the concentric morphology of the Ahaggar.

North-south diagram of the Tuareg mountain system.

133 /15 cont./ Then around the central crystalline massif at an average distance of 200 kilometers is found a nearly continuous ring of plateaus, which form the outer belt of the Ahaggar. To the north is the Mouydir, then, going clockwise, comes the Tassili des Adjjer /Tassili des Ajjers/ to the east, the Tassili n'Ahaggar /Tassili du Hoggar/ to the southeast, the Tassili de Tin-Reroh to the south, the Tassili de Timissao to the southwest, and, to the northwest, the Acedjerad and the Ahnet, the latter of which borders the Mouydir.

The beds of just a few large quaternary wadis breach this ring of tassilis; they drain nearly all the waters of the Ahaggar. The Tamanrasset wadi disappears in a vast drainage basin north of the Adrar des Iforas; formerly, it must have joined the Niger at the Taoudeni basin. The Tafassasset wadi, which drains the eastern flank of the Ahaggar, now loses itself in the Ténéré; it must have been at one time a tributary of Lake Chad and not, as long believed, of the Niger. The Igharghar leaves the Ahaggar between the Mouydir and the Tassili des Adjjer; its course has been traced as far as the foot of the Aurès.

The Tin-Tarabin wadi drains the waters of the eastern slope of the Atakor.

The Ahaggar as a whole may be compared to an immense system of fortifications. The central massif would be the inner fort bristling with towers and falling off steeply to the surrounding moat. The tassilis, also with a sheer face toward the moat but sloping gently toward the exterior, would be the peripheral glacis. A north-south cross section brings out this defensive aspect of the Ahaggar.

The central core that the Tuareg call the Atakor (some translate this term by "middle of the mountains," others by "knot" where all the wadis originate) presents a /16/ gripping appearance of wild grandeur. It is a landscape bristling with vertical peaks about 3,000 meters in altitude, of which the Ilamane (2,823 meters) is typical. These are ancient volcanoes. They are thought to have thrown up a very viscous lava, which

133 /16 cont./ solidified almost immediately, a little like toothpaste leaving the tube when it is slightly squeezed. The usual volcanic cone is very restricted; the attention is drawn only by the vertical or spiral columns constituting the peaks.

Sometimes immense tabular mountains, such as the Adrar In Taraf'n or the Adriane, bear witness to the volume of the volcanic flows, and their different planes seem to indicate the contour lines.

One also sees, towering over the immense plateaus covered with lava, veritable fortresses of stone that give the most curious effect in twilight; the Aounahampt, the Akarakar, and the Takouft are the most characteristic of this type. This is the domain of wild sheep.

The Tuareg were impressed by this strange relief. The Ilamane, so pure andmajestic, rising in state, facing south in the middle of an amphitheater of splendidly hued mountains, might have been, in their legends, a god whose praises were sung by the granite organs all around it. But this warrior people, little concerned with religious subjects, imagined a love story which caused a quarrel.

Several kilometers west of the Ilamane are two mountains; 133 the northernmost one, massive in form, is named Amdjer -- 773 which, the legend says, was a man; the other, with a pointed summit, is named Tararat -- and Tararat was a woman.

Amdjer and Tararat loved each other. It came about that Ilamane also fell in love with Tararat. This passion was not, of course, well received by Amdjer, who reproached Ilamane. The latter, very violent by nature, struck Amdjer with his spear. Amdjer defended himself vigorously, fetching his attacker two mighty saber blows which completely convinced Ilamane that he shouldn't dispute Tararat with such a rival.... Since that time Amdjer and Tararat have been /17/ united by a chain, and the spear thrust which wounded the mountain is still visible; a spring flows from it as evidence that the wound has not yet healed. Ilamane, on each side of his summit, proudly bears the

133 /17 cont./ two gashes from the saber blows, a souvenir from
773 his youth of a duel of giants.

Some time after that incident, the peace of the Ahaggar was again disturbed. Ilamane fell in love with Tahat, who was a woman, but there was another suitor named Ti Hiyène. Fearing this rival and wiser by experience, Ilamane left the place where he had always been and settled down very close to Tahat, where he has remained ever since. Vexed at feeling himself scorned by Tahat, Ti Hiyène resolved to flee from the Ahaggar and go seek his fortune toward the Adrar des Iforas. He then left, going by way of the Amded wadi. Now, in the Amded wadi there was a mountain named Eheri. Eheri was brave, though peaceable. He respected the customs, and it did not seem proper to him that a mountain of the Ahaggar should thus leave his country for what was, all in all, a rather trifling reason. He left his place and planted himself squarely in the path of the runaway in order to bar the way. Ti Hiyène, informed of Eheri's gesture, doubtless learned his lesson, for he settled upstream, near the well of Tin-Dahar.

Since that time one may admire the Ilamane, fortunate conqueror, rising in state before the Tahat, and one may see his first site in the form of an immense circular crater which forms a depression to the west of the Ilamane wadi. Near the Amded wadi, a similar crater marks the former residence of Eheri. These circular depressions have long been enigmas to geologists.

"And the location of Ti Hiyène?" I asked Marly ag Amayas, who related this legend to me in detail. "Nobody knows it," he answered, "and this is understandable: when a man decides to leave after thinking it over, he moves quietly, thinking of his plans, and leaves no trace, while he who acts from sudden passion goes abruptly and leaves a deep mark on the ground."

133 A network of wadis separates these different summits, forming /18/ drops of from 800 to 1,000 meters. The upper valleys of these wadis are young and have a V form, true canyons out through the lava fields (Tarhoumout wadi). None of these wadis

133 /18 cont. / has finished cutting its bed; they have rapids and sometimes waterfalls where they cut a passage between two Adrars. At these spots, the water stands in permanent pools called gueltas. Certain of these gueltas (Issakarassène, Afilal) contain fish and are surrounded by luxuriant vegetation that contrasts sharply with the aridity of the country.

This region of the Atakor strongly impresses the traveler with the unbelievable hues taken on by the mountains during the course of the day. The wild majesty of the mountains calls up an anxiety hard to dismiss when one is traveling along acacia-lined wadis, guided by a veiled Targui, silent and supple, mounted on a camel whose padded tread blends with the uneasy silence. The zone of the peripheral trench, in which the relief is not very marked, has large regions which are nearly flat and which are often covered with a thin layer of sand. Sometimes small massifs cut the horizon, or, to the side exposed to the prevailing winds, a dune looms up: the Adrar Bourzekal is an example of this. Sometimes granite hills in the form of perfect domes, polished, shining, and mellowed, seem to surge from the horizontal sweep (Tesnou, Iniker, Ahélêheg), or there may be a colossal accumulation of glittering blocks and of nearly geometric forms, which give an appearance of ruins to these garas /flat-topped buttes left through erosion/ 60 to 100 meters high, as at Iŋ-Tédéini, or near Ideles, or in the region of the Debna.

In this zone the wadis coming from the Atakor spread out to such an extent that one can no longer distinguish any definite valley: it is more accurate to speak of distribution basins in which the water brought down by rather powerful floods meanders along in no fixed pattern. The passage of the water is sometimes marked by dry grasses and some rare
[137] tahlas /Acacia tortilis/. One again finds a valley where the wadi breaches a rocky barrier by cutting a straight groove through it, and beyond there is another basin. The basins become larger and larger as the distance from the Atakor

133 /18 cont./ increases, for /19/ the tributary basins converge and form an immense flat plain called aciaf by the Tuareg.

Seen from afar the tassilis appear to be impassable barriers whose tops, eaten by water erosion and battered by wind, give the illusion of a fortified city. Eroding wadis have cut through these sandstone plateaus, and their deep valleys with vertical sides constitute savage gorges at the bottom of which a relatively dense vegetation contrasts with the aridity of the plateau, which is wholly bare and raked by the winds. Numerous gueltas, often fringed with tahlis (a kind of reed), are found in these tassilis.

[103] Note. -- A few altitudes:

| | | |
|---|---|---|
| Tahat | 3, 003 meters | In the Atakor |
| Ilaman | 2, 823 " | " " " |
| In-Taraïn | 2, 762 " | " " " |
| Asekrem | 2, 804 " | " " " |
| Tozat | 2, 400 " | " " " |
| Akarakar | 2, 216 " | " " " |
| In-Afilal | 2, 157 " | " " " |
| Garet el Djenoun | 2, 327 " | In the Tefedest |
| Ifetessen | 1, 680 " | In the Mouydir |

## The Climate

132 Meteorological observations are regularly made only at Tamanrasset and only since 1929. There is a lack, therefore, of exact data for the whole territory. If it is known from Tuareg reports that it has rained in a certain place, the intensity of the precipitation is not known. The information concerning the winds and temperatures is still more vague. However, by taking into account the observations made at Tamanrasset and by examining the vegetation at different places in the Ahaggar annex, as well as the distribution of the fauna, one can distinguish three climatic zones, which correspond almost exactly

132 /19 cont. / to the zones of the relief. Let us note, however, that /20/ the tassilis of the south are subject to conditions of wind and rain different from those of the tassilis of the north. Before studying the climatic zones, it is well to sketch in the general characteristics common to all the zones.

The climate is generally of the continental desert type, due to the location of the country.

The Tropic of Cancer divides the territory of the Ahaggar in two; the sun mounts to its zenith, giving the country a Sudanese influence in the form of summer clouds which sometimes condense into stormy rains: "tornado tails." This Sudanese monsoon rarely manifests itself north of the Tropic.

In winter a fairly regular predominance of northwest winds makes possible the transport of Atlantic or Mediterranean rains, which rarely affect the south.

If we turn to consider the different climatic zones, we see that the Atakor is, because of its high peaks, the center of distribution for the waters which condense in the mountains when, by chance, the clouds are low enough. Cloud systems are relatively frequent and often large, but they seem to climb when they reach the mountainous region. The altitude moderates the summer heat, and winter brings light snowfalls on the summits nearly every year. One sees only in the Atakor an [137] outlying sample of Mediterranean flora, a wild olive tree: Olea laperrini. In descending toward the peripheral trench, one encounters the kranka (Callotropis proscera), an essentially tropical shrub. Then, at the border of the central mountains, one finds the fruit-bearing palm at Silet, Abalessa, In-Amguel.

Observations of the meteorological station at Tamanrasset have been used to make rain and temperature graphs, which may be found in the appendix. Information is lacking for the war period. The climate is characterized by the regularity of the temperature and the extreme irregularity of the rains. The heavy rains, however, nearly always fall in summer or winter; when there are rains in both of these seasons, there is a rainy

132 /20 cont./ year as in /21/ 1943: 108.5 millimeters of rainfall; when, on the contrary, atmospheric conditions prevent the Sudanese tornadoes and the Atlantic winds from approaching the Ahaggar, there is a dry year as in 1945: 28 millimeters of rainfall, or as in 1949: 9 millimeters.

In view of the insufficient number of meteorological stations and of the enormous distances which separate them, it is impossible to follow the evolution of the cloud systems or to predict periodic rains.

At Tamanrasset the winds are fairly regular; in the morning the prevailing winds range from east to northeast, and in the evening from west-southwest to west-northwest.

In winter the prevailing winds bringing rain are mostly from the northwest, coming from Moroccan depressions.

In summer the rains come with southwest winds, probably originating in Sudanese cyclones.

Sandstorms are not seen, but there are rare dust storms, particularly in March.

In calm weather, or even during violent winds, whirlwinds
132 occur. There have been different theories advanced to account
821 for them, but for the time being the question is still open. The Tuareg have their opinion as to the cause of the whirlwinds; they are manifestations of genii, the Tuareg say. Here, moreover, is a story proving them right:

One sunny afternoon a Tuareg woman (others have told me that it was a Negress) was gathering wood in the ravine of Itharentidjarnin when a violent whirlwind materialized about 100 meters away. The dust began to revolve, describing an almost perfect circle, then mounted vertically, turning faster and faster. When the dust column had reached a great height, the whirlwind began to move. It started slowly, hesitating about which direction to take. Finally, it moved southward, spinning, rolling from side to side, and whistling cheerfully. The woman, entranced by this spectacle, showed her delight by loudly crying, "You-you." The whirlwind approached her, tossed her some gold, and thanked her for being merry, for, the whirlwind said, "One of us is being married."

132 /22/ The elders of the camp, to whom the woman related
821 this adventure, said it was really the first time that the Kel es Souf had ever been agreeable.

Some time later the same woman, at the same place, saw a similar whirlwind. Hoping to be rewarded again by the genii, she saluted the whirlwind with gay "you-you" cries as it passed. She had cause to rue this; she was seized, swept from the ground, whirled to an unbelievable height, then abruptly let go to crash on the ground. As she fell, the Kel es Souf told her: "We are in the funeral procession of one of our kind; this is your punishment for mocking us." The woman was found with all her limbs broken. She told her story and died.

132 The climate of Tamanrasset, which at first seems agreeable because of the mild temperature, is enervating in the long run; this is agreed to by everyone who has lived there a certain length of time. Intellectual work is very tiring. Father de Foucauld tried to settle down at the top of the Asekrem, but found he couldn't work there as hard as he could elsewhere. The extreme nervousness that seizes men, and particularly women, after a long stay is also noticeable. What causes these troubles? Doubtless they are due to the combined effects of the altitude and the extreme dryness of the air. Some ascribe them
132 to magnetic effects, and others blame radiations. (1) In point
133

1. I once made a curious observation: two years ago I was collecting different rocks, which I tested with a Geiger counter. I marked on each rock the number of "clicks" per minute. One morning I wanted to test my samples. All my rocks were more radioactive by 25 "clicks." By chance, I was

132 /22 cont./ 133

able to report this anomaly to Father Bordet, a geologist come to study volcanism in the Ahaggar. He suggested cosmic radiations, but, not being a specialist in this field, he affirmed nothing, merely noting the information in order to pass it on to a qualified person.

132 of fact, no satisfactory answer has been found.

A second climatic zone is found in the peripheral trench. This region, situated at a lower altitude, has higher temperatures and much less rain. Vegetation is nearly nonexistent there; even in the wadis, the tahlas /see Appendix, Flora/ are not numerous and the morakba /Panicum turgidum/ is /23/ nearly always dry. The kranka no longer is found, nor is the éthel, /see appendix/, and the true Saharan climate reasserts itself, leading to the complete desert of the Tanezrouft and the Ténéré. The gazelles avoid the center of this region; they approach the more humid mountainous country according to the frequency of the rains which nourish acheb (pasturage).

Lastly, in the tassilis a distinction must be made between those in the north and those in the south.

The tassilis of the north receive winter rains nearly every year, and, more rarely, get precipitation coming from the Sudanese monsoon. Information on these regions is not plentiful and is inexact, except concerning the Mouydir, which is crossed by the route from In-Salah and flown over by airplanes from Algiers. It appears from reports of the Tuareg that the Mouydir receives more rain than the Ahnet and the Acedjerad, which seems reasonable because of its greater altitude, and perhaps also because of a system of atmospheric depressions which are suspected but which have not yet been studied.

132 /23 cont./ The kranka reappears, a sign of less aridity; the tahlas are fairly dense in the wadis; the gueltas /pools/ rarely dry up and are bordered with berdis /Formium tenax/. The wild sheep is a permanent resident of the summits.

There is still less information about the tassilis of the south. Facts are almost nonexistent for the Tassili n'Ahaggar. There is information given by the Tuareg about the Tassili de Tin-Reroh and the Tassili de Timissao, which are situated on caravan routes coming from the Adrar des Iforas toward the Tidikelt or the Ahaggar. They chiefly report summer rains, and rains abundant enough to engender acheb /pasturage/.

These tassilis receive little water from the "tornado tails" because of their medium altitude. However, it rains in the summer nearly every year. The wells of Tin-Reroh and Timissao are never dry. The Tin-Reroh guelts /pool/ sometimes is.

Although not a tassili, the northern border of the Adrar des Iforas has the same sort of climate. This section is of vital importance to the Tuareg of the Ahaggar, who /24/ graze their she-camels there. Summer rains occur regularly; the Sudanese monsoon causes periodic floods. The gueltas in the wadis fill up in the summer and may still have water when the next floods come. Gergir provides abundant pasturage; it lasts nearly all year. Ethel and tamarisk are dense in the wadis, and tahlas begin to grow on the hillsides. The flora of the wadis is more varied. Gazelles are plentiful; one sees Robert's does, oryx and addax antelopes. This is certainly the most favored region in the territory of the Ahaggar annex, but geographically it is already the Sudan.

## Water in the Ahaggar

133 As in every desert region, the question of water is of pri-
312 mary importance. The Ahaggar is relatively favored by rains.
[132] Water points are numerous in the mountainous regions of the

133 /24 cont. / central core and of the tassilis. From this point of
312 view, then, it is easy enough to travel through those regions. But it is an entirely different story for the zone between the Atakor and the tassilis.

Wherever there is water, the landscape in the Ahaggar is transformed; an intense animal life develops; around the water points grows vegetation that seems luxuriant in contrast with the rest of the country. This thin trace of life has something touching about it, something timid and intimate in comparison with the grandiose face of the desert.

As a result of the crystalline nature of the soil, there is no artesian water table. The only hope of finding water is in the wadi beds, under the alluvial deposits, at depths varying from 20 to 15 meters. Occasionally, when the water table under the wadi is abundant, it flows out freely at a rocky shelf which forms an underground dam; such an outflow is called tiggert in Tamashek. When after a tiggert water accumulates in rock basins and the "potholes" of the rapids, there are gueltas (aguelmam in Tamashek) in which live fish and an entire aquatic fauna. As far as I know, there are only rare /25/ springs in the Ahaggar: we may cite the Chapuis spring near Tamanrasset, which flows from the granites of the Adrar Haggarène. Limestone deposits in certain wadis of the Tahalra permit the supposition that thermal springs may have existed formerly.

Nearly all the wadis originate in the central Ahaggar, the zone where the water is distributed. Two very large quaternary wadis, the Igharghar wadi and the Tamanrasset wadi, drain the waters of the west and north. The Tin-Tarabin wadi and the Tin-Amzi and Zazir wadis take the waters from the south and southeast slopes toward the Tamesnar, in the Azaouak wadi, a tributary of the Niger.

The Ahaggar wadis appear as a succession of basins descending from the summits like a giant staircase whose upper steps receive the water which sustains the only permanent vegetation of the country and which permits man to exercise his ingenuity

133 /25 cont. / in creating gardens. The lower steps, which spread out enormously, are dead to all sedentary life.

312 The Tamanrasset wadi affords a typical example of the Ahaggar wadi. Its source -- or more exactly, its head -- is at the Asekrem, nearly 2, 765 meters high; its mouth, that is to say, the last drainage basin, spreads out and loses itself in the Tanezrouft, at an altitude of 400 meters. Its present length is approximately 750 kilometers; if, in the quaternary period, the Tamanrasset wadi emptied into the Taoudéni depression, it must have measured more than 1, 400 kilometers. The descent in the upper part of its course is very steep, for at Amsel, 160 kilometers from its origin, the altitude has already dropped to 900 meters.

From its source down to Amselka, or about 200 kilometers, one may say that the Tamanrasset wadi is living: it has a distinct valley, the passage of the water is clearly marked; one sees terraces with clear-cut borders, and the valley is often cut in V shape. However, certain basins, such as the one at Tamanrasset (the village) give a preview of the large drainage zones downstream, evidence of a former, more humid epoch.

/26/ The description of this part of the wadi is merely an enumeration of the transversal valleys it cuts across; each of these has a corresponding rock shelf which is at the end of each basin.

In following the descent south of the Asekrem, one goes along a drainage trough which, after a kilometer, has already cut a ravine with sharply vertical sides from four to five meters high. The course then spreads out very wide, then comes a 20-meter fall into a basalt corrie with vertical columns reposing on the alluvial deposits; the valley continues, forming a canyon 60 meters wide and 30 meters deep. At this point the wadi takes the name "Tarhoumout"; it crosses a transversal valley after Mount Oul, the rocky shelf crops out, and abankor /water holes; are dug here.

133
312

/26 cont. / The wadi runs toward the south, then turns eastward: there is then a series of rapids in a gorge where the permanent gueltas of Lundien are found. Then there is a new bend to the south, the valley runs along the Akarakar, narrows, and there is a new rock shelf and the guelta of Ifelouen.

The wadi leaves the Atakor in cutting a passage between the Isekram and the Ahounahampt. It empties into the site of Tamanrasset, where it widens, takes its final name, and receives its first important tributary, the Irharhar Tekecherouet, in which are found the "grand gueltas."

By the Iharen peak the rock is grooved in a corridor 15 meters deep and one or two meters wide for about 200 meters distance. Afterward the wadi is 400 meters wide. Foggaras /subterranean channels dug to tap underground water/ are dug in its bed; they irrigate the gardens of Hadriane and Tamanrasset, and of Tihegouine, a small agricultural center a kilometer downstream from Tamanrasset.

The valley soon widens but remains hemmed in, then narrows again at Tagrambalt, where a garden nourished by a foggara is found a little before an outcropping of rock. The valley then widens once more and reaches 600 meters across.

From this point on the wadi is always very wide, but it is dead. It runs toward the south, then, at the slight narrowing at Timguiaouine, it turns sharply toward the northwest. This may be a case of a former capture.

/27/ The valley becomes immense, the rock shelves are no longer perceptible; former water reaches are suspected where the wadi passes between two hills, but the course has the appearance of an absolutely flat and sterile reg, except toward the middle, where the presence of a few tufts of dried afazzou /Panicum turgidum/ shows that a modest trickle of water sometimes reaches this zone. Near a gara /butte/ encircled by pre-Islamic tombs, the Adjelman wadi meets the Tamanrasset wadi, but its waters cannot pass through because a barrier of dunes blocks its mouth. The Adjelman, which is four kilometers wide

133
312

/27 cont./ at this place, will have a closed basin from now on. One cannot imagine a flood powerful enough to sweep away the sand-dune system which plugs the confluent.

Up to the Tassili de Timissao, the wadi appears to stretch out as far as eye can reach; it may be from 20 to 30 kilometers wide. It is a magnificent reg over which vehicles drive as if on a highway.

A few tahlas dot the course toward the center of the valley; dry stalks of gergir bear witness to a more humid time of long ago.

The confluent wadi Amded is obstructed by a large dune system; here again is a case of a large tributary having an independent basin, and its waters can no longer pass the sandy barrier which blocks their access to the Tamanrasset wadi. However, the Amded has vegetation up to its mouth during a wet year, such as 1950; at the very end of its course I have seen tufts of "had" and a few green tufts of morakba.

I have not personally followed the Tamanrasset wadi beyond Timissao; I have only the information supplied by the Tuareg, chiefly by the Kel-Ahnet.

The Ilafer wadi empties into the Tamanrasset wadi. Their junction forms an outsized flat, an immense sebkha, the final outlet for waters from such a flood as would be inconceivable in the Ahaggar at this time. Up until this point the course of the Tamanrasset wadi has been unobstructed, but, a little east of one degree longitude, it comes up against the Egtelis Erg. This is the present end of the wadi.

I have not been able to obtain any information about the extreme downstream course; it would require painstaking surveys to mark /28/ the ancient quaternary course, which is thought to have gone toward Taoudéni.

The flow of the wadi depends on the rains in the central Ahaggar, which is to say that it is extremely irregular. When, by chance, its upper tributaries -- including the Ajemet wadi -- are flowing, the water may reach to the low flats as far as

133 /28 cont. / Timissao, or so the Tuareg tell me, although I have
312 never been able to determine when such a phenomenon last occurred. In 1948, I witnessed a flood; ten millimeters of rain fell in twelve minutes at Tamanrasset, but it was impossible to tell how hard and how long it rained in the mountains; four hours after the rain, the waters arrived like a rising tide, pushing the light detritus and, in effect, cleaning the wadi. At the end of a quarter of an hour, the water in the wadi measured 200 meters across; one could still cross the current with the water halfway up the thighs, leaning sharply to counteract the force of it, and a number of little pebbles could be felt pelting the legs. The flood lasted five hours. It reached only to Amsel, and only the tributaries above Tagramba'it were flowing. This flood, which, seen from Tamanrasset, appeared so considerable, resulted in only a slight infiltration of water, for the underground water level had only an insignificant rise.

Other than in the system of living and dead wadis, of which the Tamanrasset is only one example, water is found fairly deep under ground in the tassilis and close to them, due, no doubt, to the permeability of the sandstone.

312 Men may, then, obtain water for their use in several ways. The Tuareg know how to find, near the rock shelves and upstream of them, the place to dig down from 20 to 50 centimeters with a menassa /copper basin/ until the water seeps out: this type of water point is called an "abankor." The true well, the large one found along the caravan trails, is called "anou" (plural: "ounan").

The presence of these large wells is signaled from very far away by large redjems on the hills. Many paths seem to converge on a mysterious point; the nearer one approaches, the denser becomes the network of paths; then appears /29/ a vast trampled circle, strewn with camel droppings, and in the middle of this circle is the well.

The Tuareg have another name for the well used to irrigate the gardens: this is the "tanout" (plural: "tounin"). These

312 /29 cont./ shallow wells are found in agricultural centers; generally, they are upstream from the rock shelves. The water is drawn by men or, most often, by an ox, in which case a rudimentary scaffolding supports a pulley by which a goatskin full of water may be drawn up and dumped into a basin by an ingenious system.

The last method used to tap underground water is the foggara, called by the natives the "efeli" (plural: "ifelan"). The foggara is used only to irrigate gardens; we shall see how it works when we study agriculture.

## Flora and Fauna

137 [114] The flora of the Ahaggar is more varied than that of the northern Sahara. The work of M. Maire constitutes the basic study one should refer to for information on the spontaneous vegetation. The list of plants given in the appendix was established by questioning the Tuareg in order to learn the varieties most often encountered. Very incomplete as far as herbaceous vegetation is concerned, this enumeration includes the vast majority of trees growing naturally.

There is no forest in the Ahaggar. However, information from the Kel Immidir Tuareg makes it possible to suppose the existence of a wooded stretch in the Ifetessen massif, a region still not thoroughly explored in its entirety. Perhaps it may merely be a case of wadis covered with a particularly luxuriant vegetation. In the Ahaggar almost all the flora grows in wadis. A few plants also grow on the most watered high summits, and, at the time of particularly propitious rains, the regs are covered with patches of acheb /pasturage/, which resemble a thick, sprouting beard.

The distribution of the spontaneous flora in the Ahaggar obviously /30/ is related to the climatic zones we have already discussed. There are some plants which are peculiar to a specific zone, while there is an interpenetration of most of the other vegetation.

137 /30 cont./ In the central Ahaggar, the Atakor, and the Tefedest, a zone of high elevation, one sees plants of Mediterranean origin, such as the wild olive (Olea laperrini) and the oleander. Artemisia and the "takamezout" of the Tuareg are also characteristic of this region.

At a lower level, in the zone which surrounds the central massif, the Sudanese influence is manifested in trees and shrubs such as the thora, the tebourak, and various kinds of acacias, the tabrakat and the morakba. One also sees there Saharan plants: the palm, the fersig, the drinn. And there are some traces of the Mediterranean influence: artemisia, oleander, and reeds. In brief, it is a zone of transition.

The vegetation of the peripheral trench is purely Saharan: a little acheb grows on the regs when it rains; the drinn, the had, and the guetaf invade the wadi beds. One also finds, here and there, morakba and a few tahlas.

The tassilis of the north, with their humid and well-boxed-in wadis, have a flora with Sudanese affinities along with Mediterranean and Saharan plants, while in the southern tassilis and the Adrar des Iforas the influence is very clearly Sudanese. In these latter two regions, the tahlas, still scattered, grow on the slopes outside of the wadis. In the wadi beds, one sees numerous tebourak, some thoras, tabrakat, and various acacias. The morakba grows abundantly in the small ravines as well as in the large wadis. Lastly, a luxuriant growth of gergir, reminiscent of the prairie, covers the wadis after it rains.

In the region of high altitudes, one sees mosses and lichens, as well as mushrooms. After rain, terfes (Saharan truffles) develop.

Near running water, one notes the presence of a special flora: mosses and lichens, false mint, reeds, rushes and tahlis, and couch grass grow profusely. The water itself contains algae and various aquatic plants.

136 /31/ The diversity of the flora would lead one to expect a great variety of fauna. Saharan animals do, in fact, live

136 /31 cont./ next to those habitually found in Mediterranean zones or on the Sudanese steppes. Some are frequently found in the Ahaggar or are often spoken of by the natives.

The gazelle (alenkad), a small, elegant, delicate animal, is found almost everywhere, from the first spurs of the Mouydir up to the frontier of the Niger. It likes pastures of alommoz, a small grass that quivers in the slightest breeze; this is why gazelles are particularly numerous in the Tin-Zaouaten region and in the wadis bordering the Tanezrouft. At certain times of the year, it is not unusual to see herds of 50 head.

[224] The gazelle is protected by hunting laws, but it protects itself even better by avoiding the regions inhabited by man. Because of this, the number of these animals seems to be almost constant.

Nearly all the mountains of the Ahaggar harbor wild sheep (oudad). This splendid animal, characteristic of the country, haunts all the peaks, even those seemingly inaccessible.

136 224 The Tuareg formerly hunted wild sheep with spears; they now use rifles. A small tribe, the Ibardjien, were specialists in this sport; with their dogs trained for this work, the men tracked the game and dispatched it with spears. This tribe is dying out, and this type of hunting will disappear with it. The Adjouh n'Téhélé and the Dag Rali kill a few animals during the year, either with rifles or by trapping them with a noose tied to a log.

136 It is difficult to determine with any degree of accuracy whether the number of wild sheep is increasing or decreasing.

There are practically no antelopes still living in the Ahaggar; only a few rare individuals ascend the valleys of the Adrar des Iforas and are seen at the edge of the southern tassilis.

The most widespread of the carnivores is the jackal. One sees it everywhere, on the lookout for wounded gazelles, following the tracks of small animals, avidly eyeing the herds /32/ of goats. The presence of this animal is a veritable nightmare for the young mountain shepherds.

136 /32 cont./ A cruel fox, smaller than the jackal, is sometimes found in the sandy regions of the great regs or at the approaches of the tassilis. This is the fenec.

No doubt the most curious animal of this region is the cheetah, or amayas. One rarely sees more than its tracks, and it is very hard to encounter. The cheetah is a true nomad, which hunts over enormous distances.

The Tuareg highly prize its skin, with which they ornament their saddles.

The striped hyena is rather rarely seen in the Ahaggar. It is more numerous in the tassilis and in the Adrar des Iforas.

In the mountains and, above all, close to agricultural areas, wild cats abound. These are handsome animals, the size of a very large domestic cat. Voracious and cruel, they play havoc with the poultry of the harratin /the Negro group which does the gardening/.

The Tuareg often speak of a wolf that was seen in times past in the Ahaggar. The folklore also speaks of a ferocious animal, the cynhyena, which lived in packs. (Colonel Augières reports that bones of the cynhyena have been found in the Timissao region).

Small rodents are found in great numbers in the pastures. Hares and rabbits feed on aromatic herbs which give their flesh a peculiar flavor.

Rats of all sizes and countless mice are found near the tents, and they often damage the leather sacks in which the grain is kept. The tilout, a rat with no ears and with very long, pointed claws hides among the rocks of the Atakor. Another curious animal, the daman, lives in packs among the great granitic rubble. According to scientists, this animal may be related to the rhinoceros, for the female has a linear placenta. It is about as big as a large rabbit and is exceedingly timid.

All the pasturelands of the Ahaggar teem with birds which eat the grain, above all the gergir. Thousands of them may be seen taking off when one crosses a prairie.

136 /33/ Near the water points, numerous insect-eating birds seek nourishment. Let us mention in particular a gray swallow which lives the year round in the Ahaggar, and a charming black and white bird, the moula-moula, which is considered [825] a messenger by the Tuareg and which accompanies travelers, rapidly becoming very tame.

At Tamanrasset, Bengalis (mange-mil /literally: "eat-millet"/), imported from Agadez, breed rapidly and populate the gardens, which they ornament with their red plumage.

Crows are seen almost everywhere. Vultures soar very high, so high, say the Tuareg, that the sun burns their head feathers, and when an animal dies in the desert, the rapacious birds arrive mysteriously from "nowhere."

Falcons and buzzards circle over the pasturelands in search of food.

Reptiles abound in the Ahaggar. Snakes and vipers live in and around the wadis, burrowing among the clumps of thorny vegetation and tree roots. The Tuareg fear everything that crawls. Several types of vipers (tachilt) live in the Ahaggar; some are gray, others tawny (horned) or spotted. One may encounter, but rather rarely, a sort of cobra called hench-lefel. Some snakes grow to be more than a meter long.

Lizards of all sizes live in the most desolate places. One kind, small, sand-colored, flees terrified at the approach of man in the wadis and on the regs.

The dob prefers rocky places. With its large, spiked tail, this animal has an antediluvian aspect. It plays a very important part in Tuareg stories. Children play with it as with [262] a toy. Its flesh, considered edible, is far from tasty.

The uran, a large gray lizard, possesses a redoubtable weapon in its long, flexible tail. The Tuareg call it their [825] maternal uncle and ascribe to it dauntless courage. It is said that the uran attacks nobles but /34/ refuses to fight Negroes; [262] the latter eat the flesh of the uran, having no kinship tie with it.

136 /34 cont. / A green lizard with a red head is often glimpsed on the rocks: this is the materter. It seems to be saying a continual prayer, nodding its head up and down. The Tuareg [825] claim that its bite is fatal but are contradicted by zoologists on this point.

Large numbers of toads live in the irrigation ditches; tadpoles are found in nearly all water points.

The large gueltas /pools/ such as Issakarassène, Afilal, Amguid, Arak, etc., contain fish: barbus sahari. These barbels run the risk of disappearing during violent floods.

Some water points, at Tamanrasset in particular, are stocked with gambusia, useful for eating mosquito larvae. Some say that the In-Outer guelta, situated upstream in the Tit wadi, once was inhabited by a crocodile. This claim is not to be rejected a priori if one considers the discoveries made in the Ajjers /Adjjer/ of "residual" animals.

Insects are clearly the most important of the Ahaggar's fauna. They are found everywhere, even in places which seem totally devoid of life.

Beetles are the region's largest insects; they leave orderly little dotted tracks on the sand. A green beetle, the zembabar, looks truly ornamental.

The ankokar, a large poisonous wasp which frequents the vicinity of water points, inflicts dangerous stings; the Tuareg fear it and say that several stings may cause death.

Ordinary flies are the best adapted animals in the Ahaggar, as in all the Sahara. They swarm at agricultural centers, where they are carriers of eye diseases. When one halts on a barren reg, it is a surprise to find oneself surrounded by a cloud of flies, come from heaven known where.

Butterflies fly around the gardens and pastures; moths describe thousands of ellipses around the lamps.

/35/ Ants of all sizes, ticks, mantes, dragon flies, mosquitoes, termites, and many other small insects fly and

136 /35 cont./ circle everywhere, among the plants of the wadis, around the rocks in the mountains, on the trees, and in the guemouns /cultivated squares/ of the gardens, as well as near the water points.

The gueltas harbor an entire, very varied, aquatic fauna; the moist soil shelters a quantity of insects, larvae, and worms.

Lastly, scorpions are encountered almost everywhere, yellow or black, small or large. The Tuareg fear them. It appears, however, that the sting of the Ahaggar scorpion is not fatal; it causes a high fever, varying according to the individual victim, the time of the year, and the amount of venom injected.

To my knowledge there is no any complete scientific study of the Ahaggar's fauna.

/37/

## II
## The People of the Ahaggar

172 One can say nothing very exact about the origin of the present populations of the Ahaggar, and less still on that of the populations of past centuries. However, we may be permitted to sketch a picture, a rather hypothetical one, of what the Ahaggar could have been in the remote past, although it is not possible to assign any certain chronology to the different periods.

The only positive knowledge we have of the prehistory is furnished by collections of tools, by the study of rock figurations, by results of excavations of pre-Islamic tombs, and by geological and paleoclimatological contributions. The oral traditions handed down by the Tuareg are not of much use, for they are rare and deal largely in myths.

172 /37 cont. / Many chipped stones have been found in the Ahaggar, indicating an early occupation of the region, but nearly all of the objects have been found on the surface, preventing the establishment of a chronology. However, Acheulian axes have been discovered by M. Arambourg in a basin of the Tihodaine erg beneath undisturbed sediments, with fossilized elephant bones. The In-Guezzam basin has also furnished paleolithic tools in association with fossilized bones. Objects of neolithic make are, in general, scattered on the ground.

/38/ Arrowheads are very rare. The most numerous tools are polished, two-edged axes; they are found in all sizes; some very small ones are made of very soft stone, and perhaps were used for money. Magnificent polished pestles, varying in length from 15 to 70 centimeters, are still sometimes used by the Negroes. Also to be found are polishing tools, fixed grindstones, scrapers, and the debris of pottery with linear decorations.

Some interesting information is furnished by the rock engravings. One may say that the Ahaggar is covered with them. At the present time, nearly 120 sites are known, and there are certainly others to be discovered; on the other hand, rock paintings are infrequent.

An examination of the engravings shows a succession of periods. The oldest are characterized by the presence of fauna found in humid steppe regions: elephants, lions, ostriches, giraffes, antelopes, bovids, horses. The most recent are identified by the presence of camels, asses, and crude line drawings of men.

[532 212] Contemporary engravings, accompanied by inscriptions in tifinagh, are easily recognizable, for the legends may be translated.

The rarity of paintings in the Ahaggar is explained by the almost total absence of caves permitting their preservation. Those that have been discovered were found in sheltered places

172 /38 cont./ in granitic regions. The tassilis, which have genuine caves, have not yet furnished us with any paintings. The most famous paintings are those in the Tefedest: at the Coche and Cousin-Lelubre sites. Another site, discovered in April, 1951, by M. Bobo in a valley of the Adrar Haggarène, adds a new element for the Ahaggar in that its figurations are different from those of the Tefedest.

The oldest engravings, which are termed "pre-cameline" for want of more precise references, have a considerable patina; the patina of some seems identical to that of the rock. We find perfectly drawn animals, /39/ sometimes in a dynamic posture; the line is precise, often deep in spite of the hardness of the base rocks (microgranites, basalts, etc.); sometimes the drawing is filled in in spots. Bovids and horses, although certainly ancient, have a less heavy patina than do the elephants, giraffes, and lions. Certain horses seem to be drawn less surely; it seems that one sees a decadence of the rock art which announces the following period. In addition to animals, there are enigmatic drawings, tracks, human figures; some animals are striped with parallel lines.

Next comes the "cameline" period. In addition to camels, there are also frequent asses and horses, as well as stylized men drawn with a maximum of three strokes. All of the drawings are summarily done and are without artistic interest; the line is often imprecise and there is almost no patina. There are also some scarcely comprehensible figures, some outlines of nails /sandals/, and a few ostrich silhouettes. The Tuareg are unable to translate the inscriptions in tifinagh characters.

[532] Contemporary engravings are rather rare. They portray asses, camels, and are of no interest whatsoever, except to illustrate the fact that men have been attracted to the same places, as these engravings and inscriptions overlap older ones.

Tombs of different forms are scattered throughout the Ahaggar. They are found practically everywhere, and no

172 /39 cont./ conclusions may be drawn from the presence of pre-Islamic tombs near sites of rock drawings. The Tuareg call the pre-Islamic tombs "debni" -- "idebnan" in the plural. The most frequent type is a tumulus with a diameter of about four or five meters, but much bigger ones exist, and some even have diameters of 20 or 25 meters. Sometimes the tumulus is isolated, but most often there are three or four idebnan together, and it is not unusual to find veritable necropolises. If a great many sepulchers are found near the most watered wadis of the Ahaggar, there are also /40/ many at more remote points: in the Tanezrouft and the Ténéré, where there is absolute desert at the present time.

Chouchets are less numerous than the tumuli, although very numerous. Quite well constructed, perfectly round, this type of debni required considerable work; some are as big as 20 meters in diameter.

Other types of monuments, less numerous than the preceding, are nevertheless rather widespread. They consist of perfectly regular concentric circles, marked out with stones dug into the ground; the largest have diameters of about 25 meters.

Rectangles enclosed by standing slabs and filled with average-sized pebbles also exist. These rectangles may be from 40 to 60 centimeters high. To the east, about two meters away, is constructed a U, with the ends pointing to the debni.

One also finds circles entirely paved with slabs, ordinary tumuli surrounded by oval flagging, and tumuli enclosed by little concentric walls crossed by a paved path. Lastly, idebnan in the form of crescents, with the central part filled with pebbles, are often associated with tumuli. The filling of the crescent diminishes toward the points to end in a line of stones. Some of these crescents have an enormous spread, with the distance between the points reaching as much as 400 meters; they are nearly always situated on an elongated and

172 /40 cont. / isolated gara /butte/, or on the slopes of a larger hill. One hardly ever sees them in the Ahaggar; the area in which these crescents are found extends toward the south of the central massif, beyond the large regs; a great many are found in the Adrar des Iforas and in the southern tassilis. It may be that they are manifestations of a civilization different from that of the central Ahaggar.

Oral Traditions

172 The Tuareg know that before their arrival a people called
173 the Issabaten existed in the Ahaggar. These people had a social system /41/ of castes and were ignorant of the camel. The Issabaten were unintelligent, and their stupidity is still proverbial today. The Tuareg say that they never had any conflict with these gentle and calm beings. Some of the Issabaten, no doubt of a higher caste, must have been cleverer, for tradition still conserves the name of Amamellen and of his nephew Elias, who reputedly were the founders of rock art. These people had no religion -- this must be understood to mean that they were not Moslems.

No one has yet been able to translate the ancient inscriptions in tifinagh characters that are found rather frequently. The Tuareg maintain that the inscriptions are in a language different from their own, although written with the same characters; some Tuareg believe that the inscriptions are in code, with the letters transposed within the words, and that whoever is able to decipher them will learn where treasures are hidden.

It is certain that a civilization with paleolithic techniques
172 existed in the Ahaggar during a humid period, probably at
174 the edge of lakes or around the drainage basins into which the large wadis (Tanezrouft: Amded, Tamanrasset; Igharghar, Tin-Tarabin, In-Guezzam, Amadror, Thihodaïne, Tafassasset) emptied. There is every reason to believe that

172 174 /41 cont./ the beings who peopled the Ahaggar at that epoch must have been of a Negroid race, similar in general characteristics to the people of Asselar. They were probably fishermen and hunters. Vegetation was abundant at the edges of the present-day wadis. A fauna composed of elephants, felines, giraffes, etc., reigned in the plains. The Atakor no doubt enjoyed a Mediterranean climate, but must not have been inhabited. It does not appear to be possible at this time to determine the duration of this period or to place it in time; it must have had some connection with the glacial periods in Europe.

During an interglacial period, the change to a dry climate gave the Ahaggar a desertlike character. The Negroid population, seeing its way of life upset, must have fled the Ahaggar to go south until it found conditions of existence suitable to it.

For a long while the Ahaggar remained uninhabited. /42/ The dryness continued, and the Sahara was a more terrible desert for man than it is today. Then came a period of great humidity, brought on by more regular Sudanese monsoons. The wadis flowed again, although not as heavily or as regularly as in the paleolithic epoch. One must imagine the Ahaggar with a climate scarcely different from that of today, but with regular annual rains which allowed a fauna of the savannah to move from pasture to pasture, from the northern to the southern tassilis. The Atakor retained something of its Mediterranean character, evolving toward the residual type one sees at the present time.

With conditions suitable for human life again realized in the Ahaggar, man returned to populate these regions. The new inhabitant of the Ahaggar possessed a civilization that he brought with him, no doubt from Upper Egypt. He was a cattle raiser, Negroid in type, clever at working and polishing stone; he knew how to cultivate cereals, and how to grind and cook them. The women, fat and often steatopygic,

172 /42 cont./ made pots decorated with line drawings. These
174 peoples, with a neolithic culture, could have come to the Ahaggar from the south and the east, but some groups could have come by way of the Igharghar Valley, driving their cattle before them. The tribal chiefs were aged men, masters of magic rites; they knew how to cast spells and used esoteric signs. Some were veritable artists in engraving and sculpture.

Later, there is reason to believe, white populations from Libya settled in the Ahaggar, bringing with them heliolithic customs from the Mediterranean shores, such as megalithic monuments, the sun and serpent cults, cranial deformation, the caste system. The paintings in the Tefedest clearly represent Negro shepherds, but the new paintings of the Takecherouelt wadi show people of a white race, tall and thin.

Should we consider these whites to be the ancestors of the /43/ present-day Tuareg? It would be premature to think this, but they may have been the first wave of Berbers to come to the Ahaggar. Their exodus may have been remembered by the nomadic Berber tribes who, later, camel owners, fled for various reasons before Roman and Arab promiscuity, and rediscovered the route of the neolithic whites to the Ahaggar.

The chronology of the protohistory is difficult to establish. However, a certain number of documents on this period exist. In the first place, we have the results of archaeological research, from the excavation of pre-Islamic monuments, particularly that of Tin-Hinan (cf. the book by M. Reygasse on the pre-Islamic funerary monuments).

The Tuareg have a certain number of oral traditions
173 concerning this period. On the other hand, the inscriptions from the "cameline" age give us only very sketchy information: the oldest are untranslatable, and the most recent offer very little of interest; they are limited to the expression of the admiration of a man for a woman, or to arranging rendezvous.

173 /43 cont./ The Latin, Greek, and Arab texts that have come down to us give rise to very diverse interpretations and are, in any case, extremely fragmentary.

It seems acceptable to put the beginning of this period, as far as the Ahaggar is concerned, at about the time of the Punic Wars, and to end it on February 16, 1881, date of the massacre of the Flatters mission. From that date on, the Ahaggar enters into history properly speaking.

The protohistory of the Ahaggar poses the question of the origin of the Tuareg, a question which has not yet been satisfactorily resolved. They are probably Berbers coming from different tribes, who could have crossed with a white population already settled in the Ahaggar. What characterizes the Tuareg, aside from certain somatic traits such as tall stature, an arm span /envergure/ often greater than their height, smooth or wavy black hair, the rarity of hairiness, is the unity of the language, the use of tifinagh characters, and a way of life with particular customs which has succeeded in assimilating tribes of Arab origin, such as the Issakamaren.

/44/ The Tuareg pass on orally the legendary story of Tin Hinan, said to be the "mother," ancestress of the Kel Rela nobles, who know no masculine ancestor, although some say he was French (an affirmation to be regarded with suspicion and certainly of recent origin).

Tin Hinan supposedly came from Tafilalet, but no one knows why she came to the Ahaggar, accompanied by her servant woman Takamat, ancestress of the Dag Rali.

The story, which neglects the male ancestor, must be
[565] regarded as the expression of the Tuareg tradition which calls for the transmission of the rights of nobility through the women.

The /early/ Tuareg must have possessed camels, for Tin Hinan rode a white female camel. Did they join, either as guides or protectors, caravans going to the north? We may think this, for the excavations of Tin Hinan's tomb by M. Reygasse uncovered funerary furniture which included objects of Roman origin.

174 /44 cont./ But the life of the Ahaggar soon was oriented toward the Sudan, from whence came the current of Islamization originating in Morocco. It is the Arab chroniclers, above all Ibn Khaldoun, who give us a view of the centuries troubled by incessant conflicts between the Negro kingdoms and the Tuareg, between the Tuareg and the Arabs, and between the different Tuareg tribes. Thanks to the genealogy of the noble families, recorded in oral traditions, a tentative chronology is possible.

The first Moslems probably came to preach in the Ahaggar toward the seventh or eighth century; they came from south Morocco and represented themselves to be Chorfa.

Continual wars raged between the Moslem Berbers and the Sonraï /Songhai/ of Gao, who controlled the Sudanese Sahel. After a series of successes and reverses, the Tuareg permanently installed themselves in the Ahaggar, the Adrar des Iforas, the Aïr, and the Tassili des Adjjer, mountainous, semi-desert regions where life is possible for nomads, where places of retreat are easy to defend, which make excellent bases for raids, and which constitute a zone of wells indispensable to caravans.

/45/ Beginning in the sixteenth century, the history of the Ahaggar is that of the struggle between rival tribes: a long enumeration of successful or unsuccessful raids, of assassinations of chiefs, of abductions.

The tribe which ruled the whole of the Tuareg from the beginning of the conversion to Islam was that of the Iménanes, of whom there are only a few descendants today. The Iménanes were Moroccan Chorfa. Toward the seventeenth century, the Iménanes were obliged to divide their lands and authority among the different, altogether too bellicose, Tuareg tribes. From this time dates the partition into the Tuareg of the Ahaggar, the Aïr, the Ajjers, and the Iforas.

The Kel Ahaggar emerged as a tribal confederation, ruled over by noble tribes, each of which had vassal tribes. Four

174 /45 cont./ more or less related noble tribes divided the lands of the Ahaggar. The Kel Rela claim to be descended from a Moroccan sherif; the Taïtoks are related to the Iménanes, therefore are Chorfa, but they are said to have crossed with the Negroes; those two tribes are the most important. The Ikadéiens were supposedly Berbers crossed with the Arabs of the Tidikelt; this tribe has hardly any descendants left today. The Tédjéhé Mellet have Chorfa blood; they were never very numerous and at present are represented by a small group of tents living in the Tefedest.

Constant anarchy reigned in this confederation. Assassinations led to a rapid turnover in leadership, and command was a dangerous game. The noble tribes divided the lands of the Ahaggar. The Kel Rela had the Atakor, the Tédjéhé Mellet had the Tefedest and the northern tassilis, the Taïtoks had the Ahnet and the southwest of the Ahaggar.

Since this partition, the genealogy of the Kel Rela is fairly accurately known. Kella, a noble Tuareg woman, transmitted the tobol (1) from mother to daughters. The two most

1. A sort of drum, symbol of command; by extension: the right to command.

important noble tribes, the Kel Rela and the Taïtoks, quarreled incessantly over rights of succession to the tobol, after marriages concluded in periods of friendship. Battles and alliances followed each other /46/ in confused fashion. When they were united, the Kel Ahaggar fought the Arabs of the Touat or the Negroes of the Sudan; when they fell out, they resumed their internal fights or attacked the Ajjers /Azjer/.

Pillaging or protecting the caravans, the Tuareg controlled the central and southern Sahara at the time the French sought to secure a liaison between Black Africa and Algeria. Even this common enemy scarcely succeeded in uniting the Tuareg.

/46 cont./ Man

571 In order to understand Tuareg country well, it is necessary to examine the people from the ethnic point of view, in so far as this is possible, and also from the social and economic point of view.

A concise table will show the different ethnic groups, the social classes, and the economic specializations; it will facilitate a better understanding of the human relations.

A. Ethnic /groups/

571 619 643 At the beginning of the French occupation, the Tuareg people were in a stage of social evolution similar in many ways to our Middle Ages. The same system is still in force today, although cracks in it may be seen, caused by the French and Moslem presence. To speak only of the Kel Ahaggar, who are the only ones who concern us in this study, we see a confederation of tribes commanded by the "amenokal," who is elected for life. His title confers on him the ownership of the soil, amenokal meaning "owner of the land." He disposes of the territories of nomadization /terres de parcours/ and of the arable land as he wishes. In practice, this power is exercised according to custom and in a paternalistic fashion.

571 564 Among the tribes, a very rigid caste system exists. First, there are the noble tribes which formerly supplied the warriors; they undertook the protection of the confederation. They were rich with loot taken from /48/ neighboring confederations and from outside caravans, and from protection money paid by caravaneers who passed through Kel Ahaggar territory. Then, there are the imrad tribes -- we may call them vassals. More numerous and made up of camel herders and caravan guides, they could be called on to furnish reinforcements when an expedition ran into trouble or was larger than usual.

571 619 643 At the beginning of the French occupation, the Tuareg people were in a stage of social evolution similar in many ways to our Middle Ages. The same system is still in force today, although cracks in it may be seen, caused by the French and Moslem presence. To speak only of the Kel Ahaggar, who are the only ones who concern us in this study, we see a confederation of tribes commanded by the "amenokal," who is elected for life. His title confers on him the ownership of the soil, amenokal meaning "owner of the land." He disposes of the territories of nomadization /terres de parcours/ and of the arable land as he wishes. In practice, this power is exercised according to custom and in a paternalistic fashion.

571 564 Among the tribes, a very rigid caste system exists. First, there are the noble tribes which formerly supplied the warriors; they undertook the protection of the confederation. They were rich with loot taken from /48/ neighboring confederations and from outside caravans, and from protection money paid by caravaneers who passed through Kel Ahaggar territory. Then, there are the imrad tribes -- we may call them vassals. More numerous and made up of camel herders and caravan guides, they could be called on to furnish reinforcements when an expedition ran into trouble or was larger than usual.

571 /48 cont./ Each tribe possessed slaves (iklan), bought or
564 captured in the Sudan. They lived with Tuareg families, carry-
[567] ing out domestic chores, tending goats, extracting salt, digging wells. These slave families were an integral part of the tribe and followed it in its moves.

The harratin were free or freed men, generally Negroes, often natives of the Touat, come to cultivate the arable lands of the Ahaggar. They worked under two contract systems, which are still in force and which we shall study further on.

## The Tribes

631 In the preceding chapter we saw that each noble tribe possessed imrads, or vassals. Each of these imrad tribes has a chief called "amrar," who rules the tribe according to custom. A tribe can be divided and subdivided. The tribe possesses a pasture region of its own, in which no other tribe may sojourn without a previous agreement with the amenokal, and that only in exceptional circumstances. The nobles may sojourn as they like on the lands of the vassals. The imrad tribes pay a due to the amenokal as a sign of their vassalage. This tax is called "tioussé." The payments are always in kind and in general are scrupulously discharged. This revenue enables the amenokal to uphold his rank suitably during the almost daily receptions, but it is not enough to cover the expenses of his command completely.

## /49/ The Nobles

565 The Kel Rela at present constitute the most important noble tribe of the Ahaggar. These nobles, called in Tamashek "ihaggarènes," are split into three subgroups: the iboglanes, the inembas, and the ikérémoïens. These subgroups are related and increasingly practice endogamy.

The Kel Rela are without doubt the handsomest specimens of the Tuareg type. Does this derive from the fact that they have

565/49 cont. / been the ruling caste for a long time? One is obliged to remark their true nobility, their refined politeness, and their never failing courtesy. They are more open than the imrads, often more intelligent, and some of them even possess a sense of humor. Beyh ag Akhamouk, the present amenokal, is a very representative personage and has fine qualities as a chief. The young Kel Rela turn more and more to the French, associate with them, become their friends. This attraction will become generalized little by little, that is, the esteem that these young people have for particular individuals will be extended to include France, which is only an abstraction for them.

[162] [563] The Kel Rela number slightly over 300 and possess about 350 black servants. Their tents are scattered over the whole of Ahaggar territory. The camp of the amenokal is never very far from Tamanrasset.

Another noble tribe, the Tédjéhé Mellet, is not large; [162] reduced to 32 individuals, it ordinarily sojourns in the Tefedest near the imrad tribes it possesses: the Kel Ohet and Kel Terrourrit. These nobles play practically no role in the Tuareg organization of the Ahaggar. The tribe's amrar is Khourou ag Salah.

Since our arrival in the Ahaggar, the Taïtok tribe has been exiled to the Sudan and has been dispossessed of its lands. [162] There still remain, however, about 30 nomadic Taïtoks in the vicinity of Tamanrasset. Illou ag Amri is the amrar.

[162] Nearly 70 nobles from the Sudanese tribe of Iforas sojourn in Ahaggar territory. They are often allied with the Kel /50/ Rela. Among these Iforas are a few who belong to the marabout Iforas of Temassinine.

## The Imrads

According to legend, the Dag Rali are the descendants of Takamat, Tin Hinan's servant woman. The mountains of the

565 /50 cont./ Atakor and the Arechchoum are their pasture regions. It is a tribe of rich camel and goat raisers.

[162 563] It is the most important imrad tribe under the Kel Rela; there are about 390, served by nearly 400 Negroes. The Dag Rali are stubborn mountaineers, a little narrow minded. They [147] are remarkably resistant to fatigue when they walk in their rough country. Let us also note their adaptation to the cold of December, January, and February; the camps are generally situated at an average altitude of 2,000 meters. The Tuareg [291 132] are clothed in two cotton gandurahs and are quite often wrapped in a "dokali"; they bear cold which drops as low as -12° in the tent toward five in the morning.

The tribe's amrar is Akroud ag Ama (1). The handsomest

1. Died in 1952.

tents belong to the Dag Rali, and the men are renowned as hunters of wild sheep.

[651] The tioussé paid to the amenokal is about 12 mezoued /leather grain sacks/ of dates, eight bottas /bottles/ of butter, the loan of 12 ewes for milk, and ten goats for slaughtering.

Several subgroups may be seen within the Dag Rali, named mainly according to the regions they inhabit: Kel Arechchoumi, /sic/ and the Ikhechemaden, who formerly were imrads of the Ta'ltoks.

[162 563] The most numerous imrad tribe is the Adjouh n'Téhélé. It includes approximately 590 individuals and more than 750 Negro domestics. Although imrads, the Adjouh n'Téhélé are regarded as different by the nobles. Toward the eighteenth century, this tribe, which was living in the Aïr at the time, came of its own accord to incorporate itself into the Kel Ahaggar. This was done to escape the exactions /51/ of the sultan of Agadez, who each year demanded a virgin as a sign of vassalage. This tribe's territory of nomadization extends to the east and south of those of the Dag Rali.

565 621 /51 cont./ The most important agricultural centers belonging to the Adjouh n'Téhélé are Tarhaouaout, In Dalag, and Tahifet. There are several subgroups: the Isanden in the Isernan region; the Kel Rafsa, Tahifet region; the Relaïdine, Tin-Tarabin region; and the Kel Hagalella to the south of Tamanrasset. The tribe's amrar is Samaalatokh ag Mansouri. [651] The tioussé paid to the amenokal is approximately the same as that paid by the Dag Rali.

565 [157] The Adjouh n'Téhélé have an open character; they are gay and like to joke, but they have the reputation of being quick tempered and irascible.

The Aït Loen tribe is, like the preceding ones, an imrad tribe of the Kel Rela. It is descended from Takamat. These Tuareg are nomads in the eastern Atakor and sometimes penetrate into Ajjers territory. Their most important center is Tin-[491] Tarabin. There are no roads going into the territory of this tribe, so their tents are rarely visited.

[162 563] There are about 500 Aït Loen; they possess 620 black servants. The Kel Torha, Kel Anahef, and Kel Telerteba are the three subgroups of the tribe, whose chief is El Ralen ag [651] Nissoran. Their tioussé is about four mezoued of dates to the Kel Rela and one mezoued of dates paid by the Kel Torha to the Tédjéhé Mellet.

The Aït Loen are experienced guides for going to the Ajjers and Ténéré regions.

[162 563] The Iklan Taoussit number about 600, served by 650 Negroes. They are nomads in the Tahelra, the Silet region, the Amded and Tekouiat wadis, and in the northern part of the Adrar des Iforas. They formerly belonged to the Imenanes, which accounts for their name, which means "servant of the tribe." [651] Their tioussé is on the order of four mezoued of millet, two bottas of butter, and six milch goats. Dali ag Akoumaris is the tribe's amrar. The subgroup of the tribe which sojourns almost continually in the Tin-Zaouaten region has Khadida for chief.

565 /51 cont. / The Iklan Taoussit are /52/ the Tuareg who consume the most afazzou seeds ( Panicum turgidum).

There are very few Tédjéhé n'Néfis: 98 Tuareg and 120 [162 563] Negroes. This tribe, like the preceding one, is imrad of the Kel Rela but formerly belonged to the Taïtoks. The Tédjéhé n'Néfis are related to the Adjouh n'Téhélé and like them were originally from the Aïr. Their camps are generally in the Tamanrasset wadi, downstream from the village, mostly near the gardens of Tidjenouine. The chief of the tribe is Ad Noumen ag Khadida.

The Ibotenaten tribe, comprising 128 individuals served by [162 563] 153 Blacks, is enfeoffed to the Kel Rela without being truly imrad. It is said that an Ibotenaten once killed a noble Ahaggar. The tribe was beaten by the Kel Rela and condemned to pay a tribute.

The Ibotenaten are rich camel raisers. They live permanently in the Tamesna, benefitting from the annual rains which make this region fertile. Ould Brika is the tribe's amrar.

The Irreguenaten number 434 and have 600 Negroes. [162 563] Normally they reside in the Tamesna, but they nomadize toward the Iforas and even the Timétrine region. Their name means "mixture of Arabs and Tuareg." They are allies of the Ibotenaten. Rich camel raisers, the members of this tribe are essentially nomads; they possess no agricultural center. They are the best guides to the Tassili n'Ahaggar.

The name Issakamaren designates a group of tribes of Arabic origin which were raided in the Touat and the Tidikelt about the eighteenth century by the Kel Ahaggar. The Issakamaren speak Arabic and Tamashek, but their customs have [631] become those of the Tuareg. They are incorporated in the Tuareg confederation and are treated as imrads, although with a slight nuance of inferiority in the caste system. Their pasture regions are situated on the periphery of the central massif.

The Kel in Khar tribe includes 176 individuals and 50 [162 563] Negroes. /53/ They are nomads in the eastern part of the Tefedest and trade in the Tin-Żaouaten region.

565 /53 cont./ The Mertoutek center belongs to them, and they possess gardens at Dehine and Abezzou.

The tioussé is set at one young camel and a mezoued of [651] dates. The chief of the tribe is Ikharis ag Akcham. They are rich camel raisers and are excellent guides to the Tefedest and the Amadror.

[162 563] The Kel Amguid number about 88 and possess 9 Blacks. They are related to other subgroups of the Issakamaren. They range over the region of Amguid, the Igharghar, and the Tefedest. The Kel Amguid have gardens at Adenek, Mertoutek, and [651] Ideles. They pay a tioussé of four mezoued of dates, an assaber /mat for the tents/, and a young camel. Kelli ag Khabouba is the chief of the tribe.

[162 563] Imrads of the Kel Rela, the Kel Tazolé number 60 Tuareg and 60 Negroes. They possess an important camel herd and nomadize in the region of Tazerouk, chiefly to the east of that center.

The chief of the tribe is El Mamoun ag el Hadj Baba. Tazerouk is their center, and the small neighboring centers belong to them. Their tioussé is three mezoued of dates, [651] three lambs, and a four-year-old camel.

The Kel Tazolé conduct caravans in the directions of Ghat and the Tidikelt. They exchange millet in Aïr.

[162 563] The Eouen n'Hada number 241 individuals and 90 Negroes. They are nomads in the Tefedest, the Ifetessen, and sometimes in the Selbourak wadi. Tadjemout is their agricultural [651] center. They pay the amenokal a tioussé of three mezoued of grain, a young camel, and a rug.

The Eouen n'Hada, whose amrar is Nassamou ag Elias, are guides for the Immidir.

[162 563] The Kel Immidir are around 170 individuals; they have 45 black servants. This tribe nomadizes particularly in the tassili region of Arak, the Ifetessen, and the Rharis.

[651] They own the palms at Tadjemout and the Djoraf. This tioussé amounts to six mezoued of dates and a rug. The amrar

565 /54/ is Sidi Rali ag el Hadj Mohamed. The Kel Immidir are caravaneers going toward Ghat and the Tidikelt.

The Kel Tefedest tribe is poor: for 61 Tuareg, it has only [162] 11 Negroes. Allied to the Kel Tazolé and the Kel Immidir, it 563 nomadizes in the Tefedest and the Immidir. The Kel Tefedest formerly possessed gardens in an abandoned center near In-[651] Amguel (Adjelil). Their tioussé is four mezoued of dates and a young camel. The amrar of the tribe is Ikkan ag Magamed.

The Ikoutessen are very poor and few in number: 85 indi-[162] viduals and 20 Negroes. Lamari ag Moudi is the tribe's amrar. 563 They were paying a tioussé of two mezoued of dates, a guerba [651] /waterskin/, and an empty mezoued. The Ikoutessen ordinarily sojourn in the Amguid region; they travel to the Sudan and the Tidikelt.

Formerly belonging to the Taïtoks, the Kel In Tounine now are under the Kel Rela: They are not numerous and live in the Igharghar region. The Kel In Tounine possess gardens in the Ajjers. They paid the Taïtoks, very irregularly, a [651] tioussé of six mezoued of dates and two sheep. They are guides for going in the direction of the Ajjers.

The Kel Ahnet, former imrads of the Taïtoks, at present [162 belong to the Kel Rela. This is a poor tribe of 125 Tuareg 563] and 10 Negroes. They are nomads in the Ahnet, the Acedjerad, and the Adrar des Iforas. They are excellent guides for the Tanezrouft. They possess gardens at Abalessa, Tahart, Tit, and Tibeghim, and palm trees in the Ahnet.

The amrar is Daniel ag Chikkat. The Kel Ahnet trade between the Tidikelt and the Iforas.

[162] The Iouarouaren tribe is composed of only 47 individuals and have no Negroes. It nomadizes in the Acedjerad but resides mainly in the Tin-Zaouaten region. Its chief is Bahman ag Beuh. The Iouarouaren possess palm trees at Tibeghim; they have the reputation of being excellent hunters of addax antelopes. They formerly paid the Taïtoks a tioussé of a [651] mezoued of bechena /millet/ and two bottas of butter. They are guides for the Tanezrouft.

565 /55/ An imrad tribe of the Tédjéhé Mellet, the Kel Ohet
[162 includes 80 Tuareg and 20 Negroes. It is allied to the Kel
563] In Tounine and has many dealings with the Ajjers. The tribe's
amrar is Habib ag Ouhaggarène. Its members nomadize in the
eastern Tefedest and own gardens at Ohet and Dehine. The
[65] tioussé formerly was four mezoued of dates, rope, and guerbas.

The Kel Terrourrirt are imrads of the Tédjéhé Mellet.
[162 Their tribe is not numerous: 62 Tuareg and six Negroes. They
563] are very poor. They camp in the Amguid region and in the
Tassili des Adjjer and possess several gardens at In-Amguel.
[65] The amrar is Hadj Mohamed ag Salah. They were paying
four mezoued of dates, four sheep, rope, and guerbas. They
trade with the Tidikelt.

The Ibardjien are not Issakamaren. They are imrads of the
[162] Kel Rela. It is a tribe destined to die out; there are only 24
left. They reside in the Tazrouk and Ideles region. They
were remarkable hunters of wild sheep and had dogs trained for
this practice.

The presence in the Ahaggar of former soldiers, most of
them Chaamba, must be noted. They marry Tuareg women,
found families, and raise their children in the Tuareg customs.
They are fairly numerous in the Tin-Zaouaten region.

## The Maalmines. Inaden

565 Within Tuareg society are found artisans called
463 "maalmines" in Arabic, but whose Tamashek name is "inaden."
The masculine singular is "inade;" plural, "inaden." The
feminine singular is "tinat;" plural, "tinadin."

The maalmines make up a tribe whose members almost
always marry among themselves. They are related to the
maalmines of the Iforas and of the Aïr. Although very black
skinned, they do not have negroid characteristics. The origin
[174] of the maalmines is as obscure as that of the Tuareg tribes;
some think /56/ they are Jews who were captured by the Tuareg

565 /56 cont./ and who over a period of time have adopted
463 Tuareg ways (their specialization and their character lend
174 credence to this theory). Some maalmines say that they came to the Ahaggar in the time of the sultan Goma, having been separated from the Idenan tribe of which they were members. Others claim to have always belonged to the Tuareg confederation.

565 In the Ahaggar the maalmines include 17 men, about 20
463 women, and about 40 children. They have ten iklan.

[162] The men are many-sided craftsmen, often clever and fairly artistic; in view of the material they have to work with and the tools at their disposal, one may say that they are remarkable. The women work leather with skill and art. The maalmines are not grouped in tribes but form small families scattered in every corner of the Ahaggar. When a tribe, noble or imrad, needs some work done, it sends for a craftsman and provides him with animals for transporting himself and his equipment. He lives with the tribe during the time necessary for his task and is provided for by the tribe. When the work is done he is paid, according to how satisfactory it is considered, in goats, millet, milk, butter, even camels, but there is no fixed rate paid to the maalmines by the Tuareg. There is a different arrangement when they work for the harratin, who, not being so noble as the Tuareg, would not know how to reward good work with the proper generosity. They are therefore charged the following rate: for one new
[435] hoe (made from an old oil drum): five guessa /dishes/ of wheat or millet; for four rivets put in an old hoe, one guessa of grain; for a new axe the price used to be a goat or five guessa, but since the advent of the black market there is no accurate quotation.

435 For making jewelry, there is a special price fixed by
565 custom, even for the Tuareg; thus for bracelets and earrings
463 the Targui furnishes, for example, ten pieces of silver necessary for making two bracelets; the maalem keeps five

435 /56 cont./ for himself, or else the Targui pays him in actual
463 money the value of the five pieces.
565 /57/ The same price applies for rings and pendants. The inaden have an ill-defined position in Tuareg society; some
463 consider them inferior to the imrads, others place them be-
565 tween the nobles and the imrads. It is certain that the maalmines are proud and are far from suffering from an inferiority complex. They are very well acquainted with Tuareg customs, the country, and the people, and are, in brief, the custodians of certain traditions of art, or, it could be said, of culture.

The tinadin, women of the maalmines, work leather as do all Tuareg women, but with them it takes on the character of a profession. They are very skillful and artistic, and their specialty is making cases for the iremdan /a tool/, sheaths for knives, and saber scabbards called "tittar n'takouba."

## The Harratin

565 The harratin of the Ahaggar represent, as they do elsewhere in the Sahara, the sedentary element, chiefly agricultural.

The term designates, in the thought of the region, a caste in Tuareg society. When one questions a Kel Ahaggar about the ranking of the different castes, he places the nobles, ihaggarènes, first; then the vassals, imrads, making a distinction among them of the issakamaren, who are the lowest in the caste; then come the iklan (slaves, let us say, domestic ones) -- these iklan are Blacks, and their difference from the Tuareg is evident from their ethnic type.(1).

1. A parallel Moslem religious and maraboutic hierarchy exists: (Chorfa -- Zaoui -- Arabs -- Mozabites).

565 /57 cont. / The harratin, who are also Negroes, are ranked
[563] as low as the iklan by the Tuareg, who have a high degree of racial prejudice.

However, there is a nuance: the "akli" (plural: "iklan") belongs to his master, the Targui; he cannot leave him, and, if he is no longer bought and sold because of the presence of the French, he considers himself the property of his master. The /58/ hartani is a free man; he may live where he wants to, do what work he will where he will; he makes contracts with the Tuareg and is dependent on them only in so far as his work is. Moreover, as a resident of the Ahaggar, he must observe the customs of the country.

[622] He is under the authority of the village chief, who is also
[631] a hartani, responsible to the amenokal (1).

1. This ranking and this information concern the observance of custom and have nothing to do with French law, which is administered by the head of the annex and by the judicial authorities at Batna.

The harratin of the Ahaggar apparently have two possible origins. Some come from the oases of the Touat and the Tidikelt. This population movement has, it appears, always
[166] existed. The number of these harratin varies; there is, in fact, a continual coming and going between the Ahaggar and the oases of the north, according with the dry and wet years.

The other harratin are iklan who have been freed by the Tuareg. The chief cause of this emancipation is the growing
[567] poverty of the nobles and vassals, who no longer have sufficient resources to feed and clothe their domestics.

565 /58 cont./ These freed men are no happier for their rise in the caste system, for this liberty is often synonymous with complete destitution.

The economic difficulties resulting from the prohibition of raiding have done more to suppress slavery than law and reason.

174 565 What is to be said on the historic origins of the harratin as an ethnic type? We have already seen that there are two types of harratin.

The former Tuareg slaves are probably originally from the Sudan and the Niger, where they were bought or captured in raids.

The harratin from the Touat and the Tidikelt may have the same origin as the others, but one cannot dismiss the theory that they are descendants, more or less pure, /59/ of an ancient negroid people of the Sahara (1).

1. In this connection, it is useful to read the articles published in the Bulletins de liaison saharienne at Algiers. These were prepared by professors of the University of Algiers and by all the important persons who, in different capacities, have worked in the Sahara. (Editor: Commander Ferry. Administration of the Territories of the South: Government General of Algeria).

565 241 The harratin constitute a most interesting social element in the Ahaggar, because it is they who cultivate the rare productive plots and who furnish the workmen: masons, carpenters, and manual laborers. If they appear at first sight

565 /59 cont./ to possess few intellectual or moral qualities, they
241 are perhaps nonetheless readily adaptable.

## The Language

197 The Tuareg speak a Berber language. This language is certainly the strongest link which unites the scattered populations from the regs of the Tidikelt to the banks of the Niger; it is, more than the ethnic type, the element characteristic of these peoples. It is through the language that is maintained what may still be called "Tuareg culture," which survives in the traditions, mores, and superstitions.

This language, which is called "Tamahaq" in the Ahaggar and "Tamacheq" in the Sudan, has several dialects: that spoken by the Kel Ahaggar is called "Tahaggart," thus designated by the Kel Ajjers and the Taïtoks; in the Aïr it is called "Taïrt"; in the Adrar des Iforas, "Tadrak," and the dialect of the Aoullimiden is called "Taoullemmet."

These dialects are very similar to each other; a few local differences in pronunciation distinguish them, as well as certain idioms.

Tahaggart, the language of the Tuareg of the Ahaggar, has been studied the most, chiefly in the noble tribes because, Father de Foucauld said, "the language is pure only as spoken by the nobles."

114 It is a complex language, rich and full of nuances, with a precise and difficult syntax. General Hanoteau succeeded, with the help of Tuareg captured during a battle, in writing a /60/ Tuareg grammar; this was the first formal study of Tamashek.

Dictionaries were compiled by Cid Kaoui and M. Masqueray, but the most remarkable work, which constitutes a summary, is the dictionary of Father de Foucauld. Father de Foucauld's grammar and the texts he has collected afford the best material for studying Tamashek.

114 /60 cont./ It would be impossible to praise too highly the work of the "hermit of the Ahaggar," for it has in a sense illuminated a civilization for history.

212 194 /61/ The peculiarity of Tamashek as a Berber language is that it can be written with its own characters, which are called "tifinagh."

There are 25 tifinagh characters, to which must be added compound letters formed by the combination of two simple elements.

| | |
|---|---|
| B | Q |
| CH | KH |
| D | L |
| D (strong) ض (ar) | M |
| F | N |
| G | OU consonant |
| DJ | R rolled |
| H | R |
| I | S |
| J | T |
| K ك (arak) | T (strong) ط |
| = Z (soft) [As in rase] | = Z (strong) [As in zero] |
| • = vowels : A, E, e | ou i |

Table of tifinagh letters.

212
194

/61 cont./ Each letter represents a consonant of the language; a single sign at the end of a word indicates the vowel element. To write a word, all that need be done is to write its consonants one after the other, without attaching them to each other, in any direction one pleases, from left to right or from right to left, from top to bottom or else from bottom to top, according to the fancy of the writer. Some letters, such as the M, the G, or the strong D, indicate the direction of the writing.

All written letters are pronounced, with very rare exceptions.

Here is "Tamanrasset" written in tifinagh characters:

The way the prongs of the M point indicate whether to read from the right or from the left. The word may also be written:

or yet again

One may easily imagine that this writing without vowels is rather hard to read; it is necessary, in fact, to insert the vowels in their proper places as one reads. It is always an amusing sight to see a Targui deciphering tifinagh script; he mumbles to himself as he spells out each letter of a word until, /62/ saying it aloud, he identifies the word, realizes its meaning, and finally pronounces it with evident satisfaction.

Iété.. é. é, émmé. éé., énné.. é., IèR... éssé.. é. é. éTT.
This permits him to decipher: Tamanrasset.

This system of spelling makes reading a text a long and complicated process, for one must remember the words that have been deciphered in order to reconstruct the sentence, otherwise one must begin all over again. A thorough knowledge of the language is indispensable for being able to place the vowels correctly and for avoiding misreadings.

191 /62 cont./ In spite of this difficulty in transcription, the Tuareg amuse themselves by transposing the letters in a word, making it utterly incomprehensible for the uninitiated.

[177] At the present time Tamashek is borrowing many words from Arabic and French. Father de Foucauld had already noticed during his time this invasion of Arabic and the way the Tuareg adapted numerous words to their own speech habits.

[212] In the noble tribes, each individual knows how to read and write, but that is not the case with the imrads, for many of the vassals barely know how to write their names.

The richness of the spoken language is greatly declining due to bilingualism and doubtless also because poetry, formerly inspired by the exploits of the warriors, tends to disappear. One may thus realize the importance of Father de Foucauld's work, which permanently recorded a language of oral tradition.

There will certainly come a day when the Tuareg will have to use French to perfect themselves in their own language.

NOTE: Some compound characters.:

[212] = bt = cht = rt = st

/63/

## II
## Economy

### Generalizations on the Economy of the Ahaggar

241 A country such as the one we have seen in the study of the physical characteristics of the Ahaggar, possessing very limited resources because of the scarcity of water and the poverty of the soil, can only have an agriculture of small and uncertain productivity.

439 /63 cont./ Tuareg society, nomadic through geographical necessity and warlike by need, in order to feed the soldier nobles, the herdsmen imrads, and the domestic slaves, had to find a way to balance the risks attendant to the cultivation of the valleys of the Ahaggar by the harratin. The method found is, on the one hand, to exchange salt extracted from the Amadror for millet from the Sudan, and, on the other hand, to exchange wheat harvested in the Ahaggar for dates from the Tidikelt. This double movement constitutes the essence of the Tuareg economy; it brings to light:

1) Barter, still used as system of exchange.

2) The curious fact that the Targui feeds himself with foods which are not produced in the Ahaggar, dates and millet.

3) The fact that if the Targui needs Negro domestics and harratin cultivators, he is equally necessary to them in order for them to live. It is estimated that millet makes up two-thirds of /64/ the food of the population of the Ahaggar, the other third consisting of dates.

4) The existence, as a result of this organization, of a large camel herd to maintain the caravans.

## Barter

This country, disinherited by nature, nevertheless gives
317 its inhabitants one rich resource: salt. This salt, which is
439 lacking in the Sudan, lies in great quantities on the Amadror plain, an interior basin situated to the northeast of the Ahaggar, bounded to the north by the Tassili des Adjjer, to the west by the Edjéré, and to the east by the hills which separate it from the basin of the Taffassasset.

The Amadror region, an old dried-up sebkha, is particularly desertlike. The salt is at the surface, so it is mined in the open air, in blocks weighing 50 or 60 kilograms; the small pieces cut from the blocks are put in sacks and carried off. It is evident that such a barren, desolate, frightful,

317 /64 cont. / waterless country would inspire legends; stories
439 are told of genii which haunt the salt mines all night long, and this invisible and baneful world may be heard thumping the ground and ceaselessly breaking the salt blocks with diabolical energy. When day returns, the work site seems to be in the same state as on the evening before, and nothing seems to have happened during the night, ...and yet, "They were there." Some Tuareg claim to have seen horse tracks stamped in the ground and to have ascertained the existence of equipment for extracting salt predating those now in use -- which would tend to prove the antiquity of this mining work.

The desert contains other saltworks which supply the Sudan; to the west, Idjil and above all Taoudéni are the best known; to the east are the mines of Bilma and the Acedjerad, but among the latter the Amadror salt is the most esteemed at the markets of the savanna.

Toward the month of April or May, the Tuareg send their /65/ Negro domestics to extract the salt. Caravans of about a hundred camels advance by small stages toward the salt mines, following well-beaten tracks which lead by the wells of Dehine and In-Tarass (the latter is 40 kilometers from the salt).

The work is done as rapidly as possible, for the sojourn in those parts has nothing pleasant about it because of the heat, the lack of water and wood, and the nocturnal presence of the Kel es Souf (genii). The method of extraction is clearly disorderly, but what does it matter, there is so much salt!
[492] The blocks are hewn with a kind of ax; two blocks, after having been tied with a chebka (coarse net), make a load for a camel. The small pieces are put in sacks (made from palm fibers) in 50-kilogram loads. In ten days, two men can load 50 camels, or about three metric tons of salt.

Then comes the return to the camps in the Ahaggar. Until time to be sent to the Sudan, the salt is stored near the tents or the villages. The custom is for the Negro returning

317 /65 cont./ from the Amadror to offer bits of salt to the camps
439 he encounters on his way; in exchange he is given lodging and entertained.

439 When the moment comes to leave for the Sudan, at the end of June, a Targui takes command of the caravan, in which every fifth camel carries salt. Toward the end of July the caravan arrives in the Tamesna, the region of In-Abangarit, where the Ahaggar camels live permanently. This is still almost home, it is good to rest here, and the camels, which have just covered about 1,000 kilometers, take advantage of the abundant pastures of the Sahel region. Toward the month of September or the beginning of October, the caravan gets under way again with the camels rested or exchanged for fresh ones. The Damergou region, whose largest center is Tahoua, is reached toward the end of October. This region is well known to the Kel Ahaggar. Their customers are there. Then the bartering begins; it is a long operation involving protracted discussions and laborious bargaining, during which /66/ the Tuareg exchange the salt for millet at a rate varying from year to year (the rate depends on the size of the millet harvest and how much salt is brought from elsewhere than the Ahaggar). Consignments of marine salt arriving by river routes threaten to upset the balance of the Ahaggar economy and to starve the Tuareg.

Times are cited during which a load of salt was exchanged for 15 loads of millet; on the average, the barter is carried out on the basis of five to eight loads of millet for one load of salt. The quantities exchanged are very small; they vary from a handful to two kilograms. Sometimes, but rather rarely, salt is sold to traders. With the money thus obtained, the Targui buys cloth, leather, a saddle, and several objects of domestic use, then starts back for the Ahaggar. It is now January; it will take three months before seeing the koudia again, for the caravan is laden and always stops at Tamesna, where there are celebrations, tendi, ilougan, and welcoming

439 /66 cont./ girls. The return of the millet caravans is the major event of the year. It is estimated that the millet imported from the Sudan constitutes two-thirds of the Tuareg's food. Once in the Ahaggar, the millet is stored in silos made of clay bricks, based on rock slabs so as to be protected from termites. These constructions, neither cylindrical nor conical, are a curious sight standing near the camps or the villages. The owners are sometimes absent, but no one tries to steal what could easily be taken.

## Agriculture

423 The chief characteristic of the land system in the Ahaggar
[643] is that the amenokal is, by virtue of his office, the sole owner of the land.

Whoever wants to drill a foggara must first ask permission
[651] of the amenokal and must pay him a tax of ten kilograms of wheat per garden.

The garden is the unit of cultivation. One foggara irrigates from /67/ six to ten gardens. Any other surface unit would have no meaning since the size of the cultivated plot depends on the flow of the foggara, which varies according to the year and to the different agricultural centers. At Tamanrasset a foggara waters 3.80 hectares; at Tit, 3.30 hectares; at Ideles, 4.0 hectares. A garden's area, then, varies from 40 to 60 ares. The wheat harvest may amount to 400 kilograms per hectare; the tax in that case is about one-
[651] fortieth of the harvest. Whether the owner of the garden is a Targui or a hartani, the tax (mek) is paid to the amenokal.

Trees planted in the gardens remain the property of the amenokal, for they are attached to the ground.

This inalienable possession of the land by the amenokal has enabled the Tuareg to conserve the rare cultivable lands in the Ahaggar. The force of their tribal custom saves them from their individual lack of foresight. Unfortunately, this right of the amenokal retards agricultural evolution and the maximum productive use of the lands of the Ahaggar, because the cultivator can never own the land he works. He has no

423 /67 cont./ interest in planting trees that he cannot keep. A constant effort at arboriculture cannot be hoped for since the gardener may change frequently, and the successor of a tree planter may be ignorant or unscrupulous and is free to let the planting fail.

Besides the cultivated land, the land through which routes
423 pass has great importance in the Ahaggar. The whole of the
631 territory of the Kel Ahaggar has always been divided among
486 the different Tuareg tribes. Strictly applied oral regulations define the rights and servitudes of a tribe concerning its land.

1) Passage through and watering on the lands of a tribe is the right of other Tuareg.

2) No one may sojourn on the lands of a tribe without the consent of that tribe's chief.

3) Whoever follows travelers' routes through land belonging to a tribe is responsible for any damage caused by him or his animals to the trees, wells, foggaras, gardens, and game. Here are several penalties: one goat for a broken tree branch;
[685] one sheep for damage caused /68/ by a poorly watched herd; a camel for damage caused by camels; part or all of any game killed. When a camel runs away, the owner is not responsible; he must even be told and helped. It is forbidden to put animals in a pasture where plants have not attained maximum growth.

4) The amenokal may sometimes authorize tribes to sojourn on the lands of a certain tribe, in case there is an abundance of pasturage on these lands.

The servitudes of the tribes are the normal consequence of their nomadic life, but the rights concerning the land passed through bring to light a characteristic of the Tuareg: their love of the land. These nomads, who should seek the most abundant pastures, whose every interest calls them toward the Sudan, remain attached to their soil. They observe regulations suitable for sedentary peoples.

648 Let us note that there is no agricultural exploitation directed by Europeans in the Ahaggar. The principal reason for this abstention is the meager yield to be expected; the reduction

648 /68 cont./ of the underground water level, which often results in the abandonment of a site, does not permit a costly installation. About ten years ago, a former sergeant-major of the Sahara corps settled at Tiguenouine, a small center 70 kilometers south of Tamanrasset; he quickly gave up his idea of farming and became a nomad. Another Frenchman, a retired soldier, nomadizes in the Tin-Zaouaten region; he leads a life like the Tuareg, and his herds prosper.

Officials reside at Tamanrasset, lodged in administration quarters which sometimes have a small garden for family use. The community maintains a large garden where experiments in farming and arboriculture are carried out.

The Tuareg, as we said, are the only landowners; let us
241 now see how they utilize their lands. As in all countries under Moslem influence, the method of agriculture is the "khamassa," with certain local variations. The khammès usually is a hartani,/69/ a Negro originally from the Tidikelt or a freed slave.

The agricultural system in the Ahaggar is supported by the foggara, which should water six to eight gardens. The proprietor of the foggara, generally a Targui, engages one khammes per garden. He will look among the harratin of the village for gardeners who will come to terms with him. An
241 oral contract is made between the proprietor and the khammès,
675 before witnesses. This contract may be summarized thus:

The proprietor agrees, first of all, to provide the land, which he has rented from the amenokal. He must also provide his gardener with water from the foggara he has had dug, with a "mesaha" (hoe), and with the necessary seed. In addition, the proprietor must clear the land at his own expense and must see to the improvement of the soil. He must advance the hartani food in the amount of 60 guessa of millet per year.

In exchange, the khammès undertakes the work in the fields, the threshing, and the upkeep of the foggara.

As "salary" he collects a fifth of the harvest. He also receives the fallen and gleaned ears, the harvest from ten

241 /69 cont./ "guemouns" /plots/ situated near the majen (clay
675 basins), and the wheat and barley sown in the séguias /irrigation ditches/ which belong to him.

In addition, the wheat found mixed with the dust of the threshing ground belongs to him by right, as well as the staw and several vegetables that are grown. Lastly, if the flow of the foggara slackens and new wells must be dug upstream, the khammès is paid three guessa of wheat per well dug.

In case of disputes between the proprietors and the khammès,
[692] the palavers are held in the presence of the chief of the tribe (on the Tuareg side) and the chief of the village (on the harratin side). The amenokal intervenes upon appeal, but rarely, for these contracts fixed by custom are, in general, scrupulously observed.

The Targui has limited confidence in the honesty of his khammès, an opinion often justified, for the hartani deliberately pushes over ears of grain so he may have them by his gleaning rights. The proprietor does not have the magnanimity of Boaz. Therefore, when harvest time comes, he installs himself /70/ and all his family near his garden in order to make sure that the operations are properly carried out. The khammès must furnish food for the Targui, a heavy burden for the former. That is the custom, which also holds that in case the Targui is prevented from coming, the hartani pays a due of 25 kilograms of wheat to guarantee this right of sojourn.

Another type of contract exists called "aril" in Tamashek and "nous" (half) in Arabic. The net harvest is divided into two equal parts, taking into account the following provisions:

The proprietor Targui must furnish the land rented from the amenokal, a foggara, and a hoe. He provides half of the seed and advances 25 kilograms of wheat, which will be paid back at harvest time; he pays for enriching the land (tiksal= virgin land). The gardener hartani, for his part, agrees to furnish half of the seed and one year of work.

241 675 /70 cont./ This /second/ contract system would appeal very much to the Tuareg, carefree by nature, improvident, and rarely possessing the necessary grain for the loans to the khammès. However, it is very little favored by the harratin, who prefer to have the advance of millet furnished by the proprietor under the first contract system, the right to the personal guemouns and to the gleanings, not counting the little daily thefts.

It is quite evident that these are Draconian contracts for the cultivators, who merely exist and are at the mercy of a bad harvest. The Targui may, thanks to his herds and to barter, survive several lean years, but the hartani cannot. It it not unusual to see the latter get through the period between the depletion of the winter reserves and the new wheat harvest by eating crushed date pits, young shoots of tahli, and sometimes even barley and wheat in the blade.

241 311 Land is seeded according to the amount of water available. When the output of the foggara is low, the cultivated area is restricted. It even happens, after several dry years, that the water table in the wadi shrinks to the point of disappearing. The gardens are then abandoned, the agricultural center deserted. The /71/ cultivators withdraw to a more favored village. When the rains bring up the water levels again, the dead centers may be worked once more.

241 The land is almost never manured in the Ahaggar. A system of preparing the land called "tiksal" in Tamashek is preferred. Each year the hartani gathers a clayey soil from a slope near the gardens. He carries this back, basket by basket, and spreads a thin layer on each guemoun. This virgin soil reinvigorates the cultivated land, which is quickly exhausted because of the irrigation; it contains almost no humus or limestone.

Sometimes, when the distance is not too great, the gardener brings the soil from an old root system of a dead fersig /tamarisk/ or tahla, the only humus to be found.

312 /71 cont./ Irrigation is the main problem here. It is solved by a foggara called "efeli" in Tamashek (plural: "ifelan"), which doesn't at all resemble the foggaguir of the Tidikelt and the Touat, which are permanent and require a great deal of work. In the Ahaggar the foggara is, in effect, nothing more than an underground séguia (irrigation canal) designed to tap the water of a wadi water table upstream from a cultivable plot; the water is channeled downhill following the most gradual incline to the gardens, which are irrigated by gravity.

The digging of a foggara involves several operations. First, a hole is bored upstream to reach the water and show its depth; then five or six wells are dug and are connected by an underground canal. This makes it possible to judge how large a flow may be expected. Three men work together: one digs, the other two stay at the surface, one on each side of the well, and lower a basket tied with two ropes on each handle. They throw the excavated soil to the right and left of the well.

Starting at the garden to be irrigated, a séguia is set up going in the direction of the wells upstream; this involves making embankments at first, and then further along digging into the ground as long as the alluvial soil will hold up without caving in.

/72/ Between the séguia downstream and the wells upstream other wells are then dug at intervals of five meters, connected by a tunnel. The work is done going in the upstream direction. A specialist arranges for the optimum grade following the usual practice; which calls for an ankle-depth difference between wells, or about two centimeters per meter.

When all these intermediate wells and tunnels are ready, the last tunnel (A), which connects the downstream system to the initial upstream wells, is opened. The foggara is then finished, and the water goes to feed the "majen," that is, the holding basin from which the irrigation séguias start.

312 /72 cont. / It takes one or two months to establish a foggara. Some of them (Abalessa) are six kilometers long, and the upsteam wells are ten to 12 meters deep.

When the flow diminishes, other wells are sunk upstream, but in certain agricultural centers, such as Ideles and Tahart, the bottom of the sand layer is reached, and the workers find themselves confronted with large rocks; the work then stops, as it is difficult to cope with rocks with a hoe and basket. There is nothing left to do but pray for rain to replenish the water table, or to emigrate to a more favored center.

Diagram showing how a foggara is dug.

The work is dangerous in these foggaras sunk in the loose alluvial soil, and accidents often happen. The foggara requires continual maintenance work; blown sand dries up and clogs the wells, warping of land occurs which obstruct the flow, and cave-ins are frequent. In /73/ the event of a cave-in, a work party of volunteers pitches in to repair the damage rapidly in order to protect the crop.

The beneficial flood which makes the level of the water table rise also destroys the work of the harratin, by choking up a large number of wells; the foggara must then be reconstructed. At Tamanrasset recently was tried the construction of an underground drain made with small stones spread over larger ones and then covered with clay and sand, in order to permit the flood to pass without damage to the foggara. But the Negroes are not able to undertake this kind of work.

3|2 /73 cont./ The water flowing constantly from the foggara is accumulated in a basin 8 meters by 4 meters by .40 meters large; these dimensions give the approximate size. From this basin, walled in by earth levees and made watertight by clay, the gardener runs the water into the séguias, which channel it to the guemouns under cultivation, which are inundated.

This irrigation system rapidly exhausts the soil.

The crops are watered every six or eight days, with each of the six or eight gardens dependent on the foggara having its regular turn at the water.

When the irrigation is made from a well (tanout) instead of from a foggara, the water is drawn from the well manually or with the help of a zebu. When the majen is full, the gardener proceeds with the inundation of the guemouns.

2|4 The cultivable land, which is quickly impoverished, needs rest. The harratin let land lie fallow, but involuntarily, for fairly large areas remain uncultivated because of the lack of water or of seed. It even happens that, the land being exhausted, a center is abandoned for a certain time.

The plants cultivated in the Ahaggar are few: wheat and barley in the winter, millet and tomatoes in the summer in fact constitute most of the production and cover nearly all of the cultivated land. Kitchen gardening is negligible, and in many centers nonexistent.

In the Ahaggar there are five varieties of soft wheat, probably imported from the Touat.

The wheat is sown in October and harvested at the beginning of May. /74/ It is grown on small guemouna about 1.50 meters by 3.0 meters large. It is irrigated every six or eight days. Along the séguias, two parallel lines of wheat are planted. The yield varies from ten to 15 for one. It is about 300 to 400 kilograms per hectare. The total production of the Ahaggar is about 200 metric tons of wheat per year.

Barley is cultivated in the same way as wheat, but only 50 metric tons a year are produced.

241 /74 cont./ Millet is sown after the wheat harvest is finished. Two species are found, one called Ahaggar millet and the other Sudanese.

The yield varies from eight to ten for one. The annual production is about 60 metric tons. The ears are rather thick but are looted by birds, above all the Bengalis, called "mange-mil," which originate in the Sudan.

The tomato is the chief vegetable of the region. Several varieties are sown; there may be a native one, but the harratin have long used the seeds given by the commune. They harvest the seeds themselves indiscriminately; there may be some degenerate ones among them. There is usually a surplus production of tomatoes. They are sliced in two, then dried in the sun in order to preserve them for sale and for sending to the Ajjers, the Tidikelt, El-Golea and, above all, to Ghardaïa. The method of cultivating them is most simple: The young plants are thinned out, haphazardly, at distances varying from 30 to 60 centimeters, depending on where the hoe happens to fall. When the tomato plants are grown, the guemoun is an indescribable tangle. It is a very rare gardener who puts up props for the plants.

Nearly all the native gardens have several pumpkins. There are two types, one called the Ahaggar pumpkin, which grows to an enormous size, is yellow, not very sweet, and is less esteemed than the variety called the Métlili pumpkin, which is smaller, greenish, and very wrinkled, and whose meat is much sweeter. The pumpkin constitutes the essential [262] food during the month of October and even during November.

Beans grow marvelously well, but only a few gardeners plant several guemouns of them.

/75/ Agricultural Centers

The Ahaggar has numerous agricultural centers, veritable oases, of unequal importance. The location of these gardens

241 /75 cont./ is always the same: in a living wadi, between two rock shelves. They are to be found, then, within a radius of about 100 kilometers from the upper summits of the Atakor.

The gardens string out along the wadi, using to the best advantage the cultivable and irrigable land. An impressive checkerboard of guemouns served by lines of foggaras and séguias testifies to the industry of the harratin. The green patches of early wheat among the grayish natural vegetation make a curious sight; this verdure seems unreal. The agricultural centers are always found in picturesque surroundings. The villages have rare houses of toubs or of dried bricks, [342] but more common are tahli zéribas /reed shelters/. Misery there is endemic, and the word "destitution" takes on its [511] most absolute sense here.

I have personally known families, one of them with [262 nine children, who knew upon getting up in the morning, 511] at certain times of the year, that they had nothing to eat during the coming day and that it would be the same the next day and the days after that. Only the charity of one of their fellows, scarcely any better off, would save them from starvation.

It is true that lack of foresight is a determining factor in bringing about this destitution, but it is not the only factor; one must also cite the low fertility of the soil, the frequent lack of sufficient water, above all after a long dry period, the conditions of the agricultural contract which in effect prevent the hartani from developing a passionate interest in his land, and, lastly, the limited views and complete lack of initiative that characterize the harratin. It must be noted that the Tuareg are hostile to the development of agriculture; this hostility is scarcely a reasoned one; it is a matter of a kind of nomadic atavism, augmented by a desire to keep the traditional practices intact, and also by a fear of seeing the Ahaggar penetrated by foreigners who, undoubtedly, could make the land produce and, in particular, develop the /76/ palm groves, but who would not be hereditarily subordinate to their authority.

241 /76 cont./ In connection with the conditions of life in the agricultural centers, I shall reproduce here an extract from notes taken in 1949 during a tour I made in the company of the doctor at Tamanrasset. This year of 1949 was particularly dry and came on the heels of four long dry years.

"After having walked five hours since leaving the Tilokatine wadi, where we spent the night, we came in view of a charming little oasis situated in the Outoul wadi, which
241 has cut a bed through basalt rocks, columns of which are
621 seen along the banks. This was the agricultural center of Tahart.

[162 "There are 63 inhabitants, of whom 17 are children --
164] suffering from trachoma and conjunctivitis. Two foggaras serve to irrigate the gardens, as well as two wells with water drawn by oxen. The output of the foggaras is diminishing; the harratin have tried digging other wells at the head of the foggara, but they found large blocks of stone at a depth of three meters which prevented them from reaching the water table. A long and wearying work, with primitive means.

"There are about 100 palm trees, which give small, meager dates. Nearly all of the trees are encumbered with djebars; these harratin have no idea whatsoever of how to cultivate palm trees. Those trees that now produce grew from pits haphazardly cast in a garden.

"The only winter crops are wheat and barley; no turnips, no carrots, no beans, no other vegetables that could tide them over in the period between the millet and the wheat crops and that would permit them to let the cereal ripen.

"At this time nearly all the harratin are eating green barley and young tahli shoots.

"A brief calculation will show how insufficiently these cultivators are fed, although they do very hard work in a hard climate:

| | | |
|---|---|---|
| Year 1948. | Yield of wheat for Tahart | 1, 500 kilograms |
| | Yield of millet for Tahart | 300 kilograms |
| | | 1, 800 kilograms |

24( /77/ or 1, 800 kilograms of grain to divide 63 times during
621 365 days, giving scarcely 100 grams a day per person, to which we may add three or four meals of meat per year.

"This year a green louse menaces the grain harvest; in summer a sort of 'mosquito' attacks the millet."

To complete these observations, one must add to the food listed for the harratin the very sweet tea they drink whenever they can, and it must be noted that this year 1949 was particularly bad.

If the wheat, set amid the arid mountains, gives an air of opulence to the village, the cultivator well knows that the production will be insufficient and that the fifth part of it coming to him is already pledged to Mozabite merchants to pay for the different purchases of the year. What to do? Go on farming, for such is life. This stubborn work to coax a little wheat from a hostile soil is most touching and merits a better success; but it would be necessary to educate these Negroes, and that is another story.

[361] Certain of these centers are temporary; the harratin abandon them when the soil is exhausted or when the water is no longer sufficient for irrigation; others are always occupied and under cultivation. The harratin merely cultivate smaller areas during dry years. In the permanent centers, the gardens have fruit trees.

In the appendix is the list of the principal agricultural centers of the Ahaggar.

## Animal Raising

233 A land of nomads, the Ahaggar is a region of extensive animal raising. The pastures grow according to the chance of rainfall, and the Tuareg use them with due regard to the growth of the grass. The irregularity of the annual rains obliges the Kel Ahaggar to drive the majority of their camel herd to Sudanese territory, so that about 7, 500 camels graze

233 /77 cont./ in the Tamesna, while 4, 500 stay in the Ahaggar. /78/ The goats and sheep stay near the tents and find their sustenance more or less easily. The donkeys that live in freedom are perhaps the best adapted animals. Several zebus used for drawing water in the agricultural centers are poorly fed.

It does not appear that animal raising is destined to increase much, as the climatic conditions do not permit much enlargement of the herds.

The camel is indispensable to the Tuareg; without it they could not live in the Ahaggar. The Targui-camel partnership is seen throughout the region; it is necessary; it is part of the scenery. One sees the double silhouette outlined on the crests of the central plateaus, or tracing a network of paths on the black lava regs, or printing the sand with the parallel tracks of the Targui and the camel. This strange beast seems a holdover from another age; despite its antediluvian appearance and its stiff limbs -- only its neck is supple -- it manages to climb up slopes for grazing where man sometimes has trouble following.

As far as the camel is concerned, the term animal raising seems inappropriate. For the Targui the camel is his life; thanks to it, he is able to travel at will in the desert, make his commercial exchanges, and stay for months in a region without wells if the pasturage is good. The camel is his joy; it enables him to demonstrate his masculinity; it is also the object of his fears when it is sick or when it has disappeared after breaking its fetters, making it necessary for the Targui to follow its tracks for days in order to recapture it.

The camel also is wealth, the scale of values, the gift for a birth or a marriage; it is the noble animal.

There are about 12, 000 camels in the Ahaggar. It would be tedious to enumerate the wealth of each tribe, but let us note that the Dag Rali alone possess a fifth of the herd.

The Tuareg distinguish three races of camels: a race of the Ahaggar, one of the Sudan, and a race of the north called

233/78 cont. / "maroki." The Sudan camel is the largest, generally has /79/ a light coat, is strong and fast; when it is very fat, its hump becomes high; it must have plenty of nourishment and fares badly on poor pasturage. When it is in good shape, it can carry 200 kilograms of merchandise.

The Ahaggar camel is smaller but always has a nice bearing; its coat may be light, but many of these camels are dark. When it is fat, its hump does not rise much but overflows on the sides; a more frugal eater than the Sudan camel, it can get along on meager pastures. If it runs more slowly, it climbs better; its feet become overheated on the sand but will hold up on jagged pebbles. It cannot carry more than about 150 kilograms.

There are not many maroki in the Ahaggar. It is smaller than the others but much stronger; in comparason with them it seems awkward. It requires abundant food, but in exchange can carry up to 300 kilograms. Generally dark colored, the maroki has a thick coat.

233 192 The Tuareg vocabulary to designate the camel is rich, a proof of the interest in the animal. The generic term is "amis," "imenas" in the plural. "Amadjor" is also generic but is used in the sense of: "camel seen in the distance but not identified." The plural is "imoudjar." The female camel is called "talemt" (plural: "tillemin"); "timetirout" (plural: "timetterouin") means "pregnant camel." The newborn camel is called "aoura"; at one year it is called "ag aouatey"; at two years, "allogues"; three years, "akanafoud"; four years (the teeth begin to grow but do not emerge), "aralèr"; five years (two teeth), "ag essin"; six years (four teeth), "ag okkoz"; seven years (six teeth), "Ammessedis"; eight years (two canines), "aoutahallat"; adult and old camels intermingle so that a Targui is incapable of saying how old camels live to be; some die young, some old, but the Targui never gives an [777] opinion as to age, for that could be bad luck.

233 /79 cont./ When the young camel is weaned it is called
192 "assaka"; when it is trained, one says "abal" or "amougui." The stud camel is called "amali."

Generous with the names bestowed on the camel, the Tuareg are even more wordy when it comes to describing the camel's color. /80/ While green or bright red spread on a paper is poorly appraised, the imperceptible nuances of a camel's coat are distinguished in precise fashion; this is because the colors that we mentioned are abstractions, while the difference between two grays is concrete, being the difference between two observed, known, and perhaps loved camels.

The correspondence between the colors expressed by the Tamashek words and the French shades is arbitrary; another investigator could quite well give another scale just as valid.

White: beïdedj; dark gray: iendjelan; fawn: iebramine; light fawn: atlar; fawn brown: ibazaouane; black: ikaoualane; black and white: azelraf; dirty white: idegnassen; gazelle: ierrane; light gray: ibahouane; green tones: israfane; reddish white: ilemlarane; reddish brown: ihaggarène; between red and yellow: ietlarine; the one with the blue eyes: iouinaran; the one with the white mouth: imoulssan.

According to what an animal is used for or according to his merits, there are about 20 other names, a few examples of which follow:

Saddle camel: "amis ouan tarik"; pack camel: "amis ouan edjidji"; saddle camel for a woman: "amis ouan takhaouit." Tired camel: "yaddah"; wounded camel: "yakoder"; well-trained camel: "iounane"; a hard camel to mount: "irraguel."

233 There is no need to repeat here the characteristics of the camel, its sobriety, its endurance, its fragility, too; let us remember, though, /81/ that when it "drinks its fill," it downs up to 120 liters of water.

In a moist pasture, whose grass is green, of course, the camel stays practically without drinking; when it is mounted or packed, having to undertake a journey across a strictly

233 /81 cont. / desert region or one lacking verdure, it can go for four or five days in summer and about eight days in winter without eating or drinking.

If the Tuareg have the reputation of being good camel trainers, it is because they begin training the camel when it is about two years old. The young camel is seized, and a "tiriouit" is passed over its mouth. The tiriouit is an arrangement of ropes which encloses the head something like a muzzle. A long rope serves as a rein; the trainer mounts bareback behind the nump, and does this for three or four days. The young camel begins to know the man, and then an "akala" is put on him; this is simply a rope securely tied to the lower jaw. A saddle is put on the camel for the first time, preferably the "tahlast" type, which is sturdier. For three months, the young camel is taught how to walk straight and to let itself be led wherever desired. The training is finished only after a year, at which time the "tiguemt" is inserted. This is the ring in the nose through which passes the "tarant" which finally classifies the animal as "assaka" or "amougui."

The training for pack camels is much simpler. The animal is fettered by the two front feet, a tiriouit is passed over its head, and it is attached to a tree by a very short rope. It is kept there for two days without eating, then is untied but not unfettered, so that it may find food by jumping in a ridiculous fashion from tuft to tuft. From that time, the animal is ready to be an "amis ouan edjidji." The female camels may also be trained at about the age of two years, either for the saddle or for the pack. The Tuareg only use them when their milk is dried up.

The camels do not breed at will, for the Tuareg select the males.

A half-bred Sudan-Ahaggar camel is preferred as sire.

/82/ The future sire must have certain well-determined physical characteristics; most particularly examined are the form of the legs, the length of the tail, and the size of the

233/82 cont. / testicle sac; a large head is a favorable sign, as is a white coat.

The Tuareg keep one male for 30 or 40 females; all the [232] other males are castrated: "ennedi." The castration is done rather late in order not to interfere with the development of the animal, which will always be used as a mount or as a pack animal.

The sires having been chosen, the breeding takes place without control by man. The male pursues the female and obliges her to squat down, either by putting his neck on hers or by biting her foot. Females in heat sometimes solicit the male. The covering is made after the female has been brought to squat with the male behind her; his hind legs are completely folded, his pectoral callus rests on the female's back, and his front legs are placed along her breast to keep her prisoner. The covering lasts, it seems, half an hour; after two hours, the male can begin another covering. When all the females of the herd are impregnated, the sire grazes and rests for nearly three months.

The female camel carries her young for 12 months, sometimes 11; she bears one young camel (the Tuareg questioned have never seen twin camels born). A good milk camel gives six liters at each milking, but she is only half milked, the rest being saved for the baby camel, which begins to eat only at the age of about three months.

When the female camel goes to graze during the day, followed by her colt, she wears an "abedjo" over the udder so the young camel cannot suck. The abedjo is a sort of coarse net attached to the loins and exactly covering the udder (it is made with cord from fibers of tahla branches: "ikakaben," extremely strong and rough, which repulses the young camel).

Goats constitute a veritable fortune for the /83/ Tuareg. They are content with the meager pastures of the dry years; they graze near the tents, to which they return each night to sleep. They are seen everywhere in the Ahaggar, even in the places that at first sight seem the most bleak.

233 /83 cont./ The Ahaggar goat (a goat: "tirsi"; plural: "oulli") is small, lively, a good walker. It has long black hair, but crossing it with Sudanese goats gives offspring with black and white coats. Milk production is very variable according to the seasons and the abundance and quality of the pastures. A very good milch goat may produce nearly two liters of milk per day, a month after having given birth. The average production is about one liter a day for the two milkings. Goat's milk furnishes butter, "oudi amellen," which is cooked to preserve it: "oudi"; it also is made into the different cheeses (let us recall that camel's milk is used only for drinking).

It is estimated that there are about 20,000 goats in the Ahaggar, although there may be more. The Tuareg keep one male for about 50 females. The Ahaggar goat bears one [262] kid, sometime two, but very rarely. The male kids are always eaten young; they constitute the bulk of meat consumption by the Tuareg.

[283] Goat hair is used to make ropes of all sorts, and we shall see how the hide is used in making all of the Tuareg furniture.

Sheep raising is very limited; the number of head would hardly come to a tenth of the caprine livestock, and most of the sheep are found in the Tin-Zaouaten region.

The sheep raised in the Ahaggar is a native of the Sudan; long legged, it has no wool but long stiff hairs, generally fawn colored. Its meat is excellent. It is a robust animal, a good walker, but according to the Tuareg does not bear up well during the dry years in the Ahaggar, the pastures not being sufficiently nourishing. This sheep /84/ accomplishes considerable feats; the Tuareg drive flocks from the Adrar des Iforas to the markets of the Tidikelt and the A'ir in the Ahaggar. These migrations are carried out, of course, in the winter, but the regs crossed are truly poor in water points, and the pastures are sufficiently rare to make these journeys a remarkable exploit.

233 /84 cont. /Ewe's milk is mixed with goat's milk; the hides
[262] are also used in all sorts of leatherwork. Mutton is considered choice meat and is the preference for serving to an important guest.

The ox is imported from the Sudan; it is a zebu with the characteristic hump. It is used for drawing water in the agricultural centers. However, it can live in freedom in the wadis of the Ahaggar. The amenokal owns a herd which has gone wild: when he wants a beast, he must have it shot. The oxen eat the tahlis which grow abundantly on the rocky shelves of the wadis; they drink from the numerous gueltas. This ox is a sturdy animal capable of going from the Tamesna region to the Ahaggar across desolate regs.

Milk production is practically negligible, since there are at most 300 bovids /sic/ in the Ahaggar.

The hide is used to make the large dellous /skin sacks/ for drawing water and the bottas for keeping butter in.

The bull is called: "essou" (plural: "issouan"); the cow: "tessout" (plural: "tissita").

The donkey ("eled"; plural: "ieldan") is, perhaps, the animal best adapted to the Ahaggar. The Tuareg say: "It eats everything, green or dry." It is of average size, with a rather light coat and a large darker cross on the back. The donkey
[492] is used for camp chores; it goes to fetch water and wood. It carries nearly the whole load when moving; it is the mount of the women, children, and Negroes. Some travelers claim to have seen onagers in the Ahaggar; these were actually donkeys reverted to the wild state: the Tuareg, not being able to keep them near their camps because of the paucity of pastures, /85/ let them run free. Thus it is that herds of donkeys are seen in silhouette on the mountains or fleeing in the wadis as men approach. The donkeys drink at the permanent water points, and their habitual approaches to them are marked by narrow, well-trodden paths.

233 /85 cont. / When the Tuareg want to recapture some of these animals, they organize veritable battues and must use a great deal of cleverness and energy to succeed. It is necessary to break these donkeys in order to fit them for domestic use, for many of them are born wild.

It is estimated that there are 5, 000 donkeys in the Ahaggar, but this figure is certainly too conservative.

[262] The flesh of the donkey is not eaten, nor is the milk of the female drunk.

A few horses, most of them originating in the Sudan, are to be found in certain agricultural centers. A "luxury" animal, the horse (aïs) cannot live off the Ahaggar pastures. When well nourished with barley, it bears the climate perfectly well and can be used as a mount in the mountains of the Ahaggar where water points are numerous.

Lastly, chickens are raised by the harratin in all the
231 agricultural centers; they are lean fowl which find practically all of their own food. The harratin chiefly eat the eggs,
[439] rather rarely the meat, which is sold to the Europeans.

/87/

## IV
## Material Life

### Dwelling

342 The Tuareg, as true nomads, use the tent for habitation,
281 and sometimes, in exceptional circumstances, the zériba.

The Tuareg tent is made of skins sown together and specially prepared. Its red tint, which harmonizes with the dominant tones of the Ahaggar landscape, is agreeable to the eye. For making the tent (éhakit), goat, sheep, wild sheep, and, very rarely, cattle skins are used; the skins of wild sheep are considered the best. After being stripped of its hair, the

/87 cont. / skin is lightly tanned with tamat or adjar leaves,
342 then smeared with butter to make it supple. After these
281 operations, the red tint is added in the following way:
"tamadjouhit, " a sort of red clay, is mashed up with camel dung; with the powder thus obtained, the still greasy skin is rubbed until the desired color is obtained. The skin is then soaked in water for two days so that it may be stretched, smoothed out, flattened, cut, and sewed. The women of the camp undertake this last task; they all pitch in to work, joking, talking, and the work gets done at a good rate. One tent may have from 30 to 120, or even 150, skins. Strands of fine leather thongs, artistically cut, called "balenkassen, " hang from the top, giving the inside /88/ of the tent a novel
342 effect. The tent is supported by six vertical wooden stakes, 1.50 meters high, sticking about 20 centimeters into the ground. These vertical stakes are joined in pairs by three horizontal bars; the stakes are attached to each other with cords made from plaited goat hair. The tent rests on these stakes and is anchored at the edges by smaller stakes or large stones. The front of the tent, facing south, is generally open, and the sides are attached to tall, vertical stakes, the tops of which are often carved. On the inside the tent wall is lined with an "asaber, " a kind of long mat made with stalks of "afazzou" (a grass). Making an asaber is a job requiring a great deal of patience; first the afazzou must be gathered with care taken to choose the longest stalks; then the stalks are assembled in pairs, being tied with previously prepared narrow leather thongs, with one thong around the top and another around the bottom of the stalks. The asaber is about 80 centimeters wide, with thongs wrapped around the stalks every three or four centimeters. The length varies from seven to eight meters, or exactly four times the height of a man with
[531] his arms upraised. The top border of the asaber is decorated with a band of leather interwoven with geometric designs. Two women take about a year to do this work.

342 /88 cont./ It takes three or four asabers to furnish a tent, two on the inside filter the wind, two others encircle the space in front of the tent, forming a small court, assuring privacy and a space sheltered from the wind, where someone is always to be found.

When one enters a tent, one sees that the right side is always the man's domain and the left side the woman's; each arranges his personal effects in an orderly fashion that is always surprising to the European.

342 About 50 meters away or more, but always within hailing
361 distance, live the Negroes in an enclosure of dry branches called "afarra"; another enclosure next to it constitutes the kitchen.

A camp is made up of a number of tents of this type, /89/ with some distance between tents to preserve privacy.

During the dry season, when the search for pastures becomes compelling, the Tuareg are obliged to stop at a place near water, where the goats may find some meager pasturage. The black domestics then construct zéribas. They make a framework of forked branches, from two to 2.50 meters high, circular or almost so, with a diameter varying from three to five meters. Around and on this frame are attached tahlis (tiphas); the zériba then has an elegant appearance. If there are not enough tahlis, one gets along with other dry grasses, morakba, guettaf, etc.; the zériba then has a shabby appearance, but its merits as a dwelling are not lessened. In summer the zériba is much to be preferred to a tent, for it is much cooler.

The ground under the tent or zériba is always covered with
342 coarse sand from the wadi, which is frequently changed. A
356 hearth, consisting of four stones arranged in a square and imbedded in the ground, is used either to heat tea or to provide a little heat during winter evenings. Near the tents stakes
344 support the guerbas /waterskins/; one may also see the wood-
356 pile kept up by the Negroes and the big wooden mortar which
342

356
342 /89 cont. / awaits its ration of millet, but one never sees any
[354] disorder or rubbish. A camp may have been at a site for a few hours or for several months, but on the day of its departure there is never the least broken object left at the place; the Tuareg leave behind them neither domestic refuse nor any other mark of their presence.

342 The tent is occupied by the family in the most limited sense of the term. When a man marries he takes a tent and
[592] lives in it with his wife; children up to nine years of age stay with their parents, but after that they have their own tent.

In the agricultural centers the harratin lodge either in a zériba of tahli, made like that of the Tuareg, or in a house constructed with toubs or with stones held together with tin (clay). The house is covered with a coat of tin spread on a foundation of tahli supported by a framework of fersig or /90/ éthel branches; the roof is flat. The door generally opens toward the west, and there is a small opening to the east; this system protects the houses from the heat of the midday sun. Such a structure would be unhealthy in other climates; here it doesn't matter, the family lives outdoors. In winter everyone huddles together at night around a fire in the single room in order to keep as warm as possible, but all leave the house at sunrise. The floor of these houses is covered with fine gravel from the wadi, and this is changed fairly often. The vicinity of the hartani dwelling is much less clean than that of the Tuareg tent; ashes are scattered about and refuse dries in the sun.

000 Only Tamanrasset has houses used by Europeans. Toubs are always used to construct them, although recently atone plastered with tin has been tried for certain administration buildings. Up to now the lack of lime has hindered "hard" construction; attempts have been made to make lime from cipolin, but the cost per kilogram is nearly as high as for lime imported from Algiers.

/90 cont./ The thickness of the walls varies from one to three toubs, or from 30 to 90 centimeters. The grave problem is that of the roof, which is made in the local style with a coat of tin over a bed of tahlis or reeds; the framework is made from fersig and éthel branches, with an average length of from two to 2.50 meters. In order to obtain a big enough room, the ends of these branches must be rested on a large log or on a semicircular arch made with toub. It is not possible, therefore, to make rooms more than four meters wide because of the length limitations of the logs or of the vault's span; the room may be made as long as desired by stringing together the units from two to 2.50 meters wide.

Some administration houses have iron beams, which permits the construction of wider rooms and avoids a grave annoyance, that of finding that a beam has been attacked by termites. In order to discourage termites, the frame is covered with drainage oil.

/91/ The inside plastering consists of black tin covered with a layer of white tin or, preferably, with lime, which sticks better. The outside plaster is red tin smoothed with the trowel or grooved vertically by the mason's fingers, which gives a pleasing effect. This red color gives Tamanrasset its particular look. Very often a small flowering garden brightens a house. The houses of Europeans have several rooms, a kitchen, a court, and often a small vegetable garden; they are in general smartly kept up.

## Migrations

361 166 The Tuareg only change their camps to find other pastures for the herds; when food for the animals becomes scarce within a radius of two to three hours' from camp, the head of the tent or subgroup, in agreement with the other members of the family, chooses a new site with good pasturage and, if possible, relatively near a water point. The imrad tribes make these

361 /91 cont./ changes only within the bounds of their territory.
166 In order to use pastures on the lands of a neighboring tribe, permission must be obtained from that tribe's amrar, and in addition a fee must be paid, which may be as much as two or three goats. Only the nobles move at will in the whole country.

We have already seen that the female camels are sent to Tamesna in a dry year, and that they stay there until a rainy year gives the Ahaggar desirable pastures. There then remain in the Ahaggar only a few male camels and all the goats, which accentuates the region's desert character. In these dry years the men go back and forth between the Ahaggar and the camel herds, sometimes taking Negroes with them, sometimes young adolescents. The women stay in the camps. A change of tent site is carefully planned, because of the scarcity of water points. /92/ It is not unusual to see a camp remain nearly a year at a site which is not too unfavorable.

During wet years, there are abundant pastures practically everywhere in the Ahaggar, water flows in the wadis, the female camels produce a lot of milk; one would think that the Tuareg then would sojourn long in the same place -- but no, quite the contrary, the camps are constantly moving.

Tuareg custom holds that when the pastures are just beginning to grow, the camp must not remain too long in the same place; this is a wise measure which permits plants to flower and bear seed, but putting that reason aside, there is no rational explanation of that continual shifting of tents in a country covered with the best pastures. Is there here a manifestation of the nomadic spirit? A careful psychological study would have to be made in order to understand the reasons behind these moves, which have no apparent practical purpose and which the Tuareg themselves are unable to justify.

Yet moving a camp is no joke. Dismantling the tents is easily and rapidly enough done by the women, but looking for the donkeys, the loading, the packing of the objects constitutes a job which to a European seems enough to drive one crazy; thought must also be given to milking the animals,

361 /92 cont./ to the departure of the herds, to the means of
166 moving the old people and babies. The camp is hardly ready to move before nine in the morning, although the work has been in progress since sunrise. About three in the afternoon the caravan halts for the night; the animals must then be unloaded, the asabers must be put up, the meals prepared, the animals milked; and the next day everything begins over again.

There is one regular annual migration; when the wheat
166 and barley ripen in the gardens, it is April, and all the caravans
221 returned from the Sudan have stored their millet in silos --
361 then nearly all camps head for the agricultural centers. The goats are left in the desert in the care of the Negroes. Each little agricultural center /93/ then sees a gathering of the Tuareg, who come to supervise the harvest and live at the expense of the khammès, according to the provisions of the agricultural contract. This is a joyous period, and tendi and ilougan are held every day.

In connection with these migrations, it must be noted that the Tuareg do not act exactly according to the necessities of the climate: a dry period should logically lead to an exodus by the tribes toward Sudanese territory, where the herds would be better fed in virtually permanent pastures, and yet the tents and goats stay in the Ahaggar. Political reasons do not suffice to explain this contradiction between custom and the obligations of the climate. Perhaps this custom may be seen as the effect of long habit reinforced by sentimental factors. It is certain that away from the Ahaggar and their own territories of nomadization, the Tuareg are ill at ease; they show their delight on returning to their mountains. There is a saying that the Tuareg are great travelers but not great nomads; the essential reason for this remark is certainly the profound attachment they manifest for their soil, which seems incompatible with the nomad mentality.

361 /93 cont./ To sum up the migrations of the Kel Ahaggar,
166 let us say that they extend in a radius of about 100 kilometers,
221 within the tribal lands, but that the men may lead the herds, according to the times, toward pastures 1, 000 kilometers from the family camp, and that an annual series of caravans sees them cover 15° of latitude.

The harratin cultivators are only sedentary on occasion; each year there is a large human movement from one agricultural center to another. There are three reasons for this: the Tuareg, owners of the soil, are no longer able to furnish the hartani with enough seed or to fulfill the agricultural contract; water bwgins to be lacking in a center, or digging foggaras becomes impossible; lastly, the exhausted land needs rest. It is thus that, from one year to the next, an important, well-cultivated center may become /94/ insignificant and even deserted. It appears to be impossible to establish a cycle for these agricultural migrations.

## Tuareg Furnishings

352 Lightness and flexibility are the two essential qualities of
492 Tuareg furnishings. All of these objects must be transported on the backs of animals; weight, therefore, is the principal enemy; moreover, it is easier for the animals to carry loads capable of molding themselves against the animals' bodies.
415 Thus we find a whole assortment of sacks, chiefly leather ones, in the Tuareg equipment.

These sacks are tanned in such a way as to keep the leather very flexible; but the process employed is suitable only for extremely dry climates: transported to France, the Tuareg leathers seem to come alive again, they swell with humidity, then give off a disagreeable odor, and finally become unusable.

415 All of these sacks are decorated. Some are colored and
531 bear designs put on with dye or are decorated with tinted

415 /94 cont. / leather, and sometimes they are even embellished
531 with motifs on cloth, accentuated with needlework in silk; others are made of natural leather, adorned with frayed leather thongs, for the main principle of decoration for everything carried on a camel's back seems to be to lengthen the lines in order to make them harmonize with the silhouette of this amazing animal. The decorative motifs are many but always linear; the circle, as well as the arc, is used, but the straight line dominates; there are no arabesques, no complicated curves; triangles, squares, rectangles, even trapeziums and diamond shapes are used. Red is the chief color for leather, but a wide range of other colors, artistically used, makes possible some pleasing effects; delicate greens characterize the work coming from the Sudan, pure whites are set in blacks, dark greens, and browns, different tones of yellow cover large surfaces. Then, slight grooves in the dyed leather produce interesting effects.

[492] /95/ The sacks are secured on the animals by numerous cords. These are plaited with goat's hair. Making all these fittings takes unimaginable time and patience. Such a task cannot be thought of except in relation to a nomadic tribe.

An interesting study could be made on Tuareg decoration, comparing it to that of certain Indian tribes of America; one thinks in this connection of the hypotheses advanced by Commandant Cauvet in Les Berbères en Amérique /Berbers In America/.

352 Here is a list of the various objects to be found in a Tuareg tent, undoubtedly an incomplete list, for the most familiar objects are the easiest to forget.

The woman, mistress of the hearth, owns her personal effects. The wardrobe bag, a large rectangle 80 by 60 centimeters at the top of which is an opening 30 centimeters high by 50 centimeters wide, is called "agherredj"; clothes are kept in it. Some of these agherredj are magnificent works of art.

352 /95 cont./ The other sacks belonging to the women all have the same shape. The "guerfa" is smaller than the agherredj; the "tarerrat" plaited in goat's hair is not seen as often.

The "adhaboun" consist of a whole series of small sacks of the most varied forms with a solid frame of plaited palm or sometimes of wood; small objects are put away in them: jewels, perfumes, remedies, etc. All of these sacks are generally closed with the famous Tuareg padlock, only a token lock, but always respected.

422 414

492 Rich women possess a special saddle called "akhaoui" or "takhaouit" according to its size, kept in a corner of the tent. It is an extremely curious assemblage of three types of wood (tehounek, rose laurel, tabrakat), each piece of which is chosen according to its use, shaped, cut, and decorated. The different pieces of the takhaouit are bound together with leather; it takes years to bring together branches that can be used, this work being almost always done by the women. The "haïf" is a strap /96/ that secures the saddle to the back of the camel; plaited in goat's hair, it measures five centimeters wide and three meters long; one end is adorned with an enormous pompon 50 centimeters wide and sometimes weighing more than three kilograms; embroidery in red and green wool gives a sumptuous air to the pendant, which reaches nearly to the ground when the haïf secures the saddle.

A richly decorated takhaouit has other pompons symmetrical to the haïf; these are the "tidarsiouin."

352 The feminine rug par excellence, which covers the tarraouit during a trip, comes from Timmimoun and is called "tagamdafest"; it has large black, red, and green bands, and, in the middle of it, tufts of yellow, black, and green wool.

Let us add to the objects belonging to the woman the "sendouq," a kind of small box in which sugar and tea are kept; the name, of Arabic origin, seems to indicate that it is of relatively recent importation. The "tesenit" is a palm-fiber basket in which kitchen utensils are kept.

415

492 /96 cont./ The man, when he is elegantly turned out -- and all the Tuareg want to be elegant when on camel back -- has a "djebira" (a large sack made in the Sudan) with splendid decorations in leather, dominated by whites and delicate greens. To save wear and tear on the decorations, the djebira is always carried inside out, but is turned right again upon approaching a camp.

The linen is put in a large dyed-leather bag decorated with lines: the "echchekoua," which is padlocked. The "tchekouat" ("dabia" in Arabic) is smaller, the "tesoufra" holds milk and is not decorated, for the dyes are not fast to moisture. Tea and sugar are kept in small sacks called "etfadoul."

The "tarik" ("rahla" in Arabic) adorns the corner of the tent reserved for the man. The camel saddle is well known; there are several types: the "tamzak," made in the Sudan and the most prized by the Tuareg, is ornamented with designs in green leather and has a characteristic cantle, the back of which is fixed with a whole system of metalwork. The "akoka" is also a good tarik, respectable enough to ride on; its black /97/ and red colors make it more subdued; it is also supposed to be sturdier. The "ta'last" has no cross in front; it is made of decorated wood and is very solid; it is suitable for training the animals, but an elegant man does not use it for traveling. In order to protect the camel, the tarik is placed on two or three small square rugs, the "sadfar," measuring about 50 centimeters; they have bands of blue and white cloth forming geometric motifs; they are lightly padded with old cloth.

To adorn the camel, the Tuareg place a rug called "taouart" on the seat of the saddle; the rug comes from either Fezzan or Ghardaïa. The saddle girth (ha'if) is as heavy as possible. The "rezama" (Arabic) ("tarant" in Tamashek), which is used to guide the animal, is made of plaited leather [825] ornamented with colored thongs; it is said that a tarant made from hyena hide makes the animal go faster.

492 /97 cont. / For he who wants a particularly well-equipped animal, there is the "cascabou," a sort of copper fitting with pendants and little bells which is fixed on the camel's nose, giving the beast a proud appearance and classifying the owner.

The things owned in common consist of, first, the "abator" used as water containers; these guerbas are made of goatskin or sheepskin. The "tamhit" ("mezoued" in Arabic) are used to carry grain. Butter is made in the "edjiouer."

415 We already know the use of the tendi /mortar/ and the pestle (iharen). Fixed or turning millstones called "tahount" are used near the agricultural centers.

The "terahout" is the hemispheric dish; there are several sizes. The "tesoukalin" are the small spoons; the large ones, often pyrograved, are called "temoulalt." The metal or baked-earth pot is called the "terrirt." Everything used for making tea has an Arabic name: the kettle (ralleye), the teapot (bered), the glasses (el kissan), and the tray (el tabla). The trivet is called "isseguida."

/98/ Clothing

291 The grand bearing of the Tuareg, which so impresses the visitor arriving in the Ahaggar for the first time, is largely due to the clothes he wears. The silhouette of the "men of the veil" becomes familiar. The fullness of the clothes and the lightness of the cloth, which favors harmonious drapings, seem to exaggerate the size of both the men and the women. European traders who give free rein to their imaginations are numerous; they speak of blue phantoms and indulge in comparisons as unreal as they are evocative. Here we must strip the Tuareg of this poetic aureole. Let us begin by the trousers, called "iqarbi" ("sarroil" in Arabic). Very full and not creased, the iqarbi has a hem at the waist which permits use of a plaited leather belt called "tamenalt"; there is no pocket. To make it, cloth 1.50 meters long by 1.40 meters wide is used. It is often made of black sateen or chegga.

291 /98 cont. / The fullness of the sarroil is indispensable for camel mounting, sitting on the ground, or sleeping.

The "éressoui" is an immense gandurah of tari (a blue cloth impregnated with indigo, which rubs off to give the Tuareg his characteristic skin tint) or of mahmoudi (white cotton fabric). The width of the gandurah must be more than the reach of the arms, or generally three lengths of cloth, about 2.40 meters. The éressoui is slit almost all the way down the sides and has an immense pocket fixed on the left-hand side of the chest. It contains eight meters of cloth 80 centimeters wide. Ordinarily, the Tuareg wear a blue eressoui over a white one; they gather on the shoulders the excess of cloth that would normally hang on the arms, giving a blue-white contrast of very striking effect. The arm is uncovered to reveal the bracelet of carved stone (serpentine) called "habidj," which is used as a defensive weapon in a fight.

A gandurah identical to the éressoui but made of cloth from the Sudan is called "takamist n'kora." /99/ This cloth is made of small bands one centimeters wide sewed together. The blue dye of the takamist is particularly prone to adhere to the skin. The Tuareg wear this article only on festive occasions, for it is very expensive.

The "tameskinout" is also a gandurah made from cloth made in the Sudan, but with bands from four to five centimeters wide. This very expensive garment is found much more rarely.

Another gandurah called "rati," which is worn only on grand occasions, has stripes of violine and beige tints; it is adorned with embroidery, forming circles on the back. The large chest pocket is also embroidered. "Taguelmoust" is the name of the brillant blue veil with carefully studied folds which hides the faces of the Tuareg and which novelists have named "litham," a word unknown in the Ahaggar. The size of the taguelmoust is generally 3.50 meters by 0.25 meters. The weaving of the Sudanese type resembles that of the

291 /99 cont. / takamist with one-centimeter bands. Judging a taguelmoust is difficult for a European; factors are the number of bands and the quality of the blue dye, which, when the cloth is new, is so brilliant that it looks like carbon paper. The taguelmoust is washed only after long wear, and can then no longer be used during a ceremony. The way he arranges his taguelmoust classifies a man, permitting initiates to distinguish between the tribes. The chèche /long scarf/, white or black, worn more and more, is an Arab importation; it has the advantage of lasting longer and costing a lot less; 4.0 or 4.50 meters are needed to obtain the desired effect. Some Tuareg get very nice effects arranging the chèche and the taguelmoust. Without going into the hypotheses which have been advanced to explain why the men started wearing the veil, let us say that it is the custom with the Tuareg and note that it is indispensable to wear a veil when traveling in the desert; every Frenchman who travels by camel or on foot quickly realizes that he must follow this custom or see his face take on the appearance of a lizard's skin. The taguelmoust /100/ has the advantage over the cheche of depositing a layer of greasy dye on the skin, which prevents chapping due to the dryness of the air.

The Targui's footgear is the nall called "ighatimen." Its rounded form is well known. A leather thong passes inside the big toe, two leather bands cover the foot and are sewn nearly as high as the heel. The sole consists of three thicknesses sewn together by one or several lines of stitches. Designs of pleasing colors decorate the different nal'ls and make it possible to tell where they come from. The ighatimen are made in the Sudan; the best known come from Zinder or Tahoua.

The mountain tribes -- Dag Rali and Adjouh n'Téhélé above all -- make nalls of a special type called "imarkaden." The tip is straight, slightly wider than the foot, and the heel is also straight, while the sides curve in toward the arch.

291 /100 cont./ The layers of leather may be a centimeter thick; the sewing of the leather with large stitches permits decoration. A long thong connects the leather buckles sewn on the sole and is tied over the instep. The elegant footwear is the "ighatimen."

293 A description of the Targui's apparel must include all of the objects he wears including weapons.

The "taralabt" is a leather wallet hung from the neck. An ingenious system of grooved closings keeps it from opening; it is always black and artistically decorated with yellow, green, or red stitching. Numerous inside pockets serve to hold the mirror, the "tazolt" (eye blacking, sometimes kept in a special case), the "chemma" (chewing tobacco), the "kelbou" (natron used to make tobacco milder), personal papers, and sometimes money.

Amulets called "tera" hang from the neck by a leather string; these are small leather rectangles containing either papers written by a taleb /public scribe/ or magic products protecting against sickness, the Kel es Souf /genii/, and misfortune in general. Each Targui is abundantly provided with tera, which make his life bearable.

293 /101/ The "iremdan" ("menguech" in Arabic) is an in-
752 dispensable instrument; it consists of a cutting blade, an awl,
296 and small pincers (something like eyebrow tweezers) These blades pivot around an axis; a ring makes it possible for the iremdan to be hung, but it is often carried in a special case. This tool is in turn a surgeon's kit for pulling tahla thorns from the soles of the feet and a cobbler's tool for repairing nalls /sandals/. A Targui never undertakes a trip without his iremdan.

301 We have already mentioned the "abidj," or polished stone bracelet. The "tissak" is a small silver ring without artistic value. The key to the Tuareg padlock, which is often suspended on the chest, is a much prized ornament.

411 No Targui undertakes an important trip without his "takouba," the sword worn at the side which gives that

411 /101 cont./ medieval look to the Tuareg, making them look as if they have emerged from a picture book. There are takouba and takouba; some are worth two young camels and are recognized by the grooves on the blade and the mark made by the maalem /craftsman/. The first-rate takouba is called "tazra'lt"; it has five grooves on the blade and a disk whose vertical diameter is topped by a cross; a tazra'lt should sever a camel hobble buried in the sand so that only five centimeters are showing. The "arlal" type has no groove but bears the same mark as the tazra'lt and is an excellent takouba, just as highly regarded as the latter. The "talit," worth substantially the same, does not have a groove but has the same mark as the tazra'lt, supplemented by a stylized lion. An "inaseri" costs half as much; it has three grooves and bears a crescent-shaped design with three points directed toward the center. The "tabloq" has a long central groove and is decorated with the silhouette of a lion; it costs the same as an inaseri. The "adadiglen" has never been carried by a coward; it is worth the same as a tabloq, has a long central groove flanked by two small ones; on each side of the large groove are two K's back to back. The "elghenihe" is a much rarer sword, although worth only half as much as an adadiglen; /102/ it has a single cutting edge, three large grooves, and a crescent with a point directed toward the center. The "tama," much more common, is worth scarcely half as much as the elghenihé; it can be recognized by its central groove, two small parallel grooves, and two crescents with only one point directed toward the center. There are other types of takouba of recent make; they are sometimes copies of the old blades but are easily recognized. Some old takouba do not bear distinctive marks, and one must be a true connoisseur in order to appreciate them.

One still sees Tuareg who carry the iron spear, the "allar," which was a throwing weapon for short distances. It is about 1.90 meters long. The spear is carried less and less. For hunting the wild sheep, a sort of javelin is used, the point and heel of which have the same shape as those of the spear; this weapon is called "tarrada."

411 /102 cont./ Let us mention for the record some weapons that are no longer carried: the "tilok," a magnificently decorated daggar held on the forearm by a leather bracelet; the "arrar," a shield of antelope skin, white, decorated in the middle with designs and metal trimmings; this large rectangle with rounded points gave the warriors a most impressive appearance. These shields are no longer to be found.

291 To finish with men's dress, let us note the "tabroq," a blanket coming from Timimoun called "dokali," worn on very cold days, which makes the Tuareg resemble certain American Indians.

The Tuareg women ("tamat" -- "tidedin" in the plural) wear clothes which in many ways resemble those of the men. They are not veiled, but when a stranger is presented to them, they hide their faces out of sheer modesty.

Like the men, they wear a long gandurah of tari called "erressoui," but the opening on the side is no longer than 30 centimeters under the arms. There is a white erressoui worn under the blue one. The woman also has a "takamist n'kora" that she puts on during a visit or for a fistive occasion.

/103/ She wraps herself in a large rectangle of tari, three meters by two, called "afar." The padlock key is tied to a corner of the material, and serves as a counterweight when the afar is thrown over the shoulder.

The "ikaral" is the shawl for the head; when it is made of taguelmoust cloth, it is called "alechou"; it measures about 1.50 by 0.50 meters. During an ilougan, which is a kind of tournament on camel back, a rider snatches the alechou from a woman and flees, chased by the other Tuareg, who attempt to recapture the veil. The victor is highly regarded.

The "tabarikant" is a very large veil, three by two meters, whose very clear rose color gives a most happy effect; imported from Tripolitania, it is of very finely woven wool. The tabarikant is becoming more and more rare; it is handed down from mother to daughter and is worn only for festive

291 /103 cont./ occasions. The "ra'ki" is another veil, as large as the tabarikant and made of wool, but white; it is also very rare.

The Tuareg woman does not wear a sarroil but a kind of knee-length skirt, a simple piece of cloth tied around the waist, called "assedjebès." Young girls begin wearing assedjebès when they are nubile.

The woman wear ighatimen for footgear, carry tera, and all have a taralabt slightly different from that of the men. The iremdan is often carried without a case. In winter the tabrok (dokkali) is also a feminine garment.

[854] All of the young children are naked; later they put on the blue gandurah; the boys have a sarroil toward the age of eight or nine. At about fifteen, they begin to wear the veil.

## Food

262 The Tuareg are particularly frugal eaters, and their condition of life does not predispose them to a finely prepared cuisine. Tuareg food has nothing about it to flatter the tastes of a gourmet. The few /104/ dishes palatable for a French-
[177] man have been borrowed from the Arabs and will not be mentioned here.

The basic elements of the Tuareg diet are: millet, milk, and dates. Millet (enelé) comes from the Sudan or is harvested in the Ahaggar as a summer crop; the latter, whose grain is smaller, is better liked but is insufficient in quantity.

252 Millet (the "bechena" of the Arabs) is crushed with a pestle and winnowed to keep only the white flour. This flour is sometimes eaten just as it is after crushing: this is the "tibik" used on the trail by the hurrying cameleer, and it is sometimes used even in camp.

Also called tibik is a more complicated preparation: millet is crushed, winnowed, then washed and put in a tarahout. Heated pebbles are buried in the grain until it become slightly cooked or rather roasted. The progress of the

252/104 cont. / cooking is determined by the pleasing odor that comes from the dish. This grain is next ground together with dried dates. The powder thus obtained is eaten without further preparation.

The "arahara" has a more complicated recipe: crush the millet so that a very fine flour is obtained, crush some dates, and add a little water to form a paste, crush some "tikamarin" /cheese/; mix flour, date paste, and cheese powder together; add a lot of water until you have a liquid resembling milk. Drink cool in summer.

"Asink" is the Tuareg national dish: crush millet so that you have half of it in fine flour and the other half in coarse grains; separate the grains from the flour and pour the former in a pot of boiling water; cook for two hours until the bloated grains form a rather liquid gruel; pour the flour into the gruel, stirring the mixture with the "esseroui" (a wooden paddle used especially for the asink) with the pot still on the fire; obtain a rather thick consistency, dish into the tarahout, add milk if possible, and serve hot. When there is no milk, butter may be added, or the asink may be eaten as is.

[272] /105/ Milk, another basic food, is drunk whole as soon as it is drawn, or is mixed with sour milk, or blended with whey. To make butter, milk is poured into an "adjiouer" (the "chekoua" of the Arabs) and sits for a day, preferably in the sun, causing it to sour rapidly. The sour milk is then poured into another chekoua, which is stirred until a ball of butter is obtained. The sour whey left in the chekoua is drunk during the day.

[262] Fresh butter ("zebda" in Arabic) is called "white butter" (in Tamashek: "oudi oua amellen"); it is soon eaten, but only a small amount. Most of the product is transformed into "dahan" (Arabic -- in Tamashek: "oudi"), which can be kept a long time. White butter, with a small quantity of dates added, together with a few grains of wheat or millet and

252 /105 cont./ several stalks of a plant called "alnessis," is cooked for a very long time. When it is ready, it is poured into the "tahatiat" or the "arralan" for keeping. The tahatiat is a kind of guerba /waterskin/ made with skin from a camel's neck and still has the original curved shape. The arralan is [415] shaped like a demijohn; it consists of a piece of camelskin molded in a hole dug in the ground, filled with camel dung and gravel, tied securely at the mouth by a cord, and thus dried and hardened.

"Tikamarin" is a cheese made from whole milk in the following way: a young goat is killed and its stomach, still full of milk, is carefully kept; the milk is allowed to harden in the stomach pouch, then is carefully preserved. A piece of this "seed" cheese, about the size of a gaming die, is plunged into a tarahout containing five to eight liters of milk. After a day the milk has completely curdled. A lump of this cheese, still damp, is crushed in the hands, previously washed, and made into slabs about 15 by 5 centimeters. These slabs are arranged for drying on a bed of afazzou stalks. Tikamarin is eaten dry; it is kept over a year, and it is said to be still edible after four years.

/106/ "Ioulsan" ("qlila" in Arabic) is a cheese made from the sour milk left over from kaing butter. This sour milk is poured into a pot and is heated for a long time. The contents of the pot are then poured in a special filter, a kind of afazzou basket; the water drains off and the remaining cheese is then fashioned into small circular cakes, six centimeters in diameter and two centimeters thick. Ioulsan is quickly eaten, but it can be kept dry and is used, above all, in making the argira which is eaten in the summer.

262 The Tuareg like meat very much, but they eat it relatively infrequently; yet some Tuareg say that one should not let ten days go by without eating meat.

The most used meat is goat; mutton is eaten less often, and camel in exceptional circumstances. The meat of

262 /106 cont./gazelles and wild sheep is much esteemed, particularly since it costs nothing, but having it depends on chance. The hare is eaten only by children or Negroes. Birds, wild or domesticated, are not much liked.

252 Meat is eaten boiled or grilled, always well done. The Tuareg mechoui /roasted sheep/ is called "abatoul" (hole). A hole is dug in rather coarse-grained sand, and a large fire is built in it. The embers are then removed from the hole, and the dismembered animal, well cut open, is placed in it, without butter or spices. The meat is then covered with sand, and a fire is maintained over it for two or three hours. The meat is then pulled out, is strongly hit with a stick to knock off the grains of sand, and is ready for sampling.

[262] Practically speaking, the Tuareg never eat green vegetables; they keep dried onions (tarafaret), which give [251] some taste to their dishes; dried tomatoes, abundantly produced in the Ahaggar, are also used.

Wheat, rather seldom used, makes it possible to make couscous and flat cakes called "taguella." The Tuareg also make taguella with millet flour, but these are truly awful.

262 /107/ It is well to note the scruples of the Tuareg so far as Islamic food taboos are concerned.

They continue, in fact, to eat their traditional food, and it happens that their custom fits in with Moslem regulations.

To amuse themselves, children eat "tilout" and those large lizards called "dobs," which they grill on glowing embers. They open the stomach and eat little pinches of the flesh cooked in the skin, somewhat as one would eat a soft-boiled egg.

Chicken eggs are not much liked; children accept them, but they prefer dob eggs.

The daman, called akaokao, a wild little rodent of the granite hills, is eaten only by the Negroes.

European food has not penetrated the tent, so to speak; only pates are liked, but the Tuareg do not yet go so far as to

262 /107 cont./ buy them. Rice is considered to be a remedy. In the way of preserved foods, one may see the Tuareg eat sardines in oil and jam and use canned milk. All of these foods are not accepted with enthusiasm; they are too expensive, [181] and the Tuareg seem to be truly conservative in food matters, as well as in the whole of their customs.

They drink water, milk, and tea, the latter being of 272 relatively recent importation but in the way of becoming a necessity. There is no need to mention again the ritual that surrounds the making and drinking of tea.

Coffee is scarcely drunk except with the French; when it [273] is taken in the tent, it is as a remedy. Need I say that the Tuareg drink no alcohol and that at the present time there is no exception ot this rule?

## Public Health

It appears to be practically impossible to construct a 161 demographic table for the Ahaggar: figures for the years /108/ before 1947 are rare and suspect; they give an acceptable approximation but do not give an exact picture of population movements.

In this field one must then use figures from recent censuses and observations of the tribes that may be easily visited in trying prudently to project these observations to the whole of the population.

In 1948 the count was:

| | |
|---|---|
| | 6, 048 nomads |
| | 4, 240 harratin |
| | 10, 288 |

| | |
|---|---|
| 1949 | 6, 013 nomads |
| | 4, 285 harratin |
| | 10, 298 |

The population figure for the Ahaggar seems to be fairly stationary (even if one does not rely exclusively on the figures

161 /108 cont./ cited above). The birth rate is not very high, but it is greater than the low death rate. Infant mortality is practically impossible to verify.

In 1948 there were 1, 028 men counted for 1, 202 women,
162 which would seem tosupport the widespread opinion that relative to other peoples there are more men than women among the Tuareg. One must be careful, however, not to make this type of affirmation without having previously examined all the causes that may produce such a state of affairs. It is al-
162 most certain that the Tuareg control their birth rate. The
847 chief of the tribe may forbid births or may recommend them according to the number of members of the tribe. This measure seems wise in a country which can scarcely support the existing population. The situation is such as it would be if the Tuareg had found, empirically, the ideal number of individuals able to be supported by their soil and were wise enough to try to maintain this number.

The men interrogated on this subject avoided the question, saying that this concerns their women and that they do not know the methods employed. The women are equally reticent, not to say mute.

/109/ Some of them claim to abort by drinking decoctions of plants. The French doctors know the qualities of these plants and think that this medication would be insufficient to produce the desired effect. By being patient, I was able to learn a method which, although dangerous, should be effective; I got this information from only one woman and have never been able to confirm it, as it is difficult to touch on these subjects directly. The women supposedly use a probe that they make from a "stone" called "azarif" ("cheb" in Arabic), which is of alum; they make this the size of a slate pencil.
162 This probe dissolves after having produced a mechanical effect.
165 It is likely that many women fall victim to these maneuvers,
847 for in questioning the Tuareg one discovers a rather high female mortality rate at a relatively young age. Perhaps we may see

162 /109 cont./ here the cause of the greater proportion of men
165 to women.
847 The most widespread disease in the Ahaggar is undoubtedly malaria, most often contracted in Sudanese territory and
164 spread in the Ahaggar, where anopheles are numerous in the agricultural centers and at all the permanent or temporary water points. Professor Rémy of the faculty at Nancy has found them in the Tarahouaout tiggert /outflow of water/, at the In-Ezzebib guelta /pool/; the doctor, Captain Galan, has collected them in the Afilal guelta at an altitude of nearly 2, 000 meters.

Pneumonia and its pulmonary complications wreak the most havoc among the Tuareg; this is due to the winter cold, which is ill borne in too thin clothes.

[131] In 1949 an epidemic of measles took on the aspect of a catastrophe through its pulmonary consequences.

Venereal diseases are very common among the harratin, rarer among the Tuareg.

A distressing disease of the agricultural centers is trachoma, aggravated by every type of conjunctivitis transmitted by the flies that swarm and cluster around the /110/ eyes of children. The Tuareg seem immune to diseases of the eyes; they rarely have trachoma.

Smallpox, once so common and so feared, has practically disappeared, thanks to systematic vaccination. It was an unusual event to see two Tuareg return from the Sudan in April, 1951 covered with smallpox eruptions.

Tuberculosis does not seem to have appeared; skin tests made at the Tamanrasset school are negative for children born in the Ahaggar. There seems to be no manifestation of cancer.

Although the Tuareg are abundantly provided with lice, above all in the winter, as are the harratin, a case of typhus has never been known. Typhoid is unknown, as are diphtheria, tetanus, and poliomyelitis.

164 /110 cont. / The country then is sufficiently free of serious
114 diseases; one scourge, however, must be noted: malnutrition, described and well studied by the doctor, Captain Galan, in a publication of the Pasteur Institute of Algeria: Contribution à l'étude du problème alimentaire au Hoggar /Contribution to the Study of the Nutrition Problem in the Ahaggar/.

757 The Tuareg and the Negroes are beginning to like
278 European medication and are coming more frequently to the infirmary; they value above all aspirin, quinine (which is becoming a generic term for all pills), and penicillin. They remain faithful to their pharmacopoeia, chiefly based on plants, of which here are several examples:

Pulmonary diseases: strong pimento and rellachem /see Appendix, Flora/ are specifics; for pleurisy, one must melt camel fat with the ta'noust (fruit of the acacia), eat it as hot as possible, and constrict one's chest with a rope.

For the stomach, butter mixed with tahist.

In cases of diarrhea, takamezout is the sovereign remedy, taken in tea or eaten in leaf form. This takamezout has a great reputation among the Tuareg: it comprises, they say, 40 remedies, but will not heal broken legs.

Constipation is vanquished by adjardjar and taharadjelle. Headaches have no remedy, yet tea is /111/ to be taken in preference to anything else. The liver is treated with ihemhad taken in milk. The victim of ganglions at the groin or under the armpit may easily make them disappear by rubbing them lightly with saliva very early in the morning; another method, more efficient, consists of heating goat dung and placing it on the nails of the affected member.

[752] For an open wound, make a plaster with milk and powdered tassa.

Rheumatism is easily treated; a sort of well is dug, one meter in diameter and 1.50 meters deep, the patient gets in it, a cover is put on the well, and the patient is given an infusion of otaq to make him sleep. A spring called In-Ahadja exists which is supposed to be equally as good in treating rheumatism.

757 /111 cont./ Jackal meat, eaten with decoctions of
278 rellachem for three days, is the best remedy for gonorrhea; cloves will aid in the healing.

Jackal meat is also used to cure syphilis, but in addition in the morning one must drink milk in which colocynth has been soaked; while this milk is being drunk, skewers of fat to be eaten afterward are cooked; clear soup is drunk during the entire day. After three days small, white granulations are seen in the stools, indicating the success of the treatment.

Smallpox formerly was treated in a sufficiently efficacious manner by digging a hole in the sand and heating it as if to make méchoui /roasted sheep/, although not so hot; the patient then lay in the hole and was covered with sand. After that there was nothing to do but wait.

The treatment for measles requires the patient to be kept warm, while eating hare, gazelle, or wild sheep meat.

Toothaches cannot last when treated as follows: fill the mouth with onion seeds, ouzouaz, wheat, and salt; keep these medicaments in the closed mouth for half an hour. When adolescents break out in pimples, which disfigure them, it is essential that /112/ onion seeds be burned and the smoke inhaled, which, it is said, makes all the worms leave immediately. Around a boil, apply a paste made of milk and powdered tanzet (a kind of Sudanese bean).

## Magic Rites

789 This is a very difficult subject to treat, for the secrets
754 are jealously guarded by those who possess them and want to profit from them, or are carefully hidden by those who know them in a disinterested fashion but who lack confidence in their questioner or fear reprisals.

The Ahaggar, situated at the frontiers of Islam and the black world, is without doubt impregnated with magic customs; the superficial Islamism of the population, which retains an

789
754 /112 cont. / underlying belief in genii, often not avowed but present, lends itself admirably to secret magic rites.

754 However, it seems that the Tuareg, although very superstitious, do not use maleficent spells, a specialty of the women of the Tidikelt, the Ajjers, and the Sudan. The most famous of the evil spells is the "borbor," chiefly the work of the Negresses.

The borbor acts in two ways: either it tends to poison an individual that one wants out of the way, or it serves simply to diminish the forces of someone one wants revenge against or that one wants to attract (in the last case, it acts something like a love potion). In any case the borbor produces its effects only over a long period of time; it is personal and is prepared for a specific purpose; to be effective, it must be administered cunningly.

It appears to be impossible to obtain an exact recipe for borbor. Here are the chief ingredients that enter into its composition; the proportioning is determined by a specialist.

The basic ingredient seems to be the brain of someone recently dead; it must be sought at night in a cemetery. The story is told of a woman who, having wanted to steal the brain of a recently deceased marabout, was found dead, struck down /113/ by the power of the defunct, and clutching in her clenched hand scraps of her theft.

Once obtained, the excipient is kept in a vase so that the elements effective for a given individual may be added. The list of these is long; let us mention all the external secretions of the intended victim: sweat, preferably from under the armpit; tears; earwax; urine; blood (preferably menstrual); semen. Also collected are hair, nail clippings, dirt from the arms and nails, soil walked on with the bare feet. All or part of these ingredients are added to the excipient, mixed, then cooked. This diabolic cooking is done at night by two initiated women, entirely nude. After a certain time, the pot rises in the air and revolves in the closed room; the

754 /113 cont./ women chase it, beating the air with scarves and reciting secret words. They act as if they were madwomen.

The borbor is incorporated into couscous, which, it is said, may be turned with a hand taken from a dead person, but I have had few confirmations of that practice. The borbor is administered by throwing it in the path the victim should take, if it is impossible to make him eat it.

Whether intended as philter or poison, borbor differs very little in its composition; only the quantities must differ.

When a woman wishes the death of a rival, she has another process at her disposition. Having managed to obtain some menstrual blood of the enemy, she goes to a taleb /public scribe/ who specializes in magic; the latter wraps the blood in a paper or rag on which he writes sacred words; he then throws the package into a permanent séguia /irrigation canal/. As long as the seguia flows, the blood of the rival will flow, and she will die of this hemorrhage.

There is an antidote for borbor called "bottal," a blackish substance that one throws on embers and whose emanations counteract the effects of borbor.

824 754 Two plants must be mentioned here which, without being fatal, cause momentary insanity, according to the Tuareg: first, "afeleleh" ("bettina" in Arabic), black henbane, (the antidote consists of gulping down camel meat or, better, /114/ camel fat); second, "bourzig," taken by women who want to gain weight, but which taken in strong doses induces temporary madness during which the victim spouts out an endless succession of words which she does not remember later.

754 Magic operations are most varied, and everyone can expect each day to be the victim of them. The Negroes are haunted by this fear; the Tuareg do not seem to be worried [751] by these magic maneuvers. However, everyone wears "tera," protective charms issued by the taleb; thus the Moslem religion, more or less deformed, fights against magic or, sometimes, collaborates with it.

754 /114 cont./ Belief in the evil eye is shared by the Negroes and the Tuareg: certain persons may by their words cause the worst calamities, induce illness, provoke accidents, make animals die. Happily, there are other persons who have the opposite power and who, by approaching a sleeper and placing a hand near his face, give him strength and luck for the day.

[777 831] In general women are carriers of bad luck in the morning; however, if an intimate lets her sex be glimpsed before a morning departure, luck will smile on the hunter.

Of one who has the evil eye, it is said in Tamashek; "illé tahot."

[777] 776 Who gives that good or bad luck carried by an individual and which may sometimes emanate from him? The reply to this question is: God, for, after all, these people are Moslems; but each one is persuaded that the genii, the Kel es Souf, as the Tuareg say, are agents of this suprahuman life. The Kel es Souf constitute a people of spirits invisible during the day, but who may appear to humans at night in the most varied forms. At nightfall comes the most favorable moment for the exploits of the Kel es Souf. All manifestations of natural forces are attributed to these genii: whirlwinds, echoes, floods of the wadi, cave-ins, a spontaneous fire in the dry grass. On the contrary, the mirage ("eillel") is not the work of the Kel es Souf.

/115/ He who hears or sees one of these genii is always troubled; he may become ill and even insane, for, if there are indifferent Kel es Souf (very few, however), there are no good ones. It is because of this that one must know how to protect oneself against them; this is ordinarily done by invoking God, by carrying talismans, and by always having an iron object with oneself.

The Kel es Souf like certain places and reside there in preference to others: deep ravines, in which they shower atones on the unfortunate humans who venture there, and caves, in

776 /115 cont./ the depths of which are seen their strange lights. The In-Tafeute guelta is peopled with genii; the Amadror saltworks abound with Kel es Souf, who make an infernal racket at night, breaking the salt, hewing blocks, robbing all sleep from the people who have come to work and who the next morning see no sign of this nocturnal activity. Certain high places, of which the most famous is Garet el Djenoun, are also favorite haunts of all this invisible world.

It is said that in former times some particularly powerful men were on friendly terms with the Kel es Souf, who had a language of their own. Two ways used by the genii to count up to ten are still told:

| First way: | Second way: |
|---|---|
| 1 -- Djoukhien | Dienana |
| 2 -- Djouressin | Dessinena |
| 3 -- Djettar | Makarkada |
| 4 -- Djettouri | Matezoua |
| 5 -- Alendiez | Souraten |
| 6 -- Indiez | Souratalni |
| 7 -- Hamalou | Tiguemelguemal |
| 8 -- Fellali | Teguedtassa |
| 9 -- Terra | Nougomelli |
| 10 -- Feck | Nourobelli |

The misadventures of humans with the Kel es Souf are extremely numerous. Any Targui who has a little confidence in you /116/ will tell you of his and, excited by the subject, will relate those of others. There are classic tales, such as that of Titi.

773 Titi was a shrewd Targui who one night arrived at a wadi wooded with tabrakat. Dismounting from his camel at the place he intended to pass the night, he saw a woman. He greeted her and began to unsaddle his mount. As he unloaded a sack, the woman took it from him and placed it on the ground. He went to look for wood, and she went with him to help; he lighted his fire, she stirred the coals, this solicitude

773/116 cont./ and this imitation of his gestures disturbed Titi, who guessed that this woman with the abundant hair was a Kel es Souf. He prepared his millet flat cake, and the woman repeated each of his movements. At that point Titi, seizing a firebrand, quickly ran the nonburning end through his hair; the woman imitated him but used the wrong end; her hair caught fire, she fled screaming, rolled on the ground, and rubbed against the trees, which caught fire. And ever since this adventure of long ago, one can see the remains of the tabrakat burned by the Kel es Souf in the Ouriren wadi.

Another Targui, when night was falling, spied the fire of a camp in a ravine toward which he directed himself. Hardly had he descended from his camel, when he was invited to eat. As he was very hungry, he shortened the customary salutations. Having sat down on a magnificent rug, he observed that the people were dressed as Tuareg, to be sure, but he could not determine their caste nor find any resemblance to anyone he knew. All of this seemed strange to him, but the strangest was to see the asink served in a golden terahout. He understood at once that this was a camp of the Kel es Souf. He seized the dish, bounded to his camel, which fortunately had not been unsaddled, and fled into the night. When he felt he had gone far enough, he wanted to look at the fabulous dish. Alas! It had disappeared, which proved to him that he had been the victim of the Kel es Souf.

787 Instances of clairvoyance are common with the Tuareg; this is chiefly the province of the women. It is related that during the raids of yesteryear certain Tuareg women knew /117/ the outcome of a combat which took place more than 400 kilometers away; a wife would see her husband wounded, a sister learned of the death of her brother, and the news would be verified upon the return of the warriors. This distant clairvoyance is still practiced today. Here are the two ways of going about it. At nightfall the woman endowed with this power washes herself meticulously and puts on her finest clothes.

787 /117 cont./ She goes to a "debni," a pre-Islamic tomb, lies down on the stones, and says the following words: "Imeguedda enkerguedda," the meaning of which is not known. Putting her ear to the stones, she may hear the news, certainly transmitted by the Kel es Souf. The debni speaks briefly, three times only, and it is not permitted to ask it questions.

The other process requires the sacrifice of a goat. The grass in its stomach is taken out and is made into one or several balls. When night falls the woman goes to a flat place away from all human presence; she throws the balls as far as possible, then lies on the ground and puts her ear against it. If the Kel es Souf are favorably disposed, the news arrives as briefly, but as precisely, as in the preceding method. This process is called "tizomitin." Methods exist to question Fate. They are called "idjehan" and consist of making dots on the sand whose exact number one does not know. The technique differs according to the manner of making the dots. It is something like the card game of patience, for the responses are either "yes" or "no." Some Tuareg know another method to obtain more varied answers, but the apprenticeship for this is long.

There are other superstitions, such as that which calls for
241 putting old cooking pots, or else the jaw of an ass, on view in a wheat field in order to have a good harvest. Let us also
[262] mention the Negresses' custom of eating cat's thighs in the month of March in order to gain weight.

All of these beliefs should be collected, but that would require long, patient work, which could not be carried out except in a climate of confidence.

/118/ One may say that the Ahaggar still lives in a world
771 of magic despite the presence of Islam. This fear of spirits, which seems childish to an Occidental, is very real. "Imagination," Fraser says, "knows how to act on man with as much effect as does gravity, and may kill him with the same certitude as would a dose of prussic acid." The

771 /118 cont./ inexplicable repugnance shown by the Tuareg for certain foods or for certain behavior is nothing other than a manifestation of taboos designed to protect them against the spiritual forces loosed by the persons or things in their surroundings.

Perhaps it would be fruitful to study the customs of the Tuareg world in the light of the philosophy of the forces whose principles are set forth by the Reverend Father Tempels in his Philosophie bantoue /Bantu Philosophy/.

/119/ V

## Life of the Individual

128 In closing this survey of the Ahaggar it is well to look briefly at the activities engaged in by the Targui from the day of his birth to that of his death. In following the natural course of a life, we may understand better than from more detailed studies of a particular phase the essence of the life of an individual within a tribe, insofar as it is possible to separate what is individual from what is tribal.

844 The young Targui makes his entry into the world in the tent, upon a rug of clean sand from the nearest wadi, sand which is, as we know, practically sterile, the heat destroying all microbes. Before giving birth, the young mother has followed the advice of her aunt or mother; she has walked up and down small hills ever since the first pains in order to "allow the infant to get well placed." As the pains increase, the young woman, now back in the tent, kneels on the sand, buttocks resting on the heels, and knees spread very wide apart; with raised arms she grasps two ropes which hang from the tent stakes. Two women hold her by the waist, encourage her,

844 /119 cont./ advise her. The waters are rapidly absorbed by the sand, which is replaced; then, naturally, without any help from the matrons, the infant emerges to lie on a bed of clean sand, his first cradle. During the delivery, it is good form for the woman to hide her suffering.

[184] /120/ In the noble tribes, with the Kel Rela in particular, the woman who begins to feel birth pains leaves the camp and goes into a sufficiently sheltered ravine, where the sand is very clean. She makes the delivery alone, taking the position noted above, then returns to the camp, holding her baby in her arms. She does not show the least trace of joy at the compliments of the other women. I spoke of this custom of the nobles to a vassal woman, who said to me: "It is true that the nobles do this, but it just swagger." The word she used might better be translated "affectation."

The baby, after being washed, is wrapped in a cotton cloth, preferably an old chèche /a long scarf/, and then laid on a rug near its mother.

846 853 For three days the baby will be given goat's milk with a small spoon, and only at the end of this time will the young mother nurse it. If the mother does not have enough milk, the infant is brought up on goat's milk, unless a woman of the camp can nurse the baby.

846 The new mother rests for seven days and receives no man, except for her near relatives, but nearly all the women get up from bed from the second day on. In the noble tribes most under the influence of Islam, the women observe a retreat of 40 days.

846 751 The newly delivered woman affords a particularly defenseless prey for the Kel es Souf. In order to protect herself and her infant against the attempts of the genii, she burns taharadjellé in the tent and goes outside the asaber /that is, outside the mats which line the tent and encircle the space before the tent/ only when armed with a knife, which, it seems, is very effective against evis spells. On the subject of superstition, it

846 /120 cont. / is said that a woman will never again bear children
751 if, during a delivery, she turns the foetal pouch inside out. Another cause of sterility is being hit by the tail of a uran.

845 Deliveries generally take place very well, but there are accidents, the percentage of which is not known; either the infant dies or puerperal fever is contracted. The Tuareg are completely powerless against such accidents resulting from childbirth.

852 /121/ On the seventh day of his life, the infant receives
553 his name, the occasion for a celebration to which all the close relatives are invited. A great meal is served, followed by tendi and ilougan. It is an honor to be the godfather and to give the infant its name; this honor is paid for in gifts (alouf). When several persons are candidates for the position of being the godfather, the winner is chosen by drawing straws.

854 As do all the mothers of the world, the Tuareg woman coddles her baby, covers it with caresses, is touched to hear it cry, and sings it to sleep: "O hare, bring slumber, my baby won't sleep." As soon as he can walk, the infant gets to know the camp; he wanders around the tents, plays with the black servants near the fire, learns to talk, and remains very attached to his mother, who, day after day, teaches him the customs. The daily observation of the customs makes the child very obedient and very respectful.

857 At about the age of five, the young imrad Targui beings
868 to follow his brothers or sisters as they tend the goats. The young nobles follow their Negro shepherd. The child thus learns to know his country, the paths, the plants, the animals, and their habits. An old servant will point to a track on the sand and say: "Here's your father's camel, and this track is that of the female camel that just gave birth."

During his comings and goings across the pastures, the desert life engraves itself on his memory. He notes the track of the gazelle on the sand and that of the cheetah in pursuit. "Look," says the old slave, "in spite of the slyness of the

857 868 /121 cont./ cheetah, which was working forward at a crawl, the gazelle sensed its presence and leaped away. Here is where the cheetah pounced, see how deep the prints are; he leaped five times but could not catch the gazelle, which was a large male." The young Targui raises his head and shows his joy in learning that the gazelle was saved, for after his lightninglike leaps the cheetah could not outrun the gazelle. "But you," says the slave, "when you have a rifle, you will approach the gazelle as the cheetah did, against the wind, and you will not miss him.

"These pretty patterns on the dune are the work of the khanfous. /122/ This morning he went back in his hole under that rock. Be careful in lifting the stone, for the khanfous often is the slave of the scorpion; it is even said that he is the scorpion's father. Be careful when you see that track there, it was made by the viper; let's follow it.... Here's where it ends in that cluster of chabrok. Get a rock," the old servant says, "I'm going to set the brush on fire." The chabrok crackles as it blazes, and soon the hiss of the reptile is heard as it leaves its hole, numbed. The child strikes; this is his first hunt.

In this way the desert reveals its secrets each day. That green line ending in a red point there on the rock is "matarter," the poisonous lizard. He nods his head up and down, as if he were saying a prayer to the sun. He must not be touched, for his bite is like lightning. The large dob, covered with scales, whose enormous tail is armed with spikes, will be a toy for the child who catches it, provided he is not bitten, for the dob never lets go, and the finger would have to be amputated. If by luck the young Targui has captured a female, he can eat her eggs, a treat for the children. "The stomach of the dob was full of water," he remarks to his slave. "That [825] is because it's Friday, and the dob only drinks on Friday," says the latter. "Even if there is no water about, even if it doesn't rain, each Friday God sends the dob his ration. When

857 /122 cont. / you want to keep a dob to play with the next day,
868 tie him with a cord, but never put him in a sack that has held dates or sugar, for he would die."

857 Living in constant contact with nature, the young Targui
868 comes to know its secrets; each of his observations teaches
825 him; he is curious about everything that lives and moves about him. His slave, who follows him, protects him, and loves him as a father, explains everything he sees with the words and images of a simple soul, embellishing the old themes of the country. "The black and white bird following us, flying from rock to bush, is 'moula-moula.' You must not kill him, because he brings good luck to those he escorts; besides, he is a messenger -- each time he comes close to you and cheeps, he wants /123/ to tell you a friend is coming, or warn you about losing something, or alert you against a viper crawling toward you. 'Moula-moula' knows all, and he tells it to men, but you must understand his language; there are many in the Ahaggar who understand his messages. You must learn to speak 'moula-moula.'

"The other day you were afraid when you heard the huff of that big lizard you wanted to catch to play with as with a dob; it was a uran. It has a thin tail, but it is more dangerous than the big tail of the dob. When a uran lashes a man, the mark stays in his flesh forever, and it is not good for a Targui to capture a uran, for it is said that a uran was the uncle of the first mother of the Tuareg. That is why it gets mad when one of its own people makes fun of it. On the other hand, it is afraid of the Negroes and runs from us, because it knows that we eat it. Don't try to catch a uran; I once knew a Targui who wanted to go against the custom. It was a summer day in the middle of the Tanezrouft; he caught a uran, put a cord around its neck, and tied it to his camel. He got down and let go the bridle of his mount -- for what reason, I do not know -- and at that moment the uran lashed the camel with its tail, making it trot off at great speed. Still whipping, the

857 /123 cont. / uran made the camel run until it fell completely
868 exhausted and refused to budge. The man almost died of
825 thirst while following the tracks of his animal. When he found it the first thing he did, even before drinking, was to let the uran go."

855 Upon re-entering the tent at night, tired from running about during the day, his imagination full of his discoveries, the child settles down in front of the fire, whose flames execute a marvelous dance for him. His eyes close as Venus, "she who sold her father to have beauty," sinks on the horizon.
[264] This does not please the mother; the child must eat, and one eats late in the tent, for the slaves must milk the camels and goats before making supper. She awakens her son, draws him to her, covering him with a dokkali to protect him from the cool of the night, and then begins to tell tales of the past.

/124/ These stories, which make up Tuareg folklore,
539 tend to disappear. Many young people do not know them; one must ask the old Tuareg men, those who miss the days of the raids, or, preferably, the women, who in all ages have been the keepers of tradition.

Some of these stories are fables peopled by the animals of the Ahaggar or the Sudan; sometimes they express a moral, but that is rare. Others are amazing tales in which monsters and genii harass men; often a hero succeeds in vanquishing them. These stories are very long; they contain instruction in the customs, and I think they bear a message from distant ancestors. This message, sometimes stylized, truncated, or embellished by the oral transmission, deserves to be studied; in order to do this, as many as possible of these tales should be collected before they are forgotten.

Here is the story of the jackal and the dob, as it was told to me by one of my pupils, a Targui of noble stock.

539 /124 cont./ The jackal and the dob were hunting together when chance led them to fall upon a goat, who soon departed this life. The dob made the fire while the jackal carved up the animal. The liver and the heart, grilling on the goals, gave off an enticing odor, which made the jackal regret his promise to the dob to share the hunt. Being shrewd and crafty, he sought a way to do his companion out of his share of the spoils. "Would you," he said to the dob, "take this liver and heart to my old mother, who lives in the next ravine? The poor thing can't hunt any more. While you are gone, I'll be dividing the meat." So the dob went off, trotting across the sand and rocks, carrying as best he could the gifts of the attentive son.

As soon as his partner was out of sight, the jackal jumped over the ravine, scaled the hill, and waited for the dob at the appointed place. Pretending to be feeble, he received with many thanks the gifts brought by the lizard. The latter took the path back with his rocking gait. Upon arriving back at the site of /125/ the kill, he saw the jackal stretched out near a clump of afazzou, full and sleepy, but there was no sign of the meat he expected to see.

"Where is my share?" he asked.

The jackal hardly bothered to look at him; a harsh laugh made the poor dob understand that he had been tricked.

Angry at having been so rudely cheated and vexed by the manner of the jackal, the lizard tied the bones of the goat to the tail of the sleeper. When he had finished his work, he said:

"Wake up! a man is coming toward us."

"No matter," answered the jackal without even opening his eyes.

"Careful, my friend, two dogs are with him."

Without asking any further questions, the jackal jumped up and ran off as fast as he could go. At each bound the bones hit the ground, making him believe the dogs were about to grab him. He ran and ran and ran, and, during his frantic

539 /125 cont. / flight, the bones dropped off one by one. Only one was left when, exhausted, he turned around to face his enemy. He understood then how the dob had taken his revenge. Furious, he retraced his steps, determined to make the dob pay for his impudence.

But the dob had forseen the anger of the jackal and had hidden in a hole in a boulder, barely showing the end of his nose.

"How in the world did you make that hole to hide in? I would like to have such a safe place myself, " said the jackal sweetly.

"Very easy, " the dob assured him. "Go get plenty of dry wood, stack it against the boulder, and make a great fire. When the flames are high, butt your head very hard against the rock, and it will open up. We dobs always do it that way."

Driven by his anger, the jackal carefully followed the instructions of the dob. Knocked out by the butt he gave, he fell in the fire and was roasted.

Stories of this sort are numerous, always amusing and full of lessons, as much by the observation /126/ of the animals' characters as by the morals to be drawn.

Here is a story in which the jackal is tricked by the hedgehog. The latter enjoys a most flattering reputation for cleverness.

A hedgehog and a jackal one day found themselves before a dead camel, which offered an excellent feast for the pair. "Go look for some fire, " the jackal said to the hedgehog, hoping to play one of his tricks on him while he was gone. The hedgehog, rightly suspicious, replied: "Your legs are longer than mine, and you have an established reputation as a runner; you can find fire a lot faster than I can; you go, and I'll stay and guard our prize. "

539 /126 cont./ The jackal left at his little trot, which enables him to cover the longest distances without tiring. The hedgehog, having watched the departure of his partner, went back to the camel and cut it into small pieces, which he buried near a tahla /tree/. When he had hidden all of the animal, covered the holes with sand, and rubbed out the traces of his comings and goings, he stuck the camel's tail in a hole, leaving only a few tufts of hair visible. At that point he saw the jackal returning with a firebrand; he then seized the end of the tail and pretended to be trying to pull it from the ground.

"What are you doing in that ridiculous position?" the jackal asked. "Tell me what has happened to the camel, which I don't see any more."

All out of breath, the hedgehog replied: "The animal wasn't dead; it heard that we wanted to cook it, and scarcely had you gone when it dug a hole in the ground to hide itself. I'm not strong, and I couldn't keep it from digging in and burying itself, but I've got it by the tail and it can't get very far."

"Let me take your place; I won't have any trouble in pulling it out."

"Don't get excited," said the hedgehog. "We've got plenty of time."

Alas! The jackal did not listen to this counsel of moderation; /127/ he pulled violently and fell over backward, the camel's tail hanging sadly from his muzzle.

"Your haste has ruined us," the hedgehog said. "The camel has disappeared underground. At least we still have the tail, which we'll have to content ourselves with."

"You'll get nothing, stupid hedgehog," barked the jackal angrily.

He grabbed the tail and ran off with it to appease his hunger.

Let us now listen to a story, "einoukhast," as the Tuareg say, which is very well known and is often told:

/127 cont./

539 The Lion, the Hyena, and the Jackal

Game being rare, the lion invited the hyena and the jackal to hunt with him on a certain summer day.

The association proved to be fruitful; in a short while the ground was strewn with antelopes and gazelles. A lavish meal awaited the hunters. The lion, fair by nature, asked the hyena to divide the shares. The latter, with his powerful jaws, soon cut up the game into pieces, and made three obviously equal piles. "Very good," said the lion when the work was finished, "but what is the meaning of these piles?"

"This one," said the hyena, "is for you, that one for me, and the other one for the jackal."

Two powerful blows with his paws, knocking over the hyena, constituted the first reaction of the lion, who then explained: "That is no way to divide the shares; people are right to say that you are dense."

The lion calmed himself and said to the jackal: "See if you can settle this question."

The jackal restored the piles of meat, which had been scattered by the lion, and said: "This first pile is for you, the second pile is for your meal tonight, and the third pile is for your lunch tomorrow."

The lion was extremely pleased. "Who taught you to divide shares like that?"

"It was the cuff you gave to the hyena," said the jackal.

/128/ The oral tradition often passes on lifelike stories, stripped of all marvels but which are profitable lessons, such as the two anecdotes which follow:

539 /128 cont./

The Negress and the Three "Tahenchit" (1)

1. The Tuareg tahenchit designates the cynhyena -- Tycaon pictus. This is a ferocious animal which hunts in packs and will attack men and sometimes lions.

One day a Negress left her village to gather wood. She had finished gathering her fagots when she saw three ferocious and hungry tahenchit running in her direction. Dropping her wood and calling on God, the Negress scrambled up the nearest tree. Scratched by the thorns of this saving tamat, she regarded the three wild beasts which, with foaming muzzles, besieged the tree. The day passed, and night fell. The beasts seemed to be asleep, and the Negress was very sleepy herself, but each time she dozed off she nearly fell. What had to happen, happened; she went to sleep, then fell. In falling, she screamed, and then screamed louder still upon landing on the ground in the middle of the tahenchit.

"Take your shares," she cried, hiding her head in her arms.

But the tahenchit, frightened by her cries and the noise of the fall, fled toward the desert. The Negress did the same toward the village.

825 The tahenchit is feared by the Tuareg who go to the Sudan; the animal does not inhabit the Ahaggar at present. The Augières-Draper mission of 1927-1928 found one on the border of the Tanezrouft near Timissao. The ferocity of these animals is hard to believe. The Tuareg tell of one of

825 /128 cont./ their men who was surprised by a pack of cynhyenas and who took refuge in a tree, where he feared a long siege. Knowing the voracity of the tahenchit, he cut his finger and let the blood fall on one of the beasts. In a very short time, the pack fell on the one /129/ that received the drops of blood and tried to tear him to pieces. The attacked beast fled, pursued by all the pack. The Targui got out of this difficult situation thanks to his knowledge of the habits of the desert beasts.

539 Here is another story, which proves that it is well to be armed in all circumstances.

## The Two Brothers and the Lion

It is said that there were once two brothers, still living in their parents' tent, who were united by a rare affection for each other. Nearly old enough to marry, they often went to pay court to the girls of neighboring camps. They showed themselves to be true Tuareg from the tendi to the ahal /gatherings where young people of both sexes meet/.

One evening one of them went out alone, dressed in his best finery and armed with his spear. As the camp he was to visit was quite nearby, he left on foot.

After having walked for a good hour, he realized that the camp he was looking for had moved. At the camp site, a lion wandered about in search of food.

Upon seeing the man, the beast became frightened, then roared and leaped. The Targui, quick on the defense, hurled his spear and pierced the lion's front and back left paws. Despite being hobbled by the spear, the lion struck the man with his good paw, killed him, and tore him to shreds.

The next morning the other Targui began to worry when he saw that his brother had not returned. He carefully armed himself, taking his spear, his shield, and his takouba /sword/, and set out to follow the tracks.

539 /129 cont./ Upon arriving at the scene of the drama, he soon was able to reconstruct the event and to see its fatal outcome. As he was a brave man, he could not return to camp without avenging his brother.

He tested his takouba to make sure it left the scabbard easily, held his shield close to him, and steadied his spear. When he was ready, he cried "Arr arr rrinek" several times with all his might. (This cry, it seems, has the power to render the lion particularly furious.)

The lion soon appeared, his mane bristling, his eyes /130/ terrible. The man gave his cry again. The furious beast charged. At the first bound, the spear which still hobbled him broke. The Targui threw his spear but missed the bounding animal. Parrying the animal's terrible cuff with his shield, the Targui drew his sword and with one blow cut off the lion's head.

He returned to the tent with his trophy and with his brother's broken spear.

Even for going to the ahal, one must, in the desert, be very well armed!

In the vicinity of nearly all water points in the Ahaggar, [171] one may see engravings on the rocks. The Tuareg are very familiar with these reminders of another age; by tradition they attribute these works to two mythical characters whose names we cited in a previous chapter: Amamellen and Elias. Here is a legend concerning these two heros.

Long, long ago, long before the Tuareg came to the Ahaggar, other peoples lived on these lands. No one now is able to say who these people were. All that is known is that some among them were rich, for the land was fertile and the rains abundant. The chiefs were honored, as their tombs

539 /130 cont./ attest, and their power over the spirits was great, for they knew the language of the Kel es Souf. But all that is past, and it is not well to bring to light forgotten secrets.

At that time there lived a man called Amamellen, a noble in estate; he was rich, and he had numerous slaves to care for his flocks scattered throughout the Ahaggar. It is not known how he acquired his art, but he was extremely skilled in tracing on boulders the silhouettes of all the animals he saw around him in the desert. He also knew how to draw men. Most of the time he engraved on beautiful smooth stones, and sometimes he colored his drawings in various ways.

Amamellen had a nephew, the son of his sister, an intelligent boy, /131/ clever and courageous, who often accompanied him on his travels. By being with his uncle, Elias very soon learned to engrave and to paint.

Amamellen was satisfied and happy with the progress of his nephew.

As he grew up, Elias perfected his gifts and became even more skilled than his uncle. All the people spoke of him and praised his savoir-faire and his mastery in painting and engraving. It was also said that Elias possessed extraordinary strength. The following story was told of him. While he was practicing engraving on the rocks of the djebel /mountain/ Teferkit near the Tefedest, he saw that the kids left to wander by the slaves came to suckle their mother. Having called in vain for the goatherds to separate the animals, he became angry. With a blow of his saber he cut off the summit of the djebel Teferkit and put it down in the middle of the Adenak wadi. Having separated the goats from the kids, putting the former on one side of the summit, the latter on the other, he was able to continue his work undisturbed.

To this superhuman force, he joined such qualities of mind and heart as are seldom seen even in our time.

To hear his nephew constantly praised everywhere he went made Amamellen jealous, and this jealousy was multiplied each time he saw Elias' works.

539 /131 cont./ In those days people did not know how to control their feelings, and the time came when Amamellen wished for the death of Elias, being moved by envy and, doubtlessly, also by evil genii.

He could not openly kill his nephew, even by surprise, without being hated throughout the country, so he found a way to get rid of Elias without being suspected of the deed. Amamellen picked a slave, a strong but not very intelligent boy, who obeyed his master without trying to understand the reason for his orders. "You will go," he was told, "and lead my camel herd into that wadi we passed by some time ago, near that black mountain where I killed the antelope whose horns you saved."

/132/ "But that wadi is very far to the south, outside of the usual trails of our tribes."

"I know, but those are my orders. I also know that the wide plains are covered with excellent pastures."

"Very well, master, it shall be as you wish."

"You will not go alone; Elias will accompany you."

Lowering his voice, Amamellen told the Negro the rest of his project. He finished his instructions in a whisper, while the slave, astonished, his eyes wide, remained fixed to the spot. A rough blow brought him back to reality.

"Go," said his master, "and get everything ready by sunrise. I shall tell Elias."

The next morning a hundred camels left for the south. Elias and the slave rode in front, armed with takouba and spear. Two guerbas /waterskins/ hung from the flanks of their mounts.

When the caravan had left the last mountains of the Ahaggar and the habitual trails, the question of water began to be important. The Negro, well instructed by Amamellen, was confident of finding the well or the abankor /water hole/ before the guerbas were empty.

539 /132 cont./ Elias regretfully saw the mountains recede; he trusted the slave, who knew the way, and on his mehari he seemed to doze, as if crushed by the tedium of those immense, horizonless wastes.

One evening an isolated mountain in the reg appeared in the distance. "There is where we are going," said the slave. The next day toward noon Elias could see an immense pasture, such as his uncle had described. In the wadi's bed, immeasurably wide, a veritable sea of green stretched as far as the eye could see toward the south. Thousands of birds flew over as the camels passed.

"Let us stop here," said the Negro. "Here is where your uncle wants his animals to graze."

They established their camp at the foot of the mountain with the black rocks, which dominated the desert horizon and of which Amamellen had spoken.

/133/ It was still very early, and yet the heat became unbearable, like nothing known in the Ahaggar. Elias was thirsty, and he said to the slave: "Go look for water, for the guerbas are empty."

"Alas," said the Negro, "there is no water in this accursed country; we left the last well behind us seven days ago."

"Why didn't you fill all of the guerbas we have in reserve during our last stop at the well?"

"I didn't think of it, and you didn't tell me to."

"Go back, then, to that well and bring back water."

"How can I?" whimpered the slave. "Our animals are tired, and I could not get to the well, much less return. The beasts must eat for several days before being able to undertake this trip."

Elias realized that what the slave said was true, but he began to think that he was the victim of a trick. Instead of getting angry, he reflected and watched.

Two days passed from the time they had arrived at the pasture, two long days during which the sun of the great regs

539 /133 cont./ seemed to them to make the sand and the stones boil. The animals constantly grazed on the wet leaves which nourished them and at the same time made it possible for them to go several months without drinking. Elias was suffering from thirst, and he was astonished to see the slave carry on as usual, going from the camp to the pasture, returning under the torrid sun, in short, accomplishing all of his daily work, while he himself felt incapable of taking a few steps without falling.

Night fell; the Negro slept. Elias, who had stayed awake, took the slave's nalls /sandals/ and spread a thin layer of butter on the soles. Having returned the nalls to their place, he stretched out and pretended to sleep while continuing to watch the slave.

Well before daybreak the Negro put on his sandals, examined the sleeper a moment, then, reassured, left the camp silently. Then, jumping from rock to rock, he climbed the mountain and disappeared.

/134/ At the appearance of the first rays of the sun, Elias in his turn left for the mountain, following the prints left on the rocks by the greased nalls. There was no trace whatever of footprints on the sand, which is why Elias had not been able to follow the trail of the Negro during the first two days. This time it was different; the slave had stepped only on stones, so the trail was long and winding. Elias rested often, for he was weak with thirst, but he started off again as soon as he could, fearing to lose the small tracks which shone in the sun. After an hour of hard walking, he arrived at a hole between two boulders at the bottom of which glistened a mirror of water.

After slaking his thirst, Elias felt his strength returning rapidly and returned to the camp by the same path. He said nothing of his discovery to the Negro. Days passed. The slave was not even surprised that Elias could live without drinking. He followed his master's orders without trying to understand; he was sure he had not been followed in going to drink, and that was enough for him.

539 /134 cont. / Back in the Ahaggar, Amamellen was becoming impatient; a month had already gone by, and his slave had not yet returned. Perhaps his project had succeeded better than he had hoped; perhaps Elias was dead, and with him the compromising witness. That was what Amamellen thought, but he had to be sure. He outfitted himself and started off.

His surprise and anger were great when, upon arriving at the pasture, he saw Elias stretched out on his rug while waiting for the Negro to return from counting the herd. However, despite his disappointment, he contained himself.

"How did you find something to drink?" he asked his nephew.

"I haven't had anything to drink, " replied Elias. "The Negro can swear to it. "

The Negro, taken aside, did in fact confirm Elias' words.

"No matter, " resumed Amamellen, "the main thing is that the herd is in good shape, and I congratulate you on that. For the time being, I intend to stay here awhile with the slave. You, Elias, will take your camel and leave for the well that is seven days from here going toward the Ahaggar. At this well, I left 100 female camels, 100 horses, and 100 asses; you will see that they drink, and you will /135/ fill the 100 guerbas that I hid near the well, after having repaired them, for many of them are ripped. Then you will return to the Ahaggar where I will rejoin you. "

Elias took leave of his uncle, then left during the night. He preferred this nocturnal departure, as it allowed him to fill his guerba at the aguelman /same as guelta/ without being seen. He did not know his uncle's schemes, and he was happy to leave this place where he had almost died of thirst.

Remaining behind with his slave, Amamellen gloated over Elias' departure, for this time his nephew was sure to die despite all his cleverness. In point of fact, bandits were heading for the well in order to steal the herds, and these

539 /135 cont./ cruel raiders never left anyone alive to tell the tale of their dark deeds. Elias, who had to stay in the vicinity a long time to carry out the chores given him by his uncle, unquestionably would fall under the blows of the bandits and would perish as surely as if Amamellen himself had plunged a knife into his heart.

Elias urged his camel on, for the previous night he had seen a number of fires to the east. He knew he was not safe in these regions so far from the mountains of the Ahaggar. Such a large number of fires was suspicious. There was little doubt that it was a raiding party on the way to the Ahaggar, and it must inevitably pass near the well he was making for.

He took only three days to reach the well, having trotted every night. Without wasting any time, he assembled Amamellen's herd, drew water night and day to water them, repaired the torn guerbas, and then filled them all.

As he was getting ready to leave, an armed and menacing troop appeared and began to surround the herd with the evident intention of stealing it. Elias jumped from his camel and leaped astride the most spirited stud camel of the herd. Armed with his saber and protected by his shield, he flew at the biggest group. Striking to left and right as would some demon, he spread such terror among his assailants that they fled, swearing that they had run up against a Kel es Souf.

/136/ Without waiting any longer, Elias drove the herd before him and set out in the direction of the Ahaggar, whose steel-blue summits he perceived on the horizon.

Three days passed after he left the well, the country became wilder, the dull waste of the regs gave way to the first foothills of the Ahaggar, and the wadis wound through deep gorges. This sight overjoyed Elias, for it announced his homeland. He was attacked at a turn in a wadi by a large group of bandits. He drove his herd, the horses in the lead, into the boxed-in wadi. Shouting and bellowing, he stampeded his beasts, prodding the laggards with his spear.

539 /136 cont./ The animals galloped ahead in a compact mass, giving the impression of a torrential flood surging down a narrow gorge. Elias, still mounted on his horse, had no trouble in routing the assailants, who were trapped against the sheer walls of the gorge by the wave of frightened animals.

However, the bandits did not want to let such a good prize get away: so many animals, and guarded by a single man, be he a devil, had to be raided, and this devil had to be punished for his boldness. They had to act before Elias could reach the high mountains of the Ahaggar, until then an inviolate lair. They waited until the herd had entered the vast Tamanrasset basin. There the wadi spreads out, goes along the Adrar Haggarène with its vertiginous peaks, and runs against the Adriane, whose vertical walls prevent all passage.

Asses, horses, camels, all advanced in close ranks in the bed of the wadi, which was bordered by verdure, when Elias saw that the raiders had formed a large arc designed to drive him against the cliffs of the Adriane. Contrary to their usual practice, the bandits advanced in silence, closing their ranks little by little. The silence was nerve wracking, and Elias felt himself lost despite his courage and his cleverness. He was going to fall before the enemy numbers, so near his native mountains, whose peaks he named to himself without thinking. There was no question of repeating his exploit at the well; the raiders would not let themselves be impressed a second time.

Elias had an inspiration. He vaulted to the slope of fallen rock at /137/ the foot of the mountain and climbed to the top of it to the beginning of the sheer wall of the cliff. He watched the movement of the bandits an instant, then unsheathed his saber and struck the cliff such a powerful blow that the mountain was nicked. The immense block thus cut away fell into a neighboring wadi. Climbing down the rocks in all haste, Elias forced his herd to climb the slope and pass through the passage he had carved out. All of the animals disappeared

539 /137 cont./ under the eyes of the bandits, who regarded with stupefaction the man who, having hewn a piece out of the mountain, defied them from the vantage point of the breach.

Thus ends this story of Elias. Others concerning this hero must exist, but they are buried in men's memories.

One may still admire Elias' exploit: the breach in the [823] Adriane is a landmark of Tamanrasset, and the boulder that was hewn from the mountain rests eight kilometers from there in the In-Zaouen wadi, where it has remained planted, a reminder of the hero's valor.

852 Thus, observing nature, listening to the old stories, the 304 young Targui grows up and forms his opinion. At the age of six or seven years, he undergoes circumcision: "agadam." The relatives gather for a big meal on this occasion.

857 From the women, the young boy learns to sew cloth and 868 leather. He makes toys from old rags; these are usually camels in stylized forms, sometimes having real artistic value. Toy in hand, he races with his comrades to see whose camel is the swiftest. Girls and boys alike make dolls dressed in the Tuareg style; they play camp, paying visits, drinking tea, and striking camp. The young boys carve greatly stylized camels on flat stones or on goat jawbones cut in two.

A favorite amusement consists in mounting an ass and making it gallop, which is not accomplished without numerous falls in the beginning. However, it is the camel which haunts the child; his father has /138/ already let him ride for a circle around the camp, but the little boy wants to be master of his own mount, to guide it across the fallen rocks of the nearby mountain, then to break into a fast trot on the plateau bordering the wadi but not beyond, for he would be seen from the camp and would risk a severe scolding for having taken a camel to amuse himself. Nevertheless, his parents know how it is, for they did the same thing themselves when they were young, but the "canoun" must be applied.

857 /138 cont./ When, by chance, the camp is near a guelta, the child may frolic in the water, the favorite summer sport.

If two large camps are near each other, joint games very
857 soon are organized. Sometimes a kind of hockey is played
526 with a leather ball stuffed with goat's hair. The ball is hit with a cudgel taken from a tahla; sometimes, to the delight of the spectators, hand-to-hand fights break out, with the first of the two antagonists to fall to the ground being declared the loser. As the children get excited, veritable battles take place between the two camps; it is war. Sticks and stones enter the game; trickery and force are used. The battle stops at night or when the first child is hurt, but custom requires that nothing be said to the parents, above all nothing of the origin of an injury; the child who did that would lose his honor, and parents are so slow to understand!

857 The little girl prepares for her task as mistress of the house at the side of her mother. She sews in collaboration with the
868 women, who never work individually. She is taught how to cut fine leather thongs and how to plait them; while she works she is taught the traditions of which she must be the fierce guardian later on, as she often will have to recall them to the men, who, always on the move, have a tendency, through lack of use, to forget the true Tuareg "canouns."

During their play, the children learn tifinagh writing
868 from the older ones; they trace words in the sand, then phrases. But it is in the evening before bed that their mother will give more precise lessons in spelling the words they have acquired. Thus, gradually, /139/ the child learns to read and write his language; he will never have great facility in it, but that is due to the difficulty of the method of writing.

Every Targui knows the mnemonic aid for remembering
868 the letters of the tifinagh alphabet; it is the following phrase:
211 "Fatimata oult Oghanis, tagueltenit mraou issen edssedis; tedjehenet ouart thouadis," which may be translated: "Fatimata, daughter of Oghanis, whose bride price (to be paid) is 16

868 /139 cont./ horses; no one may touch her ribs." As a matter
[211] of fact, many of the letters are not found in this phrase, but it is a good enough reminder.

Among the imrads the young boy, from the age of ten, accompanies his father to the Sudan or to the Amadror saltworks. In this way, little by little, he acquires knowledge of the trail. The noble remains at camp longer; by listening to the discussions of his elders he becomes acquainted with the art of command.

884 Gradually, the young Targui begins to wear the veil, at first using an old chèche /scarf/, which he tries to arrange in the proper fashion. At the age of fifteen he will put on the taguelmoust /blue veil/ for good during a celebration; he
[431] will take part in an ilougan /tournament/ mounted on his own camel, the gift of his godfather, or on a borrowed animal.

On this occasion he receives gifts, a takouba /sword/, a taguelmoust, or a takamist /a kind of gandurah worn on festive occasions/. He is now a young man. The girl officially takes
[881] her alechou /shawl/ at the time of puberty; she also receives gifts: the alechou, clothes. She is made much of. Now she is considered to be a woman. Until now she did not speak before the men, maintaining a shy attitude; now there is an end to that, everyone obliges her to talk and to conduct herself as a lady of the house.

Boys and girls who have assumed the taguelmoust and the alechou may thenceforth attend meetings of the adults, but they do not speak except when asked a question.

The occupations of the young people are practically the same as those of the adults. The girls help with cleaning the tent, mend clothes, and make leather bags; among the imrads, they milk the cows.

/140/ The young man begins to travel alone and tends the camels. If he still amuses himself by fighting with his friends, he no longer fences with the takouba, a practice in former times.

861 /140 cont./ The child has never been able to have his way in his parents' camp; he has always had to bow to the canouns; if, by chance, he was disobedient, his parents did not hesitate to use corporal punishment -- a few slaps, nothing more; for a more serious fault or for the repetition of an offense, he would find himself tied up like a young goat and condemned to stay in the tent. However, punishments are the exception; a word, a look, suffices. It is not at all good, the Tuareg say, to beat children too much. This training gives the young Targui a proud character, an acute sense of
181 his dignity, and a sometimes disquieting reserve. Absolute obedience to custom makes it necessary to lead a moral life which is perhaps more rigid than a religion could make it. To know a Targui and to predict his behavior is very difficult for a Frenchman, who must sort out what is individual from what comes from the constraint exercised by Tuareg society and then must take into account the coloring that Islam gives to the whole.

836 Soon the time comes when the young Targui may go to the tendi and ahals. It is necessary to say here a few words on sexual problems.

Certain stories have greatly exaggerated the freedom of morals among the Tuareg. The training of the boys, which keeps them very often out of the company of adults, and that of the girls, which ties them to their mother and obliges them to be modest, does not predispose to license.

836 There is no sexual education properly speaking; for a very long time the young girl is ignorant of everything con-
864 cerning conception. Casually, thanks to an older girl companion, she learns the essentials of intimate relations between men and women. The young man is initiated much sooner, for he may easily leave the camp; enlightened by his comrades, he wastes no time in starting an affair with a Negress of the neighborhood. The sexual customs are transmitted in conversations /141/ among the young Tuareg and are observed

83 /141 cont./ as are the other customs; there is one very
864 interesting one, the respect for the Tuareg girl. Contrary to a commonly held opinion, the young girl about to be married is always a virgin (physically) among the nobles and nearly always one among the imrads.

839 In their first youth, the Tuareg behave as do all the children of the world; they practice solitary masturbation, girls and boys using procedures characteristic of the country.
786 The first amorous relations between Tuareg girls and boys take place after celebrations. It is well to describe these celebrations, for accounts of the famous "courts of love" have been much exaggerated.

We have seen that the Tuareg organize a tendi on the
[534] occasion of a family ceremony. The tendi takes its name from the instrument used, the large wooden mortar over which is stretched a skin which has been dampened previously. The women gather around the tendi, and one or two beat out traditional rhythms on the skin, which resonates dully. One of the women chants an endless series of couplets while her companions mark the measure by clapping hands and take up the refrain in chorus. The songs evoke past combats as well as recent events; they vaunt the merits of a camel or those of a person; some are improvised. Widows, divorced women, and young girls take part in the tendi, but married women, with the permission of their husbands, also go. A woman leaves the tendi if one of her parents approaches it.

The songs continue, accompanied by the tom-tom; the men then come to sit behind the singers, listen, and also sing. Each hugs his female companion next to him, but hardly passes the limits of a public flirtation. The tendi continues late into the night while the old people sleep in the tents.

In the daytime the tendi is the indispensable accompani-
526 ment of the ilougan, which may be defined as "a tournament on camel back."

526 /141 cont./ The young Tuareg dress very carefully, /142/ each showing great fastidiousness. The camel is decked out as richly as possible. Half of the riders line up about 50 meters from the tendi, and the other half at an equal distance on the other side of the tendi. The Tuareg ride from one line to the other in pairs; each Targui watches his bearing, holding himself straight but supple, makes his mount hold its head as high as possible and keeps it abreast of its neighbor, making it trot with the gait called senat-senat or kibarat.

Quitting this back-and-forth movement, a group of riders circles the tendi as close as possible to the women; one of the Tuareg seizes one of the singers' alechou and rides off furiously, whipping his mount. His friends chase him, trying to take the veil from him. The one who succeeds in recapturing it takes it back, as victor, to its owner. He is saluted with tarallélit (the you-you of the Moors). The ilougan lasts until nightfall.

[177] It must be noted that the tendi did not originate in the Ahaggar; it was imported from the Adrar des Iforas and from Tamesna.

584 A gathering native to the Ahaggar is the assihar. A great number of men and women gather around a famous woman imzad player. They listen to the violin, which begins the first measures of a familiar song, then a man or a woman begins to sing. Between songs conversations are held, and flirtations begin in the darkness, but within the strictest bounds of propriety.

When the assihar ends late at night, young men and women go off in small groups; this is the ahal. A woman escorted by two or three young men goes to sit by a bend in a wadi. Her companions speak to her aloud when the conversation is for all ears or very softly in the ear when there are confidences to make. One of them takes the young woman's hand and holds it in his; an old Targui said: "I once held the hand of the woman I desired for three straight nights, and for three days I did not eat."

584 /143/ There is a language of the hands which supplements the conversation of the ahal; here are several examples. Having taken the woman's hand with fingers interlocked, to place one's thumb against the end of her thumb means: "I desire you very much." To trace a circle in the palm of the hand, pressing the index finger in the center of the circle, is to ask for an intimate union. The woman thus solicited takes the hand of her suitor and traces a line with the back of her index finger going from the wrist toward the fingers, which means: "I refuse." But if having done this, she traces another one in the other direction, it means: "Leave with your friends and come back alone."

584 833 Once alone with his girl friend, the young Targui will continue to pay his court, sometimes platonic, often less so. Putting their faces together, nostril against nostril, they breathe together. This type of kiss is known for the mouth too but is little practiced. Manual caresses follow the kisses. The men often stop at this stage with virgins, for they know how to "recognize a virgin by her walk, her bearing, the firmness of her breasts, and the reflex of her Achilles tendon!" The Tuareg know other caresses which satisfy the senses but respect physical virginity.

838 It must be noted that homosexuality, male or female, is unknown among the Tuareg.

839 It is said that bestiality, although very rare, does exist; but supposedly it is practiced as a remedy for venereal diseases.

These sexual customs make it possible to understand the stability of the Tuareg, who, although Moslems, do not suffer from suppressed desires. Rape does not exist, and when a woman refuses a man, he never insists, nor will he show himself jealous of a more successful comrade. Let us add that they are absolutely discreet about their relations with women. It is in these manifestations of the intimate life that one sees the prestige enjoyed by the Tuareg woman.

584 /143 cont./ The day comes, rather late, toward the age of 25 generally, when the Targui thinks of getting married. He gets a member of his family to make the proposal. The messenger says to the /144/ father of the girl: "I would like a tent and an asaber." The father understands that his daughter is being asked in marriage by means of this metaphor. "Tidjera-ouet," he replies, to give his consent. Then begins the discussion of the bride price the suitor must give to the fiancée and of the amount of the gifts to the family. There is a scale of bride prices to be paid to the women, which vary according to the tribes they belong to.

To take a Kel Rela girl, seven female camels must be given to the young bride; a Dag Rali must receive three female camels; the other imrad get only one. The husband must furnish the tent. On the day of the marriage, a taleb /scribe/ or, in the absence of a taleb, the chief of the tribe records the husband's gifts, which are not necessarily made but which he recognizes as being owed.

585 Everything being in order, the marriage and the date of the ceremony are announced. An enormous meal, for which a camel and numerous goats have been slaughtered, is served to the guests. Tendi and ilougan continue without interruption.

At the spot where the young couple's tent will be put up, a large pile of sand is prepared. A woman of the bride's family sits on it, holding a club in her hands, then, lowering her head, rests her forehead on her joined hands. Two men take the half-rolled tent and throw it over the seated woman three times.

During the whole day, the bride-to-be stays in her parents' tent; the bridegroom talks to the old men of the camp and does not participate in the public merrymaking.

The tent of the future couple having been erected, the young man will spend a night in it alone, seated on the pile of sand, without sleeping; this tradition is particularly respected among the Kel Rela. The second night the girl will become

585 /144 cont./ his wife. Formerly there was a custom now lost: the pile of sand was kept in the tent for three nights, and the two spouses slept separated by the pile, custom saying: "The first night, this woman is your sister; the second, she is your mother; the third, she is your mother-in-law; the fourth, she becomes your wife." And the pile of sand was removed.

/145/ Before entering the nuptial tent, the husband must walk around it three times, and the young woman must do the same. She is led to her husband's tent by a group of women from her family. Along the path leading to the tent, the Tuareg women sing traditional refrains:

"Thanks to God, my daughter leaves me this night."
The mother-in-law greets her son-in-law, saying to him: "Offer beautiful things to my daughter so that the shadow that will protect her will be cast by silk. Of the ten camels of her bride price, one has a white head; have her mount the gentlest one, and all her family will gaze on her."

Upon approaching the young couple's tent, the train of women comes to the gathering of men who are talking to the husband. The women then sing: "Thanks to God, and thanks to him before he was even named." The girl's mother greets her son-in-law. "Men, let us pass, stand aside, or else we shall push you and you will fall down, for we possess the greatest force that can be imagined."

The men having withdrawn a little, the young woman gets ready to pass over the threshold of her tent; one of her relatives appears suddenly, takouba /sword/ in hand, and announces: "You will not go in that tent." The young woman must then give her nalls /sandals/ to the interrupter in order to finally acquire the right to be a wife.

Up until about midnight numerous friends stay to talk to the young married couple.

[591] The new husband must remain in his wife's camp a rather long time before he is able to move his tent at will or to take his wife to his parents' camp.

585 /145 cont./ Some tribes, in particular the Issakamaren, having adopted many Arab customs, observe the following custom on the day after the marriage: the husband who has not found his wife to be a virgin during the meal breaks the bone of a leg of meat, eats the marrow, blows through the inside, then sticks the two broken pieces in the couscous. In this way everyone knows the affront he has suffered. Later in life, when his wife becomes disagreeable, he will put his fist before his mouth and blow between the fingers, imitating his gesture of the first day. The woman, ashamed, will stop her recriminations. Following another custom less and less /146/ in use, the woman who has found her husband lacking in virility during the wedding night will crown him with her alechou /shawl/, thus showing to the world the impotence of her husband by considering him to be like a woman.

593 562 The woman holds a privileged position in Tuareg society. It is customary to say that the reason for this must lie in the matriarchal organization of the tribes.

Among the Tuareg today matriarchy survives only in a very attenuated form due to the presence of Islam. It must be noted that the woman is absolute mistress in the tent; she gives the orders to the children and the Negroes, and she organizes the daily life; but outside the tent the man commands; he decides on the camp moves, the departures of the caravans, the commercial transactions. The woman's opinion is always taken into consideration; she is guardian of the traditions, [611] and, if she does not possess what we may call civil rights, it is she who transmits them: a Targui will be a noble if his mother is a noble. The right of eligibility to the amenokalat /chiefship of the confederation of tribes/ is given by the women who are directly descended in the maternal line from the ancestor Kella. This transmission of rights by the women constitutes the originality of Tuareg society.

837 Powerful in her home, lived by her husband, respected, the young wife has every chance to be happy. It is rare that

837 /146 cont./ the husband deceives his wife, and if this happens it is far from her when, departed for the Sudan, he remains absent a long time. The Tuareg woman is faithful; those who take a lover are rare. If a husband knew his wife to be unfaithful, simply by hearsay, he could repudiate her, but in the case of flagrante delicto he could kill the guilty pair, or he [684] could bring the case to the attention of the amenokal, who would impose a fine. The deceived wife may leave her husband; in this case she returns to her family, taking her [586] belongings with her. Divorces are rather rare and very ill thought of.

761 Death is not regarded with terror, a whole framework of beliefs strongly colored with Islamism promise the Targui 775 future recompense in the other world. It /147/ seems that charity will be particularly rewarded and selfishness severely punished; the punishments described would be similar to the offense. Extensive investigations would be necessary to sift out all the beliefs concerning death; to distinguish between what is Moslem and what is properly Tuareg would prove to be very difficult.

764 When a death occurs in the tent, each member of the family maintains an attitude of what appears to be very great dignity to our Western eyes. Certainly, it happens that some people cry over the deceased, which is human, but custom would have the tears held back; a man, particularly, would know how to control himself sufficiently not to show his grief.

The body does not remain in the tent long; the women wash it if it is that of a woman; the men wash it in the other case. It is perfumed; its members are laid out in an attitude of rest; then it is wrapped in a shroud (tifit), which is sewed up. During these operations, the tomb has been dug following the Moslem custom. Only men escort the corpse to the grave. After having buried it in the tomb and covered it with earth, they put up stones to mark the place, and each man returns to his tent. There is neither song nor prayer.

764 /147 cont./ A meal is served to those present at the expense of the deceased according to the instructions he has given before his death. If his wishes were not carried out, the livestock earmarked for the occasion would perish.

763 It is said that he who dies in a position of rest, his arms relaxed, his face serene, was a good man and has every chance of being rewarded. On the other hand, he who expires all curled up and with his fists clenched against his face was a bad man; even if he hid his faults during his lifetime, he is doomed to future woes.

428 The rules of inheritance are poorly known by the Tuareg; only the old know the customs, for to a greater and greater degree the tolbas introduce Moslem law.

When a man dies, one eighth of his property goes to his wife, the rest to his children. If there are no children, a /148/ third is for his wife, with the rest going to his family, part to his parents, part to his brothers and sisters. When the wife dies first, all of her property goes to her children if she has any; if she has none, half goes to her family and the other half to her husband. The property of a deceased person without heirs, a rare condition, are administered by the tribe's amrar for the benefit of the collectivity.

By an oral will made before two witnesses, a man may leave no more than a third of his fortune to an heir not designated by custom.

000 This description of a Targui's life from infancy to death provides merely a glimpse of the customs of a part of the population of the Ahaggar, the part that commands, the part that seems most attractive to the traveler, to the tourist; but one must think of the humble ones, of the harratin cultivators of the agricultural centers, of the Tuareg's black servants, their former slaves. The collecting of their traditions, which are grafted on the framework of Tuareg customs, should be a work apart, for a serious study of the Blacks cannot be

000 /148 cont./ carried out in connection with one on the Tuareg. The atavistic fear of the Negroes before the imouhar renders them mute, and gaining their confidence is a long-range undertaking; to learn of their intimate life, their joys and sorrows, would require great patience.

Still, the original character of the Ahaggar lies in just this intimate fusion of two dissimilar ways of life: one will never really know this country without understanding both the Tuareg and the Negroes and realizing what the true feelings they have about each other are, beyond what we observe superficially each day.

NOTE. Forms of religions, according to Huxley, follow a psychological determinism according to which the superior monotheistic religions are supposedly discovered by "men of thought" and polytheistic religions by "men of action." It is reasonable to ask whether the Tuareg, who formerly were, above all, "men of action," did not, for that reason, conserve survivals from neolithic religious beliefs, /149/ and whether the French peace, suppressing their essential activity, did not give rise in them to a psychological current leading to meditation and favoring Islamization. For the presence of Arab marabout, chorfa, and tolba, however active they may be, is not sufficient to explain that religious current which tends to make Tuareg customs disappear.

Note on Tuareg Matriarchy

593
562 The Ahaggar, which constitutes a sort of ethnic preserve where a system that is still feudal reigns, presents a sociological curiosity: a survival of the matriarchal family. This matriarchy, undermined by the growing influence of Islam, is tending to disappear. It is well to deny certain false ideas which circulate about the Tuareg family: "The woman

593 /149 cont./ commands." "Tuareg hospitality is characterized
562 by promiscuity, a sort of traditional prostitution." The truth is entirely different. The origin of Tuareg matriarchy is certainly lost in neolithic customs; ignorance of the process of conception may have been the cause. This familial organization led to exogamy, which tends to disappear; incest is
[835] a crime more terrible than murder. Matriarchy is the guardian of the caste system: the duty of mutual assistance bestows on the warriors (nobles) part of the fruits of others' labor and
[548] gives them ownership of the land. Prostitution does not exist; monogamy is the rule; the woman is respected. "Maternal rights," as L.-G. Richard says, "consist rather of mutual obligations than of prerogatives or advantages." There is no female liberty, for the woman owes herself to her family; in fact, she exercises no rights whatsoever; she transmits them. A custom still practiced, characteristic of matriarchy, is the requirement for the young husband to live a certain time in his wife's camp.

177 Let us repeat that Islam little by little is destroying the
593 matriarchal customs, particularly insofar as succession is con-
622 cerned, for they are increasingly regulated by Moslem practices. Today, the chiefs even desire to leave their power to their sons.

/151/ VI

## Conclusion

000 The Ahaggar is, I believe, the most engaging part of the Sahara -- and I have conveyed neither the picturesqueness of the scenery, the attraction it has for travelers, nor the anguish it sometimes instills in certain souls, when from October to

000 /151 cont./ February an extraordinary luminosity seems to merge the mountains, which are bathed in the most astonishing colors at sunset.

I purposely have not raised the economic problems which are posed; they are outside the scope of this work. Still, it is permissible to ask what the future may hold for these Tuareg, people from another age strayed into the twentieth century. The young Tuareg are certainly happy, their elders regret nostalgically the good old days of the raids; but the French peace, if it has changed their ancestral mode of life, has brought them a security that they appreciate.

The needs of the nomads are modest and are adapted to the region, but contact with us will create new needs; the populations of the north and the south, more evolved, will not fail, in the long run, to disturb this enviable serenity. Should they be kept in their present state and be considered an ethnic preserve, or should we hasten their evolution toward a more modern state of civilization? It will be regrettable, certainly, to see those tall, blue silhouettes, bearing medieval takouba at their sides, disappear; but a time will come when, on pain of extinction, the Tuareg /152/ will have to adapt themselves to the western world. This day is still far ahead -- let us hope so -- but our role is to prepare the natives of the Ahaggar for it gradually by bringing to them the elements of a choice that will perhaps permit them to make an original culture for themselves. What direction will that transformation take? It is still too early to say. This evolution may be hastened by the influence of outside contributions; the discovery of mining beds, for example, would upset the equilibrium which exists between the sedentary and the nomadic populations.

The Ahaggar should still be studied from many points of view; research is increasingly the prerogative of specialists, and it has even become urgent in the human domain, for the people who know the old customs, the marvelous legends, and the traditional songs accompanied by the imzad soon will disappear.

177 /152 cont./ Large-scale tourism has adopted the Ahaggar; mountain climbers count the virgin peaks still to be scaled and are guided by young Tuareg who begin to speak French. We cannot do otherwise than congratulate ourselves on the material results obtained, but how many Saharans miss, in the bottom of their hearts, the days of the monthly mail, evoking a fairly recent period but one which already seems long past? It was the period that drew them to the Ahaggar, which now is being led, little by little, to the light of this century.

/153/ Appendices

I

Historical Account of the French Occupation

175

February 16, 1881. The Flatters mission is massacred by the Kel Rela and Tédjéhé Mellet Tuareg, aided by a few imrad.

1887. A Taïtok raiding party is taken by surprise at Hassi Hinifel. Thirty Tuareg are taken to Algiers as prisoners for four years. It is with the aid of these Tuareg that Hanoteau will work out the first Tamashek grammar. One of these prisoners becomes the friend of the explorer Crampel, who later was to be killed by his so-called friend.

1898. The Kel Rela and the Taïtok are at war. The latter, defeated by Moussa ag Amastane, flee to the region of the Oulimiden.

1899. Commandant Pein, accompanied by Flamand, carries out a mission to occupy the Tidikelt, thus cutting the Tuareg off from their trading markets of Aoulef and In-Salah.

175 /153 cont./ The Foureau-Lamy mission crosses the Ahaggar without being troubled at any time.

1900. The amenokal Attarel dies. The situation is confused. Two amenokal are named, Mohamed ad Ourzig and Attici. This double command brings on a state of anarchy which causes the Tuareg to turn to Moussa ag Amastane, a courageous, /154/ brillant man who speaks of a possible settlement with the French. The Taïtok, however, are the first to submit, chiefly because of their desire to act before Moussa, their personal enemy since the combats of 1898.

1902. After the pillage of a caravan by the Kel Ahaggar, Lieutenant Cottenest is sent to the Ahaggar to make an example of them. The account of this expedition, La Randonnée du lieutenant Cottenest /The Long March of Lieutenant Cottenest/, written by Commandant Cauvet, is required reading for an appreciation of the man to whom we owe the Ahaggar. After a circuit of Tuareg territory that attested to the qualities of the leader of the expedition, Cottenest gives battle at Tit, at the Tin-Essa gara. About 100 Tuareg are killed in making an assault with spears and sabers. The Dag Rali and the Adjouh n'Téhélé were the tribes that suffered most in this battle.

1903. Commandant Laperrine and his lieutenants make a peaceful tour of the Ahaggar.

1904. Moussa ag Amastane submits at In-Salah.

Commandant Laperrine, accompanied by Father de Foucauld, Gautier, and Chudeau, skirts the Ahaggar to the west and effects a liaison with the colonial troops at Timiaouine.

1905. Father de Foucauld settles permanently at Tamanrasset.

Lieutenant Roussel is the first commander of the Tamanrasset post.

175/154 cont./

1908. Incidents between the Kel Rela and the Taïtok; the latter are driven back to the Sudan.

1909. Incidents between the Kel Rela and the Tuareg tribes of the Ajjers.

1910. Moussa ag Amastane, the amenokal, goes to France to travel with Father de Foucauld.

1914. The territory of the Ajjers is occupied.

1916. New incidents between the Kel Rela and the Taïtok.

/155/ On December 2, 1916, Father de Foucauld is murdered at Tamanrasset by Senussites accompanied by Aït Loen, who carry off 20 rifles and 3,000 cartridges.

1917. Revolt by several imrad groups with the object of stealing camels from the French of the Sahara.

Captain Masson gives battle to a group of Tuareg in the Ilaman wadi on April 5, 1917. (Thirteen killed, two of them French soldiers).

On June 1, near Iniker, the detachment under Pietri is attacked. (Five killed, two wounded, two missing).

On July 26 Second Lieutenant Lehuraux has to battle a party of 300 Tuareg.

1918. Peace is re-established in the Ahaggar. The Taïtok are permanently ousted from their lands and are driven back to the Sudan.

1920. General Laperrine dies at Anesbaraka from injuries sustained in an airplane accident.

1921. Death of Moussa ag Amastane. He is succeeded by Akhamouk ag Yemma.

1925. The Taïtok lay claim to their lands confiscated by the Kel Rela, but the status quo is maintained.

1927. Death of Akhamouk. Meslar ag Amayas is elected amenokal.

1950. Death of Meslar. The caliph, Bey ag Akhamouk, is elected in 1951.

## Geology

133 Thanks to the work of C. Kilian, Th. Monod, J. Bourcart, and particularly to that of M. Lelubre, partially published, it is possible to give a general idea of the geological structure of the Ahaggar and to sketch in its history.

General view

A. The center of the massif is essentially crystalline, formed of very old rocks from the pre-Cambrian age, already partially leveled at the time of the transgression of the tassili. During the tertiary period there was a rejuvenation of the relief after a powerful volcanism. This mass with the crystalline base has an altitude of 2, 600 meters at the center of the massif; it slopes off at the periphery to form the trench separating the Atakor from the tassili.

B. The tassili are plateaus of nonmetamorphic sandstone. This sandstone surrounds the crystalline mass nearly uninterruptedly. Resting on the crystalline foundation are, first, conglomerates which constitute the lower sandstone of the inner tassili, then, sandstone in small columns, topped by graptolite-bearing schist (intra-tassili depression) and overlooked by the upper sandstone of the outer tassili.

The regions leading to the tassili show Devonian and Carboniferous formations with fossils.

M. Lelubre, going beyond the simple description of the rocks, has been able to determine the genesis and the geological history /158/ of the Ahaggar thanks to data from stratigraphy, lithology, and tectonics.

1. Stratigraphy. -- The schist which bears Gothlandian graptolites rests on nonmetamorphozed Ordovician, or perhaps Cambrian, sandstone, itself resting on a thick base of

133 /158 cont./ conglomerates which are unconforming on folded, granitized, and leveled crystalline schists; this permits the deduction that the lower crystallophyllian parts are pre-Cambrian. Furthermore, M. Lelubre has discovered in the pre-Cambrian crystalline region a Suggaro-Pharusian unconformity, thus showing the existence of an ancient Pharusian basin stretching like an immense north-south trench between two Suggarian massifs. The two lines of unconformity followed by M. Lelubre are marked by rhyolite massifs which emerge from the present-day reg, marking a former volcanism at the edge of these submeridian fractures similar to the recent breaks in eastern Africa. The eastern line of unconformity follows the 5° east longitude from the Adrar In-Hédrane to the north up to the eastern edge of the Tassili de Tin-Reroh; the western line goes from the In-Zize massif up the Adrar des Iforas (40 kilometers west of Tin-Elhaoua); it goes along the western border of the Tassili de Timissao. These two orogenic cycles, Suggarian and Pharusian, have their own special metamorphism, granitization, and foldings.

2. Lithology.--The main rocks surveyed by M. Lelubre are the crystalline schists, the granites, and the vein-bearing rocks /filons/.

The crystalline schists (mica schist, gneiss, etc.) form large mountains; Egéré, Arefsa, Tourha; they dominate in the Suggarian and Pharusian series.

There are granites from different ages. Those of the Pharusian type seem to be "punched out," having produced metamorphic aureoles by contact, such as the Serkout, In-Tounin, Tesselit. Other, older granites appear in "large elongated north-south ellipses"; the Tefedest massif is one of these types.

The main vein-bearing rocks are the microgranites: Tarahouaout and Sersouf regions. Pegmatites are /159/ abundant in the granites and the gneisses; veins of quartz seem to fill vast cracks and form long mountains: border of

133 /159 cont./ the Igharghar wadi. The rhyolites form enormous massifs west of the Ahaggar, aligned in two long belts. Nice series of cipolins and marbles, only calcareous rocks of the Ahaggar, are found in the Egéré, the Tourha, and at Azrou. Finally, volcanic rocks cover immense areas, particularly in the center of the Ahaggar.

3. Tectonics. -- Due to the resistance to erosion of the cipolins, M. Lelubre has been able to inspect a very old flexible dislocation upon which a faulted dislocation is superposed: a phenomenon perhaps resulting from Pharusian orgénèse. /Note: the latter word doubtlessly is a misprint for orogénèse, "mountain building." -- Tr./ Then, Hercynian tectonics are marked in the tassili by very large fold-faults. Finally, there are fractures, resulting from the under folds of the Alpine system, which doubtlessly are linked with recent volcanism.

## Geologic History of the Ahaggar

### 1. Pre-Cambrian

a) Suggarian cycle. Nearly all the crystalline schists of the Ahaggar are from this age. It is almost impossible to set up time divisions during this period which witnessed intense sedimentation followed by folding of the Appalachian type. This cycle ended by the emersion of the Suggarian chains.

b) Pharusian cycle. A long period of erosion followed, filling in the inter-Suggarian furrow. These series underwent a less intense metamorphism than in the preceding cycle. Heavy folding occurred and "punched out" granites later appeared. Rhyolite emissions may be placed in the lower Pharusian.

133 /159 cont./

2. Tassili Transgression. Hercynian Cycle.

The conclusion of the Pharusian cycle marks the end of the depth history of the Ahaggar, which from then on consists of a solid system /160/ reinforced by granitic intrusions. An erosion of long duration affected this old massif. It cannot be said whether or not the transgression which followed reached the whole Ahaggar, but its extent shows that it was on a continental scale.

Certain schists contain the first dated fossils: graptolites from the lower Gothlandian. In an upper series, Conrad Kilian has been able to show periods of lagoons, which represent light Caledonian movements. Conglomerates separate the post-tassili series which is ascribed to the middle Devonian or the Carboniferous. This uncovered series is affected by deep Hercynian folds, with the most striking example being the great fault of Tadjemout. It is not known to what extent this folding has affected the crystalline substratum.

3. Cenomanian Transgression

The great marine invasion which covered the Sahara in the middle Cretaceous and cut Africa in two spared the Ahaggar. C. Kilian has found merely a little Cretaceous material in the Amguid region. This doubtlessly was the last incursion of the sea, and it seems really to be a question of no more than a gulf.

4. Alpine Cycle

It was not until the Alpine folding that one sees an orogenic manifestation in Tuareg country. We may admit as true that the reaction to this folding caused volcanism in the Tertiary and the Quaternary, the lava of which covers a large part of

133 /160 cont. / the Ahaggar and which must have lifted the central core. A thorough study of this volcanism has not yet been made by specialized geologists (1). Perhaps it will be

1. Since 1950, P. Bordet has been studying volcanism in the Ahaggar. M. Lelubre's thesis on the pre-Cambrian in the Ahaggar was published during the Geological Congress of Algiers in October, 1952. On this occasion several regional monographs concerning the Ahaggar were published: L'antécambrien de l'Ahaggar /The Pre-Cambrian in the Ahaggar/ by M. Lelubre; Les appareils volcaniques de l'Ahaggar /Volcanic Mechanisms of the Ahaggar/ by Bordet; Ahnet et Mouydir /Ahnet and Mouydir/ by J. Follot.

possible to /161/ separate the essential phases of this eruptive whole.

Study of the Quaternary has not been undertaken. Such a study would perhaps enable us to establish some points very interesting for archeology, notably the advances and retreats of the desert climate.

| | The other months | 0 | | |

/167/ Remarks on the Rainfall

132 M. Dubief of the Algiers Institut de physique du globe has made a very interesting study of the rainfall in the Ahaggar territory, using information furnished by the Tuareg and covering 80 years for the central Ahaggar and 60 years for the Ahnet and the Mouydir.

This research shows that the system of rains in the central Ahaggar is unrelated to that of the northern Sahara.

Moreover, the distribution of the rains in the central Ahaggar has some relation to the distribution in the Tefedest, little to that of the Mouydir, and none to that of the Ahnet; it is completely independent of the Tamesna.

Finally, the dry periods do not seem to exceed seven years (the term "dry" is not used here in its meteorological sense, but relatively speaking, indicating for the nomads a lack of pastures).

Some Tuareg claim to have observed a cycle of seven years in the duration of the ground-water level.

The observations made at Tamanrasset record as years of heavy precipitation: 1924, 1933, 1943, and 1951, which would give a cycle of about nine years.

/169/ IV

Wells or Water Points on the Caravan Trails

From Tamanrasset to Tin-Zaouaten

103 Amsel: Tiggert /natural outflow of water/ and tanout
312 /well for irrigating gardens/. Permanent agricultural center.

Tin-Tounatine: Tigget /sic/ and abankor /water hole/ in the Tamanrasset wadi.

103
312

/169 cont./ Amselka: Permanent well in the Tamanrasset wadi.

Tinef: Permanent, plentifully filled well, 1.20 meters deep, in the Tamanrasset wadi.

In-Abalesse: Permanent abankor, 0.50 meters deep, in the Tamanrasset wadi.

Tidjenaouine: Agricultural center in the Tamanrasset wadi.

In-Amelloutine: Plentifully filled abankor, 0.60 meters deep, in the Tamanrasset wadi.

Timdjaouine: Ten kilometers south of the Tamanrasset wadi, Mount Debla, fairly plentiful water, ten meters deep.

Abankor ouan Mellouline: In the Immazarène Tin-Reroh wadi, east of the tassili. Not very plentiful.

Tin-Reroh: In the tassili, plentiful, permanent, 40 kilometers from the automobile road.

In el Tobol: In the Adrar In el Tobol, not very plentiful, 15 kilometers from the automobile road.

In-Tedeini: Six kilometers north of Tin-Zaouaten, permanent, ten meters deep, shored up with gasoline drums, three kilometers from the automobile road.

/170/ Tin-Elhaoua: In the Tin-Elhaoua wadi, ten kilometers north of Tin-Zaouaten. Lined shaft, with stone drain, never dry.

Tin-Zaouaten: Three wells, a temporary guelta /natural pool/.

## From Tamanrasset in the direction of Tessalit (Sudan)

Up to Silet, various agricultural centers.

Timissao: Well in the wadi, north of the tassili, shored up with stones. Very plentiful water, nevery dar. Depth: six meters.

Tamada: Temporary guelta, rarely dry, east of the tassili, surface about five meters square; very deep.

103 /170 cont./ In-Azaoua: Southwest edge of the tassili.
312 Well, 1.50 meters, never dry.

Tiggueurt: Copious spring, in a tassili valley, three hours' march southeast of In-Azaoua, two hours to the west of Tamada. Site unusual because of verdure.

Aguelman de l'oued En-Nefis: Temporary guelta two hours' march from In-Azaoua.

Ameg: Permanent guelta in an outlier of the tassili, south of Tirek, at the head of the In-Allarène wadi.

Tirek: Permanent guelta, plentiful water, in the northern part of the Tirek ta Settefet tassili.

In-Ouzzal: In the In-Ouzzal wadi, near the confluence of the Ighelian wadi. Plentiful. Depth: eight meters.

In-Djezzal: Plentifully filled well, never dry, 23 meters deep.

Timiaouine: Permanent lined well, never dry, eight meters deep.

## From the Adrar des Iforas (Timiaouine) toward the Tidikelt

The wells of Ilafok and Guernen are filled in; in winter the caravans go straight to In-Ziza, in summer they pass by Timissao.

In-Ziza: Very large guelta, about 20 meters square, varying from five to ten meters in depth, never dry. There are 17 others.

/171/ Aït el Kra: Very copious tiggert in the tassili sandstone near Foum-Ezgag.

Tin-Senasset: Fairly copious spring.

Tin-Eddi: Poorly filled well, sometimes dry.

Tin-Akhenfous: Permanent well.

Tikebetatine: Four or five springs, fairly copious flow.

In-Rhellal: Poorly filled well, 150 kilometers from the first wells of the Tidikelt.

/171 cont./ From Tamanrasset toward In-Salah

103
312

By the automobile road:
Outoul: Agricultural center.
Tit: Agricultural center.
Tilok: Well.
In-Amguel: Agricultural center.
Iniker: Plentifully filled well.
Tesnou: Plentifully filled well.
Amsir: Well.
Meniet: Well.
Arak: Tiggert and guelta.
Tadjmout: Agricultural center, spring.
In-Takoula: Well.
Tiguelguemine: Guelta.
Djoraf: Hot spring.
Hassi el Khenig: Brackish water.

By the camel trail, west of the automobile road.
From Tamanrasset to Abalessa: Various agricultural centers.
Tin-Felki: Large well, never dry, in the Tekouiat wadi.
Tinn-Maroka: Very plentifully filled well in the Afesfes wadi.
Amsir or Arak.
Hassi Takoumbaret: Permanent.
Hassi Belrem: Plentiful, last well before the Tidikelt.

/172/ List of Selected Wadis

Atakor region:
Northern slope, whose waters are collected by the In-Amguel wadi, which flows toward the Tekouiat and which loses itself in the Tanezrouft to the south of In-Zize.

Spontaneous Flora -- Herbaceous Vegetation -- Pasturage

| Tamashek Name | Arabic Name | Miscellaneous Observations |
|---|---|---|
| 1. Tiberimt | Lemmet | Pasturage for asses, to a small extent for goats, tastes like celery (umbelliferous). |
| 2. Ennedam | | Acheb /pasturage/ plant. |
| 3. Tamadi | | Acheb plant. |
| 4. Tamedout | | Acheb plant. |
| 5. Azrem | Merkad | Acheb plant. |
| 6. Ourroug | Errega | Acheb plant. |
| 7. Tahaout | Rguig | Acheb plant. |
| 8. Tahnetnet | Tafsa | Perennial plant. |
| 9. Afessour | Cherełk | Acheb plant. |
| 10. Tanesmimet | Hamoued | Acheb plant; acid. |
| 11. Afazzou | Morakba | Panicum turgidum. Seeds eaten by the Tuareg; used, with straw, for making wind-breaking mats (asaber). |
| 12. Akałouad | Jonc | Typha augustifolia. For goats. |
| 13. Akecheker | | Thorny plant. Permanent pasturage. |
| 14. Adrilal | | Astralague prolixus. A sort of wild pea, very good pasturage. |
| 15. Alemmoz | Nçi | Aristida ascencionnis. Very good pasturage, in the zone of the peripheral trench after the rains. |
| 16. Telemmoust | Sfar | Very good pasturage. Zone: same as above. |
| 17. Aslak | Habalia | Acheb plant. Héliotropium ondulatum. |

/178 cont./

137
824

| Tamashek Name | Arabic Name | Miscellaneous Observations |
|---|---|---|
| 18. Imatelli | | Acheb plant. |
| 19. Askaf | Damrane | Traganum midatum. Very scarce in the Ahaggar, region of Tiffert. |
| 20. Tadjemaît | Njem | Couch grass, near water points, mediocre pasturage. |
| 21. Affelleleh | Bettina | Henbane. C uses madness for two or three days; its smoke is somniferous. |
| 22. Aressou | Arta | Good pasturage. |
| 23. Amateltel | | Climbing plant, particularly on acacias, the size of a vine. Good pasturage. |
| 24. Atarzim | Ghardek | Lotus of the Lotophagi (?) according to Duveyrier. |
| 25. Alaouat | Gergir | Very good pasturage. In the large wadis after floods. Peripheral trench and Iforas. |
| 26. Aremmas | Guettaf | Atriplex alimus. Laxative, very salty, mediocre pasturage. |
| 27. Tabakat | Sedra | Jujube tree, Zizyphus lotus. Average pasturage, except for asses. /179/ |
| 28. Ajmès | Guesba | Reed. |
| 29. | Defla | Oleander (poison, except for goats and gazelles). |
| 30. Tedjellit | Coloquinte | Colocynth. Gazelles, goats, asses. |
| 31. Alagoz | Hadjia | Sweet colocynth, edible. |
| 32. Aftezza | Chebrok | Zilla macroptera. Very good pasturage. |

/179 cont./

137
824

| Tamashek Name | Arabic Name | Miscellaneous Observations |
|---|---|---|
| 33. Issin | Djell | Fairly good pasturage. |
| 34. Rellachem | | Grows in the mountains, scarce, remedy for gonorrhea and cough. |
| 35. Tahara | Hâdd | Cornulaca monacantha. Very good winter pasturage, poor in the summer. |
| 36. Ana | Merkh | Ginista saharae, broom. Very good pasturage. |
| 37. Tadjerdjert | | Purgative. Fairly good pasturage. |
| 38. Tahiart | Tinhart | In the seguias /irrigation canals/ of the agricultural centers, used to perfume tea. |
| 39. Tahli | Berdi | Formium tenax. Type of large reed which grows near the tiggerts /natural outflows of water/; pasturage for goats. In times of scarcity, the heart is eaten. |
| 40. Taïberou | Bouzaka | Poison, rare (Atakor). No antidote. |
| 41. Tassa | Elbaguel | Mediocre pasturage. |
| 42. Tanatfert | Ghatassa | Makes milk bitter. |
| 43. Toulloult | Drinn | Aristida pugens. Very good pasturage, seed edible in same way as that of afazzou (three parts to one of wheat). |
| 44. Teferiest | Tesskra | Thistle, scarce, good pasturage. |
| 45. Takamezout | Chedengoura | Only in the Atakor. Sure cure for dysentery; yields 14 remedies. |

/179 cont./

| 137 824 Tamashek Name | Arabic Name | Miscellaneous Observations |
|---|---|---|
| 46. Zezeri | Zahta | Atakor. Is put in tea. |
| 47. Tihéréguéli | Chih' | Perfumes tea, remedy for colic. |
| 48. Amiou | N'gouth | Good pasturage. |
| 49. Tamadjéhi | Kroumt | Very good pasturage. |
| 50. Tatalt | Elgouzah | Good pasturage. |
| 51. Otaq | Mrenza | Mixed with crushed dates, fattens women. Bad odor. |
| 52. Tedjourt | Hallala | Remedy for gastric troubles. |
| 53. Terfes | Terfes | A sort of truffle. |
| 54. Aliouen | Denoun | A sort of large asparagus. |

/181/ VI

## Tools

412 Here is a list of tools used by the maalmine; many of them are made by the users:

Tisadh: double-pocketed bellows.

Abaracha: piece of wood 50 x 20 x 6 centimeters, serving as support for an iron mass used as an anvil.

Tehount: iron mass 6 x 6 x 15 centimeters used as an anvil.

Afadis: hammer.

Tafadist: small hammer.

Irendan: tongs.

Takadimt: adz.
Tataout: chisel for wood. } Neolithic-type hafting.
Tadouft: ax.

412

/181 cont./ Azazaoua: file.
Tazazaouat: small file.
Tasarest: burin.
Asfed: punch.
Timouda: shears.
Azazaoua ouan aserer: file for wood.
Anefif: ferrule for bellows.
Tibin: crucible.

Following is a list of objects made by the maalmines for the Tuareg; this list is certainly not complete.

/182/ Tanast: special Tuareg padlock, well known to tourists; the keys are artistically cut out and are not one of the least of the women's ornaments. Iron, brass, and copper combine to give a pleasing effect. There are padlocks with one, two, and three keys, work complicated for its own sake, as these tanast lock leather sacks which can be opened with a slit of the knife or by loosening a seam!

Tadeft: small ax.
Moussi: knife with sheath, worn at the waist.
Indel: punch for leather work.
Iremdan (menguech in Arabic): an accessory consisting of a cutting blade, an awl, and small pincers.
Tazozlet: a kind of paper knife with a triangular blade of artistically worked brass. In Tuareg society it is not used as a paper knife but as a hair-dressing tool used to separate strands of hair before braiding.
Tistent: awl.
Tesougla: large sewing needle.
Allar: the Tuareg spear.
Takouba: the saber.
Tarada: the javelin.
Tilok: arm dagger.
Tamenast (menassa in Arabic): brass basin, indispensable accessory for every meharist, used for drinking, washing, making bread, digging abankor /water hole/.

412 /182 cont./ For the harratin, the maalmines make the hoe called aguelhim and the gheniet, which is a trap for wild sheep.

412 415 The Tuareg use wooden objects made by the maalmines; these are mainly cooking utensils.

Akous: bowl for drinking milk. It often has small ears for easier gripping.

Azzka: is a very large akous capable of holding nearly six liters.

Tarahout: large, almost hemispherical dish, carved out in one piece. The wood is three centimeters thick. It is used for family meals.

/183/ Tarelalt: large dish with a fairly flat bottom; may be as large as one meter in diameter (rare).

Tendi: the wooden mortar.

Iharen: the wooden pestle.

Akabar: small mortar, sometimes pyrographed.

Tesoukalt: pyrographed wooden spoon.

Temoulalt: large pyrographed spoon (ladle).

Asseguefi: small wooden funnel.

Redjeredjaten: stakes for holding up the tent.

Tidjetouin: stakes with ornamented heads for holding the tent open.

492 Tarik (rahla in Arabic): the camel saddle. The maalmines of the Ahaggar repair them but do not make them; the most handsome ones come from the Aïr; these are the ones called tamazak and the akoka. However, the maalmines of the Ahaggar make a wholly wooden saddle called taïst, sturdy and used mainly for training the animals.

301 The principal jewelry worked in the Ahaggar is the following:

Tisak: the ring, of silver. Certain models have the lower part made of iron. The height of the rings is impressive: four to five centimeters; they entirely cover the lower part of the women's fingers, setting off the length and delicacy of their hands.

301 /183 cont./ Tisabatin: The tisabatin are ear pendants, simple rings of silver whose diameter is about ten centimeters; two tisabatin weigh 120 grams.

Teraout: large silver triangle worn on the chest; the hidden side is made of iron.

Ahbedj (plural: ihebdjen): The women always wear two. They are bracelets, the most popular type of which has the form of a simple ring with an opening. The two ends are polyhedral and are decorated with geometrical designs.

Tissegouar: silver pendants for the temples.

The Tuareg do not use gold; silver alone is used to make jewelry and the amulet cases called teraout.

The men wear smaller rings than the women.

/185/ VII

## List of Agricultural Centers

103 Abalessa (altitude: 850 meters).

361 This was the largest agricultural center before our arrival
621 in the Ahaggar; since then, Tamanrasset has surpassed Abalessa.

Abalessa is located 100 kilometers west of Tamanrasset in the Ibarras wadi at the confluence of the Abalessa wadi, which receives the waters of the Tit, Outoul, Tiffert, and Iglène wadis.

The population consists of more than a thousand harratin.

The cultivable surface is 150 hectares during favorable years; generally, the crops cover 80 hectares.

The owners of the gardens are some Kel Rela, Ta'ltok, Dag Rali, and Iklan Taoussit.

There are 11 foggara, the longest and deepest in the Ahaggar; some reach six kilometers in length, and the head wells are eight to ten meters deep.

103
361
621

/185 cont./ Approximately 300 palms grow freely or nearly so; almost all have grown from nuts, and half are dokkar (males)

Abalessa has a bordj /a small fort or solidly constructed house/ and an infirmary.

The tumulus of Tin-Hinan is located two kilometers from the bordj in the Tiffert wadi.

Centers of the Tiffert wadi.

Tounin Akourin.

A small center seven kilometers upstream from Abalessa. Two foggara and a tanout.

/186/ The amenokal has his permanent camp near gardens that he owns.

Tiffert Foulani.

Five kilometers upstream from Abalessa. Three foggara. There are about 30 palms. An active center, it is owned by the local harratin. Here is the residence of Si Ahmed Foulani, a well-known taleb /scribe/, who plays the role of cadi for the Tuareg.

Tiffert Tahtani.

Three kilometers upstream from Abalessa. Three foggara. Active and permanent center. Small village constructed of toub, overlooking some 40 palms.

Tin-Tazarouk.

One kilometer from Abalessa on the trail to Silet. One foggara. Zériba. Large quantity of diss (a large grass).

Centers of the Outoul wadi.

Outoul.

A long-abandoned center which is being revived; located between the old and new trails to In-Salah, 20 kilometers from Tamanrasset. Five foggara, two of them upstream. Several fruit trees.

Tahart.

Eighteen kilometers downstream from Outoul. Three foggara and one tanout. Owners: Ta'ltok and Tédjéhé n'Néfi.

103 /186 cont. / About 100 palms, numerous fig trees and
361 vines. A tiggert with abundant tahli. Very picturesque site.
621 Assileskine (altitude: 960 meters).

Center located six kilometers downstream from Tahart. Often abandoned. Owners: Taïtok. Three foggara, about 30 residents. Vines and several young palms. Rock drawings near the zéribas.

Ennedid (altitude: 914 meters).

Four kilometers downstream from Assileskine in a gorge at the confluence of the Outoul wadi. About 60 residents, nearly 100 palsm. Owners: Kel Rela, Dag Rali, and Iklan Taoussit. Very pretty site.

/187/ Centers of the Tit wadi.

Tit (altitude: 1, 127 meters).

Located in the Tit wadi, 50 kilometers from Tamanrasset. Fairly important center, more than 100 residents, houses of toub and zeribas. About 30 palms, numerous fig trees, and enormous vines. At this time, four foggara. Very important site for rock drawings.

Tin-Emensar.

Ten kilometers downstream from Tit. Abandoned center.

Dar Mouli.

Three kilometers downstream from Tin-Emensar, a small garden is cultivated. Site of an annual celebration where the Tuareg gather for the ziara of Moulay Abderrahmane.

Centers of the Tamanrasset wadi.

Tamanrasset (altitude: 1, 470 meters).

Fort Laperrine, administrative headquarters of the Ahaggar.

The military bordj was constructed in 1919 and used in 1920 after the abandoning of Tarahouaout.

In 1920, Tamanrasset had 40 residents. It was a small, unimportant center with three foggara; a few rare éthel and fersig lined the wadi.

103 /187 cont. / The French occupation created out of nothing
361 the built-up area which became a road center after the
621 creation of automobile roads from Tamanrasset toward In-Salah and Algiers;

from Tamanrasset toward Agadès and Fort Lamy;

from Tamanrasset toward Tin-Zaouaten and Gao.

Secondary roads of local or tourist interest were later opened:

from Tamanrasset to Djanet by way of Idelès and Serouanout;

from Tamanrasset to Idelès by way of Tarahouaout, Tahifet;

from Tamanrasset to In-Azaoua (not completed);

from Tamanrasset to the Asekrem massif by way of the Illamane peak (tourist);

from Tamanrasset to the Asekrem massif by way of the
[491] Imalaoulaouen guelta and the Akarakar. This road, finished in 1952, makes it possible to circle around the high peaks of the Atakor; it /188/ completes the one mentioned just before. Its route, laid out by the head of the Tamanrasset annex, provides maximum protection against the rains; it discloses a succession of splendid panoramas and ends at the foot of the Asekrem plateau after having crossed the strangest assortment of peaks imaginable. This road is prolonged in the direction of the Issakarassen guelta, then will continue toward the Hirafok agricultural center to end in the Tefedest.

[439] Arab and Mozabite merchants very quickly installed themselves at Tamanrasset, offering merchandise coming from Tell and buying wheat, millet, and butter from the Tuareg, making usurious loans, in a word, draining away the Tuareg's small supply of cash to direct it toward the Mzab.

The houses are built for the most part on the right bank of the wadi in the nonirrigable areas. Tamanrasset has no local color whatsoever, but the red tint of the exterior plastering, the cleanliness and charm of the streets shaded by éthel and adorned by geraniums, produce a pleasing over-all

103 /188 cont./ effect. An admirable and almost unique thing
361 in the Ahaggar is the circle of mountains which surrounds the
621 village; from the south bank of the wadi the view at sunrise or sunset is sensational.

At the present time Tamanrasset has some 20 foggara and a dozen tanout. The owners of the foggara are: the commune, some Adjouh n'Téhélé, some Tédjéhé n'Néfis, some harratin, and some merchants. The foggara are from four to five kilometers long. The gardens extend nearly six kilometers from the ksar /former fortified village/ of the Adriane to the ksar of Teggert. The cultivated area is about 70 hectares, counting the gardens of the small center of Tihegouine three kilometers downstream, watered by a foggara.

The commune owns a magnificent garden where all sorts of fruit trees are tried; it sets an example for the local gardeners. Many European houses have a small garden irrigated by foggara or by well.

The present population is about 2,000 residents. This enormous growth in population presents a terrible /189/ water problem. It appears that an agricultural center in the Ahaggar cannot grow indefinitely without considering hydraulic works.

103 Tamanrasset, although favored from the point of view of
361 water resources, is a proof of what could be attempted in the
621 other agricultural centers if the French could advise the
648 harratin and furnish them examples.

The French population is divided in the following way:

A captain, annex head, administrator of the commune.

Two or three officer assistants.

Secretaries.

A school. Seven teachers, three of them nomads.

An observatory of global physics. Three physicists.

A telecommunications service. Four radio operators, two weather men.

103
361
621
648

/189 cont. / A branch of the Company of Tropical Transportation.

An auxiliary postal receipts office.

A hotel.

A few retired persons at Tamanrasset without occupation.

From the military point of view, Tamanrasset is generally the base for a company of the camel corps. Units of the Saharan Engineer corps maintain the road from In-Salah to Tamanrasset and Agadez.

The French population totals about 120 persons; this number is subject to frequent fluctuations.

The number of Mozabite and Arab merchants, including their families, comes to about 100 individuals.

There are about 1, 900 harratin, an approximate figure, for many gardeners come and go from one agricultural center to another.

It is impossible to speak of Tamanrasset without thinking of General Laperrine and Father de Foucauld. The body of the general rests at Tamanrasset near the tomb where the priest was buried after his tragic death. The bordj where Father de Foucauld lived during the last years of his life is a tourist attraction; it is also possible to visit the hermitage built by the Father on the wadi's left bank.

/190/ Near the village of Adriane are found the tombs of Moussa ag Amastane, the Laperrine's amenokal friend, and of Dassine, the famous poetess.

In the house which was Moussa ag Amastane's, the maalmines, artisans of the Tuareg tribes, work.

Tamanrasset, administrative center, a necessary stop on the road from French West Africa and from French East Africa, is also an airplane stop destined to become more and more important.

Tourism tends to conquer the Ahaggar; the Touring Club of France has organized excursion caravans for several years. Scientists from all fields, enlightened travelers,

163 /190 cont. / mountain climbers in quest of virgin peaks, are
361 attracted to the still little-known country. For all of them
62 Tamanrasset is a departure base but not a place to linger.
[648]

Tissenaouine

In the Tissenaouine wadi at its confluence with the Tamanrasset wadi. One foggara belonging to a hartani. Very well-cultivated garden.

Tagrambalt

In the Tamanrasset wadi, 15 kilometers south of Tamanrasset. Three foggara, well-cultivated gardens. Little possibility for growth.

Amsel (altitude: 1, 180 meters)

Located in the Amsel wadi a little before its confluence with the Tamanrasset wadi, about 30 kilometers south of Tamanrasset.

The owners of the gardens are the Adjouh n'Téhélé and the Tédjéhé n'Néfis. The gardens are located upstream and downstream from the tiggert, a veritable stream of running water where abundant tahli grow. Six foggara and three tanout. There are about 60 residents. The cultivable surface totals 30 hectares; there would be possibilities for extending the center downstream. Several fruit trees.

Intnérin

In the Tamanrasset wadi seven kilometers south of Amsel. Tiggert and numerous tahli. Two foggara. Unimportant /191/ center, with no possibility for growth. Boxed-in, very hot valley.

Idikel

In the Tamanrasset wadi 15 kilometers south of Amsel. Difficult to reach by auto. Three foggara and two tanout. Large amount of cultivable land but endangered by the big floods of the Tamanrasset wadi.

Tiguenouine

In the Tamanrasset wadi seven kilometers south of Tamanrasset. A large amount of tahli at the Amelalouline tiggert. Three foggara, abundant water.

103
361
621

/191 cont. / Centers located on the In-Azaoua road

Izerzi

Fifteen kilometers south of Tamanrasset in the Izerzi wadi. A long-abandoned center revived in 1952.

Talan Téhédit

A long-abandoned center 20 kilometers south of Tamanrasset. Cultivated since 1951. Abundant water. Tiggert, tahli. Garden owners: Adjouh n'Téhéle and Tédjéhé n'Néfis. Three foggara and two tanout. Possibility for growth.

Ifok

Thirty kilometers south of Tamanrasset. Running water, tiggert, tahli. The gardens are upstream and downstream from the tiggert. Two foggara and three tanout. A frequently abandoned center.

Region of the Atakor

Ilaman (altitude: 2, 000 meters).

Highest center in the Ahaggar. Abandoned for a long time, traces of nine former foggara.

At the present time the village of Ilaman has a dozen residents. One foggara and two tanout are in operation. The Dag Rali own the gardens; their millet silos give the village a curious appearance.

Terhénanet (altitude: 1, 950 meters)

Located in the Terhénanet wadi on the edge of the Taessa massif. /192/ Like the village of Ilaman the village of Terhenanet is at the side of the road leading to the Asekrem. A small guelta is found downstream from the gardens. An unimportant center: about ten residents, two living foggara, four dead ones.

Centers of the southeastern Atakor

Tarahouaout (altitude: 1, 317 meters) -- (Fort Motylinski)

Located in the Tarahouaout wadi 80 kilometers from Tamanrasset by the automobile road. It was the administrative

103 /192 cont. / capital of the Ahaggar from 1908 to 1921. One
361 may see the old bordj overlooking the wadi, as well as old
621 houses at the foot of the cliff.

An important center, it is the fief of the Adjouh n'Téhélé tribe. Fifty-two hectares are cultivable, irrigated by ten foggara. There are numerous tanout. Fruit trees are in decline but there are still fig trees, apricot trees, and vines.

[172] Numerous pre-Islamic tombs are evidence of a very ancient occupation of this water point. Three rock-drawing sites exist on ridges downstream from the bordj.

Six kilometers downstream from the gardens, an enormous stand of tahli announces the entrance to very narrow gorges, in which one may follow over a distance of ten kilometers a veritable stream connecting a string of guelta. This is perhaps the most important permanent flow of water in the Ahaggar.

In-Dalag (altitude: 1,450 meters)

Located in the In-Dalag wadi, this very important center extends over a length of 15 kilometers. The water table is fed by waters running from the southeast of the Atakor and from the Ahéléheg djebel. The Adjouh n'Téhélé own the gardens. In dry periods this center is partly abandoned, as well as the small villages downstream: Tehi n'Oudi, Tin-Tsoumar, Tabarakaten, In-Tinsi, In-Tolouline.

There are five foggara at In-Dalag. Downstream from the cultivated centers gorges are found where great numbers of tahli grow.

/193/ Tahifet

An important center located in the wadi of the same name 50 kilometers north of Tarhaouaout. The Adjouh n'Téhélé are owners of the gardens. The cultivable surface comes to 22 hectares; there are eight foggara. Six kilometers downstream from the gardens is a tiggert surrounded by a large amount of spontaneous vegetation. The site is very picturesque.

103
361
621

/193 cont. / Centers of the northern Atakor

Ideles

Very important center in the Tarouda wadi, overlooked by the Adrar Tadéraz. The village is located on the automobile road from Tamanrasset to Djanet 265 kilometers from Tamanrasset. The village consists of a bordj and an infirmary, as well as numerous stone houses. The residents, who number about 300, were originally from the Tidikelt. The ruins of an old ksar may be seen.

The gardens belong to the Kel Rela, the Dag Rali, the Kel Tazolé, and the Kel Amguid. The cultivable area amounts to about 40 hectares, irrigated by eight foggara and about ten tanout. About 300 palm trees are fairly well cared for; there are also numerous fig trees and vines.

Amenselane

Very small center six kilometers from Ideles. One foggara. Numerous tahli near the tiggert.

Tazerouk

A center which used to be very important but whose cultivable land is often carried off in pieces during big floods. Located 188 kilometers from Tamanrasset by the Ideles automobile road. The population is made up of freed Negroes who own the gardens but whose laziness has jeopardized this favored oasis. The altitude is 1, 896 meters; two wheat harvests per year are possible. The cultivable area amounts to 45 hectares, with hardly half of it sown. Enormous, untended fig trees grow, /194/ as well as very many peach trees and apricot trees. The summer climate at Tazerouk is the most pleasant in the Ahaggar.

In the wadis which end at Tazerouk, agricultural centers are established during the rainy years; these are: Sellemal, Ihebert, Teberbert, Taouakim, Tin-Ezzar.

Tizzeit

Unimportant center, long abandoned, now cultivated, located on the camel trail from Ideles to Tazerouk. Land

103 /194 cont./ belongs to the Ibardjien, an ancient tribe on the
361 way to extinction, redoubtable mountaineers and clever hunters
621 of wild sheep. Alkaline spring, tanout. Vines, fig trees, and numerous palms.

Tin-Founès

Abandoned center located on the Amadror road; numerous untended palms.

Hirafok (altitude: 1, 510 meters)

Located in the Hirafok wadi, on the automobile road from Tamanrasset to Ideles. The gardens run lengthwise and are well tended. Twenty-four hectares of cultivable land irrigated by five foggara and five tanout. A few fig trees. A bordj is constructed by the side of the road. The wadi valley is fairly well wooded; there is a tiggert downstream.

Im-Amguel (altitude: 1, 037 meters)

Large agricultural center located in the In-Amguel wadi on the road from Tamanrasset to In-Salah, 144 kilometers from Tamanrasset. A bordj and an infirmary. Four hundred residents. Ten foggara water well-tended gardens. There are some 100 palm trees, half of which are dokkar. Vines, fig trees, apricot trees, peach trees. Poultry.

Ifrok

Upstream from In-Amguel on the automobile road from Ideles. A center long abandoned, now cultivated. One foggara. The wadi is very well wooded.

Tasakimt

An abandoned center located between Idelès and Tazerouk. One tiggert upstream from which existed a foggara and four /195/ tanout. Abundant vegetation consisting of fersig and oleander.

Centers of the Tefedest

Mertoutek

A center in decline. There now exist two living foggara compared to ten before. Altitude: 1, 450 meters. Located in

103 /195 cont. / the Mertoutek wadi, to the east of the Tefedest,
361 260 kilometers from Tamanrasset. A few fruit trees. Im-
621 portant rock-drawing sites (Coche-Chasseloup-Laubat, Lelubre and M. Cousin sites).

In-Amertek

Abandoned center downstream from Mertoutek.

Ohet

Abandoned center to the northwest of the Tefedest. Two dead foggara. Land belonging to the Tédjéhé Mellet.

Adenek

Abandoned center in the Adenek wadi at the confluence of the Dehine wadi. Land belonging to the Kel Tefedest. There still remain a few fig trees and vines.

Abezzou

Abandoned center, land belonging to the Kel In-Rhar and Eouen n'Hada. Only a few zéribas and traces of guemoun are evidence of former cultivation.

Dehine

Center located six kilometers north of Mertoutek. Abandoned. There remain a few palms and fig trees as reminders of a former prosperity.

Other agricultural centers

Silet (altitude: 775 meters)

Located 151 kilometers from Tamanrasset on the road to Tin-Zaouaten. The Silet wadi forms a large basin which receives the waters of the Tahelra. There is a very shallow water table, which makes it possible for palms to grow without irrigation. There are about 6, 000 palms which receive practically /196/ no care. Artificial fecundation is rarely practiced. This palm grove was created about 200 years ago by Arabs from the Tidikelt. The owners of the palms are some Kel Rela, Iklan Taoussit, and Dag Rali. An attempt to establish a palm grove has been made by the Annex with djebars of Téguezza.

103
361
621

/196 cont./ Some ten residents live at Silet and cultivate small gardens irrigated by three foggara. A bordj. Ruins of an old Arab fort. Numerous pre-Islamic tombs.

Tibeghim

Five kilometers from Silet. Small palm grove in a semi-wild state, which gives it a very picturesque appearance. The palms belong to the Kel Rela and the Iklan Taoussit.

Aïtoklane

Center located in the Sersouf wadi 40 kilometers south of Tazerouk. Long abandoned, now cultivated. Far from the automobile roads, this center is rarely visited. The cultivable area is great.

Tin-Tarabin

In the Tin-Tarabin wadi, away from the automobile roads, this center is rarely visited. Abandoned, then revived a short time ago. This center could prosper, for the cultivable area is large.

Tadjmout

Located on the road from Tamanrasset to In-Salah in the intra-tassili depression of the Mouydir tassili. A few gardens belonging to the Kel Immidir. Palm trees (about 100 grow freely in the gorge one kilometer from the road).

Izghan -- Izeghaf -- Djoraf

Abaondoned centers in the interior of the tassili massif. Numerous palms belonging to the Kel Immidir and the Kel Ahnet. These sites are never visited and remain unknown to all.

Tin-Teredjine

Upstream in the Teredjine wadi (In-Guezzam road). Tiggert, abundant water, abandoned garden. Tomatoes /197/ grow without being cared for. An Adjouh n'Téhélé family gathers them from time to time.

Inroudiden

In the Tahelra massif (south of Tiffert), in the Inozzorou wadi, a tributary of the Tinef. Owners: Iklan Taoussit. Unimportant.

Isernan and Sédéouen

During rainy years, gardens are established upstream from the tiggert in these two wadis, tributaries of the In-Dalag wadi.

# LE HOGGAR

Nul n'était mieux placé que Claude Blanguernon pour parler du Hoggar et des Touareg. Fixé depuis 1937 dans le Sud Algérien, c'est lui qui ouvrit il y a huit ans l'école de Tamanrasset, lui aussi qui créa la première école nomade. Au cours de ses tournées dans les campements touareg, il se lie d'amitié avec les chefs, dont il parle la langue, apprend à connaître leurs familles et à les aimer.

Esprit curieux et ouvert, Blanguernon emploie tous ses instants de loisir à parcourir le Hoggar, à noter les divers aspects de la géographie du pays et les traces de civilisation ancienne que l'on y trouve. Il reçoit et interroge tous les hommes de science éminents qui viennent étudier sur place les richesses et les particularités de cette région curieure et encore mal connue. Il se documente sur la flore et la faune, l'hydrographie et le climat comme sur les mœurs et coutumes des divers peuples du désert. Blanguernon apprend et transcrit dans un style simple et imagé les légendes que se transmettent les Touareg et que peu d'Européens ont la chance de connaître.

Grâce à l'érudition de Claude Blanguernon, à son amour pour le pays où il s'est établi, à ses dons d'écrivain, *le Hoggar* est plus qu'un guide, plus qu'un document, la somme de nos connaissances sur une partie de l'Afrique attirante entre toutes.

[p. 6] [pp. 7-8 are blank]

## AVANT-PROPOS

Ce travail commencé voici quatre ans, par timides observations personnelles, était destiné à demeurer à l'école de Tamanrasset, comme archives, afin d'éclairer mes successeurs.

Je me suis, peu à peu, rendu compte que Tamanrasset n'était pas le Hoggar, et que nombre de personnes, y arrivant, possédaient des idées toutes faites sur le pays et ses habitants. Idées souvent inexactes, toujours incomplètes, défendues avec la foi de l'ignorance et une énergie souvent convaincante, elles se répandent d'autant plus aisément qu'on les pare de merveilleux et de mystère : le pays étant mal connu s'y prête à merveille. Il faut signaler toute une littérature fleurie qui dépeint le Hoggar et les Touareg avec un luxe d'épithètes qui n'apporte aucune précision, mais a eu le mérite d'intéresser beaucoup de Français à ce pays fort attirant à divers titres.

Depuis trois ans, des caravanes de touristes viennent régulièrement visiter le Hoggar; ceux-ci posent tout naturellement de multiples questions que les Français de Tamanrasset connaissent bien, et auxquelles ils sont fatigués de répondre. J'ai pensé que cet ouvrage pourrait éclairer les visiteurs et soulager ceux qui sont las de répéter les mêmes réponses.

Ce travail est bien sûr incomplet, et certainement entaché d'erreurs, mais il a été fait avec toute l'objectivité dont j'étais capable.

[p. 9]

Je dois à M. Lelubre les données géologiques, à l'Institut de physique du globe les notes sur la climatologie. Les différents rapports annuels des chefs d'annexe du Hoggar m'ont fourni de précieux renseignements. Enfin, quantité d'amis touareg m'ont initié à leur vie.

Des spécialistes de toutes les disciplines scientifiques viennent étudier le Hoggar. Leurs recherches échappent souvent au public. Je demande leur indulgence pour ce travail, destiné à mon sens aux voyageurs et aux touristes.

# I

## LE HOGGAR

L'annexe du Hoggar, dont le chef-lieu administratif est Tamanrasset, couvre une superficie de 375 000 kilomètres carrés environ. Elle est, en gros, limitée par le 1° et le 8° de longitude est, et par les 19° et 27° de latitude nord. Les limites exactes figurent sur la carte du 1/1 000 000 du Sahara.

Le tropique du Cancer partage presque également en deux le territoire de l'annexe.

Un regard jeté sur la carte au 1/1 000 000 permet de distinguer dans ce quadrilatère un immense système montagneux bordé, au nord, par la plaine absolument stérile du Tidikelt; au sud-est et à l'ouest, par les plateaux strictement désertiques du Ténéré et du Tanezrouft.

Il semble que le Hoggar, isolé par sa ceinture de déserts, soit devenu une réserve naturelle, un monde à part du Sahara qui aurait vieilli seul, gardant une originalité de caractère résiduel.

Sa situation donne au Hoggar des affinités soudanaises, la végétation le prouve et la population en porte les traces.

Après avoir été, avant l'occupation française, un hiatus entre l'Algérie et l'Afrique noire, le Hoggar devient à présent un trait d'union.

Le Hoggar était, il y a moins de soixante-dix ans, parfaitement inconnu; on soupçonnait seulement l'existence des

Touareg grâce à des récits d'Arabes, récits entachés d'erreurs et de subjectivité.

On fut amené à progresser vers le pays touareg à la suite des actes de pillage et de destruction renouvelés des hommes « bleus », farouches, indépendants et guerriers.

Les quelques dates que l'on trouvera en appendice montreront que l'avance française dans le pays fut lente et toujours empreinte de cette humanité qui, malgré quelques combats engagés par les Touareg, ne cessa d'être le souci constant de tous les chefs.

Incontestablement le pays était destiné à frapper l'imagination. Cet ensemble montagneux, qui fait suite au Sahara septentrional, paraît clos et hostile.

Les gorges profondes qui traversent les tassilis sont les portes d'une région qui semble s'isoler du monde.

Au sortir de ces gorges sombres, on entre dans le domaine de la pierre. On la rencontre sous les formes les plus étranges; ce sont d'immenses dômes de granit qui surgissent d'une plaine de sable, ou des monolithes dressés comme une forêt de dolmens, de curieuses phyllades de schistes, semblant les feuillets d'un livre monstrueux. Ce paysage se déroule sur des centaines de kilomètres, dévoilant une nature désertique qui se pare des formes rocheuses les plus extraordinaires.

Mais le plus étrange reste à voir, le cœur du pays : chaque vallée y est une énigme, les pitons volcaniques qui bordent les ravins paraissent menacer l'intrus qui ose violer ce domaine.

Le sol présente des teintes allant du jaune tendre au noir, coupé de veines violettes, vertes, bleues ou roses. Les roches déchiquetées ou polies s'accumulent en chaos indescriptible, et d'immenses étendues de pierres noires et boursouflées semblent sortir d'une chaudière diabolique.

Les habitants paraissaient aussi mystérieux que le pays qui les abrite. Leur haute stature, leur allure fière et dédaigneuse, leur visage voilé du taguelmoust bleu étaient autant d'éléments qui donnaient libre cours à l'imagination. Des histoires circulaient par tout le Sahara, elles vantaient les vertus guerrières des Touareg, leur courage, leur cruauté alliée à un

6: Blanguernon MS25 Tuareg

sens chevaleresque de l'honneur. Ils étaient, pour certains, les derniers Atlantes, pour d'autres, d'anciens Francs, dont l'épée en forme de croix symbolisait la foi perdue.

Cependant, peu à peu, des explorateurs, des officiers administrateurs, des savants, devaient mettre les choses au point et montrer le Hoggar tel qu'il est.

Les récits de Barth et de Duveyrier ont opéré un premier déblaiement dans la connaissance générale de la région. Puis vinrent les travaux scientifiques de Flamand, Maire, Reygasse, Kilian; MM. Monod, Lelubre, Bordet, Follot, Dubief, qui ont donné les bases sûres permettant une connaissance aussi exacte que possible du pays et des hommes.

L'œuvre linguistique du père de Foucauld a fixé d'une façon remarquablement précise les Touareg et leur langue, à l'époque où il les connut.

De nombreux explorateurs, M. Lhote en particulier, ont laissé des observations précises alliées à des vues personnelles sur le pays.

Enfin, le roman a mis le Hoggar en lumière, et pour beaucoup de Français, *L'Atlantide*, cette délicieuse fiction de Pierre Benoît, est l'image qu'ils se font du pays. Les derniers livres de Frison-Roche sont également pour beaucoup dans le mouvement touristique qui s'ébauche vers le Hoggar.

## Morphologie et Relief

L'ensemble du système montagneux qui constitue le Hoggar apparaît incohérent au premier abord; il prend sens quand on l'examine en détail. Afin d'avoir une idée schématique, on peut distinguer trois grandes zones concentriques : un noyau central, un fossé périphérique, et la ceinture extérieure des tassilis.

Au centre du Hoggar s'élève un massif à peu près circulaire, sorte de plateau d'une altitude moyenne de 2 000 mètres, hérissé de pitons atteignant presque 3 000 mètres : c'est l'Atakor des Touareg (calotte cranienne). Un éperon rocheux s'avance vers le nord, c'est la Tefedest qui culmine à

Schéma montrant la morphologie concentrique du Hoggar.

Carte du système montagneux touareg, nord-sud.

2 327 mètres avec la Garet el Djenoun en son extrémité septentrionale.

Autour du noyau central, une sorte de dépression circulaire d'une altitude variant de 500 à 800 mètres forme une couronne presque parfaite dans laquelle surgissent, çà et là, des pitons granitiques ou des témoins volcaniques.

Puis on trouve à une distance de 200 kilomètres en moyenne, autour du massif cristallin central, une suite presque continue de plateaux qui constituent l'enceinte extérieure du Hoggar : au nord, le Mouydir, puis, en tournant vers l'est : le tassili des Ajjers, au sud et sud-est, le tassili du Hoggar, le tassili de Tin-Reroh; au sud-ouest, le tassili de Timissao; au nord-ouest, l'Acedjerad et l'Ahnet qui vient jouxter le Mouydir.

Seuls quelques grands oueds quaternaires ont un lit qui franchit cette enceinte tassilienne, ils drainent presque toutes les eaux du Hoggar. L'oued Tamanrasset va se perdre en un vaste bassin d'épandage au nord de l'Adrar des Iforas; il devait rejoindre autrefois le Niger dans la cuvette de Taoudéni. L'oued Tafassasset, qui draine le flanc est du Hoggar, se perd actuellement dans le Ténéré; il devait anciennement être un affluent du Tchad et non du Niger comme on l'a longtemps cru. L'Igharghar s'échappe du Hoggar entre le Mouydir et le tassili des Ajjers, son cours a pu être suivi jusqu'au pied de l'Aurès.

L'oued Tin-Tarabin rassemble les eaux du versant est de l'Atakor.

On peut comparer l'ensemble du Hoggar à un immense système fortifié, dont le massif central serait le château fort hérissé de tourelles tombant à pic sur le fossé d'enceinte; sur l'autre bord, les tassilis, également à pic sur le fossé, mais en pente douce vers l'extérieur, constitueraient les glacis périphériques. Une coupe nord-sud met en évidence cet aspect défensif du Hoggar.

Le noyau central que les Touareg nomment Atakor (certains traduisent ce terme par « milieu des montagnes », d'autres par « nœud » d'où partent tous les oueds) offre un

aspect saisissant de grandeur sauvage. C'est un hérissement de pitons verticaux d'une altitude voisine de 3 000 mètres, dont le type est l'Ilamane (2 823 m.). Ce sont d'anciens volcans. Ils auraient projeté hors du sol des laves d'une grande viscosité qui se seraient solidifiées presque immédiatement, un peu à la façon de la pâte dentifrice sortant du tube quand on le presse légèrement. Le cône volcanique habituel est très restreint, seules attirent l'attention les colonnes verticales ou spirales qui constituent le piton.

Parfois d'immenses montagnes tabulaires, tels l'Adrar In Taraïn ou l'Adriane, témoignent de l'ampleur des coulées volcaniques, leurs différents plans semblent indiquer les courbes de niveau.

On rencontre aussi, dominant d'immenses plateaux couverts de lave, de véritables forteresses du plus curieux effet dans la pénombre crépusculaire, c'est le domaine des mouflons. L'Aounahampt, l'Akarakar et le Takouft sont les plus caractéristiques de ce type.

Les Touareg ont été impressionnés par cet étrange relief. L'Ilamane, si pur et si majestueux, trônant face au midi, au milieu d'un cirque de montagnes somptueusement colorées, eût pu, dans leurs légendes, être un dieu dont les orgues de granit voisines auraient chanté les louanges. Mais ce peuple de guerriers, peu préoccupé de sujets religieux, imagina une histoire d'amour qui tourna en querelle.

A quelques kilomètres à l'ouest de l'Ilamane se trouvent deux montagnes, dont l'une, la plus au nord, de forme massive, se nomme Amdjer — la légende affirme que c'était un homme —; et l'autre, au sommet pointu, a pour nom Tararat — et Tararat était femme.

Amdjer et Tararat s'aimaient. Il advint qu'Ilamane s'éprit aussi de Tararat. Cette passion ne fut point sans doute du goût d'Amdjer, qui lui fit des remontrances. Ilamane, très violent de nature, frappa Amdjer de sa lance. Ce dernier se défendit âprement, portant à son agresseur deux violents coups de sabre, ce qui ôta à Ilamane toute envie de disputer Tararat à un tel adversaire... Depuis ce temps Amdjer et Tararat sont

1. Le massif de l'Adriane vu d'avion.
2. Dans l'Atakor, cœur du Hoggar, le massif du Fidjemayène vu du sommet de la Séouénane.
3. Position du méharistе touareg.

unis par une chaîne, et le coup de lance qui blessa la montagne est encore visible; une source en sort, témoignant que la plaie n'est pas encore cicatrisée. De chaque côté de son sommet, Ilamane porte fièrement les deux entailles des coups de sabre, souvenir de jeunesse d'un duel de géants.

A quelque temps de là, le Hoggar devait encore être troublé. Ilamane devint amoureux du Tahat qui était une femme, mais il y avait un autre prétendant nommé Ti Hiyène. Craignant ce rival, et instruit par l'expérience, Ilamane quitta la place où il se trouvait depuis toujours et vint se planter tout près du Tahat, où il est demeuré depuis lors. Vexé de se sentir dédaigné du Tahat, Ti Hiyène résolut de fuir le Hoggar et d'aller chercher fortune vers l'Adrar des Iforas. Il partit donc, en empruntant la voie de l'oued Amded. Or, dans l'oued Amded était une montagne appelée Eheri. Eheri était un homme courageux, quoique pacifique; il était respectueux des usages, et il ne lui semblait pas bon qu'une montagne du Hoggar quittât ainsi son pays pour une raison somme toute futile. Il abandonna son emplacement et vint se planter sur le chemin du fuyard, afin de lui barrer la route. Ti Hiyène, instruit du geste d'Eheri, comprit sans doute la leçon, car il se fixa en amont, près du puits de Tin-Dahar.

Depuis cette époque, on peut admirer l'Ilamane, heureux vainqueur, trônant devant le Tahat, et voir son premier emplacement qui est un immense cratère circulaire, formant une dépression à l'ouest de l'oued Ilamane. Vers l'oued Amded, un cratère semblable témoigne de l'ancienne résidence d'Eheri. Ces dépressions circulaires ont longtemps été des énigmes pour les géologues.

« Et l'emplacement de Ti Hiyène ? » demandai-je à Marly ag Amayas qui me contait par le détail cette légende. « Nul ne le connaît, dit-il, et c'est normal : lorsqu'un homme décide de partir après avoir réfléchi, il se lève doucement, en songeant à ses projets, et ne laisse aucune trace, tandis que celui qui agit sous l'emprise de la passion part brusquement et laisse une profonde empreinte dans le sol. »

Un lacis d'oueds sépare ces différents sommets, formant

4. Paysage du Tassili.
5. Phénomène d'érosion granitique (dans l'oued Mertoutek).

des dénivellations de 800 à 1 000 mètres. Les hautes vallées de ces oueds sont jeunes, en forme de V; de véritables cañons entaillent des champs de laves (oued Tarhoumout). Aucun de ces oueds n'a atteint son profil d'équilibre, ils présentent des rapides, parfois des cascades lorsqu'ils se fraient un passage entre deux Adrars. A ces endroits l'eau séjourne en des mares pérennes appelées gueltas. Certaines de ces gueltas (Issakarassène, Afilal) sont peuplées de poissons et sont entourées d'une végétation luxuriante qui contraste avec l'aridité du pays.

Cette région de l'Atakor impressionne fortement le voyageur par les teintes incroyables dont se parent les montagnes au cours de la journée. La sauvage grandeur des monts fait peser une angoisse que l'on chasse difficilement quand on chemine dans les oueds bordés d'acacias, guidé par un Targui voilé, silencieux et souple, monté sur un méhari dont le pas feutré s'accorde avec l'inquiétant silence. La zone du fossé périphérique dans laquelle on observe un relief peu accentué possède de grandes régions presque plates, recouvertes souvent d'une légère couche de sable. Parfois de petits massifs coupent l'horizon, ou, sur le côté exposé au vent dominant, une dune monte à l'assaut : l'Adrar Bourzekal en est un exemple. Parfois des collines de granit en forme de dôme parfait, poli, luisant et patiné, semblent surgir de l'étendue horizontale (Tesnou, Iniker, Ahélèheg), ou bien c'est un amoncellement colossal de blocs brillants et de formes presque géométriques, donnant à ces garas de soixante à cent mètres de haut un aspect ruiniforme, comme à In-Tédéini, ou près d'Idelès, ou dans la région du Debna.

Dans cette zone, les oueds descendus de l'Atakor s'élargissent à un tel point que l'on ne distingue plus de vallée nette, il faut plutôt parler de bassins d'épandage dans lesquels sinue, suivant un tracé incertain, l'eau qu'une crue assez puissante amène jusque-là. Ce passage des eaux est parfois jalonné d'herbes sèches et de rares tahlas. On retrouve une vallée lorsque l'oued franchit une ligne rocheuse qu'il coupe en formant une brèche à bords raides, puis c'est un nouveau bassin d'autant plus vaste que l'on s'éloigne de l'Atakor, car

les bassins affluents s'ajoutent en formant une immense étendue plate que les Touareg nomment « aciaf ».

Vus de loin, les tassilis offrent l'aspect d'une barrière infranchissable dont la frange supérieure entaillée par le ruissellement et usée par les vents donne l'illusion d'une cité fortifiée. Des oueds travailleurs ont découpé ces plateaux gréseux, leurs vallées profondes aux bords verticaux constituent des gorges sauvages au fond desquelles une végétation relativement dense jure avec l'aridité du plateau strictement nu et balayé par les vents. On rencontre dans ces tassilis de nombreuses gueltas souvent bordées de « tahlis » (sorte de roseau).

## LE CLIMAT

Les observations météorologiques ne sont faites régulièrement qu'à Tamanrasset et seulement depuis 1929. On manque donc de données précises pour l'ensemble du territoire. Si l'on sait par les Touareg qu'il a plu en quelque endroit, on ignore l'intensité des précipitations. En ce qui concerne les vents et les températures, les renseignements sont encore plus vagues. Cependant, en tenant compte des observations faites à Tamanrasset, et en examinant la végétation des différents points de l'annexe du Hoggar, ainsi que la répartition de la faune, on peut déterminer trois zones climatiques qui épousent presque exactement les zones de relief. Notons toutefois que

les tassilis du sud sont soumis à un régime de vents et de pluies différent de celui des tassilis du nord. Avant d'étudier les zones de climat, il est bon de donner un aperçu des caractères généraux communs à ces zones.

Le climat a une allure continentale désertique due à la situation du pays.

Le tropique du Cancer partageant en deux parties le territoire du Hoggar, il se produit un passage du soleil au zénith qui donne au pays une influence soudanaise sous forme de nuées d'été qui se condensent parfois en pluies orageuses : « queues de tornades ». Cette mousson soudanaise ne se manifeste que très rarement au nord du tropique.

Enfin, en hiver, une prédominance assez régulière de vents nord-ouest est capable d'apporter des pluies atlantiques ou méditerranéennes qui affectent rarement le sud.

Si l'on en vient à considérer les différentes zones de climat, on voit que l'Atakor est, grâce à ses sommets élevés, le centre de répartition des eaux que condensent les montagnes lorsque, par chance, les nuages sont assez bas; les systèmes nuageux sont relativement fréquents et souvent importants, mais ils semblent s'élever quand ils abordent la région montagneuse. L'altitude tempère la chaleur de l'été, et l'hiver amène presque tous les ans de légères chutes de neige sur les cimes. On observe, dans l'Atakor seulement, un témoin résiduel de flore méditerranéenne, un olivier sauvage : *Olea Laperrini*. En descendant vers le fossé périphérique apparaît le « kranka », *(callotropis proscera)*, arbuste dont l'aire d'expansion est essentiellement tropicale; puis, à la limite des montagnes centrales, le palmier fructifie, à Silet, Abalessa, In-Amguel.

D'après les observations du poste météorologique de Tamanrasset, on a pu établir quelques graphiques de pluies et de températures que l'on trouvera en appendice. Des renseignements manquent durant la période de guerre. Le climat est caractérisé par la régularité des températures et l'extrême irrégularité des pluies. Les grosses pluies surviennent cependant presque toujours en été et en hiver; quand les deux chances se conjuguent, il y a une année pluvieuse comme en

1943 : 108,5 mm.; quand, au contraire, les conditions atmosphériques interdisent aux tornades soudanaises et aux vents atlantiques l'approche du Hoggar, nous constatons une année sèche comme en 1945 : 28 mm., ou en 1949 : 9 mm.

Vu l'insuffisance des postes météorologiques, et les distances énormes qui les séparent, il est impossible de suivre l'évolution des systèmes nuageux, ou de prévoir un phénomène de périodicité des pluies.

A Tamanrasset les vents sont assez réguliers; le matin, le vent dominant est de composante est-nord-est; le soir, la composante serait : ouest-sud-ouest à ouest-nord-ouest.

L'hiver, les vents dominants apportant la pluie sont surtout nord-ouest, venant des dépressions marocaines.

En été, la pluie vient avec des vents sud-ouest, remontée vraisemblable des cyclones soudanais.

On n'observe pas de vents de sable, mais de rares tempêtes de poussière, surtout au mois de mars.

Par temps calme, ou même par vent violent, il se produit des tourbillons; on a émis à ce sujet différentes hypothèses, mais pour l'instant on n'a pas résolu cette question. Les Touareg ont leur opinion sur la cause des tourbillons; c'est, disent-ils, manifestations de génies. Voici d'ailleurs une histoire qui prouve combien ils ont raison.

« Par un après-midi ensoleillé, une femme touarègue — certains m'ont dit une Négresse — ramassait du bois dans le ravin d'Itharentidjarnin, lorsqu'un violent tourbillon prit naissance à une centaine de mètres. La poussière commença à tourner, décrivant un cercle presque parfait, puis elle s'éleva verticalement, toujours tournant et de plus en plus vite. Lorsque la colonne de poussière eut atteint une grande hauteur, le tourbillon se mit en marche. Il partit doucement, hésitant sur la direction à prendre, enfin il se dirigea vers le midi, tournoyant, se dandinant et sifflant allégrement. La femme, charmée par ce spectacle, manifesta sa joie par des « you-you » à pleine gorge. Le tourbillon s'approcha d'elle, lui jeta de l'or et la remercia d'être joyeuse, car, dit-il, « nous marions l'un des nôtres ».

« C'est bien la première fois, dirent les anciens du campement, à qui la femme racontait cette aventure, que les Kel es Souf se montrent agréables. »

« A quelque temps de là, la même femme, au même endroit, vit un semblable tourbillon. Espérant être de nouveau gâtée par les génies, elle salua de gais « you-you » le passage du tourbillon. Mal lui en prit, elle fut saisie, enlevée de terre, tournoya à une hauteur incroyable, puis fut brusquement lâchée et vint s'écraser sur le sol. Tandis qu'elle tombait, les Kel es Souf lui dirent : « Nous escortons le convoi funèbre d'un des nôtres, te voici châtiée de t'être moquée de nous. » On trouva la femme les membres brisés. Elle conta son histoire et mourut. »

Le climat de Tamanrasset, qui semble séduisant au premier abord par sa douceur de température, est épuisant à la longue; c'est une constatation faite par tous ceux qui y ont séjourné un certain temps. Le travail intellectuel y est très pénible. Le père de Foucauld a essayé de s'installer au sommet de l'Asekrem, mais n'a pu y trouver la puissance de travail qu'il possédait ailleurs. On a également constaté l'état de nervosité extrême qui saisit les hommes, et surtout les femmes, après un long séjour. Quelles sont les causes de ces troubles? Sans doute sont-ils dus aux effets conjugués de l'altitude et de l'extrême siccité de l'air. Certains veulent y voir des effets magnétiques, d'autres mettraient en cause des radiations (1). En fait, aucune solution satisfaisante n'a été trouvée.

On trouve une deuxième zone de climat dans le fossé périphérique. Cette région, située à plus basse altitude, possède des températures plus élevées, et les pluies y sont beaucoup plus rares. La végétation y est presque inexistante; même dans les oueds les tahlas sont très peu nombreux et le morakba est

(1) Il m'a été donné de faire une observation curieuse : il y a deux ans, je ramassais différentes roches que je passais au compteur de Geiger. J'avais noté sur chaque roche le nombre de « top » minute. Un certain matin, je voulus vérifier mes échantillons. Toutes mes roches étaient plus radio-actives de 25 « top ». Par chance je pus faire constater cette anomalie à P. Bordet, géologue venu étudier le volcanisme au Hoggar. Il pensa à des radiations cosmiques, mais n'étant pas spécialiste de cette question, n'affirma rien, se bornant à constater, afin d'aviser un professeur qualifié.

presque toujours sec. Le kranka n'existe plus, l'éthel pas davantage, et le climat saharien intégral reprend ses droits pour aboutir à la perfection désertique du Tanezrouft et du Ténéré. Les gazelles fuient le centre de cette région, elles se rapprochent des pays montagneux plus humides suivant la fréquence des pluies génératrices d' « acheb » (pâturage).

Enfin, dans les tassilis, il faut distinguer entre ceux du nord et ceux du sud.

Les premiers reçoivent des pluies d'hiver presque tous les ans, et plus rarement les précipitations provenant de la mousson soudanaise. Les renseignements sur ces régions sont imprécis et peu nombreux, sauf en ce qui concerne le Mouydir qui est traversé par la piste d'In-Salah et survolé par les avions de la ligne d'Alger. Il semble, d'après les dires des Touareg, que le Mouydir soit plus arrosé que l'Ahnet et l'Acedjerad, ce qui paraît normal du fait de sa plus grande altitude et peut-être aussi à cause d'un système de dépressions atmosphériques que l'on soupçonne, mais qui n'a pas encore été étudié.

Le kranka réapparaît, signe de moins grande aridité, les tahlas sont assez denses dans les oueds, les gueltas s'assèchent rarement, elles sont bordées de « berdis ». Le mouflon réside en permanence sur les sommets.

On est encore moins bien informé au sujet des tasailis du sud. Les renseignements sont presque inexistants pour le tassili ouan Hoggar; en ce qui concerne les tassilis de Tin-Reroh, et de Timissao, qui sont situés sur les pistes caravanières venant de l'Adrar des Iforas vers le Tidikelt ou le Hoggar, il y a les renseignements donnés par les Touareg. Ces derniers signalent surtout les pluies d'été, et les plus abondantes, celles capables de faire naître l'acheb.

Ces tassilis reçoivent peu d'eau des queues de tornades en raison de leur médiocre altitude; cependant il pleut en été presque chaque année. Les puits de Tin-Reroh et de Timissao ne sont jamais à sec. La guelta de Tin-Reroh l'est parfois.

Bien que n'étant pas un tassili, la bordure nord de l'Adrar des Iforas est soumise au même régime climatique; elle est d'importance vitale pour les Touareg du Hoggar qui y font

6: Blanguernon MS25 Tuareg

pâturer leurs chamelles. Le régime des pluies d'été est régulier, la mousson soudanaise provoque des crues régulières, les oueds possèdent des gueltas qui se remplissent l'été et peuvent conserver l'eau jusqu'aux crues suivantes. Le pâturage de gergir est abondant, il dure presque toute l'année. Ethels, tamaris, sont denses dans les oueds, et les tahlas commencent à pousser sur les pentes des collines. La flore des oueds est plus variée. Les gazelles abondent, on rencontre des biches Robert, des antilopes oryx et addax. C'est certainement la région la plus favorisée du territoire de l'annexe du Hoggar, mais géographiquement, c'est déjà le Soudan.

## L'Eau au Hoggar

Ainsi que dans toute région désertique, la question de l'eau est primordiale. Le Hoggar est relativement favorisé par les pluies. Les points d'eau sont nombreux dans les régions montagneuses du noyau central et des tassilis; à ce point de vue, il est donc assez aisé de les parcourir. Mais il en va tout autrement de la zone comprise entre l'Atakor et les tassilis.

Dès que l'eau apparaît, spontanément au Hoggar le paysage se transforme, une vie animale intense se développe, une végétation qui paraît luxuriante par opposition au reste du pays croît autour des points d'eau. Cette mince trace de vie a quelque chose d'attendrissant, de timide, d'intime par comparaison avec l'aspect grandiose du désert.

La conséquence de la nature cristalline du sol est l'absence de nappe artésienne. On ne peut espérer trouver de l'eau que dans les lits d'oued, sous les alluvions, à une profondeur qui peut varier de 0,20 m. à 15 mètres. Parfois, lorsque la nappe de l'oued est abondante, l'eau s'écoule librement au seuil rocheux qui forme barrage souterrain; un tel écoulement se nomme « tiggert » en tamahaq. Lorsque après un tiggert l'eau s'accumule dans les cuvettes rocheuses et les « marmites » des rapides, on se trouve en présence de gueltas (« aguelmam » en tamahaq), dans lesquelles vivent des poissons et toute une faune aquatique. A ma connaissance, il n'existe que de rares

6. Un oued dans l'Atakor en période sèche.

6: Blanguernon MS25 Tuareg

[FACING P. 24].

[FACING p.25]

sources au Hoggar : citons la source Chapuis qui, près de Tamanrasset, sort des granits de l'Adrar Haggarène. Des concrétions calcaires dans certains oueds du Tahalra permettent de supposer que des sources thermales ont pu exister autrefois.

Les oueds prennent presque tous naissance dans le Hoggar central qui est la zone de répartition des eaux. Deux très grands oueds quaternaires, l'oued Igharghar et l'oued Tamanrasset, drainent les eaux de l'ouest et du nord. L'oued Tin-Tarabin et les oueds Tin-Amzi et Zazir entraînent les eaux des versants sud et sud-est vers le Tamesnar, dans l'oued Azaouak, affluent du Niger.

Les oueds du Hoggar apparaissent comme une succession de bassins descendant des sommets en un gigantesque escalier, dont les degrés supérieurs recèlent l'eau qui engendre la seule végétation permanente du pays et permettent à l'ingéniosité de l'homme de créer des jardins, et dont les marches inférieures, démesurément élargies, sont mortes à toute vie sédentaire.

L'oued Tamanrasset offre un exemple typique de l'oued du Hoggar. Sa source — ou plus exactement sa tête — est à l'Asekrem, à près de 2 765 mètres d'altitude; son embouchure, c'est-à-dire le dernier bassin d'épandage, s'élargit et se perd dans le Tanezrouft, à une altitude de 400 mètres. Sa longueur actuelle est de 750 kilomètres environ; si, au quaternaire, l'oued Tamanrasset se jetait dans la dépression de Taoudéni, il devait mesurer plus de 1 400 kilomètres. La pente dans la partie supérieure de son cours est très violente puisque, à Amsel, à 160 kilomètres de sa source, l'altitude n'est plus que de 900 mètres.

Depuis sa source jusqu'à Amselka, soit environ 200 kilomètres, on peut dire que l'oued Tamanrasset est vivant : sa vallée est nette, le passage des eaux fortement marqué; on remarque des terrasses coupées à bord franc, la coupe de la vallée est souvent en forme de V. Cependant, certains bassins comme celui de Tamanrasset (village) laissent prévoir les grandes zones d'épandage d'aval, témoins d'une époque antérieure plus humide.

7. Lauriers-roses autour de la gueïta d'Issakarassène.

La description de cette partie de l'oued n'est que l'énumération des cluses qu'il traverse; à chacune de celles-ci correspond un seuil rocheux qui termine chaque bassin.

En descendant la pente sud de l'Asekrem, on suit une rigole d'écoulement, qui, au bout d'un kilomètre, creuse déjà un ravin aux bords à pic de 4 à 5 mètres de haut. Le cours s'étale largement, puis c'est une chute de 20 mètres dans un cirque de basaltes aux colonnes verticales reposant sur des alluvions; la vallée continue, formant cañon, large de 60 mètres, profonde de 30. Dès lors l'oued prend un nom : Tarhoumout; il franchit une cluse après le mont Oul, le seuil rocheux affleure, on y creuse des « abankor ».

L'oued coule vers le sud, puis tourne vers l'est; c'est alors une série de rapides dans un défilé où se trouvent les gueltas permanentes de Lundien. Puis il fait un nouveau crochet vers le sud, la vallée longe l'Akarakar, se resserre; nouveau seuil rocheux et guelta d'Ifelouen.

L'oued va quitter l'Atakor, en se creusant un passage entre l'Isekram et l'Ahounahampt. Il débouche dans le site de Tamanrasset, où il s'élargit, prend son nom définitif et reçoit son premier affluent important, l'Irharhar Tekecherouet, dans lequel se trouvent les « grandes gueltas »,

A la hauteur du pic Iharen, la roche est entaillée en un couloir d'une profondeur de 15 mètres, large de un à deux mètres pendant plus de 200 mètres. Ensuite l'oued a 400 mètres de large. Des foggaras sont creusées dans son lit; elles irriguent les jardins de l'Hadriane et de Tamanrasset, et de Tihegouine, petit centre de cultures à un kilomètre en aval de Tamanrasset.

La vallée s'élargit bientôt, mais reste encaissée, puis se rétrécit à Tagrambaït, où peu avant l'affleurement des roches se trouve un jardin que vivifie une foggara. Elle s'élargira encore et atteindra six cents mètres.

Désormais l'oued sera toujours très large, mais c'est un oued mort. Il coule vers le sud, puis au léger rétrécissement de Timguisouine, il tourne brusquement vers le nord-ouest. On peut se demander s'il n'y a pas là un ancien phénomène de capture.

La vallée devient immense, les seuils rocheux ne sont plus sensibles, on soupçonne d'anciens biefs, lorsque l'oued passe entre deux collines, mais le cours présente l'aspect d'un reg absolument plat et stérile, sauf vers le milieu, où la présence de quelques touffes d'afazzou desséchées montre que, parfois, un timide ruissellement atteint cette zone. Près d'une gara ceinte de tombes préislamiques, l'oued Adjelman entre dans l'oued Tamanrasset, mais ses eaux n'y peuvent plus pénétrer, car un bouchon de dunes obstrue l'embouchure. L'Adjelman, qui mesure quatre kilomètres de large à cet endroit, a désormais un bassin clos. On n'imagine pas quelle crue suffisamment puissante pourrait balayer le système sableux qui bouche le confluent.

Jusqu'à la hauteur du tassili de Timissao l'oued paraît s'étendre à perte de vue, il peut avoir de vingt à trente kilomètres de large. C'est un magnifique reg où les voitures roulent comme sur une autoroute. Quelques tahlas ponctuent le cours vers le centre de la vallée, des tiges sèches de gergir témoignent d'une lointaine époque plus humide.

Le confluent de l'oued Amded est obstrué par un important système de dunes; là encore, ce gros affluent possède un bassin indépendant, ses crues ne peuvent plus percer le bouchon de sable qui leur donnerait accès à l'oued Tamanrasset. Pourtant l'Amded a de la végétation jusqu'à son embouchure lors d'une année humide comme 1950; au plus bas de son cours j'ai noté des touffes de « had » et quelques touffes vertes de morakba.

Je n'ai pas personnellement suivi l'oued Tamanrasset au-delà de Timissao, je n'ai que des renseignements fournis par des Touareg, surtout des Kel-Ahnet.

L'oued Ilafer se jette dans l'oued Tamanrasset. Leur jonction forme un bief démesuré, une immense sebkha, déversoir final des eaux d'une crue inconcevable au Hoggar à présent. Jusqu'alors le cours de l'oued Tamanrasset était ouvert, mais, un peu à l'est du premier degré de longitude, il se heurte à l'erg Egtelis, et c'est la fin actuelle de l'oued.

Je n'ai pu obtenir de renseignements sur l'extrême cours aval, il faudrait de minutieuses reconnaissances pour jalonner

l'ancien tracé quaternaire sur la route supposée vers Taoudéni.

Le régime de l'oued suit le régime des pluies du Hoggar central, c'est dire qu'il est d'une extrême irrégularité. Quand, par chance, ses affluents supérieurs coulent — y compris l'oued Ajemet —, la crue peut atteindre les biefs inférieurs, jusqu'à Timissao, m'ont dit des Touareg, mais je n'ai pu savoir à quelle date un tel phénomène s'est produit pour la dernière fois. En 1948, j'ai été témoin d'une crue; il était tombé à Tamanrasset dix millimètres d'eau en douze minutes, mais il est impossible de connaître la durée et l'intensité de la précipitation sur les montagnes; quatre heures après la pluie, la crue arriva comme une marée montante, poussant les détritus légers, faisant en somme la toilette de l'oued. Au bout d'un quart d'heure, l'oued coulait sur deux cents mètres de large; on pouvait encore traverser le courant ayant l'eau à mi-cuisse, et, en s'inclinant très fortement pour en vaincre la force, on recevait sur les jambes les chocs d'une quantité de petits galets. La crue dura cinq heures. Elle atteignit seulement Amsel, seuls coulèrent les affluents supérieurs à Tagrambaît. Cette crue, qui, vue de Tamanrasset, paraissait assez importante, ne provoqua qu'une légère infiltration, car le niveau de la nappe phréatique n'augmenta que d'une façon insignifiante.

En dehors du système d'oueds vivants et morts dont le Tamanrasset n'est qu'un exemple, on trouve dans les tassilis, et dans leur voisinage, de l'eau assez en profondeur, grâce, sans doute, à la perméabilité des grès.

L'homme peut donc utiliser l'eau en la captant de plusieurs façons. Les Touareg savent repérer, près des seuils rocheux et en amont, l'endroit où en creusant de vingt à cinquante centimètres, avec une menassa, l'eau suinte : ce point d'eau se nomme « abankor ». « Anou » (pluriel : « ounan ») c'est le puits définitif, le grand puits qui jalonne les pistes caravanières.

La présence de ces grands puits est signalée de très loin par des redjems importants sur les collines. De multiples sentiers semblent converger vers un point mystérieux; plus on approche, plus dense est le lacis des pistes, puis apparaît

un vaste cercle piétiné, jonché de crottes de chameau; au centre de ce cercle est le puits.

Les Touareg utilisent un autre nom pour désigner le puits qui sert à l'irrigation des jardins : c'est le « tanout » (au pluriel : « tounin »). On trouve ces puits peu profonds dans les centres de culture; ils sont en général en amont des seuils rocheux. L'eau est tirée à bras d'homme ou le plus souvent par un bœuf; alors un échafaudage rudimentaire porte une poulie qui permet l'élévation d'une peau de chèvre pleine d'eau qu'un système ingénieux fait déverser dans un bassin.

Enfin le dernier moyen utilisé pour capter l'eau du sous-sol, c'est la foggara, appelée « efeli » (« ifelan », au pluriel). La foggara n'est utilisée que pour l'irrigation des jardins; nous verrons, en étudiant l'agriculture, les modalités de son établissement.

## La Flore et la Faune

La flore du Hoggar est plus variée que celle du Sahara septentrional. Les travaux de M. Maire constituent l'ouvrage de base auquel on doit se référer si l'on veut étudier la végétation spontanée. La liste des plantes donnée en appendice a été établie en interrogeant des Touareg afin de connaître les variétés le plus souvent rencontrées. Très incomplète en ce qui concerne la végétation herbacée, cette énumération comprend la grande majorité des arbres poussant spontanément.

Il n'y a pas de forêt au Hoggar. Cependant des renseignements émanant de Touareg Kel Immidir permettraient de croire à l'existence d'une étendue boisée dans le massif de l'Ifetessen, région encore mal explorée en son entier. Peut-être ne s'agit-il que d'oueds couverts d'une végétation particulièrement luxuriante. Au Hoggar, les oueds recèlent la presque totalité de la flore. Quelques plantes poussent aussi sur les hauts sommets les plus arrosés, et lors des pluies particulièrement propices, les regs se couvrent de plaques d'acheb qui ont l'allure d'une barbe drue et naissante.

La répartition de la flore spontanée au Hoggar est évidem-

ment en rapport avec les zones de climat dont nous avons déjà parlé. On trouve des plantes spécifiques de ces zones et une interpénétration de la plupart des autres végétaux.

Au Hoggar central, dans l'Atakor et la Tefedest, zone où l'altitude est très élevée, on rencontre des plantes d'origine méditerranéenne, telles que l'olivier sauvage *(Olea Laperrini)* et le laurier-rose. L'armoise et le « takamezout » des Touareg sont également caractéristiques de cette région.

A un niveau plus bas, dans la zone qui entoure le massif central, l'influence soudanaise se manifeste par des arbres et des arbustes tels que le thora, le tebourak et diverses sortes d'acacias, le tabrakat et le morakba. On y voit aussi des plantes sahariennes : le palmier, le fersig, le drinn; et quelques traces d'influence méditerranéenne : armoise, laurier-rose et roseau. C'est en somme une zone de transition.

La végétation du fossé périphérique est de pur type saharien : quelques acheb poussent sur les regs lors des pluies; le drinn, l'had et le guetaf envahissent le lit des oueds. On trouve aussi, çà et là, du morakba et quelques tahlas.

Les tassilis du nord, avec leurs oueds humides et très encaissés, offrent une flore ayant des affinités soudanaises, en même temps que des plantes méditerranéennes et sahariennes, tandis que dans les tassilis du sud et l'Adrar des Iforas l'influence est très nettement soudanaise. Dans ces deux dernières régions les tahlas, encore éparpillés, poussent sur les pentes, hors des oueds. Dans les lits des oueds, on voit de nombreux tebourak, des thoras, des tabrakat et divers acacias. Dans les petits ravins comme dans les grands oueds, le morakba croît en abondance. Enfin une végétation luxuriante de gergir, rappelant la prairie, couvre les oueds après les pluies.

Dans la région des hautes altitudes on rencontre des mousses et des lichens, ainsi que des champignons. Après la pluie, les terfes (truffes sahariennes) se développent.

Près des eaux courantes, on note la présence d'une flore particulière : mousses et lichens, fausse menthe, roseaux, joncs et tahlis, chiendent, se rencontrent en abondance. Enfin les eaux elles-mêmes recèlent des algues et diverses plantes aquatiques.

La diversité de la flore laisse prévoir une grande variété dans la faune. En effet, des animaux sahariens voisinent avec les habitués des zones méditerranéennes ou des steppes soudanaises. Certains se trouvent de façon fréquente au Hoggar ou font souvent l'objet de conversations entre les indigènes.

La gazelle (alenkad), petite bête élégante et fine, se rencontre un peu partout, des premiers contreforts du Mouydir jusqu'à la frontière du Niger. Elle affectionne les pâturages d'alommoz, petite graminée qui frissonne au moindre vent; c'est pourquoi les gazelles sont particulièrement nombreuses dans la région de Tin-Zaouaten et dans les oueds qui bordent le Tanezrouft. A certaines époques de l'année, il n'est pas rare de rencontrer des troupeaux de cinquante têtes.

La gazelle est protégée par la réglementation de la chasse, mais elle se protège mieux encore elle-même en fuyant les régions habitées par l'homme. Grâce à cela, le nombre de ces animaux paraît être à peu près stationnaire.

Presque toutes les montagnes du Hoggar abritent des mouflons (oudad). Cette bête splendide, caractéristique du pays, hante tous les sommets, même ceux qui paraissent inaccessibles.

Les Touareg chassaient autrefois le mouflon à la lance, ils emploient à présent le fusil. Une petite tribu, celle des Ibardjien, était spécialisée dans ce sport; avec leurs chiens, dressés à cet effet, les hommes traquaient le gibier qui était achevé à la lance. Cette tribu s'éteint, et ce genre de chasse disparaîtra avec elle. Les Adjouh n'Téhélé et les Dag Rali tuent quelques bêtes dans l'année : soit au fusil, soit en les piégeant à l'aide d'un nœud coulant fixé à une grosse bûche.

Il est difficile de savoir de façon certaine si le nombre des mouflons croît ou décroît.

Les antilopes ne vivent pratiquement plus au Hoggar, seuls quelques rares individus remontent les vallées de l'Adrar des Iforas et se rencontrent en bordure des tassilis du sud.

Parmi les carnassiers, le plus répandu est le chacal. On le voit partout, guettant les gazelles blessées, suivant les traces des petits animaux, surveillant d'un œil avide les troupeaux

de chèvres. La présence de cet animal est une véritable hantise pour les jeunes bergers des montagnes.

Un renard cruel, d'une taille inférieure à celle du chacal, se trouve parfois dans les formations sableuses des grands regs ou aux abords des tassilis. C'est le fenec.

Le plus curieux des animaux de cette région est sans doute le guépard ou amayas. On ne voit guère que ses traces et il est fort difficile de le rencontrer. Le guépard est un véritable nomade qui parcourt d'énormes distances pour chasser.

Les Touareg apprécient énormément sa peau, dont ils ornent leurs selles.

L'hyène rayée se rencontre assez rarement au Hoggar. Elle est plus fréquente dans les tassilis et dans l'Adrar des Iforas.

Dans la montagne et surtout aux abords des centres de culture, les chats sauvages abondent. Ce sont de beaux animaux, de la taille d'un très gros chat. Voraces et cruels, ils font des dégâts importants parmi les volailles des harratin.

Les Touareg parlent souvent d'un loup que l'on rencontrait dans le temps au Hoggar. Le folklore fait également état d'un animal féroce, le cynhyène, qui vivait en bandes. (Le colonel Augières signale que des ossements de cynhyène ont été trouvés dans la région de Timissao).

Dans les pâturages on trouve en abondance de petits rongeurs. Les lièvres et les lapins se nourrissent d'herbes aromatiques qui donnent à leur chair un parfum particulier.

Des rats de toutes tailles et d'innombrables souris rôdent autour des tentes et endommagent souvent les sacs de cuir dans lesquels sont emmagasinés les grains. Dans les roches de l'Atakor se cache un rat sans oreilles, aux ongles très longs et acérés, c'est le tilout. Un autre animal curieux, le daman, vit en bandes dans les grands amas granitiques. D'après les savants, il serait apparenté au rhinocéros, car sa femelle possède un placenta linéaire. Cet animal, de la taille d'un gros lapin, est excessivement farouche.

Tous les pâturages du Hoggar regorgent d'oiseaux qui mangent les graines, surtout du gergir. Par milliers on les voit s'envoler quand on traverse une prairie.

6: Blanguernon MS25 Tuareg

Près des points d'eau, quantité d'oiseaux insectivores cherchent leur nourriture. Citons en particulier une hirondelle grise qui demeure en permanence au Hoggar, et un charmant oiseau noir et blanc : moula-moula; considéré par les Touareg comme un messager, il accompagne les voyageurs et devient rapidement très familier.

A Tamanrasset, des bengalis (mange-mil), importés d'Agadès, se reproduisent rapidement et peuplent les jardins qu'ils parent de leur plumage rouge.

Les corbeaux se rencontrent un peu partout. Des vautours planent très haut, si haut que, disent les Touareg, le soleil brûle les plumes de leur crâne, et que lorsque meurt un animal dans le désert, les rapaces arrivent mystérieusement de « nulle part ».

Faucons et buses volent autour des pâturages pour chercher leur nourriture.

Les reptiles abondent au Hoggar. Les couleuvres et les vipères séjournent dans les oueds et aux abords, elles se terrent dans les touffes d'épineux et dans les racines des arbres. Les Touareg redoutent tout ce qui rampe. Plusieurs espèces de vipères vivent au Hoggar (tachilt), certaines sont grises, d'autres fauves (à cornes), ou tachetées. On peut rencontrer, mais assez rarement, une sorte de cobra appelé hench-lefeï. Certaines couleuvres atteignent plus d'un mètre.

Des lézards de toutes tailles demeurent dans les endroits les plus désolés. Certains, petits, couleur de sable, filent, apeurés, devant les pas de l'homme, dans les oueds et sur les regs.

Le dob préfère les lieux rocheux. Avec sa grosse queue épineuse, cet animal a une allure antédiluvienne. Il joue un rôle très important dans les histoires touarègues. Les enfants s'en amusent comme d'un jouet. Sa chair, considérée comme comestible, est loin d'être un délice.

L'ourane, grand lézard gris, possède une longue queue flexible qui est une arme redoutable. Les Touareg disent de lui qu'il est leur oncle maternel, lui accordent un courage indomptable. L'ourane attaque paraît-il les nobles, alors qu'il

10. Marmite des Géants.
11. Un tesendgelt (*Eragrostis bipinnata*).

6: Blanguernon MS25 Tuareg

refuse de combattre les Nègres; ces derniers mangent la chair de l'ourane, car ils n'ont aucun lien de parenté avec lui.

On aperçoit souvent, sur les rochers, un lézard vert, à tête rouge : c'est « materter »; il semble dire une prière continuelle en hochant la tête de haut en bas. Les Touareg prétendent que sa morsure est mortelle, mais sont sur ce point en contradiction avec les zoologistes.

Dans les séguias vivent des crapauds en grand nombre, les têtards se trouvent dans presque tous les points d'eau.

Les grandes gueltas comme Issakarassène, Afilal, Amguid, Arak, etc., abritent des poissons : *barbus sahari*. Ces barbeaux risquent de disparaître lors de crues violentes.

Quelques points d'eau, à Tamanrasset en particulier, sont ensemencés de gambouses, utilisées pour dévorer les larves de moustiques. On prétend que la guelta d'In-Outer, située en amont de l'oued Tit, était habitée par un crocodile. Cette affirmation n'est pas à rejeter *a priori*, si l'on songe aux découvertes de ces animaux résiduels faites aux Ajjers.

Les insectes sont évidemment l'élément le plus important de la faune du Hoggar. On en rencontre partout, même en des lieux qui paraissent totalement privés de vie.

Les scarabées sont les plus gros insectes du pays, leurs traces dessinent d'harmonieux pointillés sur le sable. Un scarabée vert, le zembabar, est une véritable parure.

Ankokar, la grosse guêpe venimeuse qui rôde aux abords des points d'eau, inflige des piqûres dangereuses; les Touareg la redoutent et disent que plusieurs piqûres peuvent occasionner la mort.

Les mouches ordinaires sont au Hoggar, comme dans tout le Sahara, les animaux les mieux adaptés. Elles pullulent dans les centres de culture, où elles sont les agents de transmission des maladies d'yeux. On est surpris lorsqu'on fait halte sur un reg dénudé de se voir entouré d'un nuage de mouches venues d'on ne sait où.

Les papillons de jour volent dans les jardins et les pâturages, ceux de nuit décrivent des milliers d'ellipses autour des lampes.

Fourmis de toutes tailles, tiques, mantes, libellules, moustiques, termites, et tant d'autres petits insectes, volent et circulent partout entre les plantes des oueds, autour des pierres des montagnes, sur les arbres et dans les guemouns des jardins, comme aux abords des points d'eau.

Les gueltas possèdent toute une faune aquatique très variée, les sols humides abritent quantité d'insectes, de larves et de vers.

Enfin les scorpions se rencontrent un peu partout, jaunes ou noirs, petits ou gros. Ils sont redoutés des Touareg. Il ne semble pourtant pas que la piqûre des scorpions du Hoggar soit mortelle; elle produit une forte fièvre, variable suivant l'individu touché, l'époque de l'année et la quantité de venin injecté.

Il n'existe pas, à ma connaissance, d'étude scientifique complète sur la faune du Hoggar.

## Peuplement du Hoggar

On ne peut rien dire de bien précis sur l'origine des populations actuelles du Hoggar, et moins encore sur celle des peuplades des siècles passés. Toutefois il est permis d'esquisser un tableau, assez hypothétique, de ce que pouvait être le Hoggar à une époque reculée, sans cependant être à même de dater avec certitude les différentes époques qui se succédèrent.

Les seules données positives que nous ayons sur la préhistoire sont fournies par les récoltes d'outillage, l'étude des figurations rupestres, le résultat des fouilles de tombeaux préislamiques, les connaissances géologiques et celles de la paléoclimatologie. Les traditions orales transmises par les Touareg sont négligeables parce que rares et volontiers mythiques.

On a trouvé au Hoggar des quantités de pierres taillées, témoignant d'un ancien peuplement, mais presque tous les objets récoltés le furent en surface, ce qui empêche l'établissement d'une chronologie. Cependant des haches de type acheuléen ont été découvertes par M. Arambourg dans une cuvette de l'erg Tihodaine, sous des sédiments en place, avec des ossements d'éléphant fossile. La cuvette d'In-Guezzam a fourni également un outillage paléolithique en présence d'ossements fossiles. Les objets de facture néolithique sont en général éparpillés sur le sol.

[p 37]

6: Blanguernon MS25 Tuareg

Les pointes de flèches sont très rares. Les outils les plus nombreux sont des haches à taille bifaciale, polies; il y en a de toutes grandeurs, certaines très petites sont en pierre très tendre, elles servaient peut-être de monnaie. De magnifiques pilons polis, variant de 15 centimètres de longueur à 70 centimètres, sont encore parfois utilisés par les Nègres. On trouve également des polissoirs, des meules dormantes, des grattoirs et des débris de poteries présentant des décorations linéaires.

Des indications intéressantes sont fournies par les gravures rupestres. On peut dire que le Hoggar en est couvert. On connaît à l'heure actuelle près de cent vingt stations, et il y en a certainement d'autres à découvrir; en revanche, les peintures rupestres sont peu fréquentes.

L'examen des gravures met en évidence une succession d'époques. Les plus anciennes sont caractérisées par la présence d'une faune de région de steppe humide : éléphants, lions, autruches, girafes, antilopes, bovidés, chevaux. Les plus récentes sont identifiées par la présence de chameaux, d'ânes et de bonshommes linéaires.

Les gravures contemporaines, accompagnées d'inscriptions en tifinar, sont facilement reconnaissables, car les légendes sont traduisibles.

La rareté des peintures au Hoggar s'explique par l'absence presque totale de grottes permettant leur conservation. Celles qui ont été découvertes se trouvaient dans des abris, en région granitique. Les tassilis, qui possèdent des grottes véritables, n'ont pas encore fourni de peintures. Les plus célèbres sont celles de la Tefedest : sites Coche et sites Cousin-Lelubre. Une autre station découverte en avril 1951 par M. Bobo, dans une vallée de l'Adrar Haggarène, apporte un élément nouveau pour le Hoggar par ses figurations différentes de celles de la Tefedest.

Les gravures les plus anciennes, que l'on qualifie de précamelines faute de références plus précises, sont fortement patinées; certaines ont une patine qui semble identique à celle de la roche. Nous trouvons des animaux parfaitement dessinés,

quelquefois dans une position dynamique; le trait est précis, souvent profond malgré la dureté des roches de support (microgranites, basaltes, etc.), quelquefois un remplissage du dessin est fait en piquetage. Bovidés et chevaux, bien que certainement anciens, ont une patine moins accentuée que les éléphants, girafes et lions. Certains de ces chevaux paraissent d'une facture moins sûre, il semble que l'on assiste à une décadence de l'art rupestre, qui annonce la période suivante. En plus des animaux, on relève des dessins énigmatiques, des traces de pas, des figurations humaines; certains animaux sont striés de traits parallèles.

Vient ensuite la période cameline. En dehors des chameaux, les ânes et les chevaux sont alors assez fréquents, ainsi que des bonshommes stylisés au maximum en trois traits. Tous les dessins offrent une facture sommaire et sans intérêt artistique; le trait est souvent imprécis et la patine n'existe presque pas. Notons également des figures peu compréhensibles, des contours de naïls et quelques silhouettes d'autruches. Des inscriptions en caractères tifinar sont intraduisibles pour les Touareg.

Les gravures contemporaines sont assez rares. Elles représentent des ânes, des chameaux, et n'offrent aucun intérêt, sinon celui de mettre en évidence le fait que les mêmes lieux ont attiré les hommes, car ces gravures et inscriptions chevauchent des gravures plus anciennes.

Le Hoggar est semé de tombeaux de formes différentes. Il y en a pratiquement partout, et l'on ne peut tirer aucune conclusion de la présence de tombeaux préislamiques près des stations rupestres. Les Touareg les nomment : « debni » et « idebnan » au pluriel. Le type le plus fréquent est un tumulus dont la taille est d'environ 4 à 5 mètres de diamètre, mais on en rencontre de beaucoup plus importants et certains atteignent même 20 et 25 mètres de diamètre. Le tumulus est parfois isolé, mais le plus souvent trois ou quatre idebnan sont voisins et il n'est pas rare de trouver de véritables nécropoles. Si l'on rencontre une grande quantité de sépultures près des oueds les plus arrosés du Hoggar, on en trouve également

beaucoup en des points périphériques : Tanezrouft, Ténéré, où le désert est actuellement absolu.

Les chouchets sont moins nombreux que les tumulus, bien que très fréquents. Fort bien construit, parfaitement circulaire, ce genre de debni représente un gros travail; certains peuvent atteindre 20 mètres de diamètre.

D'autres types de monuments, en moins grand nombre que les précédents, sont cependant assez répandus. Ils consistent en cercles concentriques, parfaitement réguliers, tracés avec des pierres enfoncées dans le sol; les plus grands ont environ 25 mètres de diamètre.

Il existe aussi des rectangles entourés de dalles dressées et remplis de cailloux de taille moyenne. La hauteur de ces rectangles peut avoir de 40 à 60 centimètres. En direction de l'est, un U, dont les pointes regardent le debni, est construit à une distance de 2 mètres environ.

On trouve aussi des cercles entièrement dallés, des tumulus ordinaires ceints d'un dallage ovale, et des tumulus entourés de murettes concentriques traversées par un chemin pavé. Enfin des idebnan en forme de croissant, dont la partie centrale est remplie de cailloux, sont souvent accompagnés de tumulus. Le remplissage central du croissant va en s'amenuisant vers les pointes, pour finir par une ligne de pierres. Certains de ces croissants ont une énorme envergure, la distance entre les pointes peut atteindre 400 mètres; ils sont presque toujours situés sur une gara allongée et isolée, ou sur les flancs d'une colline plus importante. On n'en rencontre presque jamais au Hoggar; l'aire de répartition de ces croissants s'étend vers le sud du massif central, après les grands regs; l'Adrar des Iforas et les tassilis du sud en possèdent de grandes quantités. Peut-être s'agit-il là de manifestations d'une civilisation différente de celle du Hoggar central.

*Traditions orales.*

Les Touareg savent qu'il existait au Hoggar, avant leur arrivée, une population appelée Issabaten ayant un système

12. Tamanrasset. Le centre de culture de l'Adriane.
13. Un thora (callotropis proscera) dans l'oued Tamanrasset.

[p. 40(A)]

[p.40(1)]

social de castes, ignorant le chameau. Ces Issabaten étaient inintelligents, et leur bêtise est encore aujourd'hui proverbiale. Les Touareg disent ne jamais avoir eu de conflit avec ces êtres doux et calmes. Certains de ces Issabaten, sans doute d'une caste plus élevée, devaient être plus habiles, car la tradition conserve le nom de Amamellen et de son neveu Elias qui seraient les fondateurs de l'art rupestre. Ces gens n'avaient pas de religion, il faut entendre par là qu'ils n'étaient pas musulmans.

Personne n'a jusqu'à présent pu traduire les inscriptions anciennes en caractères tifinar que l'on trouve de façon assez fréquente. Les Touareg prétendent qu'il s'agit d'une langue différente de la leur, mais écrite avec les mêmes caractères; certains d'entre eux croient que ces inscriptions sont en code, les lettres ayant été interverties dans les mots; et que celui qui pourrait en trouver le sens connaîtrait l'emplacement de trésors.

Il est certain qu'une civilisation à technique paléolithique a existé au Hoggar lors d'une période humide, vraisemblablement au bord des lacs ou des bassins d'épandage des grands oueds (Tanezrouft : Amded, Tamanrasset; Igharghar, Tin-Tarabin, In-Guezzam, Amadror, Thihodaïne, Tafassasset). On a tout lieu de croire que les êtres qui, à cette époque, peuplaient le Hoggar, devaient être de race négroïde, apparentée quant aux caractères généraux à l'homme d'Asselar. Sans doute étaient-ils pêcheurs et chasseurs. La végétation était abondante aux bords des oueds actuels. Une faune composée d'éléphants, de félins, de girafes, etc., régnait dans les plaines. L'Atakor jouissait sans doute d'un climat méditerranéen, mais ne devait pas être peuplé. Il ne paraît pas possible actuellement de fixer la durée de cette période, ni de la situer dans le temps, elle doit être en relation avec les périodes glaciaires de l'Europe.

Lors d'une période interglaciaire, une pulsation sèche du climat donne au Hoggar un caractère désertique. La population négroïde, voyant son mode de vie bouleversé, doit fuir le Hoggar et partir vers le sud où elle retrouvera les conditions d'existence qui lui sont propres.

Pendant un temps très long le Hoggar reste dépeuplé.

14. Tabrakat mort dans l'oued Amded.
15. Un ourane.

La sécheresse se poursuivant, le Sahara fut pour l'homme un désert plus terrible qu'il ne l'est aujourd'hui. Vint alors une période de plus grande humidité, occasionnée par une plus grande régularité des moussons soudanaises. Les oueds coulèrent de nouveau, sans toutefois posséder un débit aussi fort et une régularité aussi grande qu'à l'époque paléolithique. Il faut imaginer le Hoggar avec un climat à peine différent de celui qu'il possède actuellement; seule la régularité des pluies annuelles permettra à une faune de savane de se déplacer de pâturages en pâturages, des tassilis du nord à ceux du sud. L'Atakor conserve son caractère méditerranéen, qui ira en évoluant vers le type résiduel que l'on observe à présent.

Les conditions propres à la vie humaine se trouvant réalisées au Hoggar, l'homme vint de nouveau peupler ces régions. Le nouvel habitant du Hoggar possède une civilisation qu'il apporte avec lui, sans doute de Haute Egypte. C'est un éleveur de bœufs, il est de type négroïde, habile à tailler la pierre et à la polir; il sait cultiver des graines, les broyer, les cuire. Les femmes, grasses et souvent stéatopyges, confectionnent des poteries ornées de dessins linéaires. Ces peuples, de culture néolithique, ont pu arriver au Hoggar par le sud et l'est, mais certaines vagues purent emprunter la vallée de l'Igharghar, en poussant leurs bœufs devant eux. Les chefs de tribus sont des personnages âgés, maîtres des rites magiques; ils savent pratiquer l'envoûtement et utilisent des signes ésotériques. Certains d'entre eux furent de véritables artistes tant en gravure qu'en sculpture.

Il est permis de penser que, plus tardivement, des populations blanches, d'origine libyenne, vinrent aussi se fixer au Hoggar, apportant avec elles des coutumes héliolithiques des rivages méditerranéens, tels que les monuments mégalithiques, le culte solaire et celui du serpent, les déformations craniennes, les systèmes de castes. Les peintures de la Tefedest représentent manifestement des Nègres pasteurs, mais les nouvelles peintures de l'oued Takecherouelt figurent des personnages de race blanche, minces et de grande taille.

Faut-il voir dans ces individus blancs les ancêtres des

Touareg actuels ? Il serait prématuré de le penser, mais ils ont pu être la première poussée des Berbères vers le Hoggar. Leur exode a pu laisser un souvenir au sein des tribus berbères nomades, qui plus tard, possesseurs de chameaux, fuiront pour de multiples raisons la promiscuité romaine ou arabe et retrouveront la route des néolithiques blancs vers le Hoggar.

La chronologie de la protohistoire est difficile à établir. Toutefois on possède sur cette période un certain nombre de documents. Tout d'abord on connaît les résultats des recherches archéologiques, fouille des monuments préislamiques, en particulier celui de Tin-Hinan (cf. le livre de M. Reygasse sur les monuments funéraires préislamiques).

Les Touareg ont un certain nombre de traditions orales concernant cette période. En revanche, les inscriptions d'âge camelin ne nous apportent que des renseignements sommaires : les plus anciennes sont intraduisibles, les plus récentes offrent peu d'intérêt, elles se contentent d'exprimer l'admiration d'un homme pour une femme ou de fixer des rendez-vous. Les textes latins, grecs ou arabes qui nous sont parvenus donnent lieu à des interprétations très diverses et sont, de toute façon, extrêmement fragmentaires.

Il paraît acceptable de faire débuter cette période, en ce qui concerne le Hoggar, vers les guerres puniques et de la terminer le 16 février 1881, date du massacre de la mission Flatters. A partir de cette date, le Hoggar entre dans l'histoire proprement dite.

La protohistoire du Hoggar pose la question de l'origine des Touareg, question qui n'est pas encore résolue d'une façon satisfaisante. Ce sont vraisemblablement des Berbères provenant de différentes tribus, qui ont pu se croiser avec une population blanche vivant antérieurement au Hoggar. Ce qui caractérise les Touareg, plus que certains traits somatiques tels qu'une haute stature, une envergure souvent supérieure à la taille, des cheveux noirs lisses ou ondés, une pilosité rare, c'est l'unité de la langue, l'utilisation des caractères tifinar, et un mode de vie aux coutumes particulières, qui a réussi à assimiler des tribus d'origine arabe, comme les Issakamaren.

6: Blanguernon MS25 Tuareg

Les Touareg se transmettent oralement l'histoire légendaire de Tin Hinan qui serait « la mère », ancêtre des nobles Kel Rela, mais ces derniers ne connaissent pas l'ancêtre masculin, qui, selon certains, serait Français (affirmation sujette à caution, et certainement récente).

Tin Hinan serait originaire du Tafilalet, mais nul ne sait la raison qui la poussa à venir au Hoggar accompagnée de sa servante Takamat, ancêtre des Dag Rali.

Il faut voir dans ce conte, qui ignore l'ancêtre mâle, l'expression de la tradition touarègue qui assure la transmission des droits de noblesse par les femmes.

Les Touareg devaient posséder des chameaux, puisque Tin Hinan montait une chamelle blanche; participèrent-ils à un courant caravanier vers le nord, soit comme guides, soit comme protecteurs ? On peut le penser, car les fouilles du tombeau de Tin Hinan permirent à M. Reygasse de mettre au jour un mobilier funéraire comportant des objets de provenance romaine.

Mais la vie du Hoggar se tourne bientôt vers le Soudan, d'où viendra le courant d'islamisation originaire du Maroc. Ce sont les chroniqueurs arabes, et surtout Ibn Khaldoun, qui permettent d'avoir des vues sur des siècles troublés par des luttes incessantes entre les royaumes nègres et les Touareg, entre Touareg et Arabes, et entre les différentes tribus touarègues. Grâce à la généalogie des familles nobles, de tradition orale, une timide chronologie est possible.

Les premiers musulmans vinrent sans doute prêcher au Hoggar vers le VII^e ou le VIII^e siècle; ils étaient originaires du Sud marocain et se prétendaient chorfa.

Des guerres continuelles sévissaient entre les Berbères musulmans et les Sonraï de Gao qui contrôlaient le Sahel soudanais. Après des suites de succès et de revers, les Touareg s'installèrent définitivement dans le Hoggar, l'Adrar des Iforas, l'Aïr et le tassili des Ajjers, régions montagneuses, semi-désertiques, où la vie est possible pour des nomades, repaires faciles à défendre, excellentes bases de départ pour des pillages et zone de puits indispensables aux caravanes.

6: Blanguernon MS25 Tuareg

A partir du XVIe siècle, l'histoire du Hoggar est celle de la lutte entre tribus rivales : longue énumération de renvois heureux ou malheureux, d'assassinats de chefs, de rapts.

La tribu qui commanda l'ensemble des Touareg dès le début de l'islamisation est celle des Iménanes, dont il ne reste à présent que de rares descendants; les Iménanes étaient des chorfa marocains. Vers le XVIIe siècle, les Iménanes se virent dans l'obligation de partager leurs terres et leur commandement entre les différentes tribus touarègues par trop belliqueuses. De cette époque date la séparation entre les Touareg du Hoggar, de l'Aïr, des Ajjers et des Iforas.

Les Kel Ahaggar se présentent sous l'aspect d'une confédération de tribus, que commandent des tribus nobles, possédant chacune des tribus vassales. Quatre tribus nobles plus ou moins apparentées se partageaient les terres du Hoggar. Les Kel Rela prétendent descendre d'un chérif marocain; les Taïtoks sont apparentés aux Imenanes, donc chorfa, mais ils se seraient croisés, dit-on, avec des Nègres; ces deux tribus sont les plus importantes. Les Ikadéiens seraient des Berbères croisés avec des Arabes du Tidikelt; cette tribu n'a plus guère de descendants actuels. Les Tédjéhé Mellet possèdent du sang chorfa; ils ne furent jamais très nombreux, actuellement ils constituent un petit groupement de tentes qui séjourne dans la Tefedest.

Une constante anarchie régnait dans cette confédération. Les assassinats permettaient des successions rapides, et le commandement était un enjeu dangereux. Les tribus nobles se partagèrent les terres du Hoggar. Les Kel Rela eurent l'Atakor, les Tédjéhé Mellet la Tefedest et les tassilis du nord, les Taïtoks l'Ahnet et le sud-ouest du Hoggar.

Depuis ce partage, la généalogie des Kel Rela est à peu près certaine. Kella, Targuia noble, transmit le tobol (1) de mère à filles. Les deux tribus nobles les plus importantes : Kel Rela et Taïtoks, ne cesseront pas d'être en chicane au sujet des droits de succession au tobol, à la suite des mariages conclus en période d'amitié. Batailles, alliances, se succéderont

(1) Sorte de tambour, insigne du commandement; par extension : le droit au commandement.

d'une façon confuse. Lorsqu'ils sont unis les Kel Ahaggar se battent contre les Arabes du Touat, ou les Nègres du Soudan; sont-ils en désaccord, ils reprennent les luttes intestines, ou s'attaquent aux Ajjers.

Pillant ou protégeant les caravanes, les Touareg possédaient le contrôle du Sahara central et méridional au moment où les Français cherchaient à s'assurer une liaison entre l'Afrique noire et l'Algérie. C'est à peine si cet ennemi commun réussit à unir les Touareg.

## L'Homme

Pour bien comprendre le pays touareg, il est nécessaire de préciser ce qu'est l'homme, du point de vue ethnique, autant qu'il est possible de le faire, ce qu'il est aussi du point de vue social et économique.

Un tableau succinct mettra en évidence les différents groupes ethniques, les classes sociales et les spécialisations économiques; il permettra de mieux saisir les relations humaines.

*A. Ethnique.*

| | | | | |
|---|---|---|---|---|
| | | | | Nobles. |
| 1. BLANCS : | Berbères | : | Touareg | : Imrads moins les Issakamaren. |

|---|---|---|
| 1. Nobles (Ihaggarènes) | Chorfa (religieux) | |
| 2. Vassaux (Imrads) | Zaoui » | |
| 3. Artisans (Inaden) | Chaamba | |
| 4. Jardiniers (Harratin) | Divers | |
| 5. Domestiques (Iklan) | Métis | |

*C. Organisation économique.*

Touareg : Pasteurs nomades
Arabes : Pasteurs et commerçants nomades
Inaden : Artisans
Harratin : Cultivateurs, ouvriers, manœuvres
Iklan : Domestiques des Touareg
Mozabites : Commerçants sédentaires
Chorfa : Reçoivent des aumônes en échange de leur présence
Zaoui : id.

Au début de l'occupation française, le peuple touareg se trouvait à un stade d'évolution sociale semblable sur bien des points à notre Moyen Age. Aujourd'hui encore le même système reste en vigueur, cependant on peut discerner des fissures dues à la présence française et musulmane. Pour ne parler que des Kel Ahaggar, qui seuls nous intéressent dans cette étude, nous distinguons une confédération de tribus commandées par l' « amenokal » qui est élu à vie. Son titre lui confère la propriété du sol, amenokal voulant dire propriétaire de la terre. Il dispose à son gré des terres de parcours et des terres cultivables. En fait, ce pouvoir est exercé suivant la coutume et d'une façon paternelle.

Au sein des tribus existe un système de castes très étanches. Tout d'abord les tribus nobles qui autrefois fournissaient les guerriers; elles assuraient la protection de la confédération. Elles étaient riches des pillages exécutés aux dépens des

6: Blanguernon MS25 Tuareg

[Facing p. 48]

confédérations voisines, des caravanes étrangères et des droits de protection payés par les caravaniers qui empruntaient les terres de parcours des Kel Ahaggar. Ensuite les tribus imrads — nous pouvons dire vassales —; plus nombreuses, composées de pasteurs gardant les chameaux et conduisant les caravanes, elles pouvaient être appelées à fournir des renforts lorsqu'une expédition tournait mal ou prenait une ampleur anormale.

Chaque tribu possédait des esclaves (iklan) achetés ou razziés au Soudan. Ils vivaient au sein des familles touarègues, s'occupant des travaux domestiques, du gardiennage des chèvres, de l'extraction du sel, du creusement des puits. Ces familles d'esclaves faisaient partie intégrante de la tribu et la suivaient dans ses déplacements.

Les harratin étaient des hommes libres ou libérés, des Nègres en général, souvent originaires du Touat, venus pour cultiver les terres arables du Hoggar. Ils travaillaient suivant deux systèmes de contrats qui sont encore en vigueur et que nous étudierons plus tard.

## Les Tribus

Dans le précédent chapitre nous avons vu que chaque tribu noble possédait des imrads ou vassaux; ces tribus imrads ont chacune un chef appelé « amrar », qui commande la tribu en se conformant aux usages. Une tribu peut se diviser en fractions et sous-fractions. La tribu possède une zone de pâturage qui lui est propre, dans laquelle aucune autre tribu ne peut séjourner sans un accord préalable de l'amenokal et cela seulement dans des circonstances exceptionnelles. Les nobles peuvent séjourner comme bon leur semble sur les terres des vassaux. Les tribus imrads versent en signe de vassalité une redevance à l'amenokal, cet impôt est appelé « tioussé », il est toujours en nature et généralement scrupuleusement acquitté. Ce revenu permet à l'amenokal de tenir son rang lors des réceptions qui sont presque quotidiennes, mais il ne couvre qu'imparfaitement les frais que lui vaut son commandement.

6: Blanguernon · MS25 Tuareg

[Facing p. 49]

## Les Nobles

Les Kel Rela constituent actuellement la tribu noble la plus importante du Hoggar; ces nobles, appelés en tamahaq ihaggarènes, comprennent trois fractions : les iboglanes, les inembas et les ikérémoïens; ces fractions sont apparentées et pratiquent de plus en plus l'endogamie.

Les Kel Rela sont sans doute les plus beaux échantillons du type touareg. Cela tient-il à ce qu'ils forment depuis longtemps la caste dirigeante ? On est obligé de constater leur véritable noblesse, une politesse raffinée et une courtoisie jamais en défaut; ils sont plus ouverts que les imrads, souvent plus intelligents, certains d'entre eux possèdent même le sens de l'humour. Beyh ag Akhamouk, l'amenokal actuel, est un personnage des plus représentatifs, possédant de grandes qualités de chef. Les jeunes Kel Rela se tournent de plus en plus vers les Français, les fréquentent, deviennent leurs amis; cette attraction se généralisera petit à petit : l'estime que manifestent ces jeunes gens pour des individus précis s'étendra à l'abstraction qu'est pour eux la France. Les Kel Rela sont un peu plus de 300 individus possédant environ 350 serviteurs noirs. Leurs tentes sont dispersées sur tout le territoire du Hoggar. Le campement de l'amenokal n'est jamais très éloigné de Tamanrasset.

Une autre tribu noble, celle des Tédjéhé Mellet, est peu importante : réduite à 32 individus, elle séjourne ordinairement dans la Tefedest près des tribus imrads qu'elle possède : Kel Ohet et Kel Terrourrirt. Ces nobles n'ont pratiquement aucun rôle dans l'organisation touarègue du Hoggar. L'amrar de la tribu est Khourou ag Salah.

La tribu des Taïtoks a dû s'exiler au Soudan, depuis notre arrivée au Hoggar, et a été dépossédée de ses terres. Il reste cependant une trentaine de Taïtoks qui nomadisent aux environs de Tamanrasset. L'amrar est Illou ag Amri.

Près de 70 nobles de la tribu soudanaise des Iforas séjournent en terre Ahaggar. Ils sont souvent alliés aux Kel

17. Beyh ag Sidi Mansa, neveu de l'amenokal actuel.

6: Blanguernon MS25 Tuareg

Rela. Parmi ces Iforas quelques-uns appartiennent à la tribu maraboutique Iforas de Temassinine.

## Les Imrads

Suivant la légende, les Dag Rali seraient les descendants de Takamat, la suivante de Tin Hinan. Les montagnes de l'Atakor et de l'Arechchoum constituent leurs zones de pâturages. C'est une tribu de riches éleveurs de chameaux et de chèvres.

C'est la plus importante tribu imrad des Kel Rela; on compte environ 390 individus servis par près de 400 Nègres. Les Dag Rali sont des montagnards têtus, un peu bornés. Ils ont une résistance remarquable à la fatigue lorsqu'ils marchent dans leur pays accidenté. Notons également l'adaptation aux froids des mois de décembre, de janvier et de février; les campements sont en général situés à une altitude moyenne de 2 000 mètres. Les Touareg sont vêtus de deux gandouras de coton et enveloppés assez souvent d'un « dokali », et supportent des froids allant jusqu'à — 12°, sous la tente, vers cinq heures du matin.

L'amrar de la tribu est Akroud ag Ama (1). Ce sont les Dag Rali qui possèdent les tentes les plus belles, les hommes sont renommés comme chasseurs de mouflons.

La tioussé payée à l'amenokal est environ de douze mezoued de dattes, huit bottas de beurre, douze brebis prêtées pour le lait et dix chèvres à abattre.

On distingue chez les Dag Rali plusieurs sous-fractions, désignées surtout en fonction des régions qu'elles habitent : Kel Arechchoumi, et les Ikhechemaden qui étaient imrads des Taïtoks autrefois.

La tribu la plus nombreuse des imrads est celle des Adjouh n'Téhélé. Elle comprend 590 individus environ et plus de 750 Nègres domestiques. Bien qu'imrads, les Adjouh n'Téhélé sont considérés différemment par les nobles. Vers le XVIIIe siècle, cette tribu qui résidait dans l'Aïr est venue d'elle-même s'incorporer aux Kel Ahaggar, afin de fuir les exigences

(1) Mort en 1952.

du sultan d'Agadès qui réclamait chaque année une vierge en signe de vassalité. Les terres de parcours de cette tribu s'étendent à l'est et au sud de celles des Dag Rali.

Les centres de culture les plus importants appartenant aux Adjouh n'Téhélé sont Tarhaouaout, In Dalag et Tahifet. On compte plusieurs fractions : les Isanden dans la région d'Isernan, les Kel Rafsa, région de Tahifet, les Relaïdine, région de Tin-Tarabin, et les Kel Hagalella, sud de Tamanrasset. L'amrar de la tribu est Samaalatokh ag Mansouri. La tioussé versée à l'amenokal est sensiblement la même que celle des Dag Rali.

Les Adjouh n'Téhélé ont le caractère ouvert, ils sont gais et plaisantent volontiers, mais ils ont la réputation d'être vifs et coléreux.

La tribu des Aït Loen est, comme les précédentes, imrad des Kel Rela, elle descend de Takamat. Ces Touareg nomadisent dans l'est de l'Atakor et pénètrent parfois en territoire Ajjers; leur centre le plus important est Tin-Tarabin. Les communications routières vers les territoires de cette tribu sont inexistantes, aussi leurs tentes sont-elles très rarement visitées.

Les Aït Loen sont environ 500, ils possèdent 620 serviteurs noirs. Les Kel Torha, Kel Anahef et Kel Telerteba sont les trois fractions de la tribu, dont le chef est El Ralen ag Nissoran. La tioussé est d'environ quatre mezoued de dattes aux Kel Rela, et un mezoued de dattes versé par les Kel Torha aux Tédjéhé Mellet.

Les Aït Loen sont des guides éprouvés vers les Ajjers et vers le Ténéré.

Les Iklan Taoussit sont environ 600, servis par 650 Nègres; ils nomadisent dans le Tahelra, la région de Silet, les oueds Amded et Tekouiat, et dans le nord de l'Adrar des Iforas. Ils appartenaient autrefois aux Imenanes, d'où leur nom qui signifie « serviteur de la tribu ». La tioussé est de l'ordre de quatre mezoued de mil, deux bottas de beurre et six chèvres laitières. L'amrar de la tribu est Dali ag Akoumaris; la fraction de la tribu qui séjourne presque continuellement dans la région de Tin-Zaouaten a pour chef Khadida. Les Iklan Taoussit sont,

parmi les Touareg, ceux qui font la plus grosse consommation de graines d'afazzou *(Panicum Turgidum)*.

Les Tédjéhé n'Néfis sont peu nombreux : 98 Touareg et 120 Nègres; cette tribu est, comme la précédente, imrad des Kel Rela, mais autrefois elle appartenait aux Taïtoks. Les Tédjéhé n'Néfis sont apparentés aux Adjouh n'Téhélé, comme eux ils seraient originaires de l'Aïr. Leurs campements sont généralement dans l'oued Tamanrasset, en aval du village, surtout vers les jardins de Tidjenouine. Le chef de la tribu est Ad Noumen ag Khadida.

La tribu des Ibotenaten, comprenant 128 individus et servie par 153 Noirs, est inféodée aux Kel Rela sans être vraiment imrad. On dit qu'autrefois un Ibotenaten tua un noble Ahaggar. La tribu fut combattue par les Kel Rela et condamnée à payer un tribut.

Les Ibotenaten sont de riches éleveurs de chameaux, ils résident en permanence au Tamesna, bénéficiant des pluies annuelles qui fécondent cette région. L'amrar de la tribu est Ould Brika.

Les Irreguenaten sont au nombre de 434 et possèdent 600 Nègres; ils résident normalement au Tamesna, mais nomadisent vers les Iforas et même le Timétrine. Leur nom signifie : métis d'Arabes et de Touareg; ils sont alliés aux Ibotenaten. Riches éleveurs de chameaux, les membres de cette tribu sont essentiellement nomades, ils ne possèdent aucun centre de cultures. Ce sont les meilleurs guides du Tassili n'Ahaggar.

On désigne sous le nom d'Issakamaren un ensemble de tribus d'origine arabe qui furent razziées au Touat et au Tidikelt vers le XVIII^e siècle par les Kel Ahaggar. Les Issakamaren parlent l'arabe et le tamahaq, mais leurs coutumes sont devenues celles des Touareg; ils sont incorporés à la confédération touarègue et traités comme des imrads, avec cependant une légère nuance d'infériorité dans le système des castes. Leurs zones de pâturages sont situées sur la périphérie du massif central.

La tribu de Kel in Khar compte 176 individus et 50 Nègres.

6: Blanguernon MS25 Tuareg

Elle nomadise dans l'est de la Tefedest et commerce avec la région de Tin-Zaouaten.

Le centre de Mertoutek est leur propriété, mais ils possèdent des jardins à Dehine et à Abezzou.

La tioussé est évaluée à un chamelon et un mezoued de dattes. Le chef de la tribu est Ikharis ag Akcham. Ce sont de riches éleveurs de chameaux et d'excellents guides de la Tefedest et de l'Amadror.

Les Kel Amguid sont environ 88 et possèdent 9 Noirs; ils sont apparentés à d'autres fractions Issakamaren. Leur zone de déplacement est la région d'Amguid, l'Igharghar et la Tefedest. Les Kel Amguid possèdent des jardins à Adenek, à Mertoutek et à Idelès, ils paient une tioussé s'élevant à quatre mezoued de dattes, un assaber et un chamelon. Le chef de la tribu est Kelli ag Khabouba.

Imrads des Kel Rela, les Kel Tazolé comptent 60 Touareg et 60 Nègres. Ils possèdent un important troupeau camelin et nomadisent dans la région de Tazerouk, à l'est de ce centre surtout.

Le chef de la tribu est El Mamoun ag el Hadj Baba. Tazerouk est leur centre, et les petits centres voisins leur appartiennent. La tioussé est de trois mezoued de dattes, trois agneaux et un chameau de quatre ans.

Les Kel Tazolé conduisent des caravanes en direction de Rhat et du Tidikelt. Ils échangent du mil en Aïr.

Les Eouen n'Hada comptent 241 individus et 90 Nègres. Ils nomadisent dans la Tefedest, l'Ifetessen et parfois dans l'oued Selbourak. Tadjemout est leur centre de culture. Ils versent à l'amenokal une tioussé de trois mezoued de grain, un chamelon et un tapis.

Les Eouen n'Hada, dont l'amrar est Nassamou ag Elias, sont des guides de l'Immidir.

Les Kel Immidir sont environ 170 individus, ils ont 45 serviteurs noirs. Cette tribu nomadise surtout dans le tassili, région d'Arak, l'Ifetessen et le Rharis.

Ils possèdent les palmiers de Tadjemout et de Djoraf. La tioussé s'élève à six mezoued de dattes et un tapis. L'amrar

est Sidi Rali ag el Hadj Mohamed. Les Kel Immidir sont des caravaniers vers Rhat et le Tidikelt.

La tribu des Kel Tefedest est pauvre : pour 61 Touareg elle ne possède que 11 Nègres. Alliée aux Kel Tazolé et Kel Immidir, elle nomadise dans la Tefedest et l'Immidir. Les Kel Tefedest possédaient autrefois des jardins dans un centre abandonné près d'In-Amguel (Adjelil). La tioussé est de quatre mezoued de dattes et un chamelon. L'amrar de la tribu est Ikkan ag Magamed.

Les Ikoutessen sont très pauvres et peu nombreux : 85 individus et 20 Nègres. L'amrar de la tribu est Lamari ag Moudi. Ils payaient une tioussé de deux mezoued de dattes, une guerba et un mezoued vide. Les Ikoutessen séjournent ordinairement dans la région d'Amguid, ils vont au Soudan et au Tidikelt.

Appartenant autrefois aux Taïtoks, les Kel In Tounine dépendent actuellement des Kel Rela. Ils sont peu nombreux, leur région est l'Igharghar. Les Kel In Tounine possèdent des jardins aux Ajjers, ils payaient très irrégulièrement aux Taïtoks une tioussé de six mezoued de dattes et de deux moutons. Ce sont des guides vers les Ajjers.

Les Kel Ahnet, anciens imrads des Taïtoks, appartiennent à présent aux Kel Rela. Tribu pauvre de 125 Touareg et 10 Nègres. Ils nomadisent dans l'Ahnet, l'Acedjerad et l'Adrar des Iforas. Ce sont d'excellents guides du Tanezrouft. Ils possèdent des jardins à Abalessa, Tahart, Tit et Tibeghim et des palmiers dans l'Ahnet.

L'amrar est Daniel ag Chikkat. Les Kel Ahnet commercent entre le Tidikelt et les Iforas.

La tribu des Iouarouaren ne se compose que de 47 individus et ne possède pas de Nègres. Elle nomadise dans l'Acedjerad, mais réside surtout dans la région de Tin-Zaouaten. Son chef est Bahman ag Beuh. Les Iouarouaren possèdent des palmiers à Tibeghim, ils ont la réputation d'être d'excellents chasseurs d'antilopes addax. Autrefois ils payaient la tioussé aux Taïtoks, soit un mezoued de bechena et deux bottas de beurre. Ce sont des guides du Tanezrouft.

Une tribu imrad des Tédjéhé Mellet, celle des Kel Ohet, comprend 80 Touareg et 20 Nègres; elle est alliée aux Kel In Tounine et a beaucoup de relations avec les Ajjers. L'amrar de la tribu est Habib ag Ouhaggarène. Ses membres nomadisent dans l'est de la Tefedest, possèdent des jardins à Ohet et à Dehine. La tioussé était autrefois de quatre mezoued de dattes, des cordes et des guerbas.

Les Kel Terrourrirt sont des imrads des Tédjéhé Mellet. Leur tribu est peu nombreuse : 62 Touareg et 6 Nègres, et très pauvre. Ils campent dans la région d'Amguid et dans le tassili des Ajjers et possèdent quelques jardins à In-Amguel. L'amrar est Hadj Mohamed ag Salah. Ils payaient quatre mezoued de dattes, quatre moutons, des cordes et des guerbas. Ils commercent avec le Tidikelt.

Les Ibardjien ne sont pas des Issakamaren. Ils sont imrads des Kel Rela. C'est une tribu appelée à s'éteindre, on n'y compte que 24 hommes. Ils résident dans la région de Tazrouk et d'Idelès. Ils étaient de remarquables chasseurs de mouflons, possédant des chiens dressés à cet usage.

Il faut noter la fixation au Hoggar d'anciens militaires, chaamba pour la plupart, qui épousent des femmes touarègues, font souche, et dont les enfants sont élevés dans les coutumes touarègues. Ils sont assez nombreux dans la région de Tin-Zaouaten.

## Les Maalmines. Inaden

A l'intérieur de la société touarègue on trouve des artisans appelés « maalmines » (arabe), mais dont le nom tamahaq est « inaden ». On dit un « inade », des « inaden », une « tinat », des « tinadin ».

Les maalmines constituent une tribu dont les membres ne se marient guère qu'entre eux; ils sont apparentés aux maalmines des Iforas et de l'Aïr. Bien que très noirs de peau, ils n'ont pas les traits négroïdes. L'origine des maalmines est aussi obscure que celle des tribus touarègues; on a voulu voir

en eux des Juifs razziés par les Touareg et qui à la longue se seraient targuisés (leur spécialisation et leur caractère pourraient le faire croire). Certains maalmines disent être venus au Hoggar au temps du sultan Goma, ayant été séparés de la tribu des Idenan dont ils faisaient partie. D'autres prétendent avoir toujours appartenu à la confédération touarègue.

On compte au Hoggar, chez les maalmines, dix-sept hommes, une vingtaine de femmes et une quarantaine d'enfants; ils possèdent une dizaine d'iklan.

Les hommes sont des ouvriers polyvalents, souvent adroits et assez artistes; en fonction de la matière première qu'ils ont et des outils qu'ils possèdent, on peut affirmer qu'ils sont remarquables. Les femmes travaillent le cuir avec adresse et art. Les maalmines ne sont pas groupés en tribus, mais forment des familles restreintes, dispersées dans tous les coins du Hoggar. Lorsqu'une tribu, noble ou imrad, a besoin de faire exécuter des travaux, elle mande un ouvrier et lui envoie des animaux pour qu'il puisse se déplacer avec son outillage. Il réside avec la tribu pendant le temps nécessaire à l'accomplissement de sa tâche, il est nourri par la tribu qui le commande. Lorsque le travail prend fin on le paie, suivant la satisfaction éprouvée, en chèvres, mil, lait, beurre, voire chameau, mais il n'y a rien de prévu comme tarif entre maalmines et Touareg. Il en est autrement avec les harratin qui, n'étant pas aussi nobles que les Touareg, ne sauraient pas apprécier avec la générosité voulue la valeur des travaux. Il y a donc le tarif suivant : Une houe neuve (taillée dans un vieux fût d'essence), cinq guessa de blé ou de mil; quatre rivets posés sur une vieille houe, une guessa de grain; une hache neuve coûtait autrefois une chèvre ou cinq guessa, mais depuis le marché noir, il n'y a plus de cours valable !

La fabrication des bijoux, même pour les Touareg, est passible d'un cours spécial fixé par l'usage ; ainsi, pour les bracelets et les pendants d'oreilles, le Targui fournit par exemple dix pièces d'argent nécessaires à la fabrication de deux bracelets; le maalem en conserve cinq pour lui, ou bien le Targui lui verse en monnaie actuelle la valeur des cinq pièces.

18. Rhama, femme de la tribu des Iklan Taoussit.

Le même tarif est valable pour les bagues et les pendentifs. Les inaden ont une position mal définie dans la société touarègue, certains les considèrent comme inférieurs aux imrads, d'autres les placent entre les nobles et les imrads. Il est certain que les maalmines sont orgueilleux et loin de souffrir de complexe d'infériorité. Ils connaissent fort bien les usages touareg, le pays, les gens et sont en somme gardiens de certaines traditions d'art, on pourrait dire de culture.

Les tinadin, femmes des maalmines, travaillent le cuir ainsi que le font toutes les femmes touarègues, mais chez elles cela prend la tournure d'une profession. Elles sont très habiles et artistes, et leur spécialité est la fabrication des étuis pour les iremdan, les gaines pour les couteaux et les fourreaux des sabre appelés « tittar n'takouba ».

## Les Harratin

Les harratin du Hoggar représentent, comme partout ailleurs au Sahara, l'élément sédentaire, surtout cultivateur.

C'est, dans l'esprit du pays, un vocable qui désigne une caste dans la société touarègue. Lorsqu'on interroge un Kel Ahaggar sur la hiérarchie des différentes castes, il place d'abord les nobles : ihaggarènes; les vassaux : imrads, en distinguant chez ces derniers les issakamaren, qui sont au plus bas de la caste; puis les iklan (esclaves, disons domestiques); ces iklan sont des Noirs et la distinction d'avec les Touareg est évidente du fait de leur type ethnique (1).

Les harratin, qui sont aussi des Noirs, sont mis par les Touareg, qui possèdent à un degré élevé le préjugé racial, sur un plan aussi bas que les iklan.

Cependant il y a une nuance : l' « akli » (pluriel : « iklan ») appartient à son maître, le Targui; il ne peut pas le quitter, et, si à présent il n'est plus vendu, du fait de la présence française, il se considère lui-même comme la chose de son maître. Le

(1) Parallèlement existe une hiérarchisation religieuse musulmane et maraboutique (Chorfa — Zaoui — Arabes — Mozabites).

21. La tente de l'amenokal.
22. Jeunes harratin d'Ideles.
23. Type de hartani.

6: Blanguernon MS25 Tuareg

hartani est un homme libre, il peut à son gré vivre où il lui plaît, travailler comme il veut, où il veut, il passe des contrats avec les Touareg et ne dépend d'eux qu'en fonction de son travail. De plus, habitant le Hoggar, il doit observer les coutumes du pays.

Il est soumis à l'autorité du chef du village, ce dernier également hartani étant justiciable de l'amenokal (1).

Les harratin du Hoggar ont vraisemblablement deux origines possibles. Certains viennent des oasis du Touat et du Tidikelt. Ce mouvement de population a, paraît-il, toujours existé. Ces harratin constituent un élément variable quant à l'importance numérique; il y a en effet un va-et-vient continuel entre le Hoggar et les oasis du nord, suivant les années sèches ou pluvieuses.

Les autres harratin sont des iklan libérés par les Touareg. Cet affranchissement a pour principale cause la pauvreté croissante des nobles et des vassaux qui ne possèdent plus de ressources suffisantes pour nourrir et habiller leurs domestiques.

Ces hommes libérés, s'ils s'élèvent dans le système de castes, ne sont pas plus heureux, car cette liberté est souvent synonyme de dénuement absolu.

Les difficultés économiques résultant de l'interdiction des rezzous ont fait plus pour supprimer l'esclavage que la loi et la raison.

Que dire de l'origine historique des harratin en tant que type ethnique ? Nous avons déjà vu que l'on peut distinguer deux types de harratin.

Les anciens esclaves touareg sont vraisemblablement originaires du Soudan et du Niger, où ils furent achetés ou razziés.

Les harratin du Touat et du Tidikelt peuvent avoir également la même origine, mais on ne peut exclure l'hypothèse selon laquelle ils seraient descendants plus ou

(1) Cette hiérarchisation et ces rapports concernent l'observance des usages et n'a rien à voir avec la justice française qui est dans les mains du chef d'annexe et des autorités judiciaires de Batna.

moins purs d'un ancien peuplement négroïde du Sahara (1).

Les harratin constituent au Hoggar un élément social des plus intéressants, car ce sont eux qui cultivent les rares terres productives, qui fournissent les ouvriers : maçons, menuisiers, et les manœuvres. S'ils paraissent présenter au premier abord peu de qualités intellectuelles et morales, ils n'en sont peut-être pas moins facilement adaptables.

## La Langue

Les Touareg parlent une langue berbère. Cette langue est certainement le lien le plus étroit qui unit des populations éparpillées des regs du Tidikelt aux rives du Niger; elle est, plus que le type ethnique, l'élément caractéristique de ces peuplades. C'est grâce à elle que se maintient ce que l'on peut encore appeler la « culture touarègue » qui subsiste dans les traditions, les mœurs et les superstitions.

Cette langue qui se nomme le tamahaq au Hoggar, ou tamacheq au Soudan, comporte plusieurs dialectes : celui qui est parlé par les Kel Ahaggar se nomme le « tahaggart », il est ainsi appelé par les Kel Ajjers et les Taïtoks; dans l'Aïr, il se dit « taïrt »; dans l'Adrar des Iforas, « tadrak », et celui des Aoullimiden s'appelle « taoullemmet ».

Ces dialectes sont proches les uns des autres; quelques déformations de prononciations locales les distinguent, ainsi que certains idiotismes.

Le tahaggart, langage des Touareg du Hoggar, a été le mieux étudié, surtout dans les tribus nobles, car, disait le père de Foucauld : « la langue n'est pure que chez les nobles ».

C'est une langue complexe, riche, nuancée, dont la syntaxe est précise et difficile. Le général Hanoteau réussit, avec l'aide de Touareg capturés lors d'un combat, à rédiger une

(1) A ce propos il est utile de lire les articles publiés dans les *Bulletins de liaison saharienne* à Alger auxquels collaborent les professeurs de l'université d'Alger et toutes les personnalités qui, à divers titres, ont travaillé au Sahara. (Gérant : commandant Ferry. Direction des Territoires du Sud : Gouvernement général de l'Algérie).

grammaire touarègue; ce fut la première étude précise de tamahaq.

Des dictionnaires furent établis par Cid Kaoui, M. Masqueray, mais le plus remarquable travail, qui constitue une somme, est le dictionnaire du père de Foucauld. La grammaire du père de Foucauld et les textes qu'il rassembla constituent les bases les plus sûres pour l'étude du tamahaq.

On ne saurait trop dire combien l'œuvre de l'« ermite du Hoggar » est splendide, en ce sens qu'elle a mis en lumière une civilisation dans l'histoire.

Tableau des lettres tifinar

L'originalité du tamahaq en tant que langue berbère, c'est qu'il peut s'écrire avec ses caractères propres, que l'on nomme des tifinar.

Les caractères tifinar sont au nombre de vingt-cinq, auxquels il faut ajouter des lettres composées provenant de la combinaison de deux éléments simples.

Chaque lettre représente une consonne de la langue, un seul signe indique la voyellation à la fin d'un mot. Pour écrire un mot il suffit d'aligner les consonnes de ce mot les unes après les autres, sans les attacher, dans le sens que l'on veut, de gauche à droite ou de droite à gauche, comme de haut en bas ou bien de bas en haut, suivant le goût du scripteur. Certaines lettres, comme le M, le G ou le D (fort), fournissent l'indication du sens de l'écriture.

Toutes les lettres écrites se prononcent, à de très rares exceptions près.

Soit à écrire : Tamanrasset, à l'aide de tifinar :

la position des jambages du M indique le sens de gauche à droite. On peut également écrire : ou encore :

On conçoit aisément que cette écriture sans voyelles est assez pénible à lire; il faut en effet, au cours de la lecture, placer convenablement les voyelles. C'est toujours un spectacle amusant que de voir un Targui déchiffrer du tifinar; il chantonne en épelant chaque lettre des mots, jusqu'à ce que,

d'une façon que l'on peut qualifier d'audible, il identifie le mot, retrouve son sens, et le prononce enfin avec une évidente satisfaction.

Iété..é. é,émmé.éé.,enné.. é .,IèR... éssé..é.é. éTT.

ce qui permet de trouver : Tamanrasset.

La lecture d'un texte, avec ce système d'épellation, est longue et compliquée, car il faut se souvenir des mots retrouvés pour reconstituer la phrase, sinon tout est à recommencer. Une connaissance étendue de la langue est indispensable pour pouvoir placer correctement les voyelles et éviter ainsi les contresens.

Malgré cette difficulté de transcription, les Touareg s'amusent à mélanger les lettres à l'intérieur d'un mot, ce qui pour un non-initié est proprement incompréhensible.

Le tamahaq emprunte actuellement beaucoup de mots à l'arabe et au français, déjà le père de Foucauld avait noté cette invasion de l'arabe, et la targuisation de nombreux mots.

Dans les tribus nobles chaque individu sait lire et écrire, mais il en va autrement chez les imrads; nombreux sont les vassaux qui savent tout juste écrire leur nom.

La richesse de la langue parlée diminue beaucoup du fait du bilinguisme, et sans doute aussi parce que la poésie, alimentée autrefois par les exploits guerriers, tend à disparaître. On se rend compte ainsi de l'importance de l'œuvre du père de Foucauld qui a fixé pour toujours une langue de tradition orale.

Il arrivera certainement un temps où les Touareg devront utiliser le français pour se perfectionner dans leur langue.

## Généralités sur l'économie du Hoggar

Un pays, tel que nous le connaissons après l'étude du milieu physique, possédant des ressources très restreintes du fait de la rareté de l'eau et de la pauvreté du sol, ne pourra avoir qu'une activité agricole réduite aux productions incertaines.

La société touarègue, nomade par nécessité géographique, et guerrière par besoin, devait, pour nourrir les nobles-soldats, les imrads-pasteurs et les esclaves-domestiques, trouver un moyen de compenser les aléas de la culture faite par les harratin dans les vallées du Hoggar. Ce moyen, c'est d'une part l'échange du sel extrait de l'Amadror contre le mil cultivé au Soudan; et, d'autre part, l'échange du blé récolté au Hoggar contre les dattes du Tidikelt. Ce double mouvement constitue l'originalité de l'économie touarègue, il met en évidence :

1° Le troc, encore employé comme système d'échange;

2° La constatation curieuse que le Targui se nourrit de denrées qui ne sont pas produites au Hoggar : les dattes et le mil;

3° Le fait que le Targui, s'il a besoin du Nègre domestique et du hartani cultivateur, est nécessaire à ceux-ci pour qu'ils vivent. On estime que le mil constitue les deux tiers de

6: Blanguernon MS25 Tuareg

la nourriture de la population du Hoggar, le dernier tiers étant fourni par les dattes;

4° Comme conséquence de cette organisation, l'existence d'un grand troupeau camelin pour assurer les courants caravaniers.

## Le Troc

Ce pays déshérité par la nature donne cependant à ses habitants une richesse gratuite : le sel. Ce sel, qui fait défaut au Soudan, gît en grande quantité dans la plaine de l'Amadror, bassin intérieur situé au nord-est du Hoggar, encadré au nord par le tassili des Ajjers, à l'ouest par l'Edjéré et à l'est par des collines qui le séparent du bassin du Taffassasset.

Cette région de l'Amadror, ancienne sebkha desséchée, est particulièrement désertique. Le sel s'est déposé en surface, l'exploitation se fait donc à ciel ouvert, par blocs de 50 ou de 60 kilos; les menus morceaux provenant de la taille des blocs sont mis en sacs et emportés. Il est évident qu'un pays aussi nu, désolé, affreux, privé d'eau, a inspiré des légendes; on raconte des histoires de génies qui hantent les salines au long des nuits; c'est ainsi que l'on entend ce monde invisible et néfaste frapper le sol, casser des blocs de sel sans répit, avec une énergie diabolique. Lorsque paraît le jour il semble que le chantier soit resté dans le même état que la veille, que rien ne se soit passé durant la nuit, ...et pourtant, « ils étaient là ». Certains Touareg prétendent avoir vu, imprimées dans la terre, les traces du passage de chevaux et avoir constaté l'existence de matériel d'extraction antérieur à l'outillage actuel — ce qui tendrait à prouver l'ancienneté de cette exploitation minière.

Le désert recèle d'autres salines qui approvisionnent le Soudan; vers l'ouest, Idjil et surtout Taoudéni sont les plus célèbres, vers l'est Bilma, et l'Acedjerad, mais parmi ces dernières, le sel de l'Amadror est le plus coté sur les marchés de la savane.

Vers le mois d'avril ou de mai, les Touareg envoient leurs

domestiques noirs faire l'extraction du sel. Par petites étapes, des caravanes d'une centaine de chameaux avancent en direction des salines, suivant des pistes bien tracées que jalonnent les puits de Dehine et In-Tarass (ce dernier est à quarante kilomètres du sel).

Le travail se fait le plus vite possible, car le séjour en ces lieux n'a rien de réjouissant en raison de la chaleur, du manque d'eau et de bois, et de la présence nocturne des Kel es Souf (génies). L'extraction est évidemment anarchique, mais qu'importe, il y a tellement de sel ! Les blocs sont découpés avec une sorte de hache, deux blocs, préalablement entourés d'une chebka (filet grossier), constituant une charge de chameau. Les petits morceaux sont mis dans des sacs (de fibres de palmier) par charge de 50 kilos. En dix jours deux hommes peuvent charger cinquante chameaux, soit environ 3 tonnes de sel.

C'est alors le retour vers les campements du Hoggar. En attendant le temps du départ vers le Soudan, le sel est stocké au voisinage des tentes ou des villages. La coutume veut que le Nègre revenant de l'Amadror offre des morceaux de sel aux campements qu'il rencontre sur son chemin; en échange il est hébergé et fêté.

Quand le moment est venu de partir pour le Soudan, à la fin du mois de juin, un Targui prend le commandement de la caravane, dans laquelle un chameau sur cinq porte du sel. Vers la fin juillet la caravane arrive au Tamesna, région de In-Abangarit, où séjournent en permanence les chamelles du Hoggar. On est encore un peu chez soi, il est bon de s'y reposer, et les chameaux qui viennent de parcourir mille kilomètres environ profitent des pâturages abondants de la région sahélienne. Vers le mois de septembre ou le début d'octobre, la caravane démarre de nouveau avec des chameaux reposés ou ayant échangé des bêtes fatiguées. Le Damergou, dont le plus gros centre est Tahoua, est atteint vers la fin octobre. Cette région est bien connue des Kel Ahaggar. Ils y ont leurs clients. Alors commence le troc; opération de longue haleine, longues discussions, tractations laborieuses, durant lesquelles

les Touareg échangent le sel contre le mil suivant un taux variable d'une année à l'autre (ce taux est fonction de l'importance de la récolte de mil et des apports de sel étrangers au Hoggar). Des arrivages de sel marin par voie fluviale risquent de compromettre l'équilibre de l'économie du Hoggar et d'affamer les Touareg.

On cite des époques durant lesquelles une charge de sel s'échangeait contre quinze de mil; en moyenne, le troc se fait sur la base de cinq à huit charges de mil contre une de sel. Les quantités échangées sont minimes, elles varient d'une poignée à deux kilos. Parfois, mais assez rarement, du sel est vendu à des commerçants. Avec l'argent ainsi gagné le Targui achète des tissus, des cuirs, une selle et quelques objets d'usage domestique, puis se met en route vers le Hoggar. Nous sommes au mois de janvier, il faudra trois mois pour revoir la koudia, car la caravane est lourde et marque toujours un temps d'arrêt au Tamesna où il y a des fêtes, des tendi, des ilougan, et des filles accueillantes. Le retour des caravanes de mil est l'événement marquant de l'année. On estime que le mil importé du Soudan constitue les deux tiers de la nourriture des Touareg. Arrivé au Hoggar, le mil est stocké dans des silos de pierres maçonnées à l'argile, reposant sur des dalles rocheuses afin d'être à l'abri des termites. Il est curieux de voir ces constructions ni cylindriques ni coniques s'élever près des campements ou des villages. Parfois les propriétaires sont partis, mais personne n'essaie de dérober ce qui est à la portée de la main.

## L'Agriculture

Le trait caractéristique du régime de la terre au Hoggar réside dans le fait que l'amenokal se trouve être, de par son titre, le seul propriétaire de la terre.

Quiconque veut forer une foggara doit tout d'abord en demander l'autorisation à l'amenokal, et devra lui payer un impôt de dix kilos de blé par jardin.

Le jardin est l'unité de culture. Une foggara irrigue de

six à dix jardins. Toute autre unité de surface n'aurait aucun sens puisque l'étendue cultivée est fonction du débit de la foggara, qui est variable suivant les années et les différents centres de culture. A Tamanrasset une foggara arrose 3 ha 80; à Tit, 3 ha 30; à Idelès, 4 hectares. La surface d'un jardin varie donc de 40 à 60 ares. La récolte en blé peut atteindre 400 kilos à l'hectare; l'impôt est donc à peu près un quarantième de la récolte. Que le possesseur du jardin soit un Targui ou un hartani, l'impôt (mek) est payé à l'amenokal.

Les arbres plantés dans les jardins restent propriété de l'amenokal, parce que attachés à la terre.

Cette possession inaliénable du terrain par l'amenokal a permis aux Touareg de conserver les rares terres cultivables du Hoggar. La force de leur coutume tribale les préserve de leur imprévoyance individuelle. Malheureusement ce droit de l'amenokal empêche l'évolution agricole et la mise en valeur maximum des terres du Hoggar, car le cultivateur ne peut jamais devenir propriétaire du terrain qu'il travaille. Il n'a aucun intérêt à planter des arbres qu'il ne pourra pas conserver. On ne peut pas espérer un effort constant vers l'arboriculture puisque le jardinier peut changer fréquemment et que son successeur ignorant ou sans scrupules est libre de laisser péricliter la plantation.

En dehors des terres cultivées, les terrains de passage ont au Hoggar une grande importance. L'ensemble du territoire des Kel Ahaggar est partagé depuis toujours entre les différentes tribus touarègues. Des règles orales strictement appliquées précisent les droits et les servitudes de la tribu sur ses terres.

1° Le passage et l'abreuvage sur les terres d'une tribu est un droit pour n'importe lequel des autres Touareg;

2° Nul ne peut séjourner sur les terres d'une tribu sans le consentement du chef de cette tribu;

3° Quiconque emprunte le terrain de parcours d'une tribu est responsable des dégradations occasionnées aux arbres, aux puits, aux foggaras, aux jardins, au gibier, par lui ou ses animaux. Voici quelques sanctions : une chèvre, pour une branche cassée; un mouton, pour des destructions opérées

6: Blanguernon MS25 Tuareg

par un troupeau mal gardé; un chameau, pour des dégâts causés par des chameaux; une partie ou le tout du gibier abattu. Lorsqu'un chameau s'est enfui, le propriétaire n'est pas responsable, on doit même le prévenir et l'aider. Il est interdit de faire stationner des bêtes dans un pâturage dont les plantes ne sont pas parvenues au maximum de développement;

4° L'amenokal peut parfois autoriser des tribus à séjourner sur les terres d'une tribu déterminée, en cas d'abondance de pâturage sur ces terrains.

Les servitudes des tribus sont les conséquences normales de la vie nomade, mais les droits concernant les terrains de parcours mettent en évidence un trait de caractère des Touareg : leur amour de la terre. Ces nomades qui devraient suivre les pâturages les plus abondants, que tous leurs intérêts entraînent vers le Soudan, restent attachés à leur sol; ils observent des règles valables pour des sédentaires.

Notons qu'il n'existe pas au Hoggar d'exploitation agricole dirigée par des Européens. La raison principale de cette abstention est le maigre résultat que l'on peut espérer; la baisse des nappes d'eau souterraines qui entraîne souvent l'abandon d'un terrain ne peut permettre une installation coûteuse. Il y a environ dix ans, un ancien adjudant des compagnies sahariennes s'était installé à Tiguenouine, petit centre à soixante-dix kilomètres au sud de Tamanrasset : il abandonna rapidement son idée de culture et devint nomade. Un autre Français, militaire en retraite, nomadise dans la région de Tin-Zaouaten; son mode de vie est touareg, ses troupeaux prospèrent.

A Tamanrasset résident des fonctionnaires, logés dans des locaux administratifs qui possèdent parfois un petit jardin à usage familial. La commune fait cultiver un grand jardin où sont tentés des essais de culture et d'arboriculture.

Les Touareg étant donc les seuls propriétaires fonciers, voyons maintenant comment ils mettent leurs terres en valeur. Comme dans tous les pays d'influence musulmane le mode d'exploitation agricole est le « khamassa », avec certaines variantes locales. Le khammès est le plus souvent un hartani,

Nègre venu autrefois du Tidikelt, ou un ancien esclave affranchi.

Le système agricole du Hoggar a pour support la foggara, qui doit arroser six à huit jardins. Le propriétaire de la foggara, généralement un Targui, prend un khammès par jardin. Il recherchera parmi les harratin du village les jardiniers capables de s'entendre avec lui. Un contrat oral est passé entre le propriétaire et les khammès, devant témoins; il peut se résumer ainsi :

Le propriétaire s'engage tout d'abord à fournir la terre qu'il a louée à l'amenokal. Il doit aussi procurer à son jardinier l'eau provenant de la foggara qu'il a fait creuser, une « mesaha » (houe) et les semences nécessaires. De plus, le propriétaire est tenu de faire défricher le terrain à ses frais, et à faire procéder à l'amendement. Il doit au hartani une avance de nourriture de soixante guessa de mil par an.

En contrepartie, le khammès assure les travaux des champs, le battage, l'entretien de la foggara.

Comme « salaire » il perçoit un cinquième de la récolte nette, les épis tombés et glanés. La récolte d'une dizaine de « guemouns », ceux situés près du majen (bassins d'argile). Le blé et l'orge semés dans les séguias qui lui appartiennent.

En outre le blé qui se trouve mélangé à la poussière sur l'aire de battage lui revient de droit ainsi que la paille et les quelques légumes cultivés. Enfin, si le débit de la foggara diminue et que l'on soit obligé de creuser de nouveaux puits en amont, le khammès touche trois guessa de blé par puits creusé.

En cas de conflit entre les propriétaires et les khammès, les palabres sont faites en présence du chef de la tribu (côté touareg) et du chef de village (côté harratin). L'amenokal intervient en appel, mais rarement, car ces contrats fixés par l'usage sont en général scrupuleusement observés.

Le Targui n'a qu'une médiocre confiance dans l'honnêteté de son khammès, opinion souvent justifiée, car le hartani fait exprès tomber des épis qui lui reviennent par droit de glanage. Le propriétaire n'a pas la magnanimité de Booz. Aussi, lorsque le temps de la moisson est venu, le voit-on s'installer

près de son jardin avec toute sa famille pour s'assurer de la régularité des opérations. Le khammès doit fournir la nourriture du Targui, ce qui constitue une lourde charge pour lui. Ainsi le veut la coutume, qui ajoute : En cas d'empêchement du Targui, le hartani verse une redevance de 25 kilos de blé pour assurer ce droit de séjour.

Il existe une autre forme de contrat qui est appelé « aril » en tamahaq, et « nous » (moitié) en arabe. La récolte nette est partagée en deux parties égales, compte tenu des conventions suivantes :

Le Targui propriétaire doit fournir la terre louée à l'amenokal, une foggara et une houe. Donner la moitié de la semence, faire un prêt de 25 kilos de blé qui sera remboursé lors de la récolte et assurer les frais de fumure (tiksal = terre vierge). Le hartani jardinier s'engage de son côté à fournir la moitié de la semence et le travail d'un an.

Ce système de contrat qui plairait beaucoup aux Touareg insouciants par nature, imprévoyants, ayant rarement le grain nécessaire pour assurer les prêts aux khammès, est peu en honneur auprès des harratin qui préfèrent avoir l'avance de mil fournie par le propriétaire dans le premier système de contrat, le droit aux guemouns personnels et aux glanages, sans compter les petits vols quotidiens.

Il est bien évident que ces contrats sont draconiens pour les cultivateurs, qui végètent et sont à la merci d'une mauvaise récolte. Le Targui peut, grâce à ses troupeaux et au troc, résister à plusieurs années de disette, mais le hartani ne le peut pas. Il n'est pas rare de les voir faire la soudure entre les réserves d'hiver et la nouvelle récolte de blé en mangeant des noyaux de dattes pilés, des jeunes pousses de tahli, et parfois même de l'orge ou du blé en herbe.

La terre est ensemencée en fonction de la quantité d'eau disponible. Lorsque le débit des foggaras est en baisse, la surface cultivée se restreint. Il arrive même que, à la suite de plusieurs années de sécheresse, l'eau diminue tellement dans la nappe de l'oued qu'elle en vient à disparaître. Alors les jardins sont abandonnés, le centre de culture déserté. Les

cultivateurs se replient vers un village plus favorisé. Lorsque les pluies auront de nouveau rempli les nappes, les centres morts pourront être de nouveau cultivés.

La fumure ne se pratique presque pas au Hoggar. On lui préfère un système d'amendement appelé « tiksal » en tamahaq. Chaque année, le hartani va chercher, sur une pente voisine des jardins, une terre argileuse qu'il transporte couffin par couffin et dont il répand une mince couche par guemoun. Cette terre vierge vivifie la terre cultivée qui s'épuise très vite du fait de l'irrigation, elle ne contient presque pas d'humus, ni de calcaire.

Parfois, lorsqu'il n'y a pas une trop grande distance à parcourir, le jardinier apporte la terre de l'ancien système radiculaire d'un fersig mort ou d'un tahla, seul humus que l'on puisse trouver.

L'irrigation est ici le problème capital. On le résout à l'aide de la foggara appelée « efeli » en tamahaq (au pluriel : « ifelan »), laquelle ne ressemble en rien aux foggaguir du Tidikelt et du Touat, qui sont définitives et ont nécessité un travail considérable. Au Hoggar, la foggara n'est en fait qu'une séguia souterraine (canal d'irrigation) destinée à capter l'eau de la nappe d'un oued, en amont d'un terrain cultivable, et de l'amener suivant la ligne de moins grande pente vers les jardins qui seront irrigués par gravitation.

Le creusement de la foggara comporte plusieurs opérations. On fait d'abord, en amont, un forage qui permet de déceler l'eau et de juger sa profondeur, puis on creuse cinq ou six puits reliés entre eux par un canal souterrain, ce travail permet de juger de l'importance du débit. Trois hommes travaillent en collaboration : l'un creuse, les deux autres restés en surface, de chaque côté du puits, descendent un couffin à l'aide de deux cordes attachées à chaque anse et rejettent les déblais à droite et à gauche du puits.

Partant du jardin à irriguer, une séguia est établie en direction des puits d'amont, travail en remblai d'abord, puis en déblai aussi longtemps que le permet la résistance des alluvions à l'éboulement.

Entre la séguia d'aval et les puits d'amont sont ensuite creusés des puits espacés de 5 mètres, réunis entre eux par un tunnel. Le travail se fait en direction de l'amont. Un spécialiste aménage la pente optimum suivant l'usage qui est de la hauteur d'une cheville par puits, soit environ 2 centimètres par mètre.

Lorsque tous ces puits et tunnels intermédiaires sont prêts, on ouvre le dernier tunnel (A) qui raccorde l'aval aux premiers puits d'amont. La foggara est alors terminée et l'eau va alimenter le « majen » : réservoir régulateur d'où partent les séguias d'irrigation.

Schéma montrant le creusement de la foggara.

Il faut un ou deux mois pour établir une foggara. Certaines d'entre elles (Abalessa) ont 6 kilomètres de longueur, et les puits d'amont atteignent 10 à 12 mètres.

Lorsque le débit diminue, d'autres puits sont creusés vers l'amont, mais dans certains centres de culture comme Idélès et Tahart on arrive à dépasser l'épaisseur de la couche de sable; les ouvriers se trouvent alors en présence de grosses roches et le travail s'arrête, car avec une houe et un couffin il est difficile de s'attaquer au rocher. Il ne reste plus qu'à prier Dieu pour que les pluies alimentent la nappe d'eau, ou à émigrer vers un centre plus favorisé.

Le travail est dangereux, dans ces foggaras creusées à même les alluvions meubles, et des accidents se produisent souvent. La foggara nécessite un entretien continuel; les vents de sable assèchent et obstruent les puits, il se produit un colmatage qui nuit à l'arrivée de l'eau, les éboulements sont fréquents. Dans

[ﺍﻟﺮﺍﻑ(C)]

[(Ø)ב(.ק)]

ce dernier cas, une corvée de volontaires vient aider à la remise en état rapide pour protéger la récolte.

La crue bienfaitrice qui fera monter le niveau de la nappe détruira en revanche le travail des harratin, en comblant un grand nombre de puits; il faudra alors recommencer la foggara. On a récemment essayé, à Tamanrasset, la construction d'un drain souterrain en grosses pierres surmontées de plus petites, puis recouvertes d'argile et de sable, pour permettre à la crue de passer sans dommage pour la foggara. Mais les Nègres ne sont pas en mesure de se livrer à ce genre de travail.

L'eau qui coule constamment de la foggara est accumulée dans un bassin de 8 m. × 4 m. × 0,40 m.; ces dimensions donnent un ordre de grandeur. De ce bassin, en terre levée, étanchéifié à l'argile, le jardinier fait couler l'eau dans les séguias qui la conduisent dans les guemouns cultivés qui se trouvent inondés.

Ce système d'irrigation épuise rapidement le sol.

Les cultures sont arrosées tous les six ou huit jours, chacun des six ou huit jardins dépendant de la foggara ayant son tour d'eau régulièrement.

Lorsque l'irrigation est faite à partir d'un puits (tanout) et non d'une foggara, l'eau est tirée du puits à bras d'homme ou avec l'aide d'un zébu. Quand le majen est plein, le jardinier procède à l'inondation des guemouns.

La terre cultivable qui s'appauvrit très vite a besoin de repos. Les harratin pratiquent la jachère, mais involontairement, car faute d'eau, ou faute de semences, d'assez grandes étendues restent incultes. Il arrive même que, la terre étant épuisée, un centre soit complètement abandonné pour un certain temps.

Les plantes cultivées au Hoggar sont peu nombreuses : le blé et l'orge en hiver, le mil et la tomate en été constituent en fait l'essentiel de la production et couvrent la presque totalité des terres cultivées. Les cultures potagères sont négligeables, et dans beaucoup de centres elles sont inexistantes.

On compte au Hoggar cinq variétés de blé tendre vraisemblablement importées du Touat.

Le blé est semé en octobre et récolté au début de mai.

27. Une jariba près d'un champ de blé.

La culture se fait par petits guemouns de 1,50 m. sur 3 mètres environ. L'irrigation a lieu tous les six ou huit jours. Le long des séguias, deux lignes parallèles de blé sont semées. La production varie de 10 à 15 pour un. Elle est d'environ de 300 à 400 kilos à l'hectare. La production totale du Hoggar est d'environ 200 tonnes de blé par an.

L'orge est cultivée de la même façon que le blé, mais ne donne que 50 tonnes par an.

Le mil est semé dès que la récolte de blé est terminée. Il en existe deux espèces, l'une dite du Hoggar, l'autre du Soudan.

Le rendement varie de 8 à 10 pour un. La production annuelle est d'environ 60 tonnes. Les épis sont assez fournis, mais sont pillés par les oiseaux, surtout les bengalis, appelés « mange-mil », originaires du Soudan.

La tomate est le principal légume de la région. Plusieurs variétés sont semées, peut-être en existe-t-il une autochtone, mais les harratin ont utilisé depuis longtemps les graines données par la commune. Ils récoltent eux-mêmes leur semence sans sélection, il se peut qu'il y ait dégénérescence. La production des tomates est excédentaire en général. Les fruits sont coupés en deux, puis séchés au soleil afin d'être conservés pour la vente et l'expédition vers les Ajjers, le Tidikelt, El-Goléa et surtout Ghardaïa. Le mode de culture est des plus simples : les jeunes plants sont repiqués, sans ordre, à des distances variant de 30 à 60 centimètres, au hasard du coup de houe. Lorsque les pieds de tomate sont adultes, le guemoun offre l'aspect d'un fouillis indescriptible. Très rares sont les jardiniers qui posent des tuteurs.

Presque tous les jardins indigènes possèdent quelques pieds de citrouille. Il en existe deux espèces, l'une dite du Hoggar qui devient énorme, jaune, peu sucrée, moins appréciée que la variété dite de Métlili, moins grosse, verdâtre et très rugueuse, dont la chair est bien plus sucrée. La citrouille constitue l'essentiel de la nourriture au mois d'octobre et même de novembre.

Les fèves réussissent à merveille, mais seuls quelques jardiniers en cultivent plusieurs guemouns.

## Les Centres de culture

Le Hoggar possède de nombreux centres de culture, véritables oasis, d'inégale importance. La situation de ces jardins est toujours la même : dans un oued vivant, entre deux seuils rocheux. On les trouvera donc dans un rayon d'une centaine de kilomètres autour des hauts sommets de l'Atakor.

Les jardins s'étirent le long de l'oued, utilisant au mieux la terre cultivable et irrigable. Un impressionnant damier de guemouns desservi par les lignes de foggaras et de séguias témoigne de l'effort des harratin. C'est un spectacle curieux que l'opposition des taches vertes du blé naissant avec la grisaille de la végétation spontanée; cette verdure semble irréelle. Le cadre dans lequel est situé le centre de culture est toujours pittoresque. Les villages ont de rares maisons de toubs ou de pierres sèches, plus souvent des zéribas de tahlis. La misère y est endémique, et le mot dénuement prend ici son sens absolu.

J'ai personnellement connu des familles, dont l'une de neuf enfants, qui, à certains moments de l'année, savaient en se réveillant le matin qu'elles n'avaient rien à manger pour la journée et qu'il en serait de même le lendemain et les jours suivants. La charité d'un des leurs, à peine moins pauvre, pouvait seule les sauver de la famine.

Il est certain que l'imprévoyance est un facteur déterminant de ce dénuement, mais il n'est pas le seul, il faut y ajouter le peu de fertilité du sol, l'eau souvent insuffisante, surtout après une période de longue sécheresse, les conditions du contrat agricole qui interdisent en fait au hartani de s'intéresser passionnément à sa terre et enfin l'esprit borné et privé de toute espèce d'initiative dont font preuve les harratin. Il faut noter que les Touareg se montrent hostiles au développement de l'agriculture; cette hostilité est à peine raisonnée; il s'agit d'une sorte d'atavisme nomade, augmenté du désir de maintenir intacts les usages traditionnels, et aussi de la crainte de voir pénétrer au Hoggar des étrangers qui pourraient sans doute faire fructifier le sol, étendre les

palmeraies en particulier, mais qui ne seraient pas héréditairement soumis à leur autorité.

A propos des conditions de vie dans les centres de culture, je reproduis ici un extrait de notes prises en 1949 lors d'une tournée que je fis, en compagnie du médecin de Tamanrasset. Cette année 1949 était particulièrement sèche, elle faisait suite à quatre longues années de sécheresse.

« Après avoir marché cinq heures depuis l'oued Tilokatine où nous avions passé la nuit, nous arrivons en vue d'une charmante petite oasis située dans l'oued Outoul qui s'est frayé un chemin à travers des basaltes dont nous apercevons les colonnes le long des rives. C'est le centre de culture de Tahart.

« Il y a soixante-trois habitants dont dix-sept enfants — trachomes et conjonctivites. Deux foggaras servent à l'irrigation des jardins, ainsi que deux puits à tirage par bœufs. Le débit des foggaras diminue, les harratin ont essayé de creuser d'autres puits en tête de la foggara, mais ils trouvent à trois mètres de profondeur des gros blocs de pierres qui les empêchent d'atteindre la nappe. Travail long et pénible, avec des moyens primitifs.

« Il y a environ une centaine de palmiers, qui donnent des petites dattes maigres. Presque tous les arbres sont encombrés de djebars, ces harratin n'ont aucune notion de la culture du palmier. Les sujets actuellement productifs ont poussé au hasard d'un noyau jeté dans un jardin.

« Les seules cultures d'hiver sont celles du blé et de l'orge; pas de navets, ni de carottes, ni de fèves, ni aucun de ces légumes qui pourraient permettre d'attendre la maturité des céréales pour faire la soudure entre le mil et le blé.

« En ce moment presque tous les harratin mangent de l'orge verte et des jeunes pousses de tahli.

« Un calcul sommaire permet de constater l'insuffisance de l'alimentation de ces cultivateurs qui, cependant, fournissent un gros effort musculaire sous un climat excessif :

| | | |
|---|---|---|
| Année 1948. | Rapport en blé pour Tahart | 1 500 kg. |
| | » en mil » » | 300 kg. |
| | | 1 800 kg. |

soit 1 800 kilos de grain à diviser par 63 fois 365 jours, ce qui donne à peine 100 grammes par jour et par personne, auxquels nous pouvons ajouter trois ou quatre repas de viande par an.

« Cette année, un pou vert menace la récolte de céréales; en été, une sorte de « moustique » s'attaque au mil. »

Pour compléter ces observations, il faut ajouter à la nourriture des harratin le thé très sucré qu'ils boivent chaque fois qu'ils le peuvent, et noter que cette année 1949 fut particulièrement mauvaise.

Si le blé, enchâssé dans le cadre des montagnes arides, donne un air d'opulence au village, le cultivateur sait bien que la production sera insuffisante, et que le cinquième auquel il a droit est déjà engagé près des commerçants mozabites, comme acompte sur les différents achats de l'année. Que faire ? Continuer à cultiver, car telle est la vie. Ce travail têtu pour arracher un peu de blé à une terre hostile est attendrissant au possible et mériterait un meilleur sort; mais il faudrait cultiver l'esprit des Nègres, et ceci est une autre histoire.

Certains de ces centres sont temporaires; les harratin les abandonnent lorsque la terre est épuisée ou lorsque l'eau n'est plus en quantité suffisante pour l'irrigation; d'autres ont toujours été habités et cultivés. Les harratin se bornent à réduire les surfaces de culture pendant les années de sécheresse. Dans les centres permanents, les jardins possèdent des arbres fruitiers.

On trouvera en appendice la liste des principaux centres de culture du Hoggar.

## L'Elevage

Pays de nomades, le Hoggar est un pays d'élevage extensif. Au hasard des chutes d'eau naissent des pâturages qui sont utilisés par les Touareg, en respectant toutefois la fructification des herbes. L'irrégularité des pluies annuelles oblige les Kel Ahaggar à emmener la majorité de leur troupeau camelin en territoire soudanais, ainsi environ 7 500 camelins pâturent au Tamesna, tandis que 4 500 demeurent au Hoggar.

L'ensemble des chèvres et des moutons reste près des tentes et trouve plus ou moins aisément sa subsistance. Les ânes qui vivent en liberté sont peut-être les animaux les mieux adaptés. Quelques zébus servant au tirage de l'eau dans les centres de culture sont chichement nourris.

Il ne semble pas que l'élevage soit appelé à une grande extension, les conditions climatiques n'autorisant pas un accroissement excessif des troupeaux.

Le chameau est indispensable aux Touareg, sans lui ils ne pourraient pas vivre au Hoggar. L'association Targui-chameau couvre le pays, elle est nécessaire, elle fait partie du paysage. On voit la double silhouette se découper sur les crêtes des plateaux centraux, tracer un lacis de sentiers sur les regs de lave noire, ou imprimer dans le sable les traces parallèles des pieds du Targui et de ceux du chameau. Cette bête étrange semble sortir d'un autre âge; malgré son allure antédiluvienne et ses membres raides — elle n'a de souplesse que dans le cou —, elle parvient à escalader, pour pâturer, des pentes où l'homme a parfois peine à accéder.

En ce qui concerne le chameau, le terme d'élevage semble impropre. Pour le Targui, le chameau est sa vie; grâce à lui, il peut se déplacer à son gré dans le désert, faire ses échanges commerciaux, demeurer des mois dans une région sans puits si le pâturage est bon. Le chameau est sa joie, il lui permet de prouver ses qualités d'homme; il est aussi l'objet de ses craintes lorsqu'il est malade, ou qu'il a disparu, après avoir brisé son entrave et qu'il faut le suivre à la trace durant des jours pour le rattraper.

Le chameau est également la richesse, l'échelle des valeurs, le cadeau de naissance et de mariage; c'est l'animal noble.

Le Hoggar compte environ 12 000 camelins. Il serait fastidieux d'énumérer la richesse de chaque tribu, disons cependant que les Dag Rali possèdent à eux seuls un cinquième du troupeau.

Les Touareg distinguent trois races de chameaux : une race du Hoggar, une du Soudan et une race du nord appelée maroki. Le chameau du Soudan est le plus grand, en général

de pelage clair, fort et rapide; lorsqu'il est très gras sa bosse devient haute, il lui faut une nourriture abondante, il vit mal dans les pâturages maigres. En bonne forme, on peut le charger de 200 kilos de marchandise.

Le chameau du Hoggar est moins grand, mais toujours très fin d'allure; son pelage peut être clair, mais beaucoup sont foncés. Lorsqu'il est gras sa bosse ne s'élève pas beaucoup, mais déborde sur les flancs; plus sobre que les soudanais, il supporte les maigres pâturages. S'il court moins vite, il grimpe mieux; ses pieds s'échauffent sur le sable, mais résistent sur les cailloux déchiquetés. On ne peut guère le charger à plus de 150 kilos.

Il y a assez peu de maroki au Hoggar. Sa taille est plus petite, mais il est beaucoup plus fort; à côté des autres races, il paraît lourdaud. Il exige une nourriture abondante, en retour il porte jusqu'à 300 kilos. De teinte foncée, en général, le maroki possède une laine abondante.

Le vocabulaire touareg pour désigner le chameau est riche, ce qui est une preuve de l'intérêt porté à l'animal. Le terme générique est « amis », « imenas » au pluriel. « Amadjor » est également générique, mais s'emploie dans le sens : chameau aperçu de loin et non identifié (« imoudjar », au pluriel). La chamelle se dit « talemt » (pluriel : « tillemin »); « timetirout » (pluriel : « timetterouin ») veut dire la chamelle pleine. Le chamelon qui vient de naître se nomme « aoura »; lorsqu'il a un an, on dit « ag aouatey »; deux ans : « alloguès »; trois ans : « akanafoud »; quatre ans (les dents pointent mais ne sortent pas) : « araïer »; cinq ans (deux dents) : « ag essin »; six ans (quatre dents) : « ag okkoz »; sept ans (six dents) : « Ammessedis »; huit ans (deux canines) : « aoutahallat »; adulte et vieux se confondent, d'autant qu'un Targui est incapable de dire la longévité d'un chameau : certains meurent jeunes, d'autres vieux, mais il n'énonce pas d'âge, car cela pourrait être néfaste.

Le chamelon sevré porte un nom : « assaka »; lorsqu'il est dressé, on dit « abal » ou « amougui ». L'étalon se dit « amali ».

Prolixes pour les noms décernés au chameau, les Touareg le sont davantage encore lorsqu'il s'agit de définir sa couleur.

[facing p. 80]

Alors que le vert, ou le rouge cru étalé sur un papier est mal apprécié, les nuances imperceptibles d'une robe cameline sont classées de façon précise; c'est que les couleurs que nous proposons sont des abstractions, tandis que la différence entre deux gris est concrète comme étant celle entre deux chameaux vus, connus et peut-être aimés.

La correspondance des teintes exprimée par les mots tamahaq avec des nuances françaises est arbitraire, un autre enquêteur pourrait à bon droit donner une autre échelle aussi valable.

| | |
|---|---|
| Blanc | Beïdedj |
| Gris foncé | Iendjelan |
| Fauve | Iebramine |
| Fauve clair | Atlar |
| Brun fauve | Ibazaouane |
| Noir | Ikaoualane |
| Blanc et noir | Azelraf |
| Blanc sale | Idegnassen |
| Gazelle | Ierrane |
| Gris clair | Ibahouane |
| Tons verts | Israfane |
| Blanc roux | Ilemlarane |
| Brun rouge | Ihaggarène |
| Ni rouge ni jaune | Ietlarine |
| Celui qui a les yeux bleus | Iouinaran |
| Celui qui a la bouche blanche | Imoulssan |

Suivant l'usage auquel la bête est destinée, ou suivant ses qualités, il existe une vingtaine d'autres noms dont voici quelques exemples :

Chameau de selle : « amis ouan tarik »; de bât : « amis ouan edjidji »; de selle pour femme : « amis ouan takhaouit ». Chameau fatigué : « yaddah »; blessé : « yakoder »; bien dressé : « iounane »; difficile à monter : « irraguel ».

Il est inutile de rappeler les caractéristiques du chameau, sa sobriété, son endurance, sa fragilité aussi; rappelons toutefois

28. Au pâturage, rassemblement des bêtes.

[facing p. 81].

que lorsqu'il « fait le plein », il absorbe jusqu'à cent vingt litres d'eau.

Dans un pâturage humide, dont l'herbe est verte, s'entend, le chameau reste pratiquement sans boire; lorsqu'il est monté ou bâté, devant faire un voyage à travers un pays strictement désertique ou dépourvu de verdure, il peut passer quatre ou cinq jours en été et environ huit jours en hiver sans boire ni manger.

Si les Touareg sont réputés comme de bons dresseurs de chameaux, c'est qu'ils commencent le dressage vers deux ans. Le chamelon est saisi et se voit passer une « tiriouit » sur la gueule. La tiriouit est un agencement de cordes enserrant la tête un peu comme une muselière. Une longue corde sert de guide, le dresseur monte à cru derrière la bosse, et ceci pendant trois ou quatre jours. Le chamelon commence à connaître l'homme, on lui passe alors une « akala », simple corde fortement attachée à la mâchoire inférieure, une selle est posée pour la première fois; on utilise de préférence la « tahïast » qui est la plus solide. Durant trois mois on apprend au jeune chameau à marcher droit et à se laisser conduire où l'on veut. C'est seulement au bout d'un an que le dressage est achevé et que l'on pose le « tiguemt », l'anneau de nez dans lequel passe la « tarant » qui classe définitivement l'animal : « assaka » ou « amougui ».

Le dressage pour le bât est beaucoup plus simple. L'animal est entravé aux deux pattes avant, on lui passe une tiriouit sur la tête et on l'attache de très court à un arbre. Il restera ainsi sans manger durant deux jours, puis il est lâché toujours entravé afin qu'il cherche sa nourriture, sautant ridiculement de touffe en touffe. L'animal est désormais apte à faire un « amis ouan edjidji ». Les chamelles peuvent également être dressées vers deux ans, soit pour la selle, soit pour le bât. Les Touareg ne les utilisent que lorsque leur lait est tari.

La reproduction des chameaux ne se fait pas au hasard, car les Touareg sélectionnent leurs mâles.

On conserve de préférence comme reproducteur un demi-sang soudanais et Hoggar.

29. Au pâturage dans l'ouet Amded.

Le futur reproducteur doit présenter des caractères physiques bien déterminés, on examine plus particulièrement la structure des membres, la longueur de la queue et l'importance de la poche sexuelle; une grosse tête est un indice favorable, ainsi qu'un pelage blanc.

Les Touareg conservent un mâle pour trente ou quarante chamelles, tous les autres sont castrés : « ennedi ». La castration s'opère assez tard pour ne pas contrarier le développement de l'animal, qui sera toujours employé comme monture ou comme bête de bât.

Les reproducteurs ayant été sélectionnés, la reproduction se fait sans contrôle de l'homme. Le mâle poursuit la chamelle, l'oblige à « baraquer », soit en posant son cou sur le sien, soit en lui mordant la patte. Il arrive que les femelles en rut viennent solliciter le mâle. La saillie se fait, la chamelle étant baraquée, le mâle se trouvant derrière elle, les membres postérieurs complètement pliés, appuyant sa callosité pectorale sur le dos de la femelle, les antérieurs allongés le long du poitrail pour la maintenir prisonnière. La saillie dure, paraît-il, une demi-heure; au bout de deux heures, le mâle peut recommencer une autre saillie. Lorsque toutes les chamelles du troupeau sont fécondées, le reproducteur pâture et se repose près de trois mois.

La chamelle porte douze mois, parfois onze, elle donne un chamelon (les Touareg interrogés n'ont jamais vu deux produits). Une bonne laitière donne six litres de lait à chaque traite, mais on n'en trait que la moitié, le reste étant réservé au chamelon — ce dernier commence à manger seul vers trois mois.

Lorsque, dans la journée, la chamelle va au pâturage, suivie de son petit, elle porte un « abedjo » sur la mamelle afin que le chamelon ne puisse pas téter. L'abedjo est une sorte de filet grossier attaché sur les reins, recouvrant exactement la mamelle; (il est fait de corde fabriquée avec des fibres de branches de tahla : « ikakaben », extrêmement solide et rugueux, ce qui rebute le jeune chamelon).

Les chèvres constituent une véritable fortune pour les

Touareg. Elles se contentent des maigres pâturages des années sèches; elles paissent au voisinage des tentes, où elles reviennent chaque soir pour dormir. On les rencontre partout au Hoggar, même dans les endroits qui au premier abord paraissent les plus déshérités.

La chèvre du Hoggar (une chèvre : « tirsi »; pluriel : « oulli ») est petite, vive, bonne marcheuse. Elle possède de longs poils noirs, mais des croisements avec des chèvres soudanaises donnent des produits au pelage noir et blanc. La production laitière est très variable suivant les saisons, l'abondance et la valeur des pâturages. Une très bonne laitière peut produire près de deux litres de lait par jour, un mois après avoir mis bas. La production moyenne se situe aux abords d'un litre par jour pour les deux traites. Le lait de chèvre fournit le beurre : « oudi amellen », que l'on cuit pour le conserver : « oudi »; il donne aussi les différents fromages (rappelons que le lait de chamelle n'est utilisé que comme boisson).

On pense que le Hoggar compte près de 20 000 chèvres, mais il se pourrait qu'il y en eût davantage. Les Touareg conservent un mâle pour environ cinquante chèvres. La chèvre du Hoggar produit un chevreau à chaque portée, parfois deux mais très rarement. Les chevreaux mâles sont toujours mangés jeunes, ils constituent l'essentiel de la consommation en viande des Touareg.

Le poil des chèvres sert à la fabrication des cordes de toutes espèces, et nous verrons comment la peau est utilisée pour la confection de tous les objets du mobilier touareg.

L'élevage du mouton est très restreint, c'est à peine si le nombre de têtes atteint le dixième du cheptel caprin, et la majeure partie des moutons se trouve dans la région de Tin-Zaouaten.

Le mouton élevé au Hoggar est originaire du Soudan; haut sur pattes, il n'a pas de laine, mais de longs poils raides, en général de couleur fauve. La viande en est excellente. C'est un animal robuste, bon marcheur, mais qui aux dires des Touareg supporte mal les années sèches du Hoggar, les pâturages étant insuffisamment nourrissants. Ce mouton

6: Blanguernon MS25 Tuareg

accomplit de sérieuses performances; les Touareg conduisent des troupeaux depuis l'Adrar des Iforas jusqu'aux marchés du Tidikelt et de l'Aïr, au Hoggar. Ces migrations se font bien entendu en hiver, mais les regs traversés sont vraiment pauvres en points d'eau, et les pâturages suffisamment rares pour que ces déplacements constituent un exploit remarquable.

Le lait des brebis est mélangé à celui des chèvres, les peaux sont également employées dans tous les travaux de cuir. Le mouton est considéré comme une viande de choix et servie de préférence à un invité de marque.

Le bœuf est importé du Soudan, c'est un zébu à la bosse caractéristique. Il sert au tirage de l'eau dans les centres de culture. Cependant il peut vivre seul en pleine liberté dans les oueds du Hoggar. L'amenokal possède un troupeau qui s'est ensauvagé : lorsqu'il désire une bête, il doit la faire abattre à coups de fusil. Les bœufs se nourrissent des tahlis qui abondent aux seuils rocheux des oueds, ils s'abreuvent aux gueltas qui sont nombreuses. Ce bœuf est un animal résistant capable d'aller du Tamesna au Hoggar, à travers des regs désolés.

La production laitière est pratiquement négligeable, puisque le Hoggar compte un maximum de 300 bovidés.

La peau est utilisée pour fabriquer des grands dellous pour le tirage de l'eau et des bottas destinées à contenir le beurre.

Le taureau se dit : « essou » (pluriel : « issouan »); la vache : « tessout » (pluriel : « tissita »).

L'âne (« eïed »; pluriel : « ieïdan ») est, peut-être, l'animal le mieux adapté au Hoggar. Les Touareg disent : « Il mange tout, ce qui est vert et ce qui est sec. » Il est de taille moyenne, d'un pelage assez clair, portant sur le dos une grande croix plus foncée. C'est lui qui assure toutes les corvées du campement, il va chercher l'eau, le bois. Il supporte presque toute la charge des déménagements, c'est la monture des femmes, des jeunes enfants et des Nègres. Certains voyageurs ont voulu voir au Hoggar des onagres; en fait ce sont des ânes retournés à l'état sauvage : les Touareg ne pouvant pas les garder près de leurs campements, à cause de l'insuffisance des pâturages,

les laissent en liberté. Aussi voit-on un peu partout des troupeaux d'ânes se découper en silhouette sur les montagnes, ou fuir à l'approche de l'homme dans un oued. Les ânes vont boire aux points d'eau permanents aux abords desquels on remarque d'étroits sentiers profondément marqués, qui sont leurs itinéraires habituels.

Lorsque les Touareg veulent récupérer quelques-uns de ces animaux, ils organisent de véritables battues et doivent déployer beaucoup de ruse et d'énergie pour y parvenir. Un véritable dressage est nécessaire pour adapter ces ânes à la vie domestique, car beaucoup sont nés en pleine liberté.

On estime à 5 000 le nombre des ânes du Hoggar, mais ce nombre est certainement inférieur à la réalité.

La viande d'âne n'est pas consommée, le lait d'ânesse non plus.

On trouve quelques rares chevaux, pour la plupart originaires du Soudan, dans certains centres de culture. Animal de luxe, le cheval (aïs) ne peut pas vivre avec les ressources en pâturages du Hoggar. Bien nourri avec de l'orge, il supporte parfaitement le climat et pourrait être utilisé comme monture dans les montagnes du Hoggar où les points d'eau sont nombreux.

Enfin, les harratin élèvent des poules dans tous les centres de culture; ce sont de maigres volatiles qui pratiquement se nourrissent seules. Les harratin mangent surtout les œufs, assez rarement la viande, qui est vendue aux Européens.

[p. 86 is blank]

# IV

# LA VIE MATÉRIELLE

## L'Habitat

Les Touareg, en véritables nomades, utilisent la tente comme mode d'habitation, et parfois, en des circonstances exceptionnelles, la zériba.

La tente touarègue est faite de peaux cousues entre elles et préparées spécialement. Sa teinte rouge qui s'harmonise avec les tons dominants des paysages du Hoggar est agréable à regarder. On utilise pour la confection de la tente (éhakit) les peaux de chèvre, de mouton, de mouflon, très rarement de bœuf; celles de mouflon sont les plus appréciées. Préalablement débarrassée de son poil, la peau est tannée légèrement avec des feuilles de tamat ou d'adjar, puis enduite de beurre afin d'être assouplie. A la suite de ces opérations, on donne la teinte rouge de la façon suivante : le « tamadjouhit », sorte d'argile rouge, est écrasé avec des crottes de chameau; à l'aide de la poudre ainsi obtenue on frotte la peau encore grasse, jusqu'à ce que l'on obtienne la couleur désirée. La peau est ensuite trempée dans l'eau deux jours durant pour qu'elle puisse être étirée, lissée, aplanie, coupée et cousue. Ce sont les femmes du campement qui se chargent de ce dernier travail, toutes se mettent à l'œuvre, plaisantent, conversent, et l'ouvrage va bon train. Une tente peut avoir de 30 à 120 et même 150 peaux. Des touffes de fines lanières de cuir artistement découpées, appelées « balenkassen », pendent du faîte, donnant à l'intérieur un

[p. 87]

6: Blanguernon MS25 Tuareg

[Facing p. 68]

6: Blanguernon MS25 Tuareg

effet original. La tente est soutenue par six piquets de bois verticaux d'une hauteur de 1,50 m. environ enfoncés de 20 centimètres dans le sol. Ces piquets verticaux sont reliés deux par deux par trois rondins horizontaux, les piquets sont attachés entre eux à l'aide de cordes en poil de chèvre tressé. La tente repose sur ces piquets, elle est fixée à la périphérie à des piquets plus petits ou à de gros cailloux; la face, regardant le sud, est en général ouverte, les bords sont attachés à de grands piquets verticaux, dont la tête est souvent sculptée. A l'intérieur, la tente est entourée d'un « asaber », sorte de longue natte faite de tiges d' « afazzou » (graminée). La confection de l'asaber est un véritable travail de patience; il faut d'abord ramasser l'afazzou, en ayant soin de choisir les tiges les plus longues; de fines lanières de cuir ont, au préalable, été préparées, elles serviront à assembler les brins d'afazzou deux par deux, une lanière par-dessus et une par-dessous. Tous les trois ou quatre centimètres, s'alignent les lanières, et ceci sur la largeur de l'asaber, environ 80 centimètres. La longueur varie de 7 à 8 mètres, soit exactement quatre hauteurs d'homme debout les bras dressés. La bordure supérieure de l'asaber s'orne d'une frise de cuir entrelacé aux dessins géométriques. Ce travail exécuté par deux femmes dure environ un an.

Il faut trois ou quatre asabers pour garnir une tente, deux à l'intérieur tamisent le vent, deux autres s'arrondissent devant la tente, formant une petite cour, assurant l'intimité et ménageant un espace, abrité du vent, où l'on séjourne en permanence.

Lorsqu'on pénètre sous une tente, le côté droit est toujours le domaine de l'homme, le côté gauche celui de la femme; chacun y range ses objets personnels dans un état d'ordre qui surprend toujours l'Européen.

A une cinquantaine de mètres, ou plus, mais toujours à portée de voix, habitent les Nègres, dans un enclos de branchages secs, appelé « afarra »; un autre enclos, contigu, constitue la cuisine.

Un campement est un ensemble de tentes de ce genre,

30. A l'étape on entrave les bêtes pour la nuit.

[Facing p 89]

6: Blanguernon MS25 Tuareg

elles sont toujours assez éloignées les unes des autres, afin de préserver l'intimité.

Lorsque, en saison sèche, la recherche des pâturages devient un leurre, les Touareg sont obligés de demeurer à un endroit proche de l'eau, où les chèvres peuvent trouver un maigre pâturage. Les domestiques noirs construisent alors des zéribas. Ils établissent une charpente de branches fourchues, d'environ 2 mètres à 2,50 m. de hauteur, circulaire ou presque, dont le diamètre varie de 3 à 5 mètres. Autour et sur cette charpente sont attachés des tahlis (tiphas), la zériba possède alors une allure élégante. Si les tahlis font défaut, on s'arrange avec d'autres herbes sèches, morakba, guettaf, etc.; la zériba est alors de pauvre allure, mais possède les mêmes qualités d'habitabilité. En été la zériba est bien préférable à la tente, parce que beaucoup plus fraîche.

Le sol de la tente ou de la zériba est toujours recouvert de sable grossier provenant de l'oued, il est fréquemment changé. Un foyer, constitué par quatre pierres disposées en carré et enfoncées dans le sol, permet soit de chauffer le thé, soit d'apporter un peu de chaleur lors des veillées d'hiver. Près des tentes, des piquets supportent les guerbas; on peut voir aussi le tas de bois entretenu par les Nègres, et le grand mortier de bois qui attend sa ration de mil, mais jamais de désordre, ni d'immondices. Un campement peut avoir passé quelques heures ou plusieurs mois sur un emplacement, le jour de son départ on ne trouvera pas le moindre objet cassé et laissé à l'abandon; les Touareg ne laissent derrière eux ni reliefs domestiques ni aucune autre marque de leur passage.

La tente est habitée par la famille au sens le plus restreint du terme. Lorsque l'homme se marie, il prend une tente et y demeure avec sa femme; les enfants jusqu'à neuf ans restent avec leurs parents, mais après cet âge, ils ont une tente pour eux.

Dans les centres de culture les harratin logent soit dans une zériba de tahli, faite comme celle des Touareg, soit dans une maison construite en toubs ou en pierres liées au tin (argile). La maison est couverte d'un enduit de tin étalé sur lit de tahli que supporte une charpente de branches de fersig ou

31. Zéribas dans l'oasis d'Idelès.

6: Blanguernon M525 Tuareg

d'éthel; la toiture forme terrasse. La porte en général s'ouvre vers l'ouest, tandis qu'une meurtrière est ménagée vers l'est; ce système protège les maisons des ardeurs du soleil de midi. Une telle construction serait insalubre sous d'autres climats; ici peu importe, la famille vit dehors. En hiver tout le monde s'entasse le soir dans l'unique pièce autour d'un feu afin d'accumuler la chaleur au maximum, mais dès le lever du soleil tout le monde sort. Le sol de ces maisons est recouvert du fin gravier de l'oued, renouvelé assez souvent. Les abords de la maison du hartani sont beaucoup moins propres que ceux d'une tente touarègue, les cendres sont éparses, et les immondices sèchent au soleil.

Seul Tamanrasset possède des maisons utilisées par des Européens. Les toubs sont toujours employées dans la construction, cependant depuis peu de temps on essaie, pour certains bâtiments administratifs, la pierre liée au tin. Jusqu'à présent le manque de chaux avait empêché la construction en « dur »; des essais de fabrication de chaux à partir de cipolins ont été tentés, mais le prix de revient au kilo est presque aussi élevé que celui de la chaux arrivant d'Alger.

L'épaisseur des murs varie d'une à trois toubs, soit de 30 à 90 centimètres. Le grave problème est celui de la toiture qui est faite, dans le style local, d'un lit de tin reposant sur des tahlis ou des roseaux; la charpente utilise des branches de fersig et d'éthel, d'une longueur moyenne de 2 mètres à 2,50 m. Il faut, pour obtenir une pièce assez vaste, faire reposer l'extrémité de ces branches sur un gros tronc, ou sur un arc en plein cintre fait en toub. On ne peut donc réaliser que des pièces de 4 mètres de large, à cause de la longueur des troncs ou de la portée maximum de la voûte; quant à la longueur de la pièce, on peut obtenir ce que l'on veut, en ajoutant des éléments de 2 mètres à 2,50 m.

Quelques maisons administratives possèdent des poutres de fer, ce qui permet l'édification de pièces plus larges et évite un grave ennui, celui de constater qu'une poutre est la proie des termites. Afin d'éloigner les termites, on recouvre la charpente d'huile de vidange.

6: Blanguernon MS25 Tuareg

L'enduit intérieur est fait au tin noir, recouvert d'une couche de tin blanc, ou de préférence de chaux qui adhère mieux. L'enduit extérieur est de tin rouge, lissé à la truelle ou strié par les doigts du maçon dans le sens vertical, ce qui est d'un effet agréable. Cette couleur rouge donne à Tamanrasset son allure particulière. Très souvent un petit jardin fleuri égaie la façade. Les maisons européennes possèdent plusieurs pièces, une cuisine, une cour et très souvent un petit jardin potager; elles sont en général coquettement aménagées.

## Les Migrations

Les Touareg ne déplacent leurs campements que pour changer le lieu de pâturage des troupeaux; en effet, lorsque la nourriture des animaux devient rare dans un rayon de deux à trois heures de marche autour du campement, le chef de tente ou de fraction, en accord avec les autres membres de la famille, choisit un nouvel emplacement bien pourvu en pâturages et, si possible, relativement près d'un point d'eau. Les tribus imrads n'opèrent ces déplacements qu'à l'intérieur de leurs terres de parcours. Pour pâturer sur les terres d'une tribu voisine, il faut obtenir l'accord de l'amrar de cette tribu, et de plus acquitter une redevance pouvant s'élever à deux ou trois chèvres. Seuls les nobles se déplacent à leur guise dans tout le pays.

Nous avons vu précédemment qu'en année sèche les chamelles étaient envoyées au Tamesna, et qu'elles y demeuraient pratiquement jusqu'à ce qu'une année favorisée par les pluies donne au Hoggar les pâturages souhaitables. Il ne reste donc au Hoggar que quelques chameaux et toutes les chèvres, qui en accentuent encore le caractère désertique. En ces années de sécheresse, les hommes font la navette du Hoggar aux troupeaux de chamelles, emmenant avec eux tantôt des Nègres, tantôt de jeunes adolescents. Les femmes demeurent dans les campements. Les déplacements des tentes sont soigneusement calculés, à cause de la rareté des points d'eau.

Il n'est pas rare de voir séjourner un campement presque un an dans un lieu pas trop défavorisé.

Lors des années humides, les pâturages abondent pratiquement partout au Hoggar, l'eau afflue dans les oueds, les chamelles produisent du lait en abondance; l'on pourrait penser que les Touareg font alors de longs séjours au même endroit : il n'en est rien, tout au contraire, les campements ne cessent de se déplacer.

Au début de la poussée des pâturages, les campements ne doivent pas séjourner trop longtemps au même point, dit la coutume touarègue; sage mesure qui permet aux plantes de fleurir et de porter des graines, mais cette raison mise à part, rien de rationnel ne permet d'expliquer cette giration continuelle des tentes dans un pays couvert du meilleur pâturage. Peut-être est-ce là une manifestation de l'esprit nomade ? Il y aurait une curieuse étude psychologique à faire, afin de comprendre les raisons qui commandent ces déplacements sans valeur pratique apparente, que les Touareg eux-mêmes ne parviennent pas à justifier.

Pourtant le déménagement d'un camp n'est pas une partie de plaisir. Le démontage des tentes est assez aisé et rapidement exécuté par les femmes, mais la recherche des ânes, le chargement, l'arrimage des objets, constituent un travail qui pour un Européen est affolant; il faut aussi songer à la traite des animaux, au départ des troupeaux, aux moyens de déplacement des vieillards et des bébés. Le camp n'est guère en mesure de partir avant neuf heures du matin, et cependant on travaille depuis le lever du jour. Vers quinze heures la caravane s'arrête afin de passer la nuit; il faut alors décharger les bêtes, dresser les asabers, préparer les repas, traire les animaux; et recommencer le lendemain matin.

Il est une migration régulière qui se produit chaque année; lorsque le blé et l'orge mûrissent dans les jardins, on est alors en avril, toutes les caravanes revenues du Soudan ont stocké leur mil dans les silos, presque tous les campements se dirigent vers les centres de culture. Les chèvres restent au désert sous la garde des Nègres. Chaque petit centre de culture

voit alors un rassemblement de Touareg qui viennent contrôler la récolte, et vivre à la charge des khammès, suivant les clauses du contrat agricole. C'est une période joyeuse, les tendi et les ilougan se succèdent tous les jours.

A propos de ces migrations, il faut noter que les Touareg ne suivent pas exactement les nécessités du climat : une période sèche devrait obligatoirement entraîner un exode des tribus vers les terres soudanaises où les troupeaux seraient au mieux dans des pâturages presque permanents, et cependant les tentes et les chèvres restent au Hoggar. Les raisons politiques ne suffisent pas à expliquer cette contradiction des coutumes avec les obligations du climat. Peut-être faut-il voir dans cette coutume l'effet d'une longue habitude renforcée par des facteurs sentimentaux. Il est certain que hors du Hoggar et de leurs terres de parcours, les Touareg se sentent mal à l'aise, ils manifestent leur joie d'être de retour dans leurs montagnes. On a l'habitude de dire que les Touareg sont de grands voyageurs, mais non de grands nomades; la raison essentielle est certainement l'attachement profond qu'ils manifestent pour leur sol, ce qui paraît incompatible avec la mentalité nomade.

Pour résumer les migrations des Kel Ahaggar, disons qu'elles s'étendent dans un rayon d'une centaine de kilomètres, au sein de leurs terres tribales, mais que les hommes peuvent conduire les troupeaux, suivant les époques, vers des pâturages éloignés de mille kilomètres du campement familial, et qu'un courant caravanier annuel les voit se déplacer de 15° de latitude.

Les harratin cultivateurs ne sont que des sédentaires occasionnels, chaque année on constate un gros mouvement humain d'un centre de culture à un autre. A cela trois raisons : les Touareg, possesseurs du sol, ne sont plus en mesure de fournir au hartani la semence suffisante et de maintenir le contrat agricole; l'eau vient à manquer dans un centre, ou le creusement des foggaras devient impossible; enfin la terre appauvrie a besoin de repos. C'est ainsi que, d'une année à l'autre, un centre important et bien cultivé peut devenir

insignifiant, et même désert. Il paraît impossible de prévoir un cycle pour ces migrations agricoles.

## Le Mobilier touareg

La légèreté et la souplesse sont les deux qualités essentielles du mobilier touareg. Tous ces objets doivent être transportés à dos d'animaux, le poids est par conséquent l'ennemi principal; d'autre part, les animaux portent plus aisément des fardeaux capables de se mouler contre leur corps. Aussi trouvons-nous tout un assortiment de sacs, surtout en cuir, dans l'équipement touareg.

Le tannage de ces sacs est fait de façon à maintenir le cuir très souple; mais le procédé employé ne convient que sous des climats d'une extrême sécheresse : transportés en France, les cuirs touareg semblent reprendre vie, ils se gonflent d'humidité, puis dégagent une odeur désagréable et finalement deviennent inutilisables.

Tous ces sacs sont décorés. Certains sont teints et portent des dessins exécutés avec de la teinture, ou brodés avec des cuirs de couleur, parfois même agrémentés de motifs en tissu, rehaussés de coutures de soie; d'autres sont en cuir naturel, ornés de lanières de cuir effilochées, car le grand principe de décoration pour tout ce qui se transporte à dos de chameau semble être d'allonger les lignes, afin de créer une harmonie avec la silhouette de cet ahurissant animal. Les motifs décoratifs sont nombreux, mais toujours linéaires; le cercle est utilisé ainsi que l'arc de cercle, mais la ligne droite domine, point d'arabesques ni de courbes compliquées, on dessine des triangles, des carrés, des rectangles, voire des trapèzes et des losanges. Le rouge domine dans les cuirs, mais une gamme abondante de couleurs artistement utilisées permet des effets agréables à l'œil; des verts tendres caractérisent le travail en provenance du Soudan, des blancs purs sertissent des noirs, des verts foncés et des bruns, le jaune en différents tons couvre de grandes surfaces. Enfin de légères entailles dans le cuir teint donne des effets originaux.

Les sacs sont arrimés sur les bêtes par de nombreuses cordes. Celles-ci sont tressées avec des poils de chèvre. La fabrication de tout ce mobilier exige une patience et un temps que l'on a peine à imaginer. Un tel travail ne peut se concevoir que dans le cadre de la tribu nomade.

On pourrait entreprendre une étude intéressante sur la décoration touarègue, en la comparant à celle de certaines tribus indiennes d'Amérique; on songe alors aux hypothèses émises par le commandant Cauvet, dans *Les Berbères en Amérique*.

Voici une liste des divers objets que l'on rencontre sous une tente touarègue, liste sans doute incomplète, car les objets les plus familiers sont les plus facilement oubliés.

La femme, maîtresse du foyer, possède ses affaires personnelles. Le sac-armoire, grand rectangle de 80 centimètres sur 60 centimètres, surmonté d'une ouverture de 30 centimètres de haut sur 50 centimètres de large, se nomme « agherredj »; on y range les vêtements. Certains de ces agherredj sont de magnifiques œuvres d'art.

Les autres sacs appartenant aux femmes ont tous la même forme. Le « guerfa » est plus petit que l'agherredj, le « tarerrat » tressé en poil de chèvre se rencontre plus rarement.

Les « adhaboun » constituent toute une collection de petits sacs aux formes les plus variées, possédant une armature solide faite de palmier tressé, parfois de bois; on y serre les menus objets : bijoux, parfums, remèdes, etc. Tous ces sacs sont en général fermés par le fameux cadenas touareg, fermeture morale, mais toujours respectée.

Les femmes riches possèdent, rangée dans un coin de la tente, une selle spéciale appelée « akhaoui » ou « takhaouit » suivant sa grandeur. C'est un assemblage extrêmement curieux de trois espèces de bois (tehounek, laurier-rose, tabrakat), dont chaque morceau est choisi en fonction de son usage, moulé, taillé et décoré. Les différentes pièces de la takhaouit sont assemblées par des liens de cuir; il faut des années pour réunir les branches capables d'être utilisées, ce travail est presque toujours l'œuvre des femmes. L' « haïf » est une sangle

qui fixe la selle sur le dos du chameau; tressée en poil de chèvre, elle mesure 5 centimètres de large et 3 mètres de long; une des extrémités s'orne d'un énorme pompon de 50 centimètres de large, pesant parfois plus de 3 kilos, des broderies de laine rouge et verte donnent une allure somptueuse au pendentif qui tombe presque jusqu'à terre lorsque l'haïf fixe la selle.

Une takhaouit richement décorée possède d'autres pompons symétriques à l'haïf, ce sont les « tidarsiouin ».

Le tapis féminin par excellence, posé sur la tarraouit lors d'un voyage, vient de Timmimoun, on le nomme « tagamdafest »; il a de larges bandes noires, rouges et vertes et, en son milieu, des touffes de laine jaunes, noires et vertes.

Ajoutons aux objets appartenant à la femme le « sendouq », sorte de caissette dans laquelle on enferme le sucre et le thé; le nom, d'origine arabe, semble indiquer une importation relativement récente. Le « tesenit » est un couffin en fibre de palmier où l'on range les ustensiles de cuisine.

L'homme, lorsqu'il est élégant — et les Touareg veulent tous l'être lorsqu'ils sont à chameau —, possède une « djebira » (grand sac fabriqué au Soudan) aux splendides décorations de cuir dans lesquelles dominent les blancs et les verts tendres. Pour ne pas abîmer les broderies la djebira est toujours portée à l'envers, et retournée en approchant d'un campement.

On tasse le linge dans un grand sac de cuir teint et décoré au trait : « echchekoua », que l'on ferme au cadenas. La « tchékouat » (« dabia », en arabe) est de taille plus petite, la « tesoufra » contient le lait, elle est vierge de décoration, car les teintures ne résistent pas à l'humidité. Des petits sacs appelés « etfadoul » renferment le thé et le sucre.

La « tarik » (« rahla », en arabe) orne le coin de la tente réservé à l'homme. La selle de chameau est bien connue, il en existe plusieurs types : la « tamzak » fabriquée au Soudan est la plus prisée des Touareg, son dossier a une forme caractéristique, et elle s'orne de dessins en cuir vert, toute une quincaillerie est fixée derrière le dossier. L' « akoka » est encore une bonne tarik, assez honorable à monter, ses couleurs noires

et rouges la rendent plus discrète; elle est aussi, dit-on, plus solide. La « talast » ne possède pas de croix en avant, elle est en bois décoré, très solide; elle convient au dressage, un homme élégant ne s'en sert pas en voyage. Afin de ne pas blesser le chameau, on pose la tarik sur deux ou trois petits tapis carrés, les « sadfar », mesurant environ 50 centimètres, qui présentent des bandes de tissu bleu et blanc formant des motifs géométriques; ils sont légèrement rembourrés avec de vieux tissus.

Pour parer le chameau, les Touareg posent sur le siège de la selle un tapis, soit du Fezzan, soit de Ghardaïa, appelé « taouart ». La sangle (haïf) est la plus lourde possible. La « rezama » (arabe, « tarant », en tamahaq), qui sert à guider l'animal, est en cuir tressé et orné de lanières de couleur; on prétend qu'une tarant en cuir de hyène rend l'animal plus rapide.

Enfin pour celui qui désire une bête particulièrement bien équipée, on fixe sur le nez du chameau un « cascabou », sorte de monture en cuivre avec pendeloque et sonnettes, ce qui confère à l'animal une fière allure et classe son propriétaire.

Le matériel collectif comprend d'abord les « abaïor » destinées à contenir l'eau; ces guerbas sont fabriquées avec des peaux de chèvre ou de mouton. Les « tamhit » (« mezoued » en arabe) servent à transporter les grains. On fabrique le beurre dans l' « edjiouer ».

Nous connaissons déjà l'usage du tendi et du pilon (iharen). Les meules dormantes ou tournantes appelées « tahount » sont utilisées près des centres de culture.

Le « terahout » est le plat hémisphérique, il existe en différentes tailles. Les « tesoukalin » sont les petites cuillers; la grande, souvent pyrogravée, se nomme « temoulalt ». La marmite de métal ou de terre cuite s'appelle « terrirt ». Tout ce qui est utilisé pour la confection du thé porte des noms arabes : la bouilloire (ralleye), la théière (béred), les verres (el kissan) et le plateau (el tabla). Le trépied se nomme « iseguida ».

34. Type de selle (talast) avec sa sangle (aïf).

6: Blanguernon MS25 Tuareg

## L'Habillement

La grande allure des Touareg, qui impressionne tant celui qui pour la première fois arrive au Hoggar, est due, pour beaucoup, aux vêtements qu'ils portent. La silhouette des « hommes voilés » est désormais familière. L'amplitude des vêtements, et la légèreté du tissu qui favorise les drapés harmonieux semblent exagérer la taille des hommes comme celle des femmes. Nombreux sont les voyageurs européens qui laissent errer leur imagination, parlant de fantômes bleus, se livrant à des comparaisons aussi irréelles qu'évocatrices. Il faut, ici, dépouiller, au sens propre, les Touareg de cette auréole poétique. Commençons par le pantalon appelé « iqarbi » (c'est le « sarroil », en arabe). Très large et non plissé, une coulisse à la taille permet de serrer l'iqarbi à l'aide d'une ceinture de cuir tressé appelée « tamenalt »; il n'y a pas de poche. On compte 1,50 m. de tissu en 140 de large pour sa fabrication. Il est souvent en satinette noire ou en chegga. L'amplitude du sarroil est indispensable pour monter à chameau, s'asseoir par terre et dormir avec.

L' « éressoui » est une immense gandoura de tari (tissu bleu imprégné d'indigo qui déteint et donne aux Touareg cette teinte de peau caractéristique) ou de mahmoudi (cotonnade blanche). La largeur de la gandoura doit être supérieure à l'envergure des bras, soit en général trois largeurs de tissu, 2,40 m. environ. L'éressoui est fendu presque entièrement sur les côtés et possède une immense poche plaquée à gauche sur la poitrine. On compte 8 mètres de tissu en 80 centimètres. D'ordinaire les Touareg portent un éressoui bleu par-dessus un éressoui blanc, ils relèvent sur chaque épaule l'excédent de tissu qui normalement devrait pendre sur les bras, provoquant ainsi une opposition du bleu et du blanc du plus heureux effet. Le bras se trouve découvert et laisse apparaître le bracelet de pierre taillée (serpentine) appelé « habidj », qui est une arme de défense dans la lutte.

On appelle « takamist n'kora » une gandoura de forme identique à l'éressoui, mais faite de tissu fabriqué au Soudan,

6: Blanguernon MS25 Tuareg

composé de petites bandes de un centimètre cousues les unes aux autres. La teinture bleue du takamist adhère particulièrement à la peau. Les Touareg ne portent ce vêtement que les jours de fête, car il coûte très cher.

Le « tameskinout » est également une gandoura faite dans un tissu fabriqué au Soudan, mais dont les bandes ont une largeur de 4 à 5 centimètres. Ce vêtement fort onéreux, lui aussi, se rencontre beaucoup plus rarement.

Une autre gandoura appelée « rati », qui ne se porte que dans les grandes occasions, possède des rayures de teintes violine et beige; elle s'orne de broderies, formant des cercles dans le dos. La grande poche de poitrine est également brodée. On appelle « taguelmoust » le voile bleu brillant aux drapés soigneusement étudiés qui cache le visage des Touareg, que les romanciers ont nommé « litham », mot inconnu au Hoggar. La grandeur du taguelmoust est en général de 3,50 m. sur 0,25 m. Le tissage de type soudanais ressemble à celui du takamist dont les bandes ont un centimètre. Le choix d'un taguelmoust est malaisé pour un Européen, il est fonction du nombre de bandes, de la qualité de la teinture bleue qui, lorsque le tissu est neuf, ressemble au papier carbone tant elle est brillante. Le taguelmoust ne se lave qu'après un long usage, il ne peut plus alors servir lors d'une cérémonie. La façon d'arranger son taguelmoust classe un homme, il permet aux initiés de distinguer les tribus. Le chèche, blanc ou noir, que l'on porte de plus en plus, est d'importation arabe, il offre l'avantage de durer plus longtemps et de coûter beaucoup moins cher; 4 mètres ou 4,50 m. sont nécessaires pour obtenir l'allure voulue. Certains Touareg font des arrangements de chèche et de taguelmoust du plus heureux effet. Sans entrer dans les hypothèses qui ont été émises sur l'origine du port du voile chez les hommes, bornons-nous à dire, comme les Touareg, que c'est la coutume, et notons qu'il est indispensable de se voiler lorsque l'on circule au désert; tout Français qui voyage à chameau ou à pied se rend compte rapidement qu'il lui faut suivre cette coutume sous peine de voir son visage prendre l'allure d'une peau de lézard. Le taguelmoust

a l'avantage sur le chèche de déposer sur la peau une couche de teinture grasse qui évite les crevasses dues à la sécheresse de l'air.

La chaussure du Targui est la naïl appelée « ighatimen ». Sa forme arrondie est bien connue. Une lanière de cuir passe entre le pouce et l'index, deux bandes de cuir recouvrent le pied et sont cousues presque à la hauteur du talon. La semelle comprend trois épaisseurs cousues entre elles par une ou plusieurs lignes de points. Des dessins aux couleurs agréables ornent les différentes naïls et permettent d'en distinguer l'origine. Les ighatimen sont fabriquées au Soudan, les plus célèbres viennent de Zinder ou de Tahoua.

Les tribus montagnardes — Dag Rali et Adjouh n'Téhélé surtout — confectionnent des naïls d'un type particulier, appelées « imarkaden ». Le bout est droit, légèrement plus large que le pied, le talon est également droit, les côtés dessinent une courbe formant un resserrement vers la voûte plantaire. L'épaisseur des couches de cuir peut atteindre un centimètre, les coutures de cuir à gros points permettent la décoration. Une longue lanière rejoint des boucles de cuir cousues sur la semelle, et se noue sur le cou-de-pied. La chaussure élégante est l' « ighatimen ».

Il faut ajouter à l'habillement d'un Targui tous les objets qu'il porte, y compris ses armes.

Le « taralabt » est un portefeuille de cuir pendu au cou. Un ingénieux système de fermeture à glissière l'empêche de s'ouvrir, il est toujours noir et décoré artistement de coutures jaunes, vertes ou rouges. De nombreuses poches intérieures permettent de serrer : la glace, le « tazolt » (noir à yeux, qui est parfois contenu dans un étui spécial), le « chemma » (tabac à chiquer), le « kelbou » (natron destiné à adoucir le tabac), les papiers personnels et parfois de l'argent.

Du cou pendent, suspendues par un fil de cuir, les amulettes appelées « tera »; ce sont de petits rectangles de cuir, contenant soit des papiers écrits par un taleb, soit des produits magiques préservant des maladies, des Kél es Souf et du malheur en général. Chaque Targui est abondamment pourvu de tera qui lui rendent la vie supportable.

L' « iremdan » (« menguech », en arabe) est un instrument indispensable; il comporte une lame coupante, un poinçon et une petite pince (du genre pince à épiler). Ces lames pivotent autour d'un axe; un anneau permet de suspendre l'iremdan, mais ce dernier est souvent porté dans un étui spécial. Cet outil est tour à tour trousse de chirurgien, pour extraire les épines de tahla de la plante des pieds, et nécessaire de cordonnier pour réparer les naïls. Sans son iremdan, un Targui ne peut se permettre de voyager.

Nous avons déjà parlé de l' « abidj » ou bracelet de pierre polie. Le « tissak » est une petite bague d'argent, sans valeur artistique. La clef du cadenas touareg, qui pend souvent sur la poitrine, est un ornement très prisé.

Aucun Targui n'entreprend un déplacement important sans être muni de sa « takouba », l'épée portée au côté qui donne cette allure moyenâgeuse aux Touareg, semblant les faire sortir d'un livre d'images. Il y a takouba et takouba, certaines valent deux jeunes chameaux, elles se distinguent grâce aux rayures de la lame et à l'estampille marquée par le maalem. La première qualité de takouba se nomme « tazraït », elle a cinq rainures sur la lame, et un rond dont le diamètre vertical est surmonté d'une croix; une tazraït doit couper une entrave de chameau enfoncée dans du sable dont seulement cinq centimètres dépassent. Le type « arlal » n'a pas de rayure, mais porte la même marque que la tazraït, c'est une excellente takouba aussi estimée que la précédente. La « talit », de valeur sensiblement équivalente, n'a pas de rayure, possède la même marque que la tazraït, doublée d'un lion stylisé. Une « inaseri » coûte moitié moins cher, elle a trois rayures et porte un dessin en forme de croissant avec trois pointes dirigées vers le centre. La « tabloq » possède une longue rainure médiane et s'orne d'une silhouette de lion; elle coûte aussi cher qu'une inaseri. L' « adadiglen » n'a jamais été portée par un lâche, elle vaut une tabloq, une longue rainure médiane est flanquée de deux petites rainures; de chaque côté de la grande rainure deux K se tournent le dos. L' « elghenihé » est une épée beaucoup plus rare, bien qu'elle ne vaille que la moitié d'une adadiglen;

elle n'a qu'un seul tranchant, trois grandes rainures, et un croissant avec une pointe dirigée vers le centre. La « tama », beaucoup plus commune, vaut à peine la moitié de l'elghenihé; on la reconnaît à sa rainure médiane, à deux petites rainures parallèles, et à deux croissants dont une seule pointe se dirige vers le centre. Il existe d'autres takouba, de fabrication récente; elles sont parfois des copies des vieilles lames, mais on les reconnaît aisément. Certaines vieilles takouba ne portent pas de marques distinctives, il faut pour les apprécier être un véritable connaisseur.

On rencontre encore des Touareg portant la lance de fer : l' « allar », qui était une arme de jet à petite distance. Elle mesure environ 1,90 m. Le port de la lance se perd de plus en plus. Pour chasser le mouflon on utilise une sorte de javelot dont la pointe et le talon ont la forme de ceux de la lance; cette arme se nomme « tarrada ».

Notons pour mémoire des armes qui ne se portent plus : le « tilok », poignard de bras magnifiquement décoré, maintenu à l'avant-bras par un bracelet de cuir; l' « arrar », bouclier en peau d'antilope, blanc, orné en son milieu de dessins et d'appliques de métal; ce grand rectangle aux sommets arrondis donnait aux guerriers une allure des plus impressionnantes. Les boucliers sont actuellement introuvables.

Pour en finir avec l'habillement de l'homme, citons le « tabroq », couverture venant de Timimoun appelée « dokali », porté les jours de grand froid et qui donne aux Touareg une ressemblance avec certains Indiens d'Amérique.

Les femmes touarègues (« tamat », « tidedin » au pluriel) portent des vêtements qui par bien des points ressemblent à ceux des hommes. Elles ne sont pas voilées, mais quand un étranger leur est présenté, elles dissimulent leur visage par simple pudeur.

Comme les hommes, elles portent une longue gandoura de tari appelée « erressoui », mais l'ouverture du côté n'a guère que 30 centimètres sous les bras. Il existe une erressoui blanche portée sous la bleue. La femme a également une « takamist n'kora » qu'elle revêt lors d'une visite ou d'une fête.

Elle s'enveloppe dans un grand rectangle de tari de 3 mètres sur 2, appelé « afar ». La clef du cadenas est attachée à un coin du voile; elle fait contrepoids lorsque l'afar est rejeté par-dessus l'épaule.

L' « ikaraï » est le châle de tête, on l'appelle plus particulièrement « alechou », lorsqu'il est fait avec du tissu de taguelmoust; il mesure environ 1,50 m. sur 0,50 m. Lors de l'ilougan, qui est une sorte de quadrille à chameau, un méhariste enlève l'alechou à une femme et s'enfuit, poursuivi par les autres Touareg qui cherchent à reprendre le voile. Le vainqueur est fort considéré !

Le « tabarikant » est un très grand voile de 3 mètres sur 2, dont la teinte d'un rose très soutenu est du plus heureux effet; il était importé de Tripolitaine, c'est un tissage de laine très fin. Le tabarikant est de plus en plus rare, il se transmet de mère à fille et ne se porte que les jours de fête. Le « raïki » est un autre voile, aussi grand que le tabarikant en tissu de laine, mais blanc; il est aussi très rare.

La Targuia ne porte pas de sarroil, mais une sorte de jupon arrivant au genou, simple pièce de tissu nouée à la taille. appelé « assedjebès ». Les fillettes prennent l'assedjebès lorsqu'elles sont nubiles.

Les femmes chaussent les « ighatimen », portent des « tera » et possèdent toutes un « taralabt » d'une forme un peu différente de celui des hommes. L' « iremdan » est souvent porté sans étui. En hiver, le « tabrok » (dokkali) est aussi un vêtement féminin.

Les tout jeunes enfants sont nus, plus tard ils prennent la gandoura bleue; les garçons ont un sarroil vers huit ou neuf ans. Vers quinze ans, ils commencent à se voiler.

## La Nourriture

Les Touareg sont particulièrement sobres, et leurs conditions d'existence ne les prédisposent pas à la confection d'une cuisine finement préparée. La nourriture touarègue n'a rien qui puisse flatter les goûts d'un gourmet. Les quelques

6: Blanguernon MS25 Tuareg

[facing p. 104]

plats agréables à manger pour un Français ont été empruntés aux Arabes et ne seront pas mentionnés ici.

Les éléments de base de l'alimentation touarègue sont : le mil, le lait et les dattes. Le mil (enelé) vient du Soudan, ou est récolté au Hoggar en culture d'été; ce dernier, dont le grain est plus petit, est apprécié davantage, mais insuffisant en quantité.

Le mil (« bechena » des Arabes) est écrasé au pilon et vanné, afin de ne conserver que la farine blanche. Cette farine est parfois consommée telle qu'elle vient d'être écrasée, c'est le « tibik » utilisé sur la piste par le méhariste pressé et parfois même au campement.

On appelle également « tibik » une préparation plus savante : le mil, écrasé, vanné, puis lavé, est mis dans une tarahout. Des galets chauffés sont enfouis dans les grains, jusqu'au moment où ces derniers deviennent légèrement cuits, plutôt torréfiés. On vérifie le degré de cuisson à l'odeur agréable qui se dégage du plat. Ce grain est ensuite concassé avec des dattes sèches. La poudre ainsi obtenue est consommée sans autre cuisson.

L' « arahara » est une recette plus compliquée : écraser du mil, de façon à obtenir une farine bien fine; concasser des dattes, y ajouter un peu d'eau afin de former une pâte; écraser du « tikamarin »; mélanger farine, pâte de dattes et poudre de fromage; verser beaucoup d'eau jusqu'à obtention d'un liquide ayant l'apparence du lait. Consommer frais en été.

L' « asink » constitue le plat national des Touareg : écraser du mil de façon à obtenir une moitié de fine farine et l'autre de grains grossiers. Séparer grains et farine, et verser les grains dans une marmite d'eau bouillante; faire cuire deux heures jusqu'à ce que les grains gorgés d'eau fassent une bouillie, assez liquide. Verser la farine dans cette bouillie en tournant le mélange avec l' « esseroui » (une palette de bois utilisée spécialement pour l'asink), la marmite restant sur le feu. Obtenir une consistance assez ferme, servir dans le tarahout, ajouter du lait si possible et consommer chaud. Lorsque le lait fait défaut, on peut verser du beurre ou consommer l'asink au naturel.

35. A l'étape un Targui écrase son mil dans une peau de mouton.

[Facing p. 105]

6: Blanguernon MS25 Tuareg

Le lait, autre aliment de base, est bu pur dès qu'il est trait, ou mélangé à du lait aigre, ou bien encore coupé de petit-lait. Pour fabriquer le beurre, le lait, versé dans une «adjiouer» (« chekoua » des Arabes), reste une journée, de préférence au soleil, ce qui le fait aigrir rapidement. Le lait aigre est ensuite versé dans une autre chekoua, que l'on remue jusqu'à ce que l'on obtienne une boule de beurre. Le petit-lait aigre demeuré dans la chekoua est bu dans la journée.

Le beurre frais (« zebda » en arabe) est appelé beurre blanc (en tamahaq : « oudi oua amellen »); il est consommé rapidement mais en petite quantité. La grosse production est transformée en « dahan » (arabe, « oudi », en tamahaq) qui se conserve longtemps. Le beurre blanc, additionné de dattes, en petite quantité, de quelques grains de blé ou de mil et de plusieurs tiges d'une plante appelée « aïnessis », cuit pendant très longtemps. Lorsqu'il est à point, on le verse dans le « tahatiat » ou le « arraïan » afin d'être conservé. Le tahatiat est une sorte de guerba fabriquée avec la peau du cou du chameau; elle conserve la forme arquée primitive. L'arraïan a la forme d'une bonbonne, c'est un morceau de peau de chameau moulé dans un trou de sable, rempli de crottes de chameau et de gravier, l'embouchure fortement serrée par une corde, que l'on fait ainsi sécher et durcir.

Le « tikamarin » est un fromage à base de lait entier fabriqué de la façon suivante : on tue un jeune chevreau, dont on garde précieusement l'estomac encore plein de lait, on laisse durcir ce lait dans la poche stomacale, puis on le conserve soigneusement. Dans un tarahout de cinq à huit litres plein de lait, on plonge un morceau de la semence ci-dessus décrite, environ de la grosseur d'un dé. Au bout d'une journée, le lait se caille entièrement. On prend une poignée de ce fromage encore frais, on l'écrase entre ses mains, préalablement lavées, puis on en fait des plaques de 15 centimètres sur 5 centimètres environ. Ces plaques sont déposées afin d'être séchées sur un lit de tiges d'afazzou. Le tikamarin se mange sec; on le conserve plus d'une année, on dit qu'il est encore consommable au bout de quatre ans.

38. Dans l'oasis d'Idelès. A droite, un récipient à beurre (tahtiat).

6: Blanguernon MS25 Tuareg

L' « ioulsan » (« qlila » en arabe) est un fromage fabriqué à partir du lait aigre restant de la fabrication du beurre. Ce lait aigre que l'on verse dans une marmite est chauffé longtemps. Le contenu de la marmite est versé dans un filtre spécial, sorte de couffin d'afarsou; l'eau s'écoule, le fromage qui reste est ensuite façonné en petits pains circulaires de 6 centimètres de diamètre sur 2 centimètres d'épaisseur. L'ioulsan se consomme rapidement, mais on le conserve sec et il entre surtout dans la composition de l'argira que l'on mange en été.

Les Touareg aiment beaucoup la viande, mais ils en mangent relativement peu souvent, cependant certains Touareg disent qu'il ne faut pas passer dix jours sans en manger.

La chèvre est la viande la plus courante, le mouton est mangé moins souvent et le chameau dans des circonstances exceptionnelles. La viande de gazelle et de mouflon est très appréciée, surtout parce qu'elle est gratuite; sa consommation reste soumise à un facteur de chance. Le lièvre n'est mangé que par les enfants ou les Nègres. Les oiseaux sont peu appréciés, qu'ils soient sauvages ou domestiques.

Les viandes sont mangées bouillies ou grillées, toujours bien cuites. Le mechoui touareg se nomme « abatoul » (trou). On creuse un trou dans un sable à grains assez gros, on y fait un grand feu. Les braises sont ensuite dégagées du trou et la bête, dépecée, largement ouverte, y est déposée, sans beurre ni épices. On recouvre de sable sur lequel on maintient un feu durant deux ou trois heures. La bête est retirée, fortement frappée à coups de bâton pour chasser les grains de sable et livrée à la dégustation.

Les Touareg ne mangent pour ainsi dire jamais de légumes verts; ils conservent des oignons séchés (tarafaret) qui servent à donner quelque goût aux plats; les tomates séchées produites en abondance au Hoggar sont aussi utilisées.

Le blé, assez peu employé, permet la fabrication de couscous et de galettes appelées « taguella ». Les Touareg font des taguella avec la farine de mil, mais elles sont franchement détestables.

Il faut noter le scrupule des Touareg en ce qui concerne les interdits islamiques en matière de nourriture.

En fait ils continuent à manger ce qui a été leur nourriture traditionnelle, et il se trouve que la coutume cadre avec les règles musulmanes.

Les enfants mangent, pour s'amuser, des « tilout », ainsi que des « dobs », ces gros lézards, qu'ils font griller sur des braises. Ils leur ouvrent le ventre, puis dégustent par pincées la chair cuite dans la peau, un peu comme on mangerait un œuf à la coque.

Les œufs de poule sont assez peu appréciés, les enfants en acceptent, mais préfèrent les œufs de dob.

Le daman, appelé akaokao, farouche petit rongeur des collines granitiques, fournit une nourriture réservée aux Nègres.

La nourriture européenne n'a pour ainsi dire pas pénétré sous la tente, seules les pâtes ont de l'attrait, mais les Touareg ne vont pas encore jusqu'à en acheter. Le riz est considéré comme un remède. Comme conserves on peut voir des Touareg manger des sardines à l'huile, des confitures et utiliser du lait en boîte. Tous ces aliments ne sont pas acceptés avec enthousiasme, ils sont trop chers; et les Touareg paraissent être vraiment conservateurs en ce qui concerne la nourriture, comme pour l'ensemble de leurs coutumes.

Ils boivent de l'eau, du lait et du thé d'importation relativement récente, qui devient une nécessité. Il n'est pas besoin de rappeler le rituel dont s'entourent la confection et la dégustation du thé.

Le café n'est guère bu qu'avec des Français, ou s'il est pris sous la tente c'est à titre de remède. Est-il besoin de dire que les Touareg ne boivent pas d'alcool, et qu'actuellement il n'y a aucune exception à cette règle ?

## La Santé publique

Il paraît pratiquement impossible de dresser pour le Hoggar un tableau démographique : les chiffres pour les années

6: Blanguernon MS25 Tuareg

antérieures à 1947 sont rares et sujets à caution; ils donnent un ordre de grandeur acceptable, mais ne permettent pas d'établir avec exactitude les mouvements de population.

On doit donc tenir compte, dans ce domaine, des chiffres des derniers recensements et des observations faites sur des tribus que l'on peut aisément visiter, en essayant d'étendre prudemment ces observations à l'ensemble de la population.

| | | |
|---|---|---|
| En 1948 on comptait | 6 048 nomades | |
| | 4 240 harratin | |
| | | soit 10 288 âmes |
| 1949 | 6 013 nomades | |
| | 4 285 harratin | |
| | | soit 10 298 âmes |

Le chiffre de la population du Hoggar semble sensiblement stationnaire (même si l'on ne se base pas uniquement sur les chiffres ci-dessus). La natalité n'est pas très grande, mais supérieure à la mortalité qui est faible. La mortalité infantile est pratiquement incontrôlable.

En 1948, on comptait 1 028 hommes pour 1 202 femmes, ce qui permettrait d'admettre l'opinion courante qu'il y a, relativement aux autres peuples, plus d'hommes que de femmes chez les Touareg. Il faut cependant se garder des affirmations de ce genre sans avoir au préalable examiné toutes les causes qui peuvent provoquer un tel état de fait. Il est à peu près certain que les Touareg contrôlent leur natalité. Le chef de tribu peut interdire des naissances ou les recommander suivant le nombre des membres de la tribu. Cette mesure paraît sage dans un pays qui a peine à nourrir la population existante. Tout se passe comme si, empiriquement, les Touareg avaient trouvé le nombre idéal d'individus que puisse nourrir leur sol, et qu'ils fussent assez sages pour essayer de le maintenir.

Les hommes interrogés à ce sujet éludent la question, disant que cela regarde leurs compagnes, et qu'ils ignorent les moyens employés. Les femmes sont également très réticentes, pour ne pas dire muettes.

6: Blanguernon MS25 Tuareg

Certaines d'entre elles prétendent avorter en absorbant des plantes prises en décoction. Les médecins français connaissent les propriétés de ces plantes, ils estiment que cette médicamentation doit être insuffisante pour produire l'effet recherché. A force de patience, j'ai pu arriver à connaître un moyen qui, pour dangereux qu'il soit, doit être efficace; je n'ai eu ce renseignement que par une seule femme, et n'ai jamais pu en avoir confirmation, car il est difficile d'aborder ces sujets de but en blanc. Les femmes utiliseraient une sonde qu'elles fabriquent avec une « pierre » appelée « azarif » (« cheb » en arabe) qui est de l'alun; elles lui donnent la taille d'un crayon à ardoise. Cette sonde ayant produit un effet mécanique se dissout par la suite. Il est vraisemblable que beaucoup de femmes sont victimes de ces manœuvres, car en interrogeant les Touareg on constate une assez forte mortalité féminine à un âge relativement jeune. C'est peut-être là qu'il faut rechercher la cause de cette plus grande proportion d'hommes par rapport aux femmes.

La maladie la plus répandue au Hoggar est sans doute le paludisme, contracté le plus souvent en terre soudanaise et répandu au Hoggar, où les anophèles sont fréquents dans les centres de culture et dans tous les points d'eau permanents ou temporaires. Le professeur Rémy, de la faculté de Nancy, en a trouvé dans le tiggert de Tarahouaout, à la guelta d'In-Ezzebib; le médecin capitaine Galan en a récolté dans la guelta d'Afilal à près de 2 000 mètres d'altitude.

Ce qui fait le plus de ravage chez les Touareg, ce sont les pneumonies et leurs complications pulmonaires; elles sont favorisées par les froids de l'hiver très mal supportés dans des vêtements trop légers.

En 1949, une épidémie de rougeole a, par ses suites pulmonaires, pris l'allure d'une catastrophe.

Les maladies vénériennes sont très fréquentes chez les harratin, plus rares chez les Touareg.

Une calamité des centres de culture est le trachome, rehaussé de toutes les conjonctivites que transmettent les mouches qui pullulent et séjournent en grappes autour des

6: Blanguernon MS25 Tuareg

yeux des enfants. Les Touareg semblent préservés des maux d'yeux, ils ont très rarement le trachome.

La variole, autrefois si commune et si redoutée, a pratiquement disparu, grâce aux vaccinations systématiques. Ce fut une curiosité, en avril 1951, de voir rentrer du Soudan deux Touareg couverts de boutons de variole.

La tuberculose ne semble pas avoir fait son apparition, les cuti-réactions pratiquées à l'école de Tamanrasset sont négatives chez les enfants nés au Hoggar. Le cancer paraît ne pas se manifester.

Si les Touareg sont abondamment pourvus de poux, surtout en hiver, de même que les harratin, on n'a jamais constaté un cas de typhus. La typhoïde est inconnue, de même que la diphtérie, le tétanos et la poliomyélite.

Le pays est donc suffisamment préservé de graves maladies; mais il faut noter un fléau : la sous-alimentation, décrit et bien étudié par le médecin capitaine Galan dans une publication de l'institut Pasteur d'Algérie : *Contribution à l'étude du problème alimentaire au Hoggar.*

Touareg et Nègres commencent à aimer la médicamentation européenne et fréquentent davantage l'infirmerie; ils apprécient surtout l'aspirine, la quinine (qui devient un terme générique pour tous les comprimés) et la pénicilline. Ils restent fidèles à leur pharmacopée surtout à base de plantes, dont voici quelques exemples.

Maladies pulmonaires : le piment fort et le rellachem sont des spécifiques; pour la pleurésie, il faut faire fondre de la graisse de chameau en présence du taïnoust qui est le fruit d'un acacia, manger le plus chaud possible et serrer sa poitrine avec une corde.

Pour l'estomac, du beurre mélangé avec du tahist.

En cas de diarrhée, le takamezout est souverain, pris dans du thé, ou absorbé en feuilles. Ce takamezout jouit d'un grand renom auprès des Touareg : il contient disent-ils, quarante remèdes, mais ne guérit pas les jambes cassées.

La constipation est vaincue par l'adjardjar et la taharadjellé. Le mal de tête est sans remède, le thé est encore ce qui est

préférable. Le foie se traite avec de l'ihemhad pris dans du lait. Celui qui a des ganglions à l'aine ou sous l'aisselle peut les faire disparaître aisément en les frottant légèrement avec de la salive, le matin de très bonne heure; mais il est un autre moyen plus efficace qui consiste à chauffer des crottes de chèvre et à les poser sur les ongles du membre malade.

Pour une plaie ouverte, faire un emplâtre avec du lait et du tassa en poudre.

Les rhumatismes se soignent aisément, on creuse une sorte de puits de 1 mètre de diamètre sur 1,50 m. de profondeur, le rhumatisant s'y installe, on recouvre le puits d'une couverture, et l'on donne au malade une infusion d'oïaq afin qu'il dorme. Il existe une source appelée In-Ahadja qui serait également excellente pour traiter les rhumatismes.

La viande de chacal, mangée conjointement avec des décoctions de rellachem durant trois jours, est le meilleur remède contre la blennorragie; le clou de girofle ne peut qu'aider la guérison.

On emploie encore la viande du chacal pour guérir la syphilis, mais il faut en outre boire le matin du lait dans lequel a macéré de la coloquinte; pendant que l'on boit ce lait, on fait cuire des brochettes de graisse que l'on mange ensuite; durant toute la journée, boire du bouillon gras. Au bout de trois jours on constate dans les selles des petites granulations blanches qui indiquent la réussite du traitement.

On soignait autrefois la variole d'une façon suffisamment efficace en faisant un trou dans le sable et en chauffant ce trou comme si l'on devait faire un méchoui, moins fortement cependant; on couchait le varioleux dans le trou, puis on le recouvrait de sable, et il ne restait plus qu'à attendre.

La rougeole demande à être soignée au chaud, en mangeant de la viande de lièvre, de gazelle ou de mouflon.

Les maux de dents ne résistent pas au traitement suivant : après avoir réuni de la graine d'oignon, de l'ouzouaz, du blé, du sel, s'en remplir la bouche, et conserver ces médicaments une demi-heure la bouche close. Lorsque les adolescents bourgeonnent, ce qui les défigure, il est indispensable de faire

brûler de la graine d'oignon et d'en respirer la fumée, on dit que tous les vers sortent immédiatement. Autour d'un furoncle, appliquer une pâte composée de lait et de tanzet (sorte de haricot du Soudan) réduit en poudre.

## Rites magiques

Voilà un sujet qu'il est très difficile de traiter, car les secrets sont jalousement gardés par ceux qui les possèdent et veulent en tirer profit, ou soigneusement dissimulés par ceux qui les connaissent d'une façon désintéressée, mais manquent de confiance dans l'interrogateur, ou redoutent les représailles.

Le Hoggar, situé aux frontières de l'Islam et du monde noir, est à coup sûr imprégné de coutumes magiques; l'islamisation superficielle de la population qui a conservé un fond de croyance aux génies, souvent inavoué, mais présent, se prête admirablement aux rites secrets de la magie.

Cependant il semble que les Touareg, bien qu'ils soient très superstitieux, soient étrangers aux sortilèges maléfiques, spécialité des femmes du Tidikelt, des Ajjers et du Soudan. Le plus célèbre des maléfices est le « borbor », c'est avant tout l'œuvre des Négresses.

Le borbor agit de deux façons : ou bien il tend à empoisonner un individu dont on veut se débarrasser, ou bien il sert simplement à diminuer les forces d'un être dont on souhaite se venger ou que l'on désire s'attacher (dans ces derniers cas, il agit un peu à la façon d'un philtre d'amour). De toute façon, le borbor ne produit ses effets qu'à longue échéance, il est individuel et préparé dans un but précis; il doit, pour être efficace, être administré sournoisement.

Obtenir une recette précise de borbor paraît impossible. Voici les principaux ingrédients qui entrent dans sa composition, le dosage est affaire de spécialiste.

L'élément de base semble être la cervelle d'un individu mort depuis peu; on doit aller la quérir la nuit dans un cimetière. On raconte qu'une femme ayant voulu dérober le cerveau d'un marabout récemment décédé fut trouvée morte, foudroyée

par la puissance du défunt, serrant dans sa main crispée des débris de son larcin.

L'excipient, une fois récolté, est conservé dans un vase afin de lui incorporer les éléments actifs pour un individu donné. La liste en est longue; notons toutes les sécrétions externes de la personne visée : sueur, prise sous l'aisselle de préférence, larmes, cérumen, urine, sang (menstruel de préférence), sperme. On ramasse aussi les cheveux, les rognures d'ongles, la crasse des bras, celle des ongles, et la terre foulée par le pied nu. Tout ou partie de ces ingrédients est incorporé à l'excipient, mélangé, puis cuit. Cette cuisine diabolique est faite la nuit par deux femmes initiées, entièrement nues. La marmite, au bout d'un certain temps, s'élève dans les airs et gravite dans la pièce close, les femmes la poursuivent en fouettant l'air avec un foulard et en récitant des paroles secrètes. Elles deviennent comme folles.

Le borbor est incorporé à du couscous, qui, dit-on, peut être roulé avec une main prélevée sur un mort, mais j'ai eu peu de confirmations de cette pratique. On administre le borbor en le jetant sur le chemin que doit parcourir la victime, s'il est impossible de le lui faire manger.

Philtre ou poison, le borbor diffère assez peu dans sa composition, seules les quantités doivent varier.

Lorsqu'une femme désire la mort de sa rivale, elle dispose d'un autre procédé. Ayant pu se procurer du sang menstruel de l'ennemie, elle va trouver un taleb spécialisé dans la magie; ce dernier enveloppe le sang dans un papier ou un chiffon sur lequel il écrit des paroles consacrées, puis il jette le tout dans une séguia permanente. Tant que coulera la séguia, le sang de la rivale s'écoulera et elle mourra de cette hémorragie.

Il est un contrepoison du borbor, appelé « bottal », substance noirâtre que l'on jette sur des braises et dont les émanations rendent vaines les attaques du borbor.

Il faut citer ici deux plantes qui, sans donner la mort, aux dires des Touareg, rendent fous momentanément : c'est d'abord l' « afeleleh » (« bettina » en arabe), la jusquiame noire (le contrepoison consiste à faire ingurgiter de la viande ou mieux

de la graisse de chameau), ensuite le « bourzig » absorbé par les femmes qui veulent grossir, mais qui à forte dose provoque une folie passagère durant laquelle la victime débite des paroles sans suite dont elle ne se souvient pas.

Les opérations magiques sont des plus variées, et tout le monde peut s'attendre chaque jour à en être victime. Les Nègres sont hantés par cette crainte, les Touareg semblent n'être pas tracassés par ces manœuvres magiques. Cependant tous portent des « tera », amulettes protectrices délivrées par les taleb; ainsi la religion musulmane, plus ou moins déformée, lutte contre la magie, ou parfois y collabore.

La croyance au mauvais œil est commune aux Nègres et aux Touareg : certaines personnes peuvent par leurs paroles attirer les pires calamités, rendre malade, provoquer des accidents, faire crever des animaux. Il est heureusement d'autres personnes qui ont le pouvoir contraire, et qui, en s'approchant d'un dormeur et en plaçant leur main près de sa figure, donnent à ce dernier force et chance pour la journée.

En général, les femmes portent malheur le matin; cependant si une intime faisait entrevoir son sexe avant un départ matinal, la chance sourirait au chasseur.

De celui qui possède le mauvais œil, on dit en tamahaq : « illé tahot ».

Qui peut donner cette chance ou cette malchance que porte en lui l'individu et qui peut parfois rayonner hors de lui ? A cette question, on répond : Dieu, car, en somme, on est musulman; mais chacun est persuadé que ce sont les génies, les Kel es Souf comme disent les Touareg, qui sont les agents de cette vie supra-humaine. Les Kel es Souf constituent un peuple d'esprits invisibles le jour, mais qui la nuit peuvent apparaître aux humains sous les formes les plus variées. La tombée de la nuit est le moment le plus propice aux exploits des Kel es Souf. Toutes les manifestations des forces naturelles sont attribuées à ces génies : les tourbillons, l'écho, les crues d'oued, les éboulements, un feu spontané dans des herbes sèches. En revanche, le mirage (« eillel ») n'est pas l'œuvre des Kel es Souf.

Celui qui entend ou voit un de ces génies est toujours troublé, il peut tomber malade et même devenir fou, car s'il existe des Kel es Souf indifférents, en très petit nombre d'ailleurs, il n'en est aucun de bon. C'est pourquoi il faut savoir s'en protéger; on le fait d'ordinaire en invoquant Dieu, en portant des talismans et en ayant toujours avec soi un objet en fer.

Les Kel es Souf affectionnent certains endroits et y résident volontiers, entre autres : les ravins profonds, d'où ils font pleuvoir des pierres sur les malheureux humains qui s'y aventurent, les grottes au fond desquelles apparaissent d'étranges lueurs. La guelta d'In-Tafeute est peuplée de génies, les salines de l'Amadror regorgent de Kel es Souf qui la nuit mènent un tapage infernal, cassant du sel, taillant des blocs, enlevant tout sommeil à ceux qui viennent travailler et qui, au petit matin, ne voient aucune trace de cette activité nocturne. Certains hauts lieux, dont le plus célèbre est Garet el Djenoun, sont aussi des lieux d'élection de tout ce monde invisible.

On dit qu'autrefois des hommes particulièrement puissants entretenaient un commerce d'amitié avec les Kel es Souf, qui avaient un langage propre à leur monde. On se transmet encore deux façons de compter jusqu'à dix utilisées par les génies :

| *Première manière :* | *Deuxième manière :* |
|---|---|
| 1 — Djoukhien | Dienana |
| 2 — Djouressin | Dessinena |
| 3 — Djettar | Makarkada |
| 4 — Djettouri | Matezoua |
| 5 — Alendiez | Souraten |
| 6 — Indiez | Souratainì |
| 7 — Hamalou | Tiguemelguemal |
| 8 — Fellali | Teguedtassa |
| 9 — Terra | Nougomelli |
| 10 — Feck | Nourobelli |

Les mésaventures des humains avec les Kel es Souf sont des plus nombreuses. Tout Targui un peu en confiance

racontera les siennes, et, excité par le sujet, celles des autres. Il est des récits classiques, tel celui de Titi.

Titi était un Targui astucieux qui, un certain soir, arriva dans un oued boisé de tabrakat. En descendant de chameau à l'endroit où il comptait passer la nuit, il aperçut une femme. Il la salua et commença à desseller sa monture. Lorsqu'il enlevait un sac, la femme le lui prenait et le posait à terre. Il alla chercher du bois, elle vint l'aider; il alluma son feu, elle tisonna les braises; cette sollicitude et cette imitation de ses gestes inquiétèrent Titi, qui devina en cette femme à l'opulente chevelure un Kel es Souf. Il prépara sa galette de mil, la femme répétait chacun de ses mouvements. Alors Titi, saisissant un brandon, l'introduisit rapidement dans ses cheveux par le bout non enflammé, la femme l'imita, mais se trompa de côté, sa chevelure prit feu, elle s'enfuit en hurlant, se roula à terre, se frotta aux arbres qui se mirent à flamber. Et depuis cette aventure fort ancienne on voit dans l'oued Ouriren les restes des tabrakat incendiés par le Kel es Souf.

Tel autre Targui, alors que tombait la nuit, aperçut dans un ravin les feux d'un campement, vers lesquels il se dirigea. A peine fut-il descendu de chameau qu'on l'invita à manger. Comme il avait grand-faim, il écourta les salutations d'usage. S'étant assis sur un magnifique tapis il observa les gens habillés comme des Touareg, certes, mais dont il ne pouvait déterminer la caste, ni trouver de ressemblance avec quiconque de ses connaissances. Tout lui sembla étrange, mais le comble fut de se voir servir l'asink dans un terahout en or. Il comprit en un instant que ce campement était celui des Kel es Souf. Il s'empara du plat, bondit vers son chameau qui par bonheur n'était pas dessellé et s'enfuit dans la nuit. Quand il fut suffisamment loin, il voulut regarder le fameux plat. Hélas ! il avait disparu, et ce fait lui confirma qu'il avait été la victime des Kel es Souf.

Les phénomènes de voyance à distance sont courants en milieu touareg, ils sont surtout l'apanage des femmes. On raconte que lors des rezzous d'antan, certaines Targuias savaient

6: Blanguernon MS25 Tuareg

le résultat d'un combat qui se déroulait à plus de quatre cents kilomètres, telle épouse voyait son mari blessé, telle sœur apprenait la mort de son frère, et ces nouvelles se vérifiaient au retour des guerriers. Actuellement encore on pratique cette voyance à distance. Voici les deux façons d'opérer. A la tombée de la nuit, la femme douée de ce pouvoir se lave méticuleusement et revêt ses vêtements les plus beaux. Elle se dirige vers un « debni », qui est un tombeau préislamique, puis se couche sur les pierres et prononce les paroles suivantes : « Imeguedda enkerguedda », dont on ne connaît pas la signification. Appliquant son oreille contre les pierres, elle peut entendre des nouvelles transmises certainement par les Kel es Souf. Le debni parle brièvement, trois fois seulement, et il n'est pas permis de l'interroger.

L'autre procédé exige le sacrifice d'une chèvre. On enlève l'herbe contenue dans son estomac, et on en fait une ou plusieurs boules. La nuit étant tombée, la femme se dirige vers un endroit plat hors de toute présence humaine, elle jette le plus loin possible les boules, puis se couche sur le sol en y appliquant son oreille. Si les Kel es Souf sont favorables, les nouvelles arrivent aussi succinctes mais aussi précises qu'avec le moyen précédent. Ce procédé se nomme « tizomitin ». Il existe des moyens d'interroger le destin, appelés « idjehan », en traçant sur le sable des points dont on ignore le compte exact. La technique opératoire diffère suivant la manière de tracer les points. Ce sont des sortes de réussites, car les réponses sont oui ou non. Quelques Touareg connaissent un autre moyen d'obtenir des réponses plus variées, mais l'apprentissage en est long.

Il est d'autres superstitions comme celle qui exige de mettre de vieilles marmites en évidence dans un champ de blé, pour avoir une bonne récolte, ou bien une mâchoire d'âne; citons aussi la coutume propre aux Négresses de manger des cuisses de chat au mois de mars afin de grossir.

Toutes ces croyances devraient être rassemblées, mais cela exigerait un long travail de patience, qui ne pourrait se faire que dans un climat de confiance.

6: Blanguernon MS25 Tuareg

On peut dire que le Hoggar vit encore dans un monde magique malgré la présence de l'Islam. Cette crainte des esprits qui paraît puérile à un Occidental est très réelle. « L'imagination, dit Fraser, sait agir sur l'homme avec autant d'efficacité que la gravitation, et peut le tuer avec la même certitude que le ferait une dose d'acide prussique. » La répugnance inexpliquée que montrent les Touareg envers certains aliments ou certains comportements n'est autre qu'une manifestation de tabous destinés à les préserver des forces spirituelles dégagées par les personnes ou les choses de leur entourage.

Il serait peut-être fructueux d'étudier les coutumes du monde touareg à la lumière de la philosophie des forces dont le R. P. Tempels expose les principes dans sa *Philosophie bantoue*.

# V

## LA VIE INDIVIDUELLE

Il est bon pour terminer cet aperçu sur le Hoggar de jeter un coup d'œil sur la suite des activités du Targui depuis le jour de sa naissance jusqu'à celui de sa mort. Cette trame toute naturelle permet de saisir, beaucoup mieux que par des études fragmentaires, peut-être plus approfondies, l'ensemble de la vie d'un individu au sein de la tribu, pour autant que l'on puisse dissocier ce qui est individuel de ce qui est tribal.

Le jeune Targui fait son entrée dans le monde sous la tente, sur un tapis de sable propre, du sable de l'oued le plus proche, qui comme on sait est pratiquement stérile, tant l'insolation détruit tous les germes microbiens. Avant d'accoucher la jeune maman a suivi les conseils de sa tante ou de sa mère, elle a gravi et descendu de petites collines dès les premières douleurs, afin de « permettre à l'enfant de bien se placer ». Les douleurs s'accélérant, la jeune femme, rentrée sous la tente, s'agenouille sur le sable, les fesses reposant sur les talons et les genoux très écartés; elle s'accroche, les bras levés, à deux cordes qui pendent des piquets de la tente. Près d'elle, deux femmes la tiennent par la taille, l'encouragent, la conseillent. Les eaux sont rapidement absorbées par le sable qui est renouvelé, puis naturellement, sans aucune aide des matrones, l'enfant vient s'allonger sur un lit de sable propre, son premier berceau. Durant l'accouchement il est de bon ton de dissimuler sa souffrance.

[p. 119]

6: Blanguernon MS25 Tuareg

[facing p. 120]

Dans les tribus nobles, chez les Kel Rela en particulier, la femme qui commence à ressentir les douleurs de l'enfantement s'éloigne du camp, va dans un ravin suffisamment abrité, où le sable est bien propre; elle accouche seule, se tenant dans la position indiquée ci-dessus, puis revient au campement, tenant son bébé dans les bras. Elle ne manifeste pas la moindre joie devant les compliments des autres femmes. Parlant de cette coutume des nobles à une femme vassale, cette dernière me dit : « En effet les nobles agissent ainsi, mais c'est par crânerie. » Le mot qu'elle employa se traduirait plutôt par « chiqué ».

Le bébé, lavé, est enveloppé dans un tissu de coton, de préférence un vieux chèche, puis couché sur un tapis près de sa mère.

Pendant trois jours on lui donne du lait de chèvre à l'aide d'une petite cuiller, et seulement au bout de ce délai la jeune maman l'allaitera. Si la mère n'a pas suffisamment de lait, l'enfant est élevé au lait de chèvre, à moins qu'une femme du campement puisse nourrir le bébé.

Durant sept jours l'accouchée se repose et ne reçoit aucun homme, à part ses proches, mais presque toutes les femmes se lèvent dès le deuxième jour. Dans les tribus nobles, les plus islamisées, les femmes observent une retraite de quarante jours.

La femme nouvellement accouchée offre une proie particulièrement désarmée aux Kel es Souf. Afin de protéger son enfant et elle-même des entreprises des génies, elle fait brûler du taharadjellé sous la tente et ne sort de l'asaber que munie d'un couteau, ce qui, paraît-il, est souverain contre les maléfices. A propos de superstition, on dit qu'une femme n'aura jamais plus d'enfant si, lors de sa délivrance, elle retourne à l'envers la poche fœtale. Il est une autre cause de stérilité, c'est d'être frappée par la queue d'un ourane.

Les accouchements se passent en général fort bien, mais il y a un pourcentage d'accidents que l'on ne connaît pas, soit comme mortalité infantile, soit comme fièvres puerpérales. Contre ces accidents consécutifs aux couches, les Touareg sont complètement impuissants.

37. Les deleus utilisés pour maintenir l'eau fraîche.

6: Blanguernon MS25 Tuareg

[Facing p. 121]

Au septième jour de sa vie l'enfant reçoit son nom, c'est l'occasion d'une fête à laquelle sont conviés tous les proches. Un grand repas est servi, suivi de tendi et d'ilougan. Il est honorable d'être parrain, et de donner son nom à l'enfant, cet honneur se paie en cadeaux (aïouf). Lorsque plusieurs personnes sont candidates au parrainage, on tire l'élu à la courte paille.

Comme toutes les mamans du monde, la Targuia dorlote son bébé, lui prodigue des caresses, s'émeut de l'entendre crier et chante pour l'endormir : « O lièvre apporte le sommeil, mon enfant ne veut pas dormir. » Dès qu'il sait marcher l'enfant fait connaissance avec le campement, il rôde aux abords des tentes, s'amuse avec les domestiques noirs près du feu, apprend à parler, reste très attaché à sa mère qui, jour après jour, lui apprend les usages. L'observation journalière des coutumes rend l'enfant très obéissant et très respectueux.

Vers cinq ans, le jeune Targui commence à suivre ses frères ou ses sœurs qui vont garder les chèvres, seulement chez les imrads. Les jeunes nobles suivent leur berger nègre. L'enfant apprend ainsi à connaître son pays, les sentiers, les herbes, les animaux et leurs mœurs. C'est un vieux domestique qui fera remarquer une trace sur le sable, en disant : « Voici le chameau de ton père, cette empreinte est celle de la chamelle qui vient d'avoir un petit. »

Au cours de ses allées et venues à travers les pâturages, la vie du désert s'inscrit dans sa mémoire. Il note la trace de la gazelle sur le sable et celle du guépard qui la poursuit. « Regarde, dit le vieil esclave, malgré la ruse du guépard qui s'approchait en rampant, la gazelle a deviné sa présence, car elle a bondi. Voici le saut du guépard, vois comme les traces sont profondes, il a bondi cinq fois, mais n'a pu saisir la gazelle qui était un grand mâle. » Le jeune Targui relève la tête et manifeste sa joie de savoir la gazelle sauvée, car après ses bonds fulgurants le guépard ne peut vaincre la gazelle à la course. « Mais toi, dit l'esclave, lorsque tu auras un fusil, tu t'approcheras de la gazelle comme le fait le guépard, contre le vent, et tu ne la manqueras pas.

« Ces jolis dessins sur la dune sont l'œuvre du khanfous.

38. Jeune Targui et son serviteur noir à Ideles.

Il est rentré ce matin dans son trou, sous cette pierre. Prends garde en la soulevant, car le khanfous est souvent l'esclave du scorpion, on dit même que le khanfous est son père. Méfie-toi de cette trace, elle fut faite par la vipère, suivons-la... C'est ici qu'elle se termine, dans cette touffe de chabrok. Prends une pierre, dit le vieux domestique, moi je vais mettre le feu au buisson. » Le chabrok s'enflamme en crépitant et bientôt on entend le sifflement du reptile qui sort de son trou, engourdi; l'enfant frappe, c'est sa première chasse.

Ainsi, chaque jour le désert révèle ses secrets. Ce trait vert que termine un point rouge, là-bas sur le rocher, c'est « matarter », le lézard venimeux. Il remue la tête de bas en haut, comme s'il faisait une prière au soleil. Il ne faut pas y toucher, car sa morsure est foudroyante. Le gros dob, recouvert d'écailles, dont la queue énorme est armée de piquants, sera un jouet pour l'enfant qui s'en empare, à condition de ne pas se faire mordre, car le dob ne lâche pas prise et il faudrait amputer le doigt. Si par chance le jeune Targui a capturé une femelle, il pourra manger les œufs qui sont un délice pour les enfants. « L'estomac du dob était plein d'eau, fait-il remarquer à son esclave. — C'est, dit ce dernier, que nous sommes vendredi, et le dob ne boit que ce jour. Même s'il n'y a pas d'eau aux environs, même s'il ne pleut pas, Dieu envoie chaque vendredi la ration du dob. Lorsque tu veux conserver un dob pour t'en amuser le lendemain, attache-le avec une corde, mais ne le tiens jamais prisonnier dans un sac qui a contenu des dattes ou du sucre, car il mourrait. »

Vivant en perpétuel contact avec la nature, le jeune Targui arrive à en connaître les secrets, chacune de ses observations l'instruit, il est curieux de tout ce qui vit et qui bouge autour de lui. Son esclave, qui le suit, le protège et l'aime comme un père, explique chacune des observations avec les mots et les images d'une âme simple, brodant sur de vieux thèmes du pays. « L'oiseau noir et blanc qui nous accompagne, volant de rocher en buisson, c'est « moula-moula ». Il ne faut pas le tuer, car il porte bonheur à ceux qu'il escorte; de plus c'est un messager, chaque fois qu'il vient près de toi et qu'il pépie, il veut

t'annoncer l'arrivée d'un ami, ou te prévenir de la perte d'un objet, ou encore te mettre en garde contre une vipère qui rampe vers toi. « Moula-moula » sait tout, et il le dit aux hommes, mais il faut comprendre son langage, nombreux sont au Hoggar ceux qui entendent ses messages. Il te faudra apprendre le parler de « moula-moula ».

« L'autre jour, tu as eu peur en entendant souffler ce gros lézard que tu voulais prendre pour t'amuser comme avec un dob, c'était un ourane. Sa queue est fine, mais plus dangereuse que la grosse queue du dob. Lorsque l'ourane fouette un homme, la trace reste à jamais gravée dans sa chair, et il n'est point bon pour un Targui de capturer un ourane, car il fut, dit-on, l'oncle de la première mère des Touareg. C'est pour cela qu'il se fâche quand l'un des tiens veut le ridiculiser. En revanche, il craint les Nègres et fuit devant nous, car il sait que nous le mangeons. Ne cherche pas à capturer l'ourane; un Targui que je connais voulut, une fois, transgresser l'usage. C'était un jour d'été en plein Tanezrouft, il attrapa un ourane, lui mit une corde au cou et l'attacha sur son chameau. Pour quelle raison l'homme mit-il pied à terre et lâcha-t-il la bride de sa monture, je l'ignore, mais l'ourane à ce moment fouetta le chameau qui partit au grand trot. Toujours fouettant, l'ourane fit courir sa monture jusqu'à ce que, épuisée, elle tombât, refusant tout effort. L'homme faillit mourir de soif en suivant les traces de sa bête. Lorsqu'il la rejoignit, il libéra l'ourane avant même de boire. »

Le soir, en rentrant sous la tente, fatigué de sa journée de course, l'esprit plein de ses découvertes, l'enfant s'installe près du feu dont les flammes exécutent pour lui une danse merveilleuse. Ses yeux se ferment, tandis que Vénus, « celle qui vendit son père pour avoir la beauté », se cache à l'horizon. Cela n'est point du goût de la mère, l'enfant doit manger, et l'on mange tard sous la tente, car les esclaves doivent traire les chamelles et les chèvres avant de préparer le souper. Elle réveille son fils, l'attire contre elle, le couvrant d'un dokkali pour le préserver de la fraîcheur du soir, puis commence à conter des histoires du passé.

Ces récits, qui constituent le folklore touareg, tendent à disparaître. Beaucoup de jeunes gens les ignorent, il faut s'adresser aux vieux Touareg, à ceux qui regrettent le temps des rezzous, ou de préférence aux femmes, qui de tout temps ont été les gardiennes des traditions.

Certaines de ces histoires sont des fables qui mettent en présence les animaux du Hoggar ou ceux du Soudan, elles ont quelquefois une moralité exprimée, mais cela est rare; d'autres sont des contes merveilleux dans lesquels monstres et génies inquiètent les hommes, souvent un héros réussit à les vaincre. Ces contes sont très longs, ils contiennent un enseignement des usages, et je pense qu'ils apportent un message de lointains ancêtres. Ce message, parfois stylisé, tronqué, ou embelli par la transmission orale, mérite d'être étudié, il faudrait pour cela rassembler le maximum de contes, avant qu'ils tombent dans l'oubli.

Voici l'histoire du chacal et du dob, telle que me l'a contée un de mes élèves, Targui de noble race.

Le chacal et le dob chassaient de concert, lorsque le hasard les fit tomber sur une chèvre qui passa bientôt de vie à trépas. Le dob préparait le feu tandis que le chacal dépeçait l'animal. Déjà le foie et le cœur grillaient sur les charbons, dégageant une odeur alléchante qui inspira au chacal des regrets sur la promesse qu'il avait faite au dob de partager la chasse. Astucieux et retors, il chercha le moyen de frustrer son compagnon de sa part de butin. « Veux-tu, dit-il au dob, aller porter ce foie et ce cœur à ma vieille mère qui habite dans le ravin voisin ? La pauvre ne peut plus chasser. Pendant ce temps je partagerai la viande. » Voici donc le dob parti en trottinant à travers sable et rochers en tenant de son mieux les cadeaux du fils attentionné.

Dès le départ de son compère, le chacal bondit à travers le ravin, escalade la colline et va attendre le dob au rendez-vous fixé ; contrefaisant l'impotent, il reçoit en remerciant les présents que lui remet le lézard. Ce dernier prend le chemin du retour de son allure cahotante. En arrivant sur les lieux de

6: Blanguernon MS25 Tuareg

la chasse, il voit le chacal allongé près d'une touffe d'afazzou, repu et somnolent, mais point de viande comme il l'espérait.

« Où est donc ma part ? » questionna-t-il.

C'est à peine si le chacal daigna le regarder; un rire strident fit comprendre à l'infortuné dob qu'il avait été victime d'une ruse.

Mécontent d'avoir été aussi grossièrement berné, et vexé par les façons du chacal, le lézard attacha les os de la chèvre à la queue du dormeur. Quand il eut fini son travail, il dit :

« Réveille-toi, voici un homme qui vient vers nous.

— Peu importe, répond le chacal sans même ouvrir les yeux.

— Attention, ami, deux chiens l'accompagnent. »

Sans demander d'explications, le chacal s'élance et court à perdre haleine. A chacun de ses bonds, les os frappent le sol, lui faisant croire que les chiens sont près de le saisir. Il court, et court encore, et dans sa course éperdue les os tombent un par un. Il n'en reste plus qu'un, quand, épuisé, il se retourne pour faire face à son ennemi. Il comprend alors comment le dob s'est vengé. Furieux il revient sur ses pas, bien décidé à punir le lézard de son audace.

Mais le dob avait prévu la colère du chacal, il s'était caché dans le trou d'un rocher et montrait à peine le bout de son nez.

« Comment donc as-tu pu faire ce trou pour t'y cacher ? J'aimerais avoir pour moi une demeure aussi sûre, dit doucement le chacal.

— C'est très facile, assure le dob, va chercher du bois sec en abondance, tu le disposeras contre le rocher et tu feras un grand feu. Lorsque les flammes seront hautes, tu donneras un grand coup de tête dans la roche et celle-ci s'ouvrira. Nous autres dobs, nous faisons toujours ainsi. »

Poussé par sa colère, le chacal suivit exactement les conseils du dob. Assommé par le coup qu'il donna, il tomba dans le feu où il fut rôti.

Les histoires de ce genre sont nombreuses, toujours amusantes et pleines d'enseignements, tant par l'observation

du caractère des bêtes que par les leçons qui en découlent.

Voici une histoire dans laquelle le chacal est dupé par le hérisson. Ce dernier jouit de la réputation la plus flatteuse sous le rapport de l'astuce.

Un hérisson et un chacal se trouvèrent un jour devant une chamelle morte, qui offrait aux deux compères un excellent festin. « Va chercher du feu », dit le chacal au hérisson, espérant lui jouer un tour de sa façon durant son absence. Le hérisson, méfiant à juste titre, répondit : « Toi, qui as des jambes plus longues que les miennes, et dont la réputation de coureur n'est plus à faire, tu auras bien plus vite fait d'aller quérir le feu; va, je t'attends en gardant notre bien. »

Le chacal part de son petit trot qui lui permet de couvrir les plus longues distances sans fatigue. Le hérisson, ayant surveillé le départ de son compère, revient vers la chamelle, la découpe en menus morceaux qu'il va enfouir près d'un tahla. Lorsqu'il eut dissimulé toute la bête, recouvert les trous de sable et effacé les traces de ses multiples voyages, il enfonça la queue de la chamelle dans un trou, ne laissant sortir de terre que quelques touffes de poils. Apercevant alors le chacal qui ramenait un tison, il saisit le bout de la queue de la chamelle et fit mine de s'arc-bouter comme pour la sortir de terre.

« Que fais-tu dans cette posture ridicule ? dit le chacal. Donne-moi plutôt des nouvelles de la chamelle que je ne vois plus ici. »

Essoufflé, le hérisson répond : « La bête n'était pas morte, elle a entendu que nous voulions la faire cuire, à peine étais-tu parti qu'elle a fait un trou dans le sol pour s'y cacher. Moi qui ne suis pas fort, je n'ai pas pu l'empêcher de creuser ni de s'enterrer; mais je la tiens par la queue, elle ne pourra pas aller bien loin.

— Donne-moi ta place, je n'aurai pas de peine à la faire sortir.

— Ne t'énerve pas, dit le hérisson, nous avons tout notre temps. »

Hélas ! le chacal n'écouta pas ces conseils de modération,

il tira violemment, s'écroula en arrière, la queue de la chamelle pendant lamentablement de sa gueule.

« Ta précipitation nous a été fatale, dit le hérisson, la chamelle est disparue sous terre, du moins nous reste-t-il la queue dont nous nous contenterons.

— Tu n'auras rien, sot hérisson », glapit le chacal en colère.

Il se saisit de la queue et s'enfuit pour apaiser sa faim.

Ecoutons à présent une histoire, « einoukhast », comme disent les Touareg, qui est très connue et souvent contée :

### Le Lion, la Hyène et le Chacal.

Le gibier se faisant rare, le lion convia, un certain jour d'été, la hyène et le chacal à chasser avec lui.

L'association se révéla fructueuse; au bout de peu de temps antilopes et gazelles jonchaient le sol. Un plantureux repas s'offrait aux chasseurs. Le lion, équitable par nature, demanda à la hyène de faire les parts de chacun. De sa puissante mâchoire cette dernière eut tôt fait de tailler le gibier en pièces, qu'elle disposa en trois tas sensiblement égaux. « Fort bien, dit le lion, quand elle eut terminé son ouvrage, mais que signifient ces tas ?

« Celui-ci, dit la hyène, est pour toi, cet autre pour moi, et le dernier pour le chacal. »

Deux puissants coups de pattes qui renversèrent la hyène furent la première réaction du lion, qui expliqua ensuite : « Ce n'est pas une façon de partager, les gens ont bien raison de dire que ton esprit est obtus. »

Le lion reprit son calme et dit en s'adressant au chacal : « Essaie à ton tour de régler cette question. »

Le chacal rétablit les tas de viande éparpillés par le lion et dit : « Ce premier tas est pour toi, ce deuxième pour ton repas du soir, et ce troisième tas pour ton déjeuner de demain. »

Le lion s'extasia. « Qui t'a appris à partager ainsi ?

— C'est, dit le chacal, la gifle que tu donnas à la hyène. »

Souvent la tradition orale transmet des histoires vécues, dépouillées de tout merveilleux, mais qui sont des leçons profitables, telles les deux anecdotes suivantes.

### La Négresse et les trois « Tahenchit » (1).

Un certain jour, dans un village, une Négresse sortit pour ramasser du bois. Elle avait fini de rassembler son fagot, lorsqu'elle aperçut, courant dans sa direction, trois tahenchit féroces et affamées. Lâchant son bois, invoquant Dieu, la Négresse grimpa dans l'arbre le plus proche. Egratignée par les épines du tamat sauveur, elle regarda les trois fauves qui, gueule écumante, faisaient le siège de l'arbre. La journée passa, vint la nuit. Les fauves semblaient dormir, la Négresse en avait bien envie aussi, mais chaque fois qu'elle s'assoupissait, elle frôlait de peu la chute. Ce qui devait arriver, arriva; elle ferma les yeux, puis tomba. En s'effondrant, elle poussa un hurlement, puis un autre plus strident encore en touchant le sol au milieu des tahenchit.

« Prenez chacun votre morceau », cria-t-elle, en cachant sa tête dans ses bras.

Mais les tahenchit, effrayées par les cris et les bruits de chute, s'étaient enfuies vers le désert. La Négresse en fit autant vers le village.

La tahenchit est redoutée des Touareg qui vont au Soudan, ce fauve ne vit pas au Hoggar actuellement; la mission Augières-Draper en 1927-1928 en a trouvé un en bordure du Tanezrouft, près de Timissao. La férocité de ces animaux est peu croyable. Les Touareg disent que l'un d'eux, surpris par une meute de cynhyènes, s'était réfugié sur un arbre; il craignait d'être assiégé longtemps. Connaissant la voracité des tahenchit, il se fit une entaille au doigt et laissa tomber du sang sur l'un des fauves. Au bout de peu de temps la meute se jeta sur celui

(1) Les Touareg appellent tahenchit le cynhyène — *tycaon pictus*. C'est un animal féroce; chassant en bandes, il s'attaque à l'homme et parfois au lion.

39. Remplissage d'une guerba avec un entonnoir de bois.

40. Famille harratin à Tahaggart.

[p. 128(A)]

[p. 128(B)]

[p. 128(c)]

[p. 126(1)]

qui recevait les gouttes de sang, essayant de le mettre en pièces. La bête attaquée s'enfuit, poursuivie par toute la meute. Le Targui se tira de ce mauvais pas grâce à sa connaissance des mœurs des bêtes du désert.

Cette autre histoire prouve qu'en toute circonstance il est bon d'être armé.

### Les deux Frères et le Lion.

On dit que deux frères, vivant encore sous la tente de leurs parents, étaient unis d'une rare affection. Presque en âge de se marier, ils allaient souvent courtiser les jeunes filles des campements voisins. De tendis en ahals, ils se montraient de vrais Touareg.

Un soir l'un d'eux s'en alla seul, vêtu de ses plus beaux atours et armé de sa lance. Comme le campement où il se rendait était assez proche, il partit à pied.

Ayant marché une bonne heure, il s'aperçut que le campement qu'il cherchait avait déménagé. Sur l'emplacement du camp rôdait un lion qui essayait de trouver pâture.

Apercevant l'homme, la bête prit peur, rugit et bondit. Le Targui, prompt à la défense, jeta sa lance qui transperça les pattes avant et arrière gauches. Malgré l'entrave que constituait l'arme, le lion frappa l'homme de sa patte valide, le tua et le déchiqueta.

Au matin, ne voyant pas revenir son frère, l'autre Targui s'inquiéta. Il s'arma soigneusement, prenant sa lance, son bouclier et sa takouba, et partit en suivant les traces.

Arrivé sur les lieux du drame, il eut vite fait d'en reconstituer les péripéties et d'en constater l'issue fatale. Comme c'était un homme de cœur, il ne pouvait revenir au campement sans avoir vengé son frère.

Il vérifia si sa takouba sortait aisément de sa gaine, serra son bouclier et affermit sa lance. Une fois prêt, il cria : « Arr arr rrrinek » à plusieurs reprises et de toutes ses forces. (Ce cri a, paraît-il, le pouvoir de rendre le lion particulièrement furieux.)

Le lion apparut bientôt, la crinière hérissée, l'œil

41. Corvée de bois à Tizzolaïne.
42. Piste chamelière. Boubaker donne les Issalen (les nouvelles).

terrible. L'homme poussa de nouveau son cri. La bête furieuse s'élança. Au premier bond, la lance, qui entravait encore ses pattes, se rompit. Le Targui jeta son trait, mais l'animal bondissant ne fut pas atteint. Esquivant le terrible coup de patte du fauve avec son bouclier, le Targui dégaina, et d'un coup de sabre trancha la tête du lion.

Il revint à sa tente avec son trophée, la lance brisée de son frère.

Même pour aller à l'ahal, il faut, au désert, être très bien armé !

Aux environs de presque tous les points d'eau du Hoggar, on peut observer sur les roches des gravures rupestres. Les Touareg connaissent bien ces témoignages d'un autre âge, par tradition ils attribuent ces œuvres à deux personnages mythiques dont nous avons cité les noms dans un précédent chapitre : Amamellen et Elias. Voici une légende se rapportant à ces deux héros.

Il y a longtemps, fort longtemps, bien avant que les Touareg vinssent au Hoggar, des peuples vivaient sur ces terres. Dire quels étaient ces peuples, nul à présent ne le pourrait. Tout ce que l'on sait, c'est que certains d'entre eux étaient riches, car la terre était féconde et les pluies abondantes. Les chefs étaient vénérés ainsi qu'en témoignent leurs tombeaux, leur pouvoir sur les esprits était grand, car ils connaissaient le langage des Kel es Souf. Mais tout ceci est mort, et il n'est point bon de percer à jour des secrets oubliés.

En ce temps donc vivait un homme appelé Amamellen, noble de son état; il était riche, ses esclaves étaient nombreux pour garder ses troupeaux disséminés par tout le Hoggar. On ignore comment il apprit son art, mais il était d'une rare habileté à tracer sur les rochers les silhouettes de tous les animaux qu'il voyait autour de lui dans le désert. Il savait aussi reproduire les hommes. Il gravait le plus souvent sur de belles pierres lisses, et parfois il colorait diversement ses dessins.

Amamellen avait un neveu, le fils de sa sœur, garçon

6: Blanguernon MS25 Tuareg

intelligent, adroit et courageux, qui l'accompagnait souvent dans ses déplacements. Au contact de son oncle, Elias apprit très vite à graver et à peindre.

Amamellen se montrait satisfait et heureux des progrès de son neveu.

En grandissant, ce dernier affirmait ses dons, il devint même plus habile que son oncle. Tous les gens parlaient de lui, vantaient son savoir-faire, son adresse en peinture et en gravure. On disait également qu'Elias possédait une force peu commune. On citait de lui le trait suivant. Alors qu'il s'entraînait à graver sur les roches du djebel Teferkit, près de la Tefedest, il s'aperçut que les chevreaux laissés à l'abandon par les esclaves venaient téter leur mère. Ayant appelé en vain les bergers pour séparer les animaux, il se mit en colère. D'un coup de sabre il trancha le sommet du djebel Teferkit et le planta au milieu de l'oued Adenak. Ayant séparé les chèvres de leurs petits, les unes en amont, les autres en aval, il put à son aise continuer son ouvrage.

A cette force surhumaine, il joignait des qualités d'esprit et de cœur comme il est très rare d'en rencontrer même à notre époque.

Entendre constamment louer son neveu partout où il allait rendit Amamellen jaloux, et cette jalousie s'amplifiait chaque fois qu'il voyait les travaux d'Elias.

En ce temps-là, les gens ne savaient pas contrôler leurs sentiments, et il vint un moment où Amamellen désira la mort d'Elias, poussé par l'envie et sans doute aussi par de mauvais génies.

Il ne pouvait ouvertement tuer son neveu, même par surprise, sans s'attirer la haine du pays, aussi il trouva un moyen qui devait le débarrasser d'Elias sans que l'on puisse le soupçonner. Amamellen choisit donc un esclave, garçon solide mais peu intelligent qui obéissait sans chercher à comprendre le sens des actes de son maître. « Tu iras, lui dit-il, conduire mon troupeau de chameaux dans l'oued où nous sommes passés, il y a déjà bien longtemps, près de cette montagne noire où j'ai tué une antilope dont tu as conservé les cornes.

— Mais cet oued est très loin vers le sud, hors des passages habituels de nos tribus.

— Je sais, mais telle est ma volonté. Je sais aussi que les grandes étendues sont couvertes d'excellent pâturage.

— Bien, maître, il sera fait comme tu veux.

— Tu n'iras pas seul, Elias t'accompagnera. »

Baissant le ton, Amamellen dit au Nègre la suite de son projet. Dans un murmure il termina ses explications, tandis que l'esclave, étonné, les yeux fixes, demeurait inerte. Une bourrade le ramena à la réalité.

« Va, dit le maître, et que tout soit prêt pour le lever du soleil; je préviendrai Elias. »

Le lendemain matin, une centaine de chameaux partaient vers le sud. Elias et l'esclave marchaient en tête, armés de la takouba et de la lance. Aux flancs de leurs montures pendaient deux guerbas.

Lorsque la caravane eut quitté les dernières montagnes du Hoggar et les pistes habituelles, la question de l'eau commença à se poser. Le Nègre, bien renseigné par Amamellen, avait la certitude de trouver le puits ou l'abankor avant que les guerbas fussent vides.

Elias allait, regrettant ses montagnes; il se fiait à l'esclave qui connaissait la piste, et sur son méhari, il semblait assoupi, comme écrasé par l'ennui que distillent ces immenses espaces sans horizon.

Un soir, apparut au loin une montagne isolée sur le reg. « C'est là que nous allons », dit l'esclave. Le lendemain, vers midi, Elias put voir un immense pâturage, tel que son oncle l'avait décrit. Dans le lit de l'oued, d'une largeur démesurée, s'étendait à perte de vue, vers le sud, une véritable mer de verdure. Des milliers d'oiseaux s'envolaient sur le passage des chameaux.

« Arrêtons-nous ici, dit le Nègre, c'est là que ton oncle veut que ses bêtes pâturent. »

Ils avaient établi leur camp au pied de cette montagne aux roches noires qui dominait l'étendue horizontale du désert, dont avait parlé Amamellen.

Il était encore très tôt, et cependant la chaleur devenait intenable, rien de comparable avec celle du Hoggar. Elias eut soif, il dit à l'esclave : « Va chercher de l'eau, car les guerbas sont vides.

— Hélas ! dit le Nègre, il n'y a pas d'eau dans ce pays maudit, nous avons laissé le dernier puits à sept jours derrière nous.

— Pourquoi n'as-tu pas rempli toutes les guerbas que nous avons en réserve, lors de notre dernière halte au puits ?

— Je n'y ai pas pensé, et tu ne m'en as pas donné l'ordre.

— Retourne donc à ce puits et rapporte de l'eau.

— Comment le pourrai-je, pleurnicha l'esclave, nos bêtes sont lasses, je ne peux pas atteindre le puits ni à plus forte raison en revenir. Les bêtes doivent manger pendant plusieurs jours avant de pouvoir entreprendre ce voyage. »

Elias reconnut, en lui-même, que l'esclave disait vrai; mais il se prit à songer qu'il pouvait être victime d'une machination. Au lieu de s'indigner, il réfléchit et observa.

Il y avait deux jours déjà qu'ils étaient arrivés au pâturage, deux longues journées pendant lesquelles le soleil des grands regs leur sembla faire bouillir le sable et les pierres. Les animaux broutaient sans arrêt les feuilles humides qui, tout en les nourrissant, leur permettent de rester plusieurs mois sans boire. Elias souffrait de la soif, il s'étonnait de voir l'esclave dans son état normal, allant du campement au pâturage, revenant sous le soleil torride, accomplissant en somme son travail quotidien, alors que lui-même se sentait incapable de faire quelques pas sans défaillir.

La nuit vint; le Nègre s'endormit. Elias, qui veillait, s'empara des naïls de l'esclave et déposa sur les semelles une mince couche de beurre. Ayant remis les naïls à leur place, il s'allongea et simula le sommeil sans cesser d'observer l'esclave.

Bien avant le jour, le Nègre se chaussa, examina le dormeur un moment, puis, rassuré, sortit en silence du campement. Alors, bondissant de roche en roche, il grimpa sur la montagne et disparut.

Dès les premiers rayons du soleil, Elias partit à son tour vers la montagne en suivant les empreintes laissées sur les roches par les nails graissées. Aucune trace de pas sur le sable, c'est pourquoi durant les deux premiers jours Elias n'avait pu trouver le chemin suivi par le Nègre. Cette fois il en était autrement, l'esclave ne posait le pied que sur des cailloux, aussi la piste était-elle longue et sinueuse. Elias se reposait souvent, car il était abattu par la soif, mais il repartait le plus vite possible, craignant de perdre les petites traces qui brillaient au soleil. Après une heure d'une marche pénible, il arriva devant un trou, entre deux rochers, au fond duquel luisait un miroir d'eau.

S'étant rassasié, Elias sentit ses forces revenir rapidement, il retourna au campement par le même chemin. Il ne dit rien de sa découverte au Nègre. Les jours passèrent. L'esclave ne s'étonnait même pas qu'Elias pût vivre sans boire. Il suivait les ordres de son maître sans chercher à comprendre, il était sûr de ne pas avoir été suivi en allant boire, et cela lui suffisait.

Au Hoggar, Amamellen s'impatientait; un mois déjà s'était écoulé et son esclave n'était point de retour. Son projet avait peut-être réussi au-delà de toute espérance, Elias était mort, et mort avec lui le témoin gênant. Ainsi pensait Amamellen, mais il fallait en être sûr. Il s'équipa et partit.

Quelles ne furent pas sa surprise et sa colère quand, arrivé au pâturage, il aperçut Elias allongé sur son tapis tandis que le Nègre revenait de compter les bêtes. Cependant, malgré sa déception, il se contint.

« Comment as-tu bu ? demanda-t-il à son neveu.

— Je n'ai pas bu, répondit Elias, le Nègre pourrait en jurer. »

De fait le Nègre, pris à part, confirma les paroles d'Elias.

« Peu importe, reprit Amamellen, l'essentiel est que le troupeau soit en bon état et je vous félicite. Pour l'instant, je compte rester quelque temps ici avec l'esclave. Toi, Elias, tu prendras ton chameau et tu partiras au puits qui est à sept jours d'ici en marchant vers le Hoggar. A ce puits j'ai laissé cent chamelles, cent chevaux et cent ânes, tu les feras boire, et tu

rempliras les cent guerbas que j'ai cachées près du puits, après les avoir réparées, car beaucoup sont déchirées. Ensuite tu rentreras au Hoggar où je te rejoindrai. »

Elias prit congé de son oncle, puis partit dans la nuit. Il préférait ce départ nocturne qui lui permettait de remplir sa guerba à l'aguelman sans être vu. Il ne connaissait pas les desseins de son oncle et partait, joyeux de quitter ces lieux où il avait failli mourir de soif.

Resté avec son esclave, Amamellen se réjouit du départ d'Elias, car cette fois la mort de son neveu était certaine malgré toute son ingéniosité. En effet des pillards se dirigeaient vers le puits afin de voler des troupeaux, et ces cruels razzieurs ne laissaient jamais personne vivant pour conter leurs tristes exploits. Elias, devant rester longtemps aux alentours du point d'eau pour accomplir le travail imposé par son oncle, tomberait immanquablement sous les coups des pillards et périrait aussi sûrement que si Amamellen lui avait plongé sa lame dans le cœur.

Elias pressait l'allure de son chameau, car la veille au soir il avait aperçu vers le levant de nombreux feux. Il savait qu'en ces régions éloignées des montagnes du Hoggar il n'était pas en sécurité. Une aussi grande réunion de feux était suspecte. Il s'agissait sans doute d'un rezzou se dirigeant vers le Hoggar qui devait fatalement passer près du puits où il se rendait.

Il mit seulement trois jours pour atteindre le puits, ayant trotté toutes les nuits. Sans délai il rassembla les troupeaux d'Amamellen, tira de l'eau nuit et jour pour les abreuver, répara les guerbas déchirées, puis les remplit toutes.

Alors qu'il allait se mettre en route, apparut une troupe armée et menaçante qui commença à entourer les troupeaux avec le désir évident de les voler. Elias sauta de son chameau et enfourcha le plus fougueux étalon du troupeau. Armé de son sabre et protégé par son bouclier, il vola vers le groupe le plus nombreux. Tel un démon frappant à droite, frappant à gauche, il répandit la terreur chez les assaillants qui s'enfuirent, effrayés par l'exploit d'Elias, jurant avoir affaire à un Kel es Souf.

6: Blanguernon MS25 Tuareg

[FACING p.136]

Sans plus attendre, Elias, poussant les troupeaux devant lui, prit la direction du Hoggar dont il apercevait à l'horizon les sommets bleutés.

Trois jours s'étaient écoulés depuis le départ du puits, le pays devenait plus sauvage, la morne étendue des regs faisait place aux premiers contreforts du Hoggar, les oueds se glissaient en de profonds défilés. Ce spectacle ravissait Elias, car il lui annonçait son pays. Il fut attaqué au détour d'un oued par un important groupe de pillards. Il lança ses troupeaux, chevaux en tête, dans l'oued encaissé. Criant, hurlant, il affolait ses bêtes, aiguillonnant les traînardes avec sa lance.

Les animaux galopaient en masse compacte, donnant l'impression d'un torrent en crue dévalant une gorge étroite. Elias, toujours monté sur son cheval, n'eut pas de peine à mettre en fuite les assaillants coincés contre les bords à pic de la falaise par le flot des bêtes affolées.

Cependant les pillards ne voulaient pas lâcher une proie aussi belle : tant de bêtes, et gardées par un seul homme, fût-il un diable, devaient être razziées, et ce diable puni de son audace. Il leur fallait agir avant qu'Elias pénétrât dans les hautes montagnes du Hoggar, repaire jusqu'alors inviolé. Ils attendirent que les troupeaux se fussent engagés dans le vaste cirque de Tamanrasset. Là l'oued s'étale, longe l'Adrar Haggarène, aux pics vertigineux, bute sur l'Adriane dont les parois verticales interdisent tout passage.

Anes, chevaux, chameaux, allaient en rangs serrés dans le lit de l'oued bordé de verdure, lorsque Elias s'aperçut que les razzieurs dessinaient un vaste arc de cercle de façon à l'acculer contre les falaises de l'Adriane. Contrairement à leur habitude, les pillards avançaient en silence, resserrant peu à peu leurs rangs. Le silence était angoissant, et malgré son courage et sa ruse Elias se sentit perdu. Il allait succomber sous le nombre, tout près de ses montagnes natales dont il énumérait les sommets machinalement. Il n'était plus question de rééditer l'exploit du puits, les razzieurs ne se laisseraient pas impressionner une seconde fois.

Elias eut une inspiration. Il s'élança sur la pente d'éboulis

[Facing p. 137]

6: Blanguernon MS25 Tuareg

qui borde la montagne, il la gravit jusqu'en haut, au pied du vertigineux à pic de la falaise. Il regarda un instant le mouvement des pillards, puis dégainant son sabre il frappa la falaise d'un coup si puissant qu'il entailla la montagne. L'immense bloc ainsi arraché alla tomber dans un oued voisin. Dévalant à toute vitesse l'éboulis, il força les troupeaux à grimper la pente et à franchir ce col qu'il venait d'entailler. Toutes les bêtes disparurent sous les yeux des pillards qui regardaient, médusés, celui qui, ayant tranché la montagne, les défiait du haut de la brèche.

Ainsi finit cette histoire d'Elias. Il doit en exister d'autres concernant ce héros, mais elles sont enfouies au fond des mémoires.

On peut encore actuellement admirer l'exploit d'Elias : la brèche de l'Adriane caractérise Tamanrasset, et le rocher qui fut arraché à la montagne gît à huit kilomètres de là dans l'oued In-Zaouen où il est demeuré planté, témoignant de la valeur du héros.

Ainsi, observant la nature, écoutant les récits des anciens, le jeune Targui grandit et forme son jugement. Vers six ou sept ans, il subit la circoncision : « agadam »; un repas important réunit les proches à cette occasion.

Près des femmes, le jeune garçon apprend à coudre le tissu et le cuir. Il confectionne des jouets avec de vieux chiffons, ce sont en général des chameaux aux formes stylisées, ayant parfois une réelle valeur artistique. Son jouet à la main, il fait des courses avec ses camarades, afin de savoir quel est le chameau le plus rapide. Fillettes et garçons fabriquent également des poupées habillées à la mode touarègue, ils jouent au campement, rendent des visites, boivent le thé et déménagent. Le jeune garçon taille dans des galets plats des chameaux stylisés au maximum, ou bien utilise des mâchoires de chèvre coupées en deux.

Un amusement de choix consiste à monter un âne et à le faire galoper, ce qui ne va pas sans de nombreuses chutes au début. Cependant le chameau hante l'enfant; son père l'a

44. Jeu d'enfant targui chez les Dag Rali.

6: Blanguernon M825 Tuareg

déjà fait monter pour une promenade autour du camp, mais ce que désire le petit garçon, c'est être maître de sa monture, la guider à travers les éboulis de la montagne toute proche, puis la lancer au grand trot sur le plateau qui borde l'oued, pas plus loin, car on l'apercevrait du campement, il risquerait de sérieuses remontrances pour avoir pris un chameau afin de s'amuser. Pourtant ses parents savent qu'il en est ainsi, puisque eux-mêmes en firent autant autrefois, mais le « canoun » doit être appliqué.

Lorsque, par chance, le campement est voisin d'une gueïta, l'enfant peut s'ébattre dans l'eau, c'est le jeu favori de l'été.

Deux campements importants sont-ils voisins qu'aussitôt s'organisent des jeux collectifs. Tantôt on joue une sorte de hockey avec une balle de cuir rembourrée de poil de chèvre, que l'on frappe d'un gourdin prélevé sur un tabla; tantôt de véritables séances de lutte à main plate se déroulent à la grande joie des spectateurs, qui déclarent perdant celui des deux jouteurs qui le premier tombe à terre. L'excitation gagnant les enfants, on en arrive à de véritables combats entre les deux campements, et c'est la guerre. Bâtons et cailloux entrent en jeu, ruses et force se déploient. On s'arrête à la nuit, on a un premier blessé, mais la coutume veut que l'on ne dise rien aux parents, surtout pas l'origine de la blessure; l'enfant qui le ferait serait perdu d'honneur, et les parents sont si peu compréhensifs !

La fillette se prépare près de sa mère à sa tâche de maîtresse de maison. Elle coud, en collaboration avec les femmes qui ne font jamais un ouvrage individuel. On lui apprend à découper les fines lanières de cuir, et à les tresser; pendant qu'elle travaille on lui enseigne les traditions dont elle sera plus tard la gardienne farouche, ayant souvent à rappeler aux hommes, qui, toujours en voyage, ont tendance à oublier de menus usages, les véritables « canouns » touareg.

Au cours de leurs jeux, les enfants apprennent de leurs aînés l'écriture tifinar, ils tracent dans le sable des mots, puis des phrases. Mais c'est le soir, à la veillée, que la mère leur précisera l'orthographe des mots acquis. Ainsi, insensiblement,

6: Blanguernon MS25 Tuareg

l'enfant sait lire et écrire sa langue; il n'aura jamais une grande aisance, mais cela est dû à la difficulté du mode d'écriture.

Chaque Targui connaît le moyen mnémotechnique de se rappeler les lettres de l'alphabet tifinar, c'est la phrase suivante : « Fatimata oult Oghanis, tagueltenit mraou issen edssedis; tedjehenet ouart thouadis », que l'on peut traduire ainsi : « Fatimata fille d'Oghanis dont la dot (à verser) est de seize chevaux; nul ne peut toucher ses côtes. » En fait beaucoup de lettres manquent dans cette phrase, mais c'est un acquis suffisant.

Chez les imrads le jeune garçon, à partir de dix ans, accompagne son père soit au Soudan, soit aux salines de l'Amadror. De cette façon, peu à peu, il acquiert le sens de la piste. Le noble reste plus longtemps au campement; en écoutant les discussions de ses aînés, il s'initie au commandement.

Insensiblement le jeune Targui commence à se voiler, d'abord avec un vieux chèche, qu'il essaie d'arranger suivant l'usage. C'est vers quinze ans qu'il prendra définitivement le taguelmoust, lors d'une fête; il participera à un ilougan, monté sur son chameau, don de son parrain, ou sur une bête d'emprunt.

A cette occasion il reçoit des cadeaux, une takouba, un taguelmoust, ou une takamist. C'est un jeune homme. La fille prend officiellement son alechou au moment de la puberté; elle aussi reçoit des cadeaux : l'alechou, des vêtements. Elle est très entourée. On la considère comme une femme. Jusqu'ici elle restait muette devant les hommes, conservant un maintien timide; c'en est fini de cette attitude, chacun l'oblige à parler, à se comporter en maîtresse de maison.

Garçons et filles qui ont pris le taguelmoust et l'alechou peuvent désormais assister aux réunions de grandes personnes, mais ils ne prennent la parole que s'ils sont interrogés.

Les occupations des jeunes gens sont sensiblement les mêmes que celles des adultes. Les filles participent à l'entretien de la tente, cousent des vêtements, fabriquent les sacs de cuir; chez les imrads, elles vont traire les vaches.

Le jeune homme commence à voyager seul, s'occupe des chameaux. S'il s'amuse encore à lutter avec ses amis, il ne connaît plus à présent l'escrime à la takouba qui se pratiquait autrefois.

Jamais l'enfant n'a pu manifester sa volonté dans le campement de ses parents, il a dû toujours se plier aux canouns; quand par hasard il faisait preuve de désobéissance, ses parents n'hésitaient pas à recourir aux châtiments corporels, quelques gifles sans plus; lors d'une faute plus grave ou d'une récidive, il se voyait attaché, tel un chevreau, et condamné à demeurer sous la tente. Cependant les punitions sont l'exception, une parole, un regard suffisent. Il n'est point bon, disent les Touareg, de trop frapper les enfants. Cette éducation donne au jeune Targui un caractère fier, un sens aigu de sa dignité et une réserve qui paraît parfois inquiétante. L'obéissance absolue aux usages oblige à mener une vie morale peut-être plus rigide que ne saurait le faire une religion. Connaître un Targui et prévoir son comportement est très difficile pour un Français qui doit faire le tri entre ce qui est individuel et ce qui vient de la contrainte exercée par la société touarègue, et songer également à la teinture islamique qui recouvre l'ensemble.

Bientôt arrive le temps où le jeune Targui va pouvoir assister aux tendi et aux ahals. Il est nécessaire de dire ici quelques mots des problèmes sexuels.

On a beaucoup exagéré dans certains récits la liberté de mœurs des Touareg. L'éducation des garçons qui maintient l'enfant très souvent éloigné des adultes, celle des filles qui les tient attachées, à leur mère et les oblige à une attitude pudique, ne prédisposent pas à la licence.

Il n'y a pas à proprement parler d'éducation sexuelle, la jeune fille est ignorante pendant très longtemps de tout ce qui a trait à la conception. Incidemment, grâce à une compagne plus âgée, elle apprend l'essentiel des relations intimes entre les hommes et les femmes. Le jeune homme est initié beaucoup plus tôt, car il sort aisément du campement; renseigné par des camarades, il ne tarde pas à nouer une intrigue avec une Négresse des environs. Dans les conversations entre jeunes

Touareg se transmettent les usages sexuels, qui sont observés comme les autres coutumes; il en est un fort intéressant, c'est le respect envers la jeune fille touarègue. Contrairement à une opinion communément admise, la jeune fille qui va se marier est toujours vierge (physiquement) chez les nobles, et presque toujours chez les imrads.

Dans leur prime jeunesse, les Touareg se conduisent comme tous les enfants du monde, ils pratiquent la masturbation solitaire, filles et garçons utilisent les procédés particuliers au pays. Les premières relations amoureuses entre jeunes filles et garçons touareg ont lieu à la suite de fêtes. Il est bon de définir ces fêtes, car on a beaucoup brodé sur les fameuses « cours d'amour ».

Nous avons vu que pour marquer une cérémonie familiale les Touareg organisent un tendi. Le tendi tire son nom de l'instrument utilisé, c'est le grand mortier de bois sur lequel a été tendue une peau, préalablement mouillée. Les femmes s'assemblent autour du tendi, une ou deux frappent, suivant des rythmes traditionnels, la peau qui résonne sourdement. L'une d'entre elles chante d'interminables couplets, tandis que ses compagnes scandent la mesure en frappant la paume de leurs mains, et reprennent en chœur le refrain. Les chants évoquent des combats passés, des faits récents aussi, ils vantent les mérites d'un chameau, ou ceux d'un personnage, certains sont improvisés. Participent aux tendi les femmes veuves, divorcées, et les jeunes filles, mais les femmes mariées y vont également avec la permission du mari. Toute femme s'éloignera du tendi si l'un de ses parents s'en approche.

Les chants vont leur train, accompagnés du tam-tam; les hommes alors viennent s'asseoir derrière les chanteuses, écoutent, chantent aussi. Chacun serre sa compagne de près, mais ne sort guère des limites d'un flirt public. Le tendi se poursuit tard dans la nuit, alors que les personnes âgées dorment sous les tentes.

De jour, le tendi est l'accompagnement indispensable de l'ilougan, que l'on pourrait définir : un quadrille à chameau.

Les jeunes Touareg font une toilette très soignée, où

chacun fait preuve d'une coquetterie raffinée. Le chameau est harnaché le plus luxueusement possible. La moitié des méharistes se place sur une ligne à une cinquantaine de mètres du tendi, l'autre moitié se tient à une distance égale de l'autre côté du tendi. Par groupes de deux, les Touareg vont d'une ligne à l'autre, chaque Targui surveille son attitude, se tient droit, mais souple, relève au maximum la tête de sa monture, maintient celle-ci à la hauteur de son voisin et la fait trotter à l'allure dite « senat-senat » ou « kibarat ».

Délaissant ce va-et-vient, un groupe de méharistes fait le tour du tendi le plus près possible des femmes, l'un des Touareg s'empare de l'alechou d'une chanteuse et s'enfuit au grand galop, cravachant sa monture. Ses amis le poursuivent, essayant de lui reprendre le voile. Celui qui réussit rapporte en vainqueur le voile à sa propriétaire. Il est salué de « tarallélit » (you-you des Mauresques). L'ilougan dure jusqu'à la tombée du jour.

Il faut noter que le tendi n'est pas originaire du Hoggar, il a été importé de l'Adrar des Iforas et du Tamesna.

Une réunion propre au Hoggar est l' « assihar ». Autour d'une joueuse d'imzad renommée se rassemblent un grand nombre de femmes et d'hommes. On écoute le violon, qui entonne les premières mesures d'un chant connu, puis un homme ou une femme se met à chanter. Entre les chants les conversations vont leur train, et à la faveur de l'obscurité des flirts s'ébauchent, mais dans le domaine de la correction la plus stricte.

Lorsque se termine, tard dans la nuit, l'assihar, jeunes gens et jeunes filles s'éloignent par petits groupes, c'est l'ahal. Une femme escortée par deux ou trois jeunes gens va s'asseoir au détour d'un oued. Ses compagnons lui parlent, à haute voix lorsque chacun peut entendre la conversation, ou très bas à l'oreille quand ce sont des confidences. L'un d'eux prend la main de la jeune femme et la serre dans la sienne; un vieux Targui disait : « Autrefois je suis resté trois nuits durant à serrer la main de la femme que je désirais, et durant trois jours je n'ai pas mangé. »

Il est un langage des mains étranger à la conversation de l'ahal, en voici plusieurs exemples. Ayant joint sa main à celle de la femme, les doigts entrecroisés, opposer son pouce à l'extrémité de l'autre pouce veut dire : Je te désire beaucoup; tracer un cercle sur la paume de la main, en appuyant l'index au centre du cercle, c'est demander une union intime; la femme sollicitée prend la main de son soupirant et du revers de son index trace une ligne partant du poignet et allant vers les doigts, ce qui veut dire : Je refuse; mais lorsque ayant tracé, cette ligne, elle en trace une autre en sens inverse, il faut comprendre : Pars avec tes amis et reviens seul.

Une fois seul avec son amie, le jeune Targui continuera sa cour, parfois platonique, souvent moins. Joignant leurs visages, narine contre narine, ils se respirent mutuellement. Ce baiser sur la bouche est connu mais peu pratiqué. Des caresses manuelles succèdent aux baisers. Les hommes en restent souvent à ce stade avec les vierges, car ils savent « reconnaître une vierge à sa démarche, à son maintien, à la dureté des seins et au réflexe du tendon d'Achille » ! Les Touareg connaissent d'autres caresses, qui tout en satisfaisant les sens respectent la virginité physique.

Il faut noter que l'homosexualité, tant masculine que féminine, est inconnue en milieu touareg.

On dit que la bestialité, quoique très rare, existe cependant, mais elle serait pratiquée comme remède contre les maladies vénériennes.

Ces coutumes sexuelles permettent de comprendre l'équilibre des Touareg, qui bien que musulmans ne souffrent pas de refoulements. Le viol n'existe pas, et lorsqu'une femme se refuse jamais l'homme ne lui en tiendra rigueur, ni ne manifestera de jalousie envers un camarade plus heureux. Ajoutons qu'ils sont d'une discrétion absolue dans leurs relations féminines. C'est à ces manifestations de la vie intime que l'on voit le prestige dont jouit la femme touarègue.

Arrive le moment où le Targui songe à se marier, assez tardivement, vers vingt-cinq ans en général. Il charge un membre de sa famille de faire la demande. Le messager dit au

[FACING p. 144]

père de la jeune fille : « Je voudrais une tente et un asaber. » Le père comprend que l'on demande sa fille en mariage à l'aide de cette métaphore. « Tidjera-ouet », répond-il pour donner son accord. Alors commence la discussion sur la dot que le prétendant doit donner à la fiancée, et sur l'importance des cadeaux à la famille. Il existe un barème des dots à verser aux femmes, qui varie suivant la tribu à laquelle elles appartiennent.

Pour prendre une fille Kel Rela, il faut donner à la jeune épousée sept chamelles; une Dag Rali doit recevoir trois chamelles; les autres imrads une seule. Le mari doit fournir la tente. Le jour du mariage, un taleb ou, à défaut, le chef de la tribu enregistre les dons du mari qui ne sont pas forcément versés, mais qu'il reconnaît devoir.

Tout étant en règle, on annonce le mariage et la date de la cérémonie. Un énorme repas pour lequel on a abattu un chameau et de nombreuses chèvres est servi aux invités. Tendi et ilougan se succèdent sans interruption.

A l'endroit où sera montée la tente des jeunes époux, un gros tas de sable est préparé. Une femme de la famille de la jeune fille s'y assoit, tenant un gourdin entre ses mains, puis baissant la tête, repose son front sur ses mains jointes. Deux hommes saisissent la tente à demi roulée, et par trois fois la lancent par-dessus la femme ainsi assise.

Durant toute la journée la fiancée demeure sous la tente de ses parents, le fiancé parle avec les vieux du campement et ne participe pas aux réjouissances publiques.

La tente des futurs époux montée, le prétendant y passera une nuit seul, assis sur le tas de sable, sans dormir; cette tradition est surtout respectée chez les Kel Rela. La seconde nuit la fiancée deviendra sa femme. Autrefois existait une coutume qui s'est perdue : durant trois nuits le tas de sable était conservé dans la tente, les deux époux dormaient séparés par le tas, et la coutume disait : « La première nuit, cette femme est ta sœur; la deuxième, elle est ta mère; la troisième, elle est ta belle-mère; la quatrième, elle devient ton épouse. » Et l'on ôtait le tas de sable.

45. L'écrivain public.

6: Blanguernon MS25 Tuareg

[facing p.145]

Avant d'entrer dans la tente nuptiale le mari doit en faire trois fois le tour, la jeune femme devra en faire autant. Elle est conduite vers la tente de son mari par un groupe de femmes de sa famille. Le long du chemin qui mène à la tente, les Targuias chantent des refrains traditionnels :

« Grâce à Dieu, ma fille me quitte cette nuit. » La belle-mère salue son gendre, elle lui dit : « Offre de jolies choses à ma fille, que l'ombre qui la protégera soit due à la soie. Des dix chameaux de sa dot, l'un a la tête blanche, fais-la monter sur le plus docile, et toute sa famille la regardera. »

En approchant de la tente des jeunes époux, le cortège des femmes se heurte à l'assemblée des hommes qui conversent avec le mari. Elles chantent alors : « Grâce à Dieu, et grâce à lui avant même qu'il fût nommé. » La belle-mère salue son gendre. « Hommes, laissez-nous passer, écartez-vous ou bien nous vous pousserons et vous tomberez à la renverse, car nous possédons la plus grande force qui puisse se concevoir. »

Les hommes s'étant légèrement effacés, la jeune femme s'apprête à franchir le seuil de sa tente, quand surgit un de ses proches, la takouba au poing, qui annonce : « Tu n'entreras pas dans cette tente. » La jeune femme doit alors donner ses naïls à l'interrupteur pour enfin acquérir le droit d'être l'épouse.

Jusque vers minuit de nombreux amis restent à parler avec les jeunes mariés.

Le nouveau marié devra rester un temps assez long dans le campement de sa femme, avant de pouvoir déplacer sa tente à sa guise, ou amener sa femme dans le campement de ses parents.

Certaines tribus, imprégnées de coutumes arabes, en particulier les Issakamaren, observent l'usage suivant au lendemain du mariage : le mari qui n'a pas trouvé sa femme vierge casse, au moment du repas, l'os du gigot, absorbe la moelle, souffle à l'intérieur, puis plante les deux morceaux brisés dans le couscous. Ainsi chacun connaît l'affront qu'il a subi. Plus tard dans la vie, lorsque sa femme sera désagréable, il mettra son poing devant sa bouche et soufflera entre ses doigts, simulant son geste du premier jour. La femme, honteuse, cessera ses récriminations. Suivant une autre coutume de moins en moins

pratiquée, la femme qui, durant la nuit de noce, n'aurait pas éprouvé la virilité de son mari, coiffe ce dernier avec l'alechou, montrant ainsi au monde l'impuissance de son époux, en le considérant comme une femme.

La situation de la femme est privilégiée au sein de la société touarègue. On a coutume de dire qu'il faut en voir la raison dans l'organisation matriarcale des tribus.

Le matriarcat n'est actuellement chez les Touareg qu'une survivance très atténuée du fait de la présence de l'Islam. Il faut noter que, sous la tente, la femme est maîtresse absolue : c'est elle qui donne les ordres aux enfants et aux Nègres, et qui organise la vie quotidienne; mais hors de la tente c'est l'homme qui commande; il décide le déplacement du campement, le départ des caravanes, les transactions commerciales. L'opinion de la femme est toujours prise en considération, elle est la gardienne des traditions, et, si elle ne possède pas ce que nous pouvons appeler les droits civiques, c'est elle qui les transmet : un Targui sera noble lorsque sa mère est noble. Le droit d'éligibilité à l'amenokalat est donné par les femmes qui, par une ascendance maternelle directe, remontent jusqu'à l'ancêtre Kella. Cette transmission des droits par les femmes constitue l'originalité de la société touarègue.

Puissante dans son foyer, aimée de son mari, respectée, la jeune épouse a toutes les chances d'être heureuse. Il est rare que le mari trompe sa femme, et si cela lui arrive, c'est loin d'elle, lorsque, parti au Soudan, il reste longtemps absent. La femme touarègue est fidèle, rares sont celles qui prennent un amant. Si un mari connaissait l'infidélité de sa femme, simplement par ouï-dire, il pourrait la répudier, mais en cas de flagrant délit il pourrait tuer les coupables, ou porter le fait à la connaissance de l'amenokal qui fixerait une amende. L'épouse trompée peut quitter son mari; dans ce cas elle retourne dans sa famille en emportant ses biens. Les divorces sont assez rares et très mal jugés.

La mort n'est pas envisagée avec terreur, tout un ensemble de croyances fortement teintées d'islamisme promettent au Targui des récompenses futures dans l'autre monde. Il

semble que la charité serait particulièrement récompensée et l'égoïsme sévèrement puni, les châtiments décrits seraient des peines du talion. De longues enquêtes seraient indispensables pour démêler toutes les croyances relatives à la mort; faire la part de ce qui est musulman et de ce qui est proprement touareg se révélerait très difficile.

Quand un décès se produit sous la tente, chacun des membres de la famille conserve une attitude empreinte de la plus grande dignité à notre sens occidental. Certes il arrive que des personnes pleurent le défunt, ce qui est humain, mais l'usage veut que l'on évite les larmes; un homme, surtout, saura suffisamment se contrôler pour ne pas montrer son chagrin.

Le mort ne reste pas longtemps sous la tente, il est lavé par les femmes si c'est une femme ou par les hommes dans l'autre cas. On le parfume, on allonge ses membres dans une attitude de repos, puis on l'enveloppe d'un linceul (« tifit ») qui est cousu. Durant ces opérations, la tombe a été creusée suivant l'usage musulman. Seuls les hommes conduisent le défunt en terre. Après l'avoir déposé dans la tombe et recouvert de terre, on pose les pierres témoin, puis chacun regagne sa tente. Il n'y a ni chant ni prière.

Un repas est servi aux personnes présentes, aux frais du défunt selon les instructions qu'il a données avant de mourir. Si l'on n'exécutait pas ses volontés, le bétail désigné pour le festin périrait.

On dit que celui qui est mort dans une position de repos, les bras allongés, le visage serein, était bon et qu'il a toutes les chances d'être récompensé. En revanche, celui qui expire les jambes repliées en chien de fusil et les poings serrés contre sa figure était un méchant homme; même si durant sa vie il a dissimulé ses défauts, il est voué aux tracas futurs.

Les règles de l'héritage sont mal connues des Touareg, seuls les vieux savent les usages, car de plus en plus les tolbas introduisent la loi musulmane.

Lorsqu'un homme meurt, un huitième de son bien revient à sa femme, le reste à ses enfants. S'il n'y a pas d'enfant, un

tiers est pour sa femme, le reste revient à la famille du défunt, partie aux parents, partie aux frères et sœurs. Quand la femme meurt la première, si elle a des enfants la totalité de ses biens leur est attribuée; si elle n'a pas d'enfant, la moitié revient à sa famille, l'autre moitié à son époux. Les biens d'un défunt n'ayant pas d'héritiers, ce qui est très rare, sont administrés par l'amrar de la tribu pour la collectivité.

Par testament oral fait devant deux témoins, un homme ne peut disposer que du tiers de sa fortune en faveur d'un héritier non prévu par l'usage.

Cette description de la vie du Targui depuis l'enfance jusqu'à la mort ne fait entrevoir les coutumes que d'une partie de la population du Hoggar, celle qui commande, celle qui paraît la plus attirante au voyageur, au touriste; mais il faut songer aux humbles, aux harratin cultivateurs des centres de culture, aux domestiques noirs des Touareg, leurs anciens esclaves. Rassembler leurs traditions qui viennent se greffer sur un ensemble de coutumes touarègues doit être un travail à part, car une enquête sérieuse sur les Noirs ne peut se mener de front avec celle menée sur les Touareg. La crainte atavique des Nègres en face de l'imouhar les rend muets, gagner leur confiance est une œuvre de longue haleine, connaître leur vie intime, leurs joies et leurs peines demandera une grande patience.

Pourtant, ce qui constitue l'originalité du Hoggar, c'est cette intime fusion de deux modes de vie dissemblables : on ne connaîtra réellement ce pays qu'après avoir compris Touareg et Nègres, et réalisé les véritables sentiments qu'ils nourrissent les uns pour les autres, en dehors de ce que nous observons superficiellement chaque jour.

NOTA. Les formes religieuses, d'après Huxley, suivent un déterminisme psychologique selon lequel les religions monothéistes supérieures auraient été découvertes par les « hommes de pensée » et les religions polythéistes par les « hommes d'action ». Il est permis de se demander si les Touareg, qui étaient autrefois avant tout « hommes d'action » n'auraient pas, pour cette raison, conservé les survivances religieuses néoli-

thiques; et si la paix française, supprimant leur activité essentielle, n'a pas suscité chez eux un courant psychologique les portant à la contemplation et favorisant l'islamisation. Car la présence des marabouts, des chorfa, et des tolba arabes, si actifs soient-ils, ne suffit pas à expliquer ce courant religieux qui tend à faire disparaître les coutumes touarègues.

## Note sur le Matriarcat touareg

Le Hoggar, qui constitue une sorte de réserve ethnique, où règne un système encore féodal, offre une curiosité sociologique : c'est un reliquat de famille matriarcale. Ce matriarcat, sapé par l'influence grandissante de l'Islam, a tendance à disparaître. Il est bon de détruire certaines idées fausses qui ont cours en ce qui concerne la famille touarègue : « La femme commande », « L'hospitalité touarègue est caractérisée par une promiscuité, sorte de prostitution traditionnelle ». La vérité est tout autre. L'origine du matriarcat touareg se perd certainement dans les coutumes néolithiques, l'ignorance du processus de la conception a pu en être la cause. La conséquence de cette organisation familiale était l'exogamie, qui tend à disparaître; l'inceste est un crime plus terrible que le meurtre. C'est le matriarcat qui est gardien du système des castes : le devoir de s'assister mutuellement confère aux guerriers (nobles) une part du fruit du travail des autres et leur donne la propriété du sol. La prostitution n'existe pas, la monogamie est la règle, la femme est respectée. « Le droit maternel, comme dit L.-G. Richard, consiste plutôt en obligations mutuelles qu'en prérogatives ou avantages. » Il n'existe pas une liberté féminine, car la femme se doit à la famille; en fait elle n'exerce aucun droit, elle le transmet. Une coutume encore pratiquée, caractéristique du matriarcat, est l'obligation pour le jeune mari d'habiter un certain temps dans le campement de sa femme.

Répétons que l'Islam détruit peu à peu les coutumes matriarcales, surtout dans les successions qui sont de plus en plus régies par les usages musulmans. Les chefs désirent même aujourd'hui léguer leur pouvoir à leur fils.

## VI

## CONCLUSION

Le Hoggar, dont je n'ai fait sentir ni le pittoresque des sites, ni l'attrait qu'il exerce sur les voyageurs, ni l'angoisse qu'il fait parfois peser sur certaines âmes, lorsque d'octobre à février la luminosité extraordinaire semble rapprocher les montagnes qui se parent au couchant des plus étonnantes couleurs, est, je crois, la portion du Sahara la plus attachante.

C'est à dessein que je n'ai pas soulevé les problèmes économiques qui se posent, ceux-ci dépassant le cadre de ce travail. Il est cependant permis de se demander ce que l'avenir réserve à ces Touareg, gens d'un autre âge, égarés dans le XX^e siècle. Les jeunes Touareg sont certainement heureux, leurs aînés regrettent nostalgiquement le beau temps des razzous; mais la paix française, si elle a changé leur mode de vie ancestral, leur a apporté une sécurité qu'ils apprécient.

Les besoins des nomades sont modestes et adaptés au pays, mais à notre contact de nouveaux besoins naîtront; les populations du nord et du sud, plus évoluées, ne vont pas manquer à la longue de troubler cette sérénité enviable. Doit-on les préserver et les considérer comme une réserve ethnique, ou hâter leur évolution vers un stade de civilisation plus moderne ? Il sera, certes, regrettable de voir disparaître ces grandes silhouettes bleues, flanquées de takoubas médiévales; mais un temps viendra où, sous peine de disparaître, les Touareg

devront s'adapter au monde occidental. Ce jour est encore lointain — souhaitons-le —, mais notre rôle est d'y préparer insensiblement les indigènes du Hoggar, en leur apportant les éléments d'un choix qui leur permettra peut-être de se constituer une culture originale. Quel sera le sens de cette transformation ? Il est encore trop tôt pour le dire. Cette évolution peut se précipiter sous l'influence d'apports extérieurs, la découverte de gisements miniers, par exemple, bouleverserait l'équilibre qui existe entre sédentaires et nomades.

A de nombreux points de vue le Hoggar doit encore être étudié, les recherches sont de plus en plus l'apanage des spécialistes, elles sont même urgentes dans le domaine humain, car bientôt disparaîtront ceux qui connaissent les vieilles coutumes, les légendes merveilleuses et les chants traditionnels accompagnés à l'imzad.

Le grand tourisme a adopté le Hoggar, les alpinistes comptent les pics vierges qui restent à ascensionner, ils sont guidés par de jeunes Touareg qui commencent à parler français. Nous ne pouvons que nous féliciter des résultats matériels obtenus, mais combien de sahariens regrettent au fond d'eux-mêmes le temps du courrier mensuel évoquant une époque peu éloignée, mais qui déjà semble lointaine : celle qui les attira vers ce Hoggar que l'on amène peu à peu à la lumière du siècle.

## *APPENDICES*

### *I*

### HISTORIQUE DE L'OCCUPATION FRANÇAISE

— Le 16 février 1881, la mission Flatters est massacrée par des Touareg Kel Rela et Tédjéhé Mellet, aidés de quelques imrads.

— 1887. Un rezzou de Taïtoks se fait surprendre à Hassi Hinifel. Trente Touareg sont emmenés à Alger comme prisonniers durant quatre ans. C'est avec l'aide de ces Touareg que Hanoteau établira la première grammaire tamahaq. L'un de ces prisonniers devint l'ami de l'explorateur Crampel; celui-ci devait plus tard être assassiné par son soi-disant ami.

— 1898. Kel Rela et Taïtoks sont aux prises. Ces derniers, battus par Moussa ag Amastane, s'enfuient chez les Oulimiden.

— 1899. Le commandant Pein, accompagné de Flamand, en mission, occupe le Tidikelt, coupant ainsi aux Touareg leurs marchés d'échange d'Aoulef et d'In-Salah.

La mission Foureau-Lamy traverse le Hoggar sans être inquiétée à aucun moment.

— 1900. L'amenokal Aïtarel meurt. La situation est confuse. Deux amenokals sont nommés, ce sont Mohamed ad Ourzig et Attici. Ce double commandement engendre une anarchie qui amène les Touareg à se tourner vers Moussa ag Amastane, courageux,

49. Attente d'un rendez-vous.
50. Danse nègre à Tamanrasset.

[p. 153]

d'esprit brillant, qui parle d'un accord possible avec les Français. Ce furent cependant les Taïtoks qui firent les premiers leur soumission, surtout par désir de devancer Moussa qui était leur ennemi personnel depuis les combats de 1898.

— 1902. A la suite du pillage d'une caravane par les Kel Ahaggar, le lieutenant Cottenest est envoyé au Hoggar pour y faire un exemple. Il faut lire le récit de cette expédition : *La Randonnée du lieutenant Cottenest*, écrit par le commandant Cauvet, pour apprécier l'homme à qui nous devons le Hoggar. Après un périple en territoire touareg qui dénote les qualités du chef de l'expédition, Cottenest livre combat à Tit, à la gara Tin-Essa. Une centaine de Touareg furent tués en faisant un assaut à la lance et au sabre. Les Dag Rali et Adjouh n'Téhélé furent les tribus les plus éprouvées par cette lutte.

— 1903. Le commandant Laperrine et ses lieutenants font une tournée pacifique au Hoggar.

— 1904. Moussa ag Amastane fait acte de soumission à In-Salah.

Le commandant Laperrine, accompagné du père de Foucauld, de MM. Gautier et Chudeau, contourne le Hoggar par l'ouest et effectue une liaison avec les troupes coloniales à Timiaouine.

— 1905. Le père de Foucauld s'installe à Tamanrasset d'une façon définitive.

Le lieutenant Roussel est le premier chef de poste de Tamanrasset.

— 1908. Incidents entre Kel Rela et Taïtoks; ces derniers sont refoulés au Soudan.

— 1909. Incidents entre les Kel Rela et les tribus touarègues des Ajjers.

— 1910. Moussa ag Amastane, l'amenokal, va en France faire un voyage avec le père de Foucauld.

— 1914. Le territoire des Ajjers est occupé.

— 1916. Nouveaux incidents entre Kel Rela et Taïtoks.

Le 2 décembre 1916, le père de Foucauld est assassiné à Tamanrasset par des Senoussistes accompagnés d'Aït Loen qui emportent vingt fusils et trois mille cartouches.

— 1917. Révolte de quelques partis imrads ayant pour objectif le vol des chameaux des sahariens français.

Le capitaine Masson livre combat à un groupement de Touareg dans l'oued Ilaman, le 5 avril 1917 (treize tués, dont deux militaires français).

Le 1er juin, près d'Iniker, le détachement Pietri est attaqué (cinq tués, deux blessés, deux disparus).

Le 26 juillet, le sous-lieutenant Lehuraux doit combattre un parti de trois cents Touareg.

— 1918. Rétablissement de la paix au Hoggar. Les Taïtoks sont définitivement évincés de leurs terres et refoulés au Soudan.

— 1920. Le général Laperrine meurt des suites d'un accident d'avion, à Anesbaraka.

— 1921. Décès de Moussa ag Amastane. Akhamouk ag Yemma lui succède.

— 1925. Les Taïtoks réclament leurs terres confisquées au profit des Kel Rela, mais le *statu quo* est maintenu.

— 1927. Mort d'Akhamouk. Meslar ag Amayas est élu amenokal.

— 1950. Décès de Meslar. Le khalifat, Bey ag Akhamouk, est élu en 1951.

## II

## GÉOLOGIE

Grâce aux travaux de C. Kilian, Th. Monod, J. Bourcart, et surtout à ceux de M. Lelubre partiellement publiés, on peut donner un aperçu sur la structure géologique du Hoggar et ébaucher son histoire.

*Vue générale.*

A. Le centre du massif est essentiellement cristallin, formé de roches très anciennes, d'âge antécambrien, déjà en partie arasé lors de la transgression tassilienne. Au tertiaire s'opère un rajeunissement du relief par suite d'un volcanisme puissant. Cet ensemble cristallin de base est à une altitude de 2 600 mètres au centre du massif, il s'abaisse à la périphérie pour former le fossé séparant l'Atakor des tassilis.

B. Les tassilis sont des plateaux de grès non métamorphiques. Ces grès entourent le cristallin d'une façon presque continue. Sur le socle cristallin reposent d'abord : des conglomérats qui forment les grès inférieurs des tassilis internes, ensuite des grès à colonnettes, surmontés de schistes à graptolithes (dépression intra-tassilienne) et dominés par les grès supérieurs des tassilis externes.

Les pays prétassiliens montrent du dévonien et du carbonifère avec fossiles.

Allant au-delà de la simple description des roches, M. Lelubre a pu déterminer la genèse et l'histoire géologique

[p. 157]

du Hoggar grâce à des données de stratigraphie, de lithologie et de tectonique.

1° *Stratigraphie.* — Les schistes à graptolithes gothlandiens reposent sur des grès non métamorphisés ordoviciens ou peut-être cambriens, eux-mêmes assis sur d'épais conglomérats de base qui sont discordants sur des schistes cristallins plissés, granitisés et arasés; ce qui permet de déduire que les ensembles cristallophylliens inférieurs sont antécambriens. D'autre part, M. Lelubre a découvert dans le pays cristallin antécambrien une discordance suggaro-pharusienne, montrant ainsi l'existence d'un ancien bassin pharusien s'allongeant tel un immense fossé nord-sud entre deux massifs suggariens. Les deux lignes de discordance suivies par M. Lelubre sont jalonnées par des massifs de rhyolites, qui sortent du reg actuel, marquant un volcanisme ancien au bord de ces fractures subméridiennes semblables aux cassures récentes de l'Afrique orientale. La ligne de discordance orientale longe le 5° de longitude est depuis l'Adrar In-Hédrane au nord jusqu'à la bordure est du tassili de Tin-Reroh; la ligne occidentale se suit depuis le massif d'In-Zize jusqu'à l'Adrar des Iforas (40 km. ouest de Tin-Elhaoua), elle longe la bordure ouest du tassili de Timissao. Ces deux cycles orogéniques, suggarien et pharusien, ont chacun leur métamorphisme, leurs granitisations et leurs plissements particuliers.

2° *Lithologie.* — Les principales roches relevées par M. Lelubre sont les schistes cristallins, les granites et les filons.

Les schistes cristallins (micaschistes, gneiss, etc.) forment de grandes montagnes : Egéré, Arefsa, Tourha; ils dominent dans les séries suggariennes et pharusiennes.

Il y a des granites de différents âges. Ceux du type pharusien semblent être à « l'emporte-pièce », ayant déterminé des auréoles métamorphiques de contact, tels le Serkout, In-Tounin, Tesselit. D'autres granites plus anciens se présentent en « grandes ellipses allongées nord-sud », le massif de la Tefedest en est le type.

Les principales roches filoniennes sont les micro-granites : région de Tarahouaout et du Sersouf; les pegmatites sont

abondantes dans les granites et les gneiss; des filons de quartz semblent remplir de vastes cassures et forment de longues montagnes : bordure de l'oued Igharghar; les rhyolites forment d'énormes massifs à l'ouest du Hoggar, alignés en deux longues traînées. On trouve de belles séries de cipolins et de marbres, seuls calcaires du Hoggar, dans l'Egéré, le Tourha, et à Azrou. Enfin des roches volcaniques recouvrent d'immenses étendues, surtout au centre du Hoggar.

3° *Tectonique.* — Grâce à la résistance à l'érosion des cipolins, M. Lelubre a pu observer une très ancienne tectonique souple à laquelle une tectonique cassante se superpose : phénomène peut-être consécutif à l'orgénèse pharusienne. D'autre part la tectonique hercynienne s'est marquée dans les tassilis par de très grands plis-failles. Enfin des cassures, issues des plis de fond du système alpin, seraient sans doute liées au volcanisme récent.

## HISTOIRE GÉOLOGIQUE DU HOGGAR

### 1° *Antécambrien.*

*a) Cycle suggarien.* Presque tous les schistes cristallins du Hoggar sont de cet âge. Il est presque impossible d'établir des divisions de temps durant cette période qui vit une intense sédimentation suivie de plissements du type appalachien. Ce cycle s'est terminé par l'émersion des chaînes suggariennes.

*b) Cycle pharusien.* Une longue période d'érosion succéda, comblant le sillon inter-suggarien. Ces séries subirent un métamorphisme moins intense que lors du cycle précédent. De puissants plissements se produisirent, et, postérieurement, apparaissent les granites à « l'emporte-pièce ». Les émissions de rhyolites se placeraient à la base du pharusien.

### 2° *Transgression tassilienne. Cycle hercynien.*

L'issue du cycle pharusien marque la fin de l'histoire profonde du Hoggar, qui dès lors forme un système solide

armé par les intrusions granitiques. Une érosion de longue durée affecta ce vieux massif. On ne peut dire si la transgression qui suivit toucha tout le Hoggar, son ampleur montre qu'elle était d'ordre continental.

Certains schistes contiennent les premiers fossiles datés : graptolithes du gothlandien inférieur. Dans une série supérieure, Conrad Kilian a pu déceler des périodes lagunaires, qui traduisent de légers mouvements calédoniens. Des conglomérats séparent la série post-tassilienne qui serait du dévonien moyen ou du carbonifère. Cette série extérieure de couverture est affectée par de profonds plis hercyniens, dont la grande faille de Tadjemout est l'exemple le plus net. On ne sait pas dans quelle mesure ce plissement a affecté le substratum cristallin.

### 3° *Transgression cénomanienne.*

La grande invasion marine qui a recouvert le Sahara au crétacé moyen et coupé en deux l'Afrique a respecté le Hoggar. Seul un peu de crétacé a été trouvé par C. Kilian dans la région d'Amguid. C'est là sans doute la dernière incursion de la mer, encore ne s'agit-il vraisemblablement que d'un golfe.

### 4° *Cycle alpin.*

Il faut attendre le plissement alpin pour voir une manifestation orogénique au pays touareg. On peut admettre que les contrecoups de ce plissement aient déterminé un volcanisme tertiaire-quaternaire, dont les laves recouvrent une grande partie du Hoggar et qui dut exhausser le noyau central. Une étude profonde de ce volcanisme n'a pas encore été faite par des géologues spécialisés (1). Peut-être sera-t-il possible de

(1) P. Bordet étudie, depuis 1950, le volcanisme du Hoggar. La thèse de M. Lelubre sur l'antécambrien au Hoggar a été publiée lors du Congrès géologique d'Alger en octobre 1952. A l'occasion de ce congrès, des monographies régionales concernant le Hoggar ont été publiées : *L'antécambrien de l'Ahaggar*, par M. Lelubre; *Les appareils volcaniques de l'Ahaggar*, par Bordet; *Ahnet et Mouydir*, par J. Follot.

discerner des phases essentielles dans cet ensemble éruptif.

L'étude du quaternaire n'a pas été entreprise. Elle permettrait peut-être de situer des points très intéressants pour l'archéologie, notamment les avances et les reculs du climat désertique.

[p. 162 is blank]

## MÉTÉOROLOGIE

Quelques chiffres relatifs à la météorologie, fournis par l'observatoire de Tamanrasset et la station O. N. M.

Pour une période allant de 1925 à 1939 :

1° Température.

| | |
|---|---|
| Moyenne des maxima | : 28°,6 |
| Moyenne des minima | : 13°,6 |
| M + m/2 | : 21°,1 |
| Amplitude M - m | : 15° |
| Extrêmes maxima | : 39° |
| Extrêmes minima | : -6°,6 |

2° Humidité relative : %

| | | |
|---|---|---|
| Moyenne annuelle % | 33 | à 7 heures |
| | 21 | à 13 heures |
| | 23 | à 18 heures |

3° Nébulosité.

| | | |
|---|---|---|
| Moyenne annuelle % | 2 | à 7 heures |
| | 2,8 | à 13 heures |
| | 3,3 | à 18 heures |

4° Pluie.

Moyenne annuelle en mm. : 43,8

[p. 163]

Courbe montrant la moyenne des maxima et des minima de 1941 à 1948.

Courbe indiquant pour l'année 1943 la moyenne mensuelle des maxima et des minima.

5° Précipitations annuelles de 1933 à 1951 (en mm.).

| | | | |
|---|---|---|---|
| 1933 : | 159 | 1943 : | 108,5 |
| 1934 : | 14,1 | 1944 : | 45,9 |
| 1935 : | 6,4 | 1945 : | 28 |
| 1936 : | 10,3 | 1946 : | 47,5 |
| 1937 : | 15,9 | 1947 : | 31,3 |
| 1938 : | 16,6 | 1948 : | 35,5 |
| 1939 : | 26 | 1949 : | 9,4 |
| 1940 : | 58 | 1950 : | 56,2 |
| 1941 : | 22 | 1951 : | 141,4 |
| 1942 : | 28,8 | | |

Pluies annuelles de 1933 à 1951.

1945 : Année de faible pluviosité.

1944 : Année de pluviosité moyenne.

1943 : Année de grande pluviosité.

Répartition des pluies au cours de l'année.

6° Précipitations mensuelles lors d'une année pluvieuse.

| | | | | | |
|---|---|---|---|---|---|
| 1951 : | Janvier | : 0,8 | Juillet | : 1,4 |
| | Février | : 1,6 | Août | : 18,8 |
| | Mars | : 0 | Septembre | : 96,4 |
| | Avril | : 0 | Octobre | : 0 |
| | Mai | : 0 | Novembre | : 0,2 |
| | Juin | : 14,9 | Décembre | : 0 |

7° Précipitations mensuelles lors d'une année sèche.

| | | | | |
|---|---|---|---|---|
| 1949 : | Mars | : 5,3 | Avril | : 2,1 |
| | Juillet | : 1,2 | Août | : 0,8 |
| Les autres mois | | : 0 | | |

## REMARQUES SUR LA PLUVIOSITÉ

M. Dubief, de l'Institut de physique du globe d'Alger, a fait une enquête fort intéressante sur les pluies en territoire Hoggar, d'après les renseignements fournis par les Touareg, portant sur quatre-vingts années pour le Hoggar central et sur soixante années pour l'Ahnet et le Mouydir.

Il résulte de ces recherches que le régime des pluies dans le Hoggar central n'a aucune relation avec celui du Sahara septentrional.

D'autre part, la distribution des pluies du Hoggar central a quelques relations avec celle de la Tefedest, peu avec le Mouydir et aucune avec l'Ahnet; elle est complètement indépendante du Tamesna.

Enfin les périodes de sécheresse ne semblent pas excéder sept ans (le terme de sécheresse n'étant pas pris dans le sens météorologique, mais d'une façon relative, indiquant, pour les nomades, le défaut de pâturages).

Certains Touareg prétendent avoir observé un cycle de sept ans dans la durée de la nappe phréatique.

Les observations faites à Tamanrasset notent comme années de grosses précipitations : 1924, 1933, 1943 et 1951, ce qui donnerait un cycle de neuf ans environ.

## PUITS OU POINTS D'EAU SUR LES PISTES CARAVANIÈRES

### *De Tamanrasset à Tin-Zaouaten.*

*Amsel :* Tiggert et Tanout. Centre de culture permanent.

*Tin-Tounatine :* Tigget et Abankor dans l'oued Tamanrasset.

*Amselka :* Puits permanent dans l'oued Tamanrasset.

*Tinef :* Puits permanent, abondant, 1,20 m. de profondeur, dans l'oued Tamanrasset.

*In-Abalesse :* Abankor permanent, 0,50 m. de profondeur, dans l'oued Tamanrasset.

*Tidjenaouine :* Centre de culture dans l'oued Tamanrasset.

*In-Amelloutine :* Abankor abondant, profondeur 0,60 m., dans l'oued Tamanrasset.

*Timdjaouine :* 10 kilomètres sud oued Tamanrasset, mont Debla, assez abondant, 10 mètres de profondeur.

*Abankor ouan Mellouline :* Dans l'oued Immazarène Tin-Reroh, est du tassili. Peu abondant.

*Tin-Reroh :* Dans le tassili, abondant, permanent, à 40 kilomètres de la piste auto.

*In el Tobol :* Dans l'Adrar In el Tobol, peu abondant, à 15 kilomètres de la piste auto.

*In-Tédéini :* 6 kilomètres nord de Tin-Zaouaten, permanent, 10 mètres de profondeur, étayé avec des fûts d'essence, à 3 kilomètres de la piste auto.

53. Un vannier Ag Adar.

[A168]

6: Blanguernon MS25 Tuareg

*Tin-Elhaoua :* Dans l'oued Tin-Elhaoua, 10 kilomètres nord de Tin-Zaouaten. Coffré, pierré, jamais à sec.

*Tin-Zaouaten :* Trois puits, une guelta temporaire.

### *De Tamanrasset vers Tessalit (Soudan).*

Jusqu'à Silet, différents centres de culture.

*Timissao :* Puits dans l'oued, nord du tassili, étayé en pierres. Très abondant, jamais à sec. Profondeur : 6 mètres.

*Tamada :* Guelta temporaire, rarement à sec, est du tassili, surface 5 m. × 5 m. environ; très profonde.

*In-Azaoua :* Bordure sud-ouest du tassili. Puits, 1,50 m., jamais à sec.

*Tiggueurt :* Source abondante, dans une vallée tassilienne, à trois heures de marche au sud-est d'In-Azaoua, à deux heures à l'ouest de Tamada. Site curieux à cause de la verdure.

*Aguelman de l'oued En-Nefis :* Guelta temporaire à deux heures de marche d'In-Azaoua.

*Ameg :* Guelta permanente dans lambeau de tassili, au sud de Tirek, à la tête de l'oued In-Allarène.

*Tirek :* Guelta permanente, eau abondante, dans le nord du tassili de Tirek ta Settefet.

*In-Ouzzal :* Dans l'oued In-Ouzzal, près du confluent de l'oued Ighelian. Abondant. Profondeur : 8 mètres.

*In-Djezzal :* Puits abondant, jamais à sec, 23 mètres de profondeur.

*Timiaouine :* Puits permanent, coffré, jamais à sec. 8 mètres de profondeur.

### *De l'Adrar des Iforas (Timiaouine) vers le Tidikelt.*

Les puits d'Ilafok et de Guernen sont comblés, en hiver les caravanes vont d'une traite à In-Ziza, en été elles passent par Timissao.

*In-Ziza :* Très grande guelta, environ 20 m. × 20 m., variant de 5 à 10 mètres de profondeur, jamais à sec. On en compte dix-sept autres.

*Alt el Kra :* Tiggert très abondant, dans les grès tassiliens, à proximité de Foum-Ezgag.

*Tin-Senasset :* Source assez abondante.

*Tin-Eddi :* Puits peu abondant, parfois à sec.

*Tin-Akhenfous :* Puits permanent.

*Tikebetatine :* Quatre ou cinq sources, débit assez abondant.

*In-Rhellal :* Puits peu abondant, à 150 kilomètres des premiers puits du Tidikelt.

*De Tamanrasset vers In-Salah.*

Par la piste automobile :

*Outoul :* Centre de culture.
*Tit :* Centre de culture.
*Tilok :* Puits.
*In-Amguel :* Centre de culture.
*Iniker :* Puits abondant.
*Tesnou :* Puits abondant.
*Amsir :* Puits.
*Meniet :* Puits.
*Arak :* Tiggert et guelta.
*Tadjmout :* Centre de culture, source.
*In-Takoula :* Puits.
*Tiguelguemine :* Guelta.
*Djoraf :* Source chaude.
*Hassi el Khenig :* Eau saumâtre.

Par la piste chamelière, à l'ouest de la piste auto.

*De Tamanrasset à Abalessa :* différents centres de culture.

*Tin-Felki :* Grand puits, jamais à sec, dans l'oued Tekouiat.

*Tinn-Maroka :* Puits très abondant, dans l'oued Afesfes.

*Amsir* ou *Arak.*

*Hassi Takoumbaret :* Permanent.

*Hassi Belrem :* Abondant, dernier puits avant le Tidikelt.

LISTE DE QUELQUES OUEDS

*Région de l'Atakor :*

*Versant nord*, dont les eaux sont collectées par l'oued In-Amguel qui coule vers le Tekouiat, lequel va se perdre dans le Tanezrouft, au sud d'In-Zize.

## V

## LA FLORE

| NOM TAMAHAQ | NOM ARABE | OBSERVATIONS DIVERSES |
|---|---|---|
| Ahtès | | *Acacia albida.* Rare. |
| Alioù | | *Olea Laperrini.* Haute montagne. |
| Adjiar | El latim | Arganier (?). Bois dur, pâturage pour chameau, baies comestibles. |
| Azaoua | Fersig | *Tamarix gallica.* Bon pâturage. Khecba pour toitures, zéribas. |
| Taberkat | Ethel | Bois tendre, fabrication d'écuelles et cuillers, pâturage salé; le fruit colore le cuir en rouge. |
| Tamat | Tahala | *Acacia seyal.* Bon pâturage, bois dur. |
| Absaq | Tahla | *Acacia tortilis.* Bon pâturage, bois dur. |
| Teborak | Techat | *Banalites aegypticae.* Objets usuels; fruit comestible, remède contre la toux. |
| Tihok | Irak | Arbuste, bois tendre, utilisé pour le nettoyage des dents. |
| Telothat | | Chauffage. |
| Tedjert | Tedjert | *Acacia eburnea.* Graines servant au tannage ; épines : clous pour rahla. |
| Tezzeit | Nakhla | Palmier. |
| Thora | Kranka | *Callotropis proscera.* Bois pour rahla ; la sève provoque des ophtalmies. |
| Tehounek | Jeddari | Atakor. Bois de chauffage, tannage des guerbas. |
| Assellouf | Elhelhab | |
| Tarkat | | Fruit au goût de raisin, grosseur d'une jujube. |
| Edjaq | | Bois dur, sert à fabriquer des grains de chapelet. |

[p.177]

## FLORE SPONTANÉE — VÉGÉTATION HERBACÉE — PATURAGES

| | NOM TAMAHAQ | NOM ARABE | OBSERVATIONS DIVERSES |
|---|---|---|---|
| 1 | Tiberimt | Lemmet | Pâturage pour les ânes, un peu pour chèvres, goût de céleri (ombellifère). |
| 2 | Ennedam | | Plante d'acheb. |
| 3 | Tamadi | | Plante d'acheb. |
| 4 | Tamedout | | Plante d'acheb. |
| 5 | Azrem | Merkad | Plante d'acheb. |
| 6 | Ourroug | Errega | Plante d'acheb. |
| 7 | Tahaout | Rguig | Plante d'acheb. |
| 8 | Tahnetnet | Tafsa | Plante vivace. |
| 9 | Afessour | Cherefk | Plante d'acheb. |
| 10 | Tanesmimet | Hamoued | Plante d'acheb; acide. |
| 11 | Afazzou | Morakba | *Panicum turgidum*. Graines consommées par les Touareg; avec la paille, confection des nattes brise-vent (asaber). |
| 12 | Akaïouad | Jonc | *Typha augustifolia*. Chèvres. |
| 13 | Akecheker | | Plante épineuse. Pâturage permanent. |
| 14 | Adrilal | | *Astralague prolixus*. Sorte de pois sauvage, très bon pâturage. |
| 15 | Alemmoz | Nçi | *Aristida ascencionnis*. Très bon pâturage, dans la zone du fossé périphérique après les pluies. |
| 16 | Telemmoust | Sfar | Très bon pâturage. Zone : id. ci-dessus. |
| 17 | Aslak | Habalia | Plante d'acheb. *Héliotropium ondulatum*. |
| 18 | Imatelli | | Plante d'acheb. |
| 19 | Askaf | Damrane | *Traganum midatum*. Très peu au Hoggar, région de Tiffert. |
| 20 | Tadjemaït | Njem | Chiendent, près des points d'eau, pâturage médiocre. |
| 21 | Afelleleh | Bettina | Jusquiame. Rend fou deux ou trois jours; la fumée est somnifère. |
| 22 | Aressou | Arta | Bon pâturage. |
| 23 | Amateltel | | Plante grimpante, sur les acacias surtout, de la taille de la vigne. Bon pâturage. |
| 24 | Atarzim | Ghardek | Lotus des Lotophages (?) d'après Duveyrier. |
| 25 | Alaouat | Gergir | Très bon pâturage. Dans les grands oueds après les crues. Fossé périphérique et Iforas. |
| 26 | Aremmas | Guettaf | *Atriplex alimus*. Laxatif, très salé, pâturage médiocre. |
| 27 | Tabakat | Sedra | Jujubier, Ziziphus lotus. Pâturage moyen, sauf pour les ânes. |

| | NOM TAMAHAQ | NOM ARABE | OBSERVATIONS DIVERSES |
|---|---|---|---|
| 28 | Almès | Guesba | Roseau. |
| 29 | | Defla | Laurier-rose (poison, sauf pour les chèvres et gazelles). |
| 30 | Tedjellit | Coloquinte | Coloquinte. Gazelles, chèvres, ânes. |
| 31 | Alagoz | Hadjia | Coloquinte douce, comestible. |
| 32 | Aftezza | Chebrok | *Zilla macroptéra*. Très bon pâturage. |
| 33 | Issin | Djell | Assez bon pâturage. |
| 34 | Rellachem | | Pousse dans la montagne, peu abondant, remède contre la blennorragie et contre la toux. |
| 35 | Tahara | Hâdd | *Cornulaca monacantha*. Très bon pâturage d'hiver, mauvais en été. |
| 36 | Ana | Merkh | *Ginista saharae*, genêt. Très bon pâturage. |
| 37 | Tadjerdjert | | Purgatif. Assez bon pâturage. |
| 38 | Tahiart | Tinhart | Dans les séguias des centres de culture, sert à parfumer le thé. |
| 39 | Tahli | Berdi | *Formium tenax*. Sorte de grand roseau qui pousse près des tiggerts; pâturage à chèvres. En période de disette, on consomme le cœur. |
| 40 | Taïberou | Bouzaka | Poison, rare (Atakor). Pas de contrepoison. |
| 41 | Tassa | Elbaguel | Pâturage médiocre. |
| 42 | Tanatfert | Ghatassa | Rend le lait amer. |
| 43 | Toulloult | Drinn | *Aristida pugens*. Très bon pâturage, graine comestible comme celle de l'afazzou (trois mesures contre une de blé). |
| 44 | Teferiest | Tessakra | Chardon, peu abondant, bon pâturage. |
| 45 | Takamezout | Chedengoura | Atakor seulement. Anti-dysentérique certain, donne quatorze remèdes. |
| 46 | Zezeri | Zahta | Atakor. Se met dans le thé. |
| 47 | Tihérguéli | Chih' | Parfume le thé, remède contre les coliques. |
| 48 | Amiou | N'gouth | Bon pâturage. |
| 49 | Tamadjéhi | Kroumt | Très bon pâturage. |
| 50 | Tataït | Elgouzah | Bon pâturage. |
| 51 | Oïaq | Mrenza | Mélangé à des dattes pilées, fait grossir les femmes. Mauvaise odeur. |
| 52 | Tedjourt | Hallala | Remède contre les embarras gastriques. |
| 53 | Terfes | Terfes | Sorte de truffe. |
| 54 | Aliouen | Denoun | Sorte de grosse asperge. |

[p. 180 is blank]

## VI

## OUTILLAGE

Voici une liste des outils utilisés par les maalmines; nombre d'entre eux sont de leur fabrication :

Tisadh : Soufflet à double poche.

Abaracha : Pièce de bois de 50 × 20 × 6 cm. servant de support à une masse de fer servant d'enclume.

Tehount : Masse de fer de 6 × 6 × 15 cm. utilisée comme enclume.

Afadis : Marteau.
Tafadist : Petit marteau.
Irendan : Pinces.
Takadimt : Hache herminette } Emmanchement de
Tatsout : Gouge à bois } type néolithique.
Tadouft : Hache }
Azazaoua : Lime.
Tazazaouat : Petite lime.
Tasarest : Burin.
Asfed : Poinçon.
Timouda : Cisailles.
Azazaoua ouan aserer : Lime à bois.
Anefif : Embout de soufflet.
Tibin : Creuset.

Voici une liste des objets fabriqués par les maalmines pour le compte des Touareg; cette liste n'est certainement pas complète.

[p. 181]

Tanast : Cadenas spécial aux Touareg, bien connu des touristes; les clefs sont artistement découpées et ne sont pas un des moindres ornements des femmes. Fer, laiton, cuivre concourent à donner un effet agréable. Il existe des cadenas à une, à deux et à trois clefs, travail compliqué à plaisir, si l'on songe que ces tanast ferment des sacs de cuir que l'on peut ouvrir d'un coup de couteau, ou en relâchant une couture !

Tadeft : Petite hache.

Moussi : Couteau avec gaine, porté à la ceinture.

Indel : Poinçon destiné au travail du cuir.

Iremdan (menguech, en arabe) : Accessoire comprenant une lame coupante, un poinçon et une petite pince.

Tazozlet : Sorte de coupe-papier à lame triangulaire en laiton artistement travaillé. Dans la société touarègue il n'est pas utilisé comme coupe-papier, mais, instrument de coiffure, il sert à partager les mèches de cheveux avant le tressage.

Tistent : Alène.

Tesougla : Grosse aiguille à coudre.

Allar : La lance des Touareg.

Takouba : Le sabre.

Tarada : Le javelot.

Tilok : Le poignard de bras.

Tamenast (menassa, en arabe) : Cuvette en laiton, accessoire indispensable à tout méhariste, servant à boire, à se laver, à faire le pain, à creuser l'abankor.

Pour les harratin, les maalmines confectionnent la houe appelée aguelhim, et le gheniet, qui est un piège à mouflons.

Les Touareg utilisent des objets de bois fabriqués par les maalmines, ce sont surtout des ustensiles de cuisine.

Akous : Bol destiné à boire le lait. Il est souvent muni de petites oreilles afin de le rendre plus aisément préhensible.

Azzka : Est un très grand akous qui peut contenir près de six litres.

Tarahout : Grand plat presque hémisphérique, taillé dans la masse, l'épaisseur du bois est de 3 centimètres; il est destiné aux repas familiaux.

Tarelalt : Grand plat à fond assez plat, pouvant atteindre parfois 1 mètre de diamètre (rare).

Tendi : Le mortier de bois.

Iharen : Le pilon de bois.

Akabar : Petit mortier, parfois pyrogravé.

Tesoukalt : Cuiller de bois pyrogravée.

Temoulalt : Grande cuiller (louche) pyrogravée.

Asseguefi : Petit entonnoir de bois.

Redjeredjaten : Piquets servant à supporter la tente.

Tidjetouin : Piquets à tête ornée tenant la tente ouverte.

Tarik (rahla, en arabe) : La selle de chameau. Les maalmines du Hoggar les réparent, mais ne les fabriquent pas; les plus belles viennent de l'Aïr, ce sont celles appelées tamazak, et les akoka. Cependant les maalmines confectionnent au Hoggar une selle seulement en bois appelée taïst, solide et servant surtout au dressage.

Les principaux bijoux travaillés au Hoggar sont les suivants :

Tisak : La bague, en argent. Certains modèles ont la face inférieure en fer. La hauteur des bagues est impressionnante : 4 à 5 centimètres; elles couvrent entièrement la base des doigts des femmes, faisant ressortir la longueur et la finesse des mains.

Tisabatin : Les tisabatin sont des pendants d'oreilles, simple jonc circulaire en argent dont le diamètre est d'environ 10 centimètres; deux tisabatin pèsent 120 grammes.

Teraout : Grand triangle porté sur la poitrine, en argent, dont la face cachée est en fer.

Ahbedj (au pluriel, ihebdjen) : Les femmes en portent toujours deux. Ce sont des bracelets, dont le modèle le plus recherché a la forme d'un simple jonc, ouvert, dont les deux têtes sont polyédriques et décorées de dessins géométriques.

Tissegouar : Pendentifs temporaux, en argent.

Les Touareg n'utilisent pas l'or, seul l'argent sert à confectionner les bijoux et les porte-amulettes appelés teraout.

Les hommes portent des bagues aux dimensions plus restreintes que celles des femmes.

[p. 184]

54. Porte de la maison de Mossa ag Amastane (demeure actuelle des Inadan).
55. L'école nomade au campement de l'amenokal.

[p. 184(A)]

[p. 184 (R)]

[p. 184 (C)]

[p. 184 (D)]

## VII

## LISTE DES CENTRES DE CULTURE

*Abalessa* (altitude : 850 mètres).

C'était le plus grand centre de culture avant notre arrivée au Hoggar; depuis, Tamanrasset a surpassé Abalessa.

Abalessa est situé à 100 kilomètres à l'ouest de Tamanrasset, dans l'oued Ibarras, au confluent de l'oued Abalessa qui reçoit les eaux des oueds Tit, Outoul, Tiffert et Iglène.

La population est de plus d'un millier de harratin.

La surface cultivable est de 150 hectares lors des années favorables; en général, les cultures couvrent 80 hectares.

Les propriétaires de jardins sont des Kel Rela, des Taïtoks, des Dag Rali et des Iklan Taoussit.

On compte onze foggaras, ce sont les plus longues et les plus profondes du Hoggar; certaines atteignent 6 kilomètres de long, et les puits de tête ont une profondeur de 8 à 10 mètres.

Environ trois cents palmiers poussent à peu près librement, presque tous sont issus de noyaux, et la moitié sont des dokkars (mâles).

Abalessa possède un bordj et une infirmerie.

Le tumulus de Tin-Hinan est situé à 2 kilomètres du bordj, dans l'oued Tiffert.

*Centres de l'oued Tiffert.*

*Tounin Akourin.*

Petit centre à 7 kilomètres en amont d'Abalessa. Deux foggaras et un tanout.

56. Bordj du Père de Foucauld.

[p. 185]

L'amenokal a son campement permanent près des jardins dont il est le propriétaire.

*Tiffert Foulani.*

A 5 kilomètres en amont d'Abalessa. Trois foggaras. On compte une trentaine de palmiers. Centre actif, il est la propriété des harratin de l'endroit. C'est là que réside Si Ahmed Foulani, taleb réputé, qui joue le rôle de cadi auprès des Touareg.

*Tiffert Tahtani.*

A 3 kilomètres en amont d'Abalessa. Trois foggaras. Centre actif et permanent. Petit village construit en toubs, dominant une quarantaine de palmiers.

*Tin-Tazarouk.*

A 1 kilomètre d'Abalessa, sur la piste de Silet. Une foggara. Zéribas. Grande quantité de diss (grande graminée).

*Centres de l'oued Outoul.*

*Outoul.*

Centre longtemps abandonné qui reprend vie; situé entre l'ancienne et la nouvelle piste d'In-Salah, à 20 kilomètres de Tamanrasset. Cinq foggaras, dont deux en amont. Quelques arbres fruitiers.

*Tahart.*

A 18 kilomètres en aval d'Outoul. Trois foggaras et un tanout. Propriétaires : Taïtoks et Tédjéhé n'Néfis.

Une centaine de palmiers, nombreux figuiers et vignes. Un tiggert avec d'abondants tahlis. Site très pittoresque.

*Assileskine* (altitude : 960 mètres).

Centre situé à 6 kilomètres en aval de Tahart. Souvent abandonné. Propriétaires : Taïtoks. Trois foggaras, une trentaine d'habitants. Vigne et quelques jeunes palmiers. Gravures rupestres près des zéribas.

*Ennedid* (altitude : 914 mètres).

A 4 kilomètres en aval d'Assileskine, dans une gorge, au confluent de l'oued Outoul. Une soixantaine d'habitants, près de cent palmiers. Propriétaires : Kel Rela, Dag Rali et Iklan Taoussit. Très joli site.

*Centres de l'oued Tit.*

*Tit* (altitude : 1 127 mètres).

Situé dans l'oued Tit, à 50 kilomètres de Tamanrasset. Centre assez important, plus de cent habitants, maisons de toubs et zéribas. Une trentaine de palmiers, de nombreux figuiers et des vignes énormes. Actuellement, quatre foggaras. Station rupestre très importante.

*Tin-Emensar.*

A 10 kilomètres en aval de Tit. Centre abandonné.

*Dar Mouli.*

A 3 kilomètres en aval de Tin-Emensar, un petit jardin est cultivé. Lieu d'une fête annuelle où se réunissent les Touareg pour la ziara de Moulay Abderrahmane.

*Centres de l'oued Tamanrasset.*

*Tamanrasset* (altitude : 1 470 mètres).

*Fort Laperrine*, chef-lieu administratif du Hoggar.

Le bordj militaire fut construit en 1919 et utilisé en 1920 après l'abandon de Tarahouaout.

En 1920, Tamanrasset avait quarante habitants. C'était un petit centre sans importance, ayant trois foggaras; quelques rares éthels et fersig bordaient l'oued.

L'occupation française créa de toutes pièces l'agglomération qui devint un nœud routier après la création des pistes automobiles de Tamanrasset vers In-Salah et Alger;

de Tamanrasset vers Agadès et Fort Lamy;

de Tamanrasset vers Tin-Zaouaten et Gao.

Des pistes secondaires d'intérêt local ou touristique furent ouvertes par la suite :

de Tamanrasset à Djanet par Idelès et Serouanout;

de Tamanrasset à Idelès par Tarahouaout, Tahifet;

de Tamanrasset à In-Azaoua (inachevée);

de Tamanrasset au massif de l'Asekrem par le pic de l'Ilamane (touristique);

de Tamanrasset au massif de l'Asekrem, par les gueltas d'Imalaoulaouen et l'Akarakar. Cette piste, terminée en 1952, permet de faire le circuit des hauts sommets de l'Atakor; elle

complète la précédente. Son tracé, étudié par le chef d'annexe de Tamanrasset, assure le maximum de protection contre les pluies; il fait découvrir une succession de splendides panoramas et se termine au pied du plateau de l'Asekrem après avoir traversé le plus étrange jaillissement de pitons que l'on puisse imaginer. Cette piste se prolonge vers les gueltas d'Issakarassen, puis ira vers le centre de culture d'Hirafok, pour se terminer dans la Tefedest.

Des commerçants arabes et mozabites s'installèrent très vite à Tamanrasset, offrant des marchandises venues du Tell et achetant du blé, du mil, du beurre aux Touareg, faisant des prêts usuraires, en un mot drainant le peu d'argent liquide des Touareg pour le diriger vers le Mzab.

Les maisons se sont construites surtout sur la rive droite de l'oued dans les parties non irrigables. Tamanrasset ne possède aucune couleur locale, mais la teinte rouge des enduits extérieurs, la propreté et la coquetterie des rues ombragées d'éthels et fleuries de géraniums forment un ensemble agréable. Ce qui est admirable et presque unique au Hoggar, c'est le cirque de montagnes qui entoure le village; de la rive sud de l'oued, le spectacle au lever et au coucher du soleil est sensationnel.

Actuellement Tamanrasset possède une vingtaine de foggaras et une dizaine de tanouts. Les propriétaires des foggaras sont : la commune, des Adjouh n'Téhélé, des Tédjéhé n'Néfis, des harratin et des commerçants. Les foggaras ont une longueur de 4 à 5 kilomètres. Les jardins s'étendent sur près de 6 kilomètres du ksar de l'Adriane au ksar de Teggert. La surface cultivée est d'environ 70 hectares, en comptant les jardins du petit centre de Tihegouine, à 3 kilomètres en aval, arrosés par une foggara.

La commune possède un jardin magnifique, où sont essayés toutes sortes d'arbres fruitiers; il sert d'exemple aux jardiniers locaux. Beaucoup de maisons européennes ont un petit jardin irrigué par foggara ou par puits.

La population actuelle est de 2 000 habitants environ. Cet énorme accroissement de population pose un angoissant

problème de l'eau. Il semble qu'un centre de culture au Hoggar ne puisse pas s'accroître indéfiniment sans envisager des travaux hydrauliques.

Tamanrasset, bien que favorisé du point de vue des ressources en eau, est une preuve de ce que l'on pourrait tenter dans les autres centres de culture si des Français pouvaient conseiller les harratin et payer d'exemple.

La population française se répartit de la façon suivante :

Un capitaine chef d'annexe, administrateur de la commune.

Deux ou trois officiers adjoints.

Des secrétaires.

Une école. Sept instituteurs, dont trois nomades.

Un observatoire de physique du globe. Trois physiciens.

Un service des télécommunications. Quatre radio, deux météo.

Une base de la société des Transports tropicaux.

Une recette postale auxiliaire.

Un hôtel.

Quelques personnes retirées à Tamanrasset, sans fonction.

Du point de vue militaire, Tamanrasset est généralement la base d'une compagnie méhariste. Des éléments du génie saharien assurent l'entretien de la piste d'In-Salah à Tamanrasset et Agadès.

La population française est d'environ 120 personnes; ce nombre est sujet à de fréquentes fluctuations.

Le nombre des commerçants mozabites et arabes, y compris leurs familles, s'élève à une centaine d'individus.

Les harratin sont au nombre d'environ 1 900, chiffre approximatif, car beaucoup de jardiniers vont et viennent d'un centre de culture à l'autre.

On ne peut parler de Tamanrasset sans songer au général Laperrine et au père de Foucauld. Le corps du général repose à Tamanrasset près de la tombe où fut enterré le père après sa mort tragique. Le bordj où vécut le père de Foucauld durant les dernières années de sa vie est un lieu de visite pour les touristes; on peut également visiter l'ermitage construit par le père sur la rive gauche de l'oued.

6: Blanguernon MS25 Tuareg

Près du village de l'Adriane, se trouvent les tombes de Moussa ag Amastane, l'amenokal ami de Laperrine, et de Dassine, la célèbre poétesse.

Dans la maison qui fut celle de Moussa ag Amastane travaillent les maalmines, les artisans des tribus touarègues.

Tamanrasset, centre administratif, étape obligatoire sur la piste d'A. O. F. et d'A. E. F., est aussi une escale d'aviation appelée à devenir de plus en plus importante.

Le grand tourisme tend à conquérir le Hoggar, le Touring Club de France organise depuis quelques années des caravanes d'excursionnistes. Savants appartenant à toutes les disciplines, voyageurs éclairés, alpinistes en quête de pics vierges, sont attirés par le pays encore mal connu. Pour tous, Tamanrasset est une base de départ, mais non pas un lieu de séjour.

*Tissenaouine.*

Dans l'oued Tissenaouine, à son confluent avec l'oued Tamanrasset. Une foggara appartenant à un hartani. Jardin très bien cultivé.

*Tagrambaït.*

Dans l'oued Tamanrasset, à 15 kilomètres au sud de Tamanrasset. Trois foggaras, jardins bien cultivés. Peu de possibilités d'extension.

*Amsel* (altitude : 1 180 mètres).

Situé dans l'oued Amsel, peu avant son confluent avec l'oued Tamanrasset, environ à 30 kilomètres au sud de Tamanrasset.

Les propriétaires de jardins sont les Adjouh n'Téhélé et les Tédjéhé n'Néfis. Les jardins sont situés en amont et en aval du tiggert, véritable ruisseau d'eau courante où poussent d'abondants tahlis. Six foggaras et trois tanouts. On compte une soixantaine d'habitants. La surface cultivable est de 30 hectares; il y aurait des possibilités d'extension vers l'aval. Quelques arbres fruitiers.

*Intnérin.*

Dans l'oued Tamanrasset, à 7 kilomètres au sud d'Amsel. Tiggert et de nombreux tahlis. Deux foggaras. Centre peu

important, sans possibilité d'extension. Vallée encaissée et très chaude.

*Idikel.*

Dans l'oued Tamanrasset, à 15 kilomètres au sud d'Amsel. Accès difficile en auto. Trois foggaras et deux tanouts. Terre cultivable en grande quantité, mais menacée par les grosses crues de l'oued Tamanrasset.

*Tiguenouine.*

Dans l'oued Tamanrasset, à 7 kilomètres au sud de Tamanrasset. Au tiggert d'Amelalouline grande quantité de tahlis. Trois foggaras, eau abondante.

*Centres situés sur la piste d'In-Azaoua.*

*Izerzi.*

A 15 kilomètres au sud de Tamanrasset, dans l'oued Izerzi. Centre longtemps abandonné, revivifié en 1952.

*Talan Téhédit.*

Centre longtemps abandonné, à 20 kilomètres au sud de Tamanrasset. Cultivé depuis 1951. Eau abondante. Tiggert, tahlis. Propriétaires des jardins : Adjouh n'Téhélé et Tédjéhé n'Néfis. Trois foggaras et deux tanouts. Possibilité d'extension.

*Ifok.*

A 30 kilomètres au sud de Tamanrasset. Eau courante, tiggert, tahlis. Les jardins sont en amont et en aval du tiggert. Deux foggaras et trois tanouts. Centre souvent abandonné.

*Région de l'Atakor.*

*Ilaman* (altitude : 2 000 mètres).

Centre le plus élevé du Hoggar. Abandonné pendant longtemps, traces de neuf foggaras anciennes.

Actuellement le village d'Ilaman compte une douzaine d'habitants. Une foggara fonctionne ainsi que deux tanouts. Les Dag Rali sont propriétaires des jardins, leurs silos à mil donnent une allure curieuse au village.

*Terhénanet* (altitude : 1 950 mètres).

Situé dans l'oued Terhénanet, en bordure du massif du

Taessa. Comme le village d'Ilaman, celui de Terhénanet est au bord de la piste qui mène à l'Asekrem. En aval des jardins se trouve une petite guelta. Centre peu important : une dizaine d'habitants, deux foggaras vivantes, quatre mortes.

*Centres du sud-est Atakor.*

*Tarahouaout* (altitude : 1 317 mètres). (Fort Motylinski).

Situé dans l'oued Tarahouaout, à 80 kilomètres de Tamanrasset par la piste automobile. C'est l'ancienne capitale administrative du Hoggar, de 1908 à 1921. On peut voir, dominant l'oued, le vieux bordj, ainsi que d'anciennes maisons au pied de la falaise.

Centre important, c'est le fief de la tribu des Adjouh n'Téhélé. 52 hectares sont cultivables, irrigués par dix foggaras. On compte de nombreux tanouts. Les arbres fruitiers sont en régression, mais il y a encore des figuiers, des abricotiers et des vignes.

De nombreux tombeaux antéislamiques témoignent d'une très ancienne occupation de ce point d'eau. Trois stations de gravures rupestres existent sur des crêtes en aval du bordj.

A 6 kilomètres en aval des jardins une énorme végétation de tahlis annonce l'entrée de gorges très étroites, dans lesquelles durant dix kilomètres on peut suivre un véritable ruisseau reliant un chapelet de gueltas. C'est peut-être l'écoulement permanent le plus important du Hoggar.

*In-Dalag* (altitude : 1 450 mètres).

Situé dans l'oued In-Dalag, ce centre très important s'étend sur une longueur de 15 kilomètres. La nappe est alimentée par les eaux de ruissellement du sud-est de l'Atakor et du djebel Ahélébeg. Les Adjouh n'Téhélé sont les propriétaires des jardins. En période de sécheresse ce centre est en partie abandonné, ainsi que les petits villages qui se trouvent en aval : Tehi n'Oudi, Tin-Tsoumar, Tabarakaten, In-Tinsi, In-Tolouline.

On compte cinq foggaras à In-Dalag. En aval des centres cultivés se trouvent des gorges où poussent des tahlis en grande quantité.

*Tahifet.*

Centre important situé dans l'oued du même nom, à 50 kilomètres au nord de Tarhaousout. Les Adjouh n'Téhélé sont les propriétaires des jardins. La surface cultivable est de 22 hectares, il existe huit foggaras. A 6 kilomètres en aval des jardins est un tiggert entouré d'une grosse végétation spontanée. Le site est très pittoresque.

*Centres du nord de l'Atakor.*

*Idelès.*

Centre très important dans l'oued Tarouda, dominé par l'Adrar Tadéraz. Le village est situé sur la piste automobile de Tamanrasset à Djanet, à 265 kilomètres de Tamanrasset. Un bordj et une infirmerie ainsi que de nombreuses maisons de pierres constituent le village. Les habitants, au nombre de 300 environ, sont originaires du Tidikelt. On peut y voir les ruines d'un vieux ksar.

Les jardins appartiennent aux Kel Rela, aux Dag Rali, aux Kel Tazolé et aux Kel Amguid. La surface cultivable est d'environ 40 hectares, irrigués par huit foggaras et par une dizaine de tanouts. Environ trois cents palmiers sont assez bien entretenus; il existe aussi de nombreux figuiers et des vignes.

*Amenselane.*

Très petit centre à 6 kilomètres d'Idelès. Une foggara. Nombreux tahlis près du tiggert.

*Tazerouk.*

Centre qui fut autrefois très important, mais dont la terre cultivable est souvent emportée par lambeaux lors des grosses crues. Situé à 188 kilomètres de Tamanrasset par la piste automobile d'Idelès. La population est constituée par des Nègres affranchis qui sont propriétaires des jardins, mais dont la fainéantise a fait péricliter cette oasis privilégiée. L'altitude est de 1 896 mètres, deux récoltes de blé sont possibles dans l'année. La surface cultivable est de 45 hectares, la moitié à peine est ensemencée. Il pousse d'énormes figuiers non

soignés, de très nombreux pêchers et abricotiers. Le climat d'été est, à Tazerouk, le plus agréable du Hoggar.

Dans les oueds qui aboutissent à Tazerouk, des centres de culture sont établis lors des années pluvieuses, ce sont : Sellemaï, Ihebert, Teberbert, Taouakim, Tin-Ezzar.

*Tizzeit.*

Centre peu important, longtemps abandonné, actuellement cultivé, situé sur la piste chamelière de Idelès à Tazerouk. Terre appartenant aux Ibardjien, ancienne tribu en voie d'extinction, redoutables montagnards et habiles chasseurs de mouflons. Source alcaline, tanout. Vignes, figuiers et de nombreux palmiers.

*Tin-Founès.*

Centre abandonné, situé sur la piste de l'Amadror; nombreux palmiers non soignés.

*Hirafok* (altitude : 1 510 mètres).

Situé dans l'oued Hirafok, sur la piste automobile de Tamanrasset à Idelès. Les jardins s'étalent en longueur et sont bien cultivés. 24 hectares de terre cultivable, irrigués par cinq foggaras et cinq tanouts. Quelques figuiers. Un bordj est construit en bordure de la piste. La vallée de l'oued est assez boisée, il existe un tiggert en aval.

*Im-Amguel* (altitude : 1 037 mètres).

Gros centre de culture, situé dans l'oued In-Amguel, sur la piste de Tamanrasset à In-Salah, à 144 kilomètres de Tamanrasset. Un bordj et une infirmerie. 400 habitants. Dix foggaras arrosent des jardins bien entretenus. On compte une centaine de palmiers dont la moitié est constituée de dokkars. Vignes, figuiers, abricotiers, pêchers. Volailles.

*Ifrok.*

En amont d'In-Amguel, sur la piste automobile d'Idelès. Centre longtemps abandonné, actuellement cultivé. Une foggara. L'oued est très boisé.

*Tasahimt.*

Centre abandonné, situé entre Idelès et Tazerouk. Un tiggert, en amont duquel existaient une foggara et quatre

tanouts. Abondante végétation de fersig et de laurier-rose.

*Centres de la Tefedest.*

*Mertoutek.*

Centre en déclin. Il existe actuellement deux foggaras vivantes contre dix autrefois. 1 450 mètres d'altitude. Situé dans l'oued Mertoutek, à l'est de la Tefedest, à 260 kilomètres de Tamanrasset. Quelques arbres fruitiers. Stations rupestres importantes (sites Coche-Chasseloup-Laubat, Lelubre et M. Cousin).

*In-Amertek.*

Centre abandonné en aval de Mertoutek.

*Ohet.*

Centre abandonné, au nord-ouest de la Tefedest. Deux foggaras mortes. Terre des Tédjéhé Mellet.

*Adenek.*

Centre abandonné, dans l'oued Adenek, au confluent de l'oued Dehine. Terre des Kel Tefedest. Il reste quelques figuiers et vignes.

*Abenzou.*

Centre abandonné, terre des Kel In-Rhar et Eouen n'Hada. Seules des zéribas et des traces de guemouns témoignent d'anciennes cultures.

*Dehine.*

Centre situé à 6 kilomètres au nord de Mertoutek. Abandonné. Il reste quelques palmiers et figuiers témoins d'une ancienne prospérité.

*Autres centres de culture.*

*Silet* (altitude : 775 mètres).

Situé à 151 kilomètres de Tamanrasset, sur la piste de Tin-Zaouaten. L'oued Silet forme une grande cuvette où arrivent les eaux du Tahelra. Il existe une nappe d'eau très peu profonde qui permet aux palmiers de pousser sans irrigation. Il y a environ six mille palmiers qui ne reçoivent pratiquement

6: Blanguernon MS25 Tuareg

aucun soin. La fécondation artificielle n'est presque pas utilisée. Cette palmeraie fut créée il y a environ deux cents ans par des Arabes du Tidikelt. Les propriétaires des palmiers sont des Kel Rela, des Iklan Taoussit et des Dag Rali. Un essai de palmeraie a été tenté par l'annexe avec des djebars de Téguezza.

Une dizaine d'habitants séjournent à Silet et cultivent de petits jardins irrigués par trois foggaras. Un bordj. Ruine d'un vieux fort arabe. Nombreux tombeaux préislamiques.

*Tibeghim.*

A 5 kilomètres de Silet. Petite palmeraie à l'état quasi sauvage, ce qui lui confère un aspect très pittoresque. Les palmiers appartiennent aux Kel Rela et aux Iklan Taoussit.

*Aïtoklane.*

Centre situé dans l'oued Sersouf, à 40 kilomètres au sud de Tazerouk. Longtemps abandonné, actuellement cultivé. Loin des pistes automobiles, ce centre est rarement visité. Les terres cultivables ont une grande superficie.

*Tin-Tarabin.*

Dans l'oued Tin-Tarabin, hors des pistes automobiles, ce centre est rarement visité. Abandonné, puis revivifié depuis peu. Ce centre pourrait prendre de l'essor, car les terres cultivables ont une grande surface.

*Tadjmout.*

Situé sur la piste de Tamanrasset à In-Salah, dans la dépression intratassilienne du Mouydir. Quelques jardins appartenant aux Kel Immidir. Palmiers (environ une centaine poussent librement dans la gorge à 1 kilomètre de la piste).

*Izghan. Izeghaf. Djoraf.*

Centres abandonnés à l'intérieur du massif tassilien. Nombreux palmiers appartenant aux Kel Immidir et aux Kel Ahnet. Ces sites ne sont jamais visités et restent ignorés de tous.

*Tin-Teredjine.*

En amont de l'oued Teredjine (piste d'In-Guezzam). Tiggert, eau abondante, jardin à l'abandon. Des tomates y

poussent sans culture. Une famille Adjouh n'Téhélé fait la récolte de temps en temps.

*Inroudiden.*

Dans le massif du Tahèlra (sud de Tiffert), dans l'oued Inozzorou, tributaire du Tinef. Propriétaires : Iklan Taoussit. Peu important.

*Isernan* et *Sédéouen.*

Lors des années pluvieuses, des jardins sont établis en amont des tiggerts dans ces deux oueds tributaires de l'oued In-Dalag.

[p. 198 is blank]

## INDEX DES NOMS TAMACHEQ ET ARABES

*Abalessa*, oasis, 72.
*Abankor*, point d'eau, 28, 132.
*Abedjo*, filet pour protéger la mamelle et empêcher le chamelon de tèter, 82.
*Acheb*, pâturage, 23, 30.
*Aciaf*, étendue plate, 19.
*Adjar*, arbre (*accacia albida*) 87.
*Afarra*, enclos, 88.
*Afazzou* (*parricum turgidum*) 27, 88, 105, 106, 125.
*Aguelmam*, voir guelta.
*Ahal*, flirt, 129 et suivantes, 140, 142, 143.
*Aïs*, cheval, 85.
*Akhaoui*, selle de femme, 95.
*Akli*, esclave, 48, 56, 57, 58.
*Alenkad*, gazelle, 31.
*Alommor*, petite graminée, 31.
*Amayas*, guépard, 32.
*Amenokal* (chef du Hoggar), 47, 69, 84.
*Amrar*, chef, 48 et suivantes, 91.
*Ankokar*, guêpe, 34.
*Anou*, puits, 28.
*Aril*, forme de contrat de jardinage, 70,
*Asink*, bouillie de mil (plat habituel), 104, 116.
*Assaber*, sorte de natte, 53, 88, 92, 120, 144.
*Assihar*, réunion, 142.

*Bechena*, mil, 54.
*Berdi* (*typhas elephanticus*) voir tahli, 23.
*Berber*, poison, 112, 113.
*Betlas*, bouteille à beurre, 50 et suivantes, 84.

*Chebka*, filet, 65.

*Debni*, tombeau pré-islamique, 39, 40, 117.
*Dellous*, sac de peau destiné à puiser de l'eau, 84.
*Dob*, sorte de lézard, 33, 107, 122, 123, 124.
*Drinn*, plante saharienne, 30.

*Efeli*, foggara, 29, 71.
*Ehakit*, vêlum, 87.
*Eied*, âne, 84.
*Essou*, taureau, 84.
*Fersig*, tamaris, 30, 71, 89, 90
*Gergir*, crucifère, 24, 27, 30, 32.
*Guelta*, mare, 18, 19, 23, 24, 26, 34, 35, 84, 115, 135, 138.
*Guemouns*, carrés de culture, 35, 69, 70, 71, 73, 74.
*Guessa*, plat, 69.
*Guelaf*, plante saharienne, 30, 89.

*Had*, plante saharienne, 27, 30.
*Haif*, sangle, 95.
*Hench lefei*, cobra, 33.

*Ibalenkassen*, lanières de cuir, 87.
*Iboglanes*, fraction des Kel Rela, 49.
*Idebnan*, pluriel de debni, voir ce mot.
*Ifelan*, pluriel de efeli, voir ce mot.
*Ihaggarenes*, nobles, 49, 57.
*Ikeremoiens*, fraction des Kel-Rela, 49.
*Iklan*, pluriel de akli, voir ce mot.
*Ilougan*, carrousel à chameau, 66, 93, 121, 139, 141, 144.

[p. 199]

*Imrad*, pluriel de amrid, vassaux, 46 et suivantes, 91, 121, 139, 141, 144.

*Imzad*, instrument de musique, 142, 152.

*Inade*, artisan, 55, 57.

*Inembas*, fraction des Kel-Rela, 49.

*Khamassa*, contrat de jardinage, 68 et suivantes.

*Kranka* (*callotropis proscera*) 20, 23, 30.

*Majen*, bassin, 69, 72, 73.

*Maroki*, race de chameau (pour tous les termes désignant le chameau, voir pages 78, 79, 80, 81).

*Materter*, lézard, 34, 122.

*Menassa*, cuvette de cuivre, 28.

*Mesaha*, houe, 69.

*Mezoued*, sac de cuir pour transporter le grain, 50, 51, 53, 97.

*Morakba*, plante (voir afazou), 22, 27, 30, 89.

*Moula Moula*, oiseau, 33, 122, 123.

*Oudad*, mouflon, 31.

*Oudi*, beurre, 83, 105.

*Oulli*, pluriel de tirsi, voir ce mot.

*Ounan*, pluriel de anou, voir ce mot.

*Ourane*, grand lézard, 33, 34, 122, 123.

Sacs des Touareg (pour les différents termes, voir page 95).

*Sebkha*, étendue plate, 27, 64.

*Tabrakat*, tamaris *(articulata)*, 38, 95.

*Tachili*, vipère, 33.

*Taguel moust*, voile bleu usagé, 99, 139.

*Tahla*, arbre, 22, 24, 27, 30, 71, 82, 126, 138.

*Talhi*, sorte de roseau, 19, 75, 76, 89, 90 (voir berdi).

*Takamezout*, plante médicinale, 30, 110.

*Takouba*, épée (pour les différentes sortes d'armes voir p. 101 et suivantes, 129, 139, 140, 145, 151).

*Tamadjouhit*, argile rouge, 87.

*Tamat*, arbre *(acacia torbilis)*, 87.

*Tanout*, puits servant à l'irrigation des jardins, 29, 73.

*Tassilis*, montagnes, 12, 13, 19, 20, 23, 24, 27, 28, 30, 32, 38, 42, 53.

*Tebourak*, arbre produisant des Ibourarem : fruits comestibles, 30.

*Tehounek*, bois de chauffage, 95.

*Tendi*, mortier, 66, 93, 97, 121, 129, 140, 141, 142, 144.

*Terfes*, truffe saharienne, 30.

*Tessout*, vache, 84.

*Thora*, voir kranka.

*Tiggert*, écoulement d'eau, 24.

*Tiksal*, terre vierge, 70, 71.

*Tiloit*, rongeur *(cterodactylus gundi)*, 32, 107.

*Tin*, argile, 89, 90, 91.

*Tinat*, femme d'artisan, 55, 57.

*Tiousse*, impôt, 48 et suivantes.

*Tirsi*, chèvre, 83.

*Tittar n'takouba*, fourreau de sabre, 57.

*Tobol*, tambour de l'amenokal, 45.

*Zembebar*, scarabée vert, 34.

[p.200]

# Preface

In this book I aim at the combination of historical and functional methods of anthropology to analyse the development of Tuareg culture with particular reference to food-producing activities. I do not, therefore, present all my Tuareg material. 121

My general anthropological outlook is doubtless largely due to my training under influential scholars of historical and functional methods. I was introduced to historical methods at the University of Copenhagen by Dr. Kaj Birket-Smith, who taught with that caution and sense which must be the foundation of all anthropological science. His strict demand that anthropology must proceed on the basis of knowledge forms the most valuable part of my whole anthropological training, and for this I express to him my sincere gratitude. 114

I freely admit that I am much attached to the traditional methods of Danish anthropology. Among its scholars I am greatly indebted also to Professor C. G. Feilberg with whom I have a large field of interests in common. From the very day I began my studies in Copenhagen he offered me all possible help in discussing with me the major problems of cultural history in the Near and Middle East, and in Africa, and using much of his spare time to teach me Arabic. His detailed study on the black tent and its history forms an important cornerstone for my chapter on Tuareg tent development.

When I began my studies in Copenhagen Professor Feilberg acted as curator in the Danish National Museum where, like other students of these days, I was generously helped by the curator, Jens Yde – my closest friend. Though his main field of interest is the Indians of the Americas, he has also a surprisingly comprehensive knowledge of African cultures. I hold in very high esteem Mr. Jens Yde's scholarly realistic outlook which has been extremely stimulating to my own work. I express my gratitude also to Dr. Helge Larsen, leader of The Ethnographical Collection of The Danish National Museum, and to the curator Mr. Werner Jacobsen.

My interest in functional anthropology dates right back to my University years in Copenhagen. For though Danish anthropology is in the main historical, it was Dr. Birket-Smith's demand that students should read the important works of such functional or social anthropologists as Malinowski, Radcliffe-Brown, Firth, Evans-Pritchard, and others. But most knowledge I have of functional anthropology came to me under a two years' study, granted me by The British Council, at The University College London with Professor C. Daryll Forde as my principal teacher. I wish to acknowledge my sincere gratitude for his unusual kindness and valuable help during my stay in London, and for his readiness to consider any problem in the light of his very deep and versatile knowledge. In this book I acknowledge his clear view of the problems connected with the development of food-producing activities advanced in 1934 when many scholars were shooting in the dark.

[p. vii]

[p. vi is blank]

114 My gratitude to Dr. Phyllis Kaberry, who acted as my supervisor during my London studies, is not easily expressed in words. Nobody has taken so profound an interest in my studies as Dr. Kaberry, and if my descriptions of economics and political systems contain views of any value this is due largely to her extreme interest in my Tuareg material. Much of my later field-work among the Tuareg has also been carried out along lines suggested by Dr. Kaberry.

My stay in London was indeed a fruitful one as I was also able to attend lectures and seminars by Professor Raymond Firth and Professor I. Schapera, and to benefit from the rich knowledge of East African cultures possessed by Mr. G. W. B. Huntingford of The School of Oriental and African Studies.

121 I try to reconstruct history within the limited area of Northern Africa occupied by the Tuareg. In [127] doing so I use methodologies of different anthropological schools, and also include material available from written sources, from Tuareg traditions, and from archaeology. I feel confident that my procedure is justified, but present it to the reader's judgement with a quotation from the great anthropologist E. E. Evans-Pritchard, who speaks about the rejection of the reconstruction of history by functional anthropologists as follows: "A case can be made out for this rejection, though not in my opinion so strong a case as is usually supposed, for all history is of necessity a reconstruction, the degree of probability attending a particular reconstruction depending on the evidence available" (Evans-Pritchard 1962, p. 21).

114 The real foundation of my book is the field-material I have been able to gather during eight journeys 122 to Northern Africa. I made the first two short trips on my own account, while later journeys were paid by Danish foundations, notably by *Statens Almindelige Videnskabsfond, Carlsbergfondet, Rask-Ørsted Fondet, Knud Rasmussen Fondet*, and by grants from the University of Copenhagen. I have also been supported economically by The Danish National Museum and by The Museum of Prehistory in Aarhus, which museums now contain my collections of ethnographical sepcimens. My first Tuareg journey carried out in 1951 owes its beginning to economic and moral support from the former leader of the Aarhus Museum, Professor P. V. Glob, now Director-General of the Central Office and of the Museum of National Antiquities in Denmark. My journey to the Tuareg of Ahaggar and Ayr 1954-55 was partly paid by The University College London on the very kind initiative of Professor Daryll Forde.

122 I express my sincere thanks to the above-mentioned institutions and their directors.

The results achieved on my journeys are due largely to friendly help rendered me by the Algerian administration and the administration of the Niger Republic in Niamey and at Agadez. In Algeria I met at an early date Mr. Pierre Bataillon and Mr. Josef Kniebihly of the Civil Administration at Djelfa. They willingly offered me their friendship and did everything to help me during the three weeks of 1947 when I suffered very greatly from malaria. On my journeys to the Ayr Tuareg I have been very kindly assisted by all governmental offices, and I thank heartily Mr. G. Feral, formerly civil governor of the Cercle d'Agadez, Mr. J. Demonceau, Mr. Claude Gardin, and Mr. and Mrs. Bernus of the IFAN at Niamey.

My two Danish friends, Niels Wismer, Norwegian Vice-Consul in Algeria, and Clas Wismer have been of outstanding importance for all my journeys among North African pastoralists. They supported me morally and practically every time I came to Algiers, and they gave me their friendship which I treasure most highly.

I also acknowledge with grateful thanks the valuable help of the Danish Consulate of Algeria under the leadership of the Vice-Consul, Mr. E. Hartvig. 122

The valuable North African collections preserved in the Musée de l'homme, Paris, Musée d'Ethnographie et de Préhistoire du Bardo, Algiers, and in the Musée de la ville de Neuchâtel have been of extreme importance to my studies, and I wish to thank sincerely the directors of these museums for their kindness in allowing me free admission to all interesting objects. I thank the Musée de l'homme for its courtesy in permitting me to reproduce the illustrations Figs. 62, 75 & 88. For the photograph Fig. 254 I am indebted to the courtesy of Dr. Erik Smidt, Copenhagen. 127

Anthropology necessitates co-operation with many other sciences, and this I have often experienced when working on my book. I wish to thank sincerly my friend Mr. K.-G. Prasse for his readiness to let me benefit from his profound knowledge of all structural problems connected with Tuareg language and other Berber dialects. He has kindly undertaken the work of checking the spelling of Tuareg words used in this book, and I owe him much for discussions about the meanings of such Tuareg words that may be important from a culture-historical viewpoint. I also thank my friend Dr. Hans Helback of The Danish National Museum for his assistance on problems connected with cultivated plants, and the veterinary surgeon Mr. Niels Grunnet for his comments on Tuareg stock-diseases. 114

I wrote this book in English which was kindly corrected by Major C. L. Bayliss of The British Embassy in Denmark. As to the drawing of diagrams, maps, etc., they are made by Mr. Arne Morell Nielsen whose readiness to help a friend is unrivalled.

The book was written mainly during eight months of 1961 and nobody has rendered me so much real help as my wife Ida.

I cannot in this way convey my heart-felt thanks to Tuareg friends, but my thoughts are among them with my brothers of the Aguh-en-tehlé and the Imezzureg tribes.

# Introduction

This book is the result of several years' study of North African pastoralism. My interest in this subject began under climatic conditions rather different from those of North Africa. In the winter 1945–46 I journied on skis through Northern Sweden, Finland, and the Norwegian Finmark. For about three months I lived among the Lapps, and, watching the techniques of reindeer-breeding, I became very interested in the problems connected with the history and evolution of stock-breeding. Shortly after my return from this trip I began to study anthropology in the University of Copenhagen under Dr. Kaj Birket-Smith, and as the main subject of the degree of M.Sc. acquired in summer 1950, I chose pastoral cultures of the Near and Middle East. I had already then made two short journeys to North Africa. 114 121

(1) In summer 1947 I spent about three months in Central Algeria to investigate Arab nomads in the steppes of the High Plateau and the adjacent parts of the Sahara. I travelled around the towns of Djelfa, Zenina, Aflu, Laghwat, and Ghardaya. I had little money at my disposal and could never afford to engage native assistants or to have a horse or a mule for riding and transportation. I walked through the barren steppes and deserts carrying as my main luggage several bottles filled with water. This journey was certainly not easy, and at its end I suffered very badly from malaria. Nevertheless, I managed to get into contact with camps of nomadic tribes such as the *Ulad Nail*, the *Larba*, and the *Sait Otba*, and for shorter periods I followed them during their migrations towards the south. I also contacted certain semi-nomadic tribes living around Aflu in Djebel Amour of the Sahara Atlas. I did not, however, understand Arabic, and the nomads, who were rather shy and suspicious of Europeans, generally had no knowledge of French. It is evidently most difficult to collect ethnographical material under such circumstances. And if I had not received the very kind assistance of French administrators and officers, of native Arab caids, and of Arabs who had formerly served in the French Army, I should indeed have acquired nothing. The year 1947 followed upon a long period of drought which had caused severe losses to all nomads. Many of them had lost all their livestock, and famine occurred all over pastoral Algeria. The consequences of the drought when at its worst can be illustrated by the following example:— Arriving at Aflu in the Djebel Amour, I discovered a small camp the tents of which apparently belonged to a type constructionally different from those used among Central Algerian nomads. I went to the camp where I was told that it belonged to semi-nomads of the *Adjaletes* and *Ulad Sidi Brahim* tribes. They all suffered extremely from famine, and entering the first tent I found three dying children under filthy rugs. I now concentrated upon the problems connected with this dreadful disaster which seemed to prove the insufficiency of pure pastoralism in the barren countries of North Africa. 114 122 731 [121]

[p. 1]

114 (2) In winter 1950 I visited several *Kabyle* villages in the Djurdjura Mountains, and stayed for some
121 time in the regions which I had already visited in summer 1947. I wanted to gather supplementary material on the consequences of the drought period, and also to acquire some personal knowledge of winter life among nomads. – Part of the material collected 1947 and 1950 has been published (Nicolaisen 1950).

101 On later journeys to Northern Africa I have studied culture and society of pastoral Tuareg:—

114 (3) In summer 1951 I spent about five months (May September) in Ahaggar. I arrived at Algiers
122 from where I travelled southwards by car to make short stops at Djelfu, Laghwat, Ghardaya, El Golea, and In Salah. Reaching Tamanraset in Ahaggar in the month of May, I hired an interpreter
[124] to visit many Tuareg camps of the important vassal tribes *Aguh-en-tehlé* and *Dag Rali* on journeys accomplished by means of camels and donkeys. Part of the time I also lived at Tamanraset where I was visited daily by Tuareg informants. Apart from Tamanraset I visited the following centres of
[12] cultivation:— Tit, Utul, Terhenanet, and I-n-dalag. My investigations concentrated upon economics
[126] and material culture in relation to environment, and about 300 ethnographic specimens were collected. I left Tamanraset for Algiers by plane via Ganet (Djanet), Rat (Ghat), Ft. Flatters, and Wargla.

(4) I returned to North Africa in summer 1952. The length of this visit was about three months and a half. From Algiers I went by train and trucks to Arris in the Aurès Mountains where I stayed for about five weeks among the semi-nomadic Berber-speaking *Chawiya*. I rode through the valleys of this montain massif on a mule, and the journey terminated with my arrival at the oasis of Biskra. From Biskra I went by train to Tuggurt from where I continued by truck to Wargla. I left this oasis by a French military plane for Ganet in Tasilé-n-Ajjer via El Golea, In Salah, and Tamanraset. At Ganet I hired camels and a native guide and went westwards via Ft. Ghardel to Afara, where I had the opportunity to meet the supreme chief of the *Kel Ajjer* living in French territory. From Afara I went up the valley named Aharhar and across the Tasilé Mountains to Éléżi (Ft. Polignac). After a short rest with the French garrison I went northwards to the region of Hassi Issendjel, where I visited various Tuareg camps, notably of the tribes *Kel Terurit* and *Urarren*. I stayed in Tasilé-n-Ajjer for six weeks, and returned by plane to Algiers via Ft. Flatters and Wargla. From Algiers I made a very
[126] short trip to the *Kabyle* of the Djurdjura Mountains. From the Kabyle, the Chawiya, and the Ajjer Tuareg an ethnographical collection of about 70 specimens was made.

(5) From autumn 1952 until summer 1954 I studied social anthropology in University College London under Professor Daryll Forde and Dr. Phyllis Kaberry. My studies in London were interrupted in summer 1953 when I went to North Africa to stay for three months among the Ahaggar Tuareg. I lived most of the time in camps of the vassal tribes *Dag Rali* and *Aguh-en-tehlé*, but I also visited the *Iklan-en-tawsit* and camps of certain *Iseḳḳemaren* tribes, notably the *Iheyawen-Hada*. I also paid a visit to camps of the *Kel Rezzi* Tuareg (*Ahl Azzi*) who descend patrilineally from Arabs, and I spent several days in the camp of the *Amenukal*, that is the supreme chief elected from the dominant noble tribe of *Kel Rela*. Among agricultural settlements visited the most important were Abalessa and Silet –
[121] apart from Tamanraset. My studies concentrated upon social and political organization, but I made
[126] an ethnographical collection of more than a hundred specimens. The journey from Algiers to Tamanraset and return was made by plane via El Golea and In Salah.

7:Nicolaisen E-5 (1951-1962) 1963 .MS25 Tuareg MS25

(6) My sixth journey to North Africa was undertaken 1954–55 and comprised about 14 months' field-work among Northern and Southern Tuareg. I left Algiers by car via Djelfa, Laghwat, Ghardaya, El Golea to In Salah at the beginning of the autumn 1954. At In Salah I bought four camels and hired an Arab guide of the *Ulad Ba Hammu* tribe. After a short visit to his camp we went southwards to the region of the Ahnet Massif where I visited camps of *Kel-ahem-mellen* (a small noble tribe), *Kel-Immidir* (*Isekkemaren*), *Ayt Lowayen* of the *Kel Turha* section, *Kel Rezzi*, and notably the *Kel Ahnet*. Two small camps visited claimed to belong to the noble *Taytok* tribe, but they had no matrilineal relationship to that tribe which is now found in the Tamesna plains west of Ayr. I left Ahnet for Tamanrasset about the middle of December, and in the following months I travelled alone with my camels in Ahaggar as I now knew Tuareg language sufficiently to dispense with an interpreter. Until the beginning of April 1955 I lived in camps of the *Dag Rali* and the *Aguh-en-tehlé* tribes, and passed some days in the *Amenukal*'s camp. I also had a house at Tamanrasset where I could work more peacefully with problems connected with kinship, land tenure, and political organization. In this work I was mainly assisted by two older Tuareg of the *Dag Rali* and the *Aguh-en-tehlé* tribes. Apart from Tamanrasset I visited the following cultivation centres:— Utul, Tahart, Ti-n-amenser, Ennedid, Iglen, Abalessa, Amsel, and Tarhawhawt. – On the 3rd of April, 1955, I left Ahaggar for Ayr together with two Ayr Tuareg who were returning to their camps at Northern Ayr after a caravan journey to Tamanrasset. We travelled south-eastwards via the small cultivation centre Tagnut and thence into the very barren country separating Ahaggar from Ayr. We refilled our six skin-bags with water at the wells of I-n-abeggi and I-n-azawa, and had no water again until we arrived at a fairly large and permanent waterhole (*agelmam*) known as Tamengoyt, situated on the northern outskirts of the Ayr Massif. Close to this place we met the first Tuareg camps of the *Kel Tédalé* who dominate the northern parts of Ayr. The following days we saw several camps of these Tuareg. At last we arrived at the camp of one of my companions who belonged to the *Ikkoberen* tribe though his family was very mixed with *Kel Tédalé*. This camp was situated in the Azel valley, where we stayed for about ten days to regain full strength. Thereupon we continued to *Iferwan* which constitutes the northernmost village of the Ayr Massif. I lived in this village for about three weeks and then I continued towards Agadez together with a Tuareg of the *Kel Akerra* tribe. We visited camps of various tribes on our journey southwards (*Kel Rarus*, *Iforas*). The journey was a difficult one as two of my camels were worn out. We left them in a camp of *Ikojjejiten* Tuareg. This was situated at the Afarak valley from where we continued to Agadez via the small agricultural settlements of Tabeydag, Azzal, and Alarses. From Agadez I went by truck down to Zinder, but returned quickly to make a more complete investigation of the Ayr Tuareg. The situation was now very difficult as my two camels left at Afarak died and I was too short of money to buy a new animal. My financial problems were rather acute and were solved only by the very kind and resolute help rendered me by Professor Daryll Forde of University College London. I was thus able to continue my studies for another six months. I hired a house in Agadez where I could work peacefully, and bought a fine riding camel in order to be able to visit Tuareg camps in the vicinity. The most extensive journey made went to the village of Awderas, north-east of Agadez and close to the Begzen Mountains. On this journey I revisited the small settlements of Tabeydag, Azzal, and Alarses, and visited pastoral camps of the *Iforas*, the *Ikojjejiten*, the *Kel Tamat*, the *Igen-*

101 114 122 *déynen*, and the *Imezzureg*. If not staying in Agadez I lived mainly in camps of the latter tribe, and spent a considerable time in one particular camp. My studies were concluded with a visit to the camp of the *Kel Ferwan* drum-chief north of Aderbissinat. I remained in his camp for about a fortnight and also visited camps of the *Echchikhen* Tuareg and the Fulani who are numerous in this area. I left Agadez by air via Tawa, Niamey, Bamako to Dakar whence I returned to Denmark by ship, and a [126] few days later returned to London to resume my studies at University College. On this comparatively long journey among the Tuareg I did not make any large ethnographical collection, as I could not afford to buy much, but brought back with me about fifty different specimens plus a few archaeological objects.

(7) In 1956 I returned to Copenhagen from London. I was then planning a new journey to North Africa, but for many reasons this had to be postponed until the autumn 1959. The journey was a very short one of only two months. I left Copenhagen by air on the second of August and arrived at Niamey the next day. After a week's stay at Niamey I continued by plane via Maradi and Zinder to Agadez. The day after my arrival at this ancient capital of the Ayr people I was able to join a car expedition organized by Mr. J. Demonceau, who was studying locust migrations, and by Mr. Claude Gardin of the "Peloton Nomade", who was looking for Tuareg camel thieves. We went first to Ingal and from there continued northwards to the village and salt pits of *Tegidda-n-tésemt*. We went further north but stopped at the well of I-n-abanţerit, then going eastwards across the Talak Plains to the western edge of the Ayr Massif. Our journey back to Agadez followed the road through the mountains. Though this journey did not take much more than a week it was of great importance to my studies, as I had for the first time an occasion to see the extensive plains west of Ayr – a region of great economic value to many tribes not only of Ayr Tuareg but also to certain tribes of Ahaggar. On the journey I visited camps of *Idaléyen*, *Kel Tédalé* and *Iforas* (Ayr Tuareg), of [121] *Iregenaten* (Ahaggar Tuareg), and of *Tégehé-n-Efis* (originally Ahaggar Tuareg). In all these camps I collected much valuable material concerning tent structures and economics. – Shortly after my [123] return to Agadez from this brief journey I met a Tuareg of the *Imezzureg* tribe. I knew him well from my visit to Ayr in 1955, and he was in fact my classificatory elder brother. I went immediately to his camp situated not very far from Agadez, and I lived with him and his kinsmen for the rest of the time left at my disposal. During this period the camp was frequently broken and taken to the best possible pastures of annual plants. I left the camp only once for a week when my brother and I made a camel journey westwards to Tegidda-n-tagayt and Tegidda-n-edrar. In these regions we visited several Ayr tribes which I had never been among previously (e.g. *Imezzuren*, *Ijakarkaren*), and we were lucky enough to meet during this journey the supreme chief of the noble *Kel Azel* tribe. We also visited the camp of the drum-chief of the *Kel Geres* Tuareg, who move northwards to Ayr at the end of the rains. I finished my field-work about the sixth of October and was back in Copenhagen by plane via Zinder, Maradi, and Niamey on the tenth. I made a very small ethnographical collection [126] comprising about twenty specimens. My investigations were not concentrated on any particular [121] subject. I acquired valuable supplementary material on such different matters as traditional political systems, kinship, ecology, and technology.

(8) Participating in The First International Congress of Africanists at Accra I had the opportunity

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

to visit Niamey for one week at the beginning of December 1962. Here I studied the very valuable 101
ethnographical collections of The IFAN Museum, and I spent two days in camps of *Bélla* and Tuareg 114
of the *Western Iwllemmeden* east and north-east of Ayoru on the Niger. Of particular value was my 122
visit to a camp of the dominant noble tribe, *Kel Tahabanat*. Its supreme chief *Amuley* and his family [127]
gave me important information on Tuareg culture in this little known area. My visit to Tuareg and [115]
*Bélla* near Ayoru was made possible by the very kind assistance of Mr. and Mrs. Bernus of the IFAN. They put a truck with its driver at my free disposition.

Altogether I have spent almost three years among North African pastoralists – mainly among the 114
Tuareg. This length of time is not so impressive as it may seem, for my investigations have been carried out over an extensive territory ranching from the Mediterranean to the outskirts of the Sudanese savannah. A detailed study of Tuareg ecology and culture necessitates a detailed knowledge of change [121]
and variation in environment within and without the country in which the Tuareg live.

The literature which deals with the Tuareg is very comprehensive as can be seen from the bibliography at the end of this book, but most publications are of very little value and many of them are almost inaccessible.

The Tuareg are first mentioned in literature by Arab authors of the Middle Ages, but most of these historians and geographers did not know the Tuareg country and even the few of them who travelled in the Sahara tell us very little about the Tuareg in early Arabic texts generally called *Muletthemin*, that is "the veiled ones". The most important Arab authors who mention the Tuareg are Ibn Hawkal (10th century), El-Bekri (11th century), Edrisi (12th century), Ibn Batutah (14th century), and Ibn Khaldun (14th century). Ibn Khaldun gives the most intimate description of the Tuareg though apparently he never met them. But they played a very important part in his attempt to recount the ancient history of the North African Berbers. After Ibn Khaldun came Leo Africanus (16th century) who published information gathered by himself on journeys in the Sahara. His book was first published in Italian. There are certain later Arab authors who have contributed to our knowledge of North African cultures and the Tuareg, e.g., Es-Sadi who lived in the 17th century. We must also mention in this connection that there are other valuable Arabic manuscripts, notably those generally referred to as the Agadez Chronicle, which contain much historical material on the Ayr Tuareg (cf. Palmer 1910; 1928; 1936; Urvoy 1934).

The first modern description of the Tuareg was given by Hornemann who travelled from Cairo to Murzuk in 1798. Throughout the 19th century many European travellers contributed to our knowledge of the Tuareg, and it is very important now to have their accounts which derive from a time when traditional political systems were unaffected by European colonization. Among these travellers we should mention such outstanding names as Lyon, Caillié, Denham & Clapperton & Oudney, Richardson, Barth, Duveyrier, Rohlfs, Hourst, Foureau, and von Bary. Lyon gives a very valuable description of the Tuareg who live around Tasilé-n-Ajjer, but by far the most important among these authorities are Barth, who wrote about the *Kel Ajjer*, the *Kel Ayr*, and the *Iwllemmeden*, and Duveyrier, who published an excellent monograph on the Northern Tuareg with particular reference to the Tuareg of Tasilé-n-Ajjer. At the beginning of the present century military posts were established in the Sahara, and literature about the Tuareg became more abundant. Thus Benhazera wrote a good book on

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

114 the Tuareg of Ahaggar who were also visited by other scientists and explorers. The most important work on these Tuareg is the great dictionary edited by Foucauld, who lived several years in Ahaggar until his death in 1916. Later works are those of Lhote and Blanguernon. From the Tuareg of Tasilé-n-Ajjer literature is scarce, but recently good studies on them have been published by Dubief, who has also contributed to our knowledge of the Ahaggar Tuareg. From Ayr we have one early book by Jean, who is often unreliable, while the later book by Rodd contains much valuable material. More recently our knowledge of the Ayr Tuareg has also been extended by the studies of Lhote and Nicolas. The latter author has published a good survey of the tribes and groups inhabiting Ayr and adjacent regions, but Nicolas' most important studies deal with the *Iwllemmeden Kel Dennek* around Tawa. Our knowledge of the south-western Tuareg along the Niger and around Timbuktu (the *Iwllemmeden Kel Ataram* and the *Kel Tademaket*) is unfortunately very sparse. There are only two books to be mentioned, namely those of Aymard and Richer. As to the Tuareg north of the Niger in the mountains of Adrar-n-Foras, they have been described by Cortier, and there is no other important work about them.

Very recently our knowledge of the Tuareg has also been increased by important works dealing more generally with the Tuareg or with particular aspects of their culture, e.g., the works of Lhote, Gabus, and Briggs. But none of these authors has tried to describe in detail Tuareg social organization. Nobody but Miner, who writes mainly on culture and social life of Timbuktu, has published a Tuareg kinship system. This system, which is taken down among the *Bélla* who are the former slaves of the Niger Tuareg, does not seem to be entirely correct in the sense that it does not indicate the true classificatory terms. I may add that I have myself published one Tuareg kinship system incorrectly, namely that of the Ayr Tuareg (cf. Nicolaisen 1959, p. 102). This will be correctly re-published in this book.

Tuareg literature is largely superficial, but there are a few good studies. In some of them you will find information also given in this study. When I mention observations which have also been made by earlier authorities, I do not refer to them in case they may be said to be generally known and made by several authors. Many of the works which I mention in my bibliography are of extremely little value. However, I wish to describe cultural features in detail, and a few interesting notes may be found even in more popular travelling books which are also sometimes furnished with good photographs.

[126] Almost all photographs published in this book are of my own taking or represent objects collected by myself among the Tuareg. Where other pictures are used reference to authorities is given.

# The Tuareg

The Tuareg are Berber-speaking, nomadic stock-breeders who live in an extensive area of Western Sahara and the northern parts of the Western Sudan. The territory dominated by the Tuareg lies between 14° and 30° Northern Latitude and between 5° Western Longitude and 10° Eastern Longitude. 101 131

The Tuareg fall into several main groups which correspond largely to political units. These groups are the following:—

I. *Kel Ajjer*, in the mountains named Tasilé-n-Ajjer in the eastern part of the Algerian Sahara and in adjacent parts of Libya. Northwards they reach Tripolitania and the great sandy desert Erg Oriental around Radames.

II. *Kel Ahaggar*, in the Ahaggar Mountains, in the mountains of Ahnet, Immidir, and Téfedest – and in adjacent parts of the lowland. Certain tribes of the Ahaggar group live in the southern plains of Tamesna between the mountain massifs of Adraɣ-n-Foras and Ayr, particularly around I-n-abanɣerit and Tegidda-n-tésemt.

III. *Kel Adrar*, in the mountains of Adraɣ-n-Foras south-west of Ahaggar.

IV. *Kel Ayr*, in the mountain massif of Ayr and in the plains to the west and south. The Tuareg of Ayr form several semi-independent units of which the more important are the *Kel Ewey*, the *Kel Tamat*, the *Kel Faday*, and the *Kel Ferwan*.

V. *Kel Geres*, south of the Kel Ayr in the plains around Tessawa. Late in summer at the end of the rains they move up to Southern Ayr around the watering places of Tegidda-n-edrar, Tegidda-n-tagayt, and Tafadek.

VI. *Iwllemmeden Kel Dennek*, that is the eastern *Iwllemmeden*, in the plains around Tawa. At the end of the rains they move northwards to the region of Ingal which is within the country of the Ayr Tuareg.

VII. *Iwllemmeden Kel Ataram*, that is the western *Iwllemmeden*, in the plains around Meneka and along the Niger.

VIII. *Kel Tademaket* comprising several tribes and groups of tribes around Timbuktu and Lac Faguibine. Important among these Tuareg are the *Tengerregif* and the *Kel Inteser*. The *Tademaket* Tuareg from about A.D. 1800 were subjected to the *Iwllemmeden Kel Ataram*.

The two former groups, the *Kel Ajjer* and the *Kel Ahaggar*, are frequently referred to by the generic term of *Northern Tuareg*, while the six latter groups living on the outskirts of the true desert and in the Sudanese savannah are known as *Southern Tuareg*. In addition to these groups there are certain small Tuareg groups which in recent times have left their original homeland. After the French penetra- 101 167

[p. 7]

167 tion into Ayr many Tuareg of that region emigrated, and some of them settled as far away as Darfur
[649] where they and their descendants still live near El Fasher. Another emigration took place after the
[162] Tuareg revolt against the French in 1917. Many Tuareg of the *Kel Ayr* and the *Iwllemmeden* fled to Northern Nigeria to settle in villages and towns around Kano and Katsena. According to Rodd about 30.000 Ayr Tuareg fled to Nigéria after the revolt (Rodd 1926a, p. 361).

161 According to statistics for the period 1933–38 the total number of Tuareg living in the Algerian Sahara and to the south in the republics of Niger and Soudan is estimated by Lhote to be about 240.000.

162 They were divided among the main groups as follows:—

| | |
|---|---|
| *Kel Ahaggar* | 4.254 |
| *Kel Ajjer* | 1.508 |
| *Kel Adrar* | 4.223 |
| *Kel Ayr & Kel Geres* | 27.765 |
| *Iwllemmeden* | 161.160 |
| *Tengerregif* | 40.000 |

162 These figures need certain corrections. Thus the *Kel Ajjer* are more numerous than indicated by the
161 above figure, which does not include Tuareg of that group living in Libya. On the other hand the
[567] figure for *Iwllemmeden* Tuareg is much too high; it includes about 94.000 negroid slaves which should be deducted, as slaves are not included in the other figures. Nevertheless, Lhote believes that the actual number of free Tuareg is about 300.000 as the birth rate is on the increase. Thus statistics for 1950 indicate that there are 4.611 fairskinned Tuareg in Ahaggar (Lhote 1955a, p. 157). Nicolas assumes that there are about 500.000 Sudanese Tuareg (Nicolas 1950a, p. Avertissement). This figure is, no doubt, too high. If we assume that there are in all 300.000 Tuareg, we find that the two northern groups *Kel Ajjer & Kel Ahaggar* living in the true desert country constitute about three per cent of the total Tuareg population.*

197 The Tuareg language is known as *tamahak* in the two northern groups, *tamachek* in the south. It has four main branches or dialects, namely 1) *tahaggart* spoken by the *Kel Ahaggar* and the *Kel Ajjer*; 2) *tadrak* spoken by the Tuareg of *Adrar-n-Foras*; 3) *tayri* spoken by the Ayr Tuareg and the *Kel Geres*; 4) *tawllemmet* spoken by the *Iwllemmeden* and other Sudanese Tuareg. Grammatically these four dialects are closely related, but there are important distinctions in pronunciation and vocabulary. The dialects are on the whole mutually intelligible.

212 The alphabet known as *tifinar* is known in all Tuareg groups. It is related to the ancient Libyan script. Several authors have stated that *tifinar* is not so widely known among the modern Tuareg as it was in the past. It is true that certain Northern Tuareg have adopted the Arabic alphabet, but it is very difficult even nowadays to find adult Tuareg who do not know their proper script which is also widely used for letters. This, anyway, is true of the Tuareg groups I have visited, and it must be added that I have never found any proof of the statement so frequently seen in literature that the alphabet is

* Considering the statistics for 1933–38 (240.000 ÷ 94.000) the total number of true Tuareg in 1950 would appear to be lower than 300.000.

Fig. 1. Map of the central parts of the Western Sahara and the adjacent Sudanese [illegible] inhabited by the Tuareg who fall into eight major political groups or federations. These groups, as mentioned in the text, are sub-divided into the politically very important drum-groups. The geographical position of the eight groups is roughly indicated by Roman numerals. The *Kel Tademaket* Tuareg (VIII) from about A.D. 1800 were subjected to the Iwllemmeden Kel Ataram (VII) (cf. Richer 1924, p. 96). Scale, 1 centimetre = 125 kilometres.

known and used particularly by women. There are slight distinctions in the characters of the alphabet 212
used by various Tuareg groups. I here reproduce the characters generally used in Ahaggar (Tasilé-n-
Ajjer) and in Ayr. In transcribing *tifinar* into the Roman alphabet I have on the whole adopted the [104]
system used by Foucauld who has made the most profound studies of the northern dialect (Foucauld
1918-20, 1920, 1925-30, 1940, 1951-52), but certain alterations have been made in agreement with
the proposal of K.-G. Prasse. The Ayr dialect is very badly known. Its grammar and its peculiar [114]
vocabulary has never been studied.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

565 The true Tuareg in most groups fall into several classes as follows:—

619 *Ihaggaren* (sing. *Ahaggar*), or *Imajeren* (sing. *Amajer*). These two words designate the supreme Tuareg class which is generally referred to in literature as "nobility". The term *Ihaggaren* is used only among the Northern Tuareg, while *Imajeren* is employed in Ayr and also among Sudanese Tuareg. The two terms are synonymous, and so-called noble Tuareg are found in most Tuareg groups. However, the *Kel Geres* employ the term *Imajeren* for all true Tuareg. Among the *Kel Adrar* certain tribes claim to be noble, but though these tribes have very much the same position as noble tribes in Ahaggar and in Ayr, they are not recognized as true noble Tuareg by people of other groups.

*Ineslemen* (sing. *Aneslem*). This class is that of *Mrabetin* or marabuts, the religious class established after the introduction of Islam. In most Tuareg groups there are whole tribes of *Ineslemen* under the leadership of their own chiefs, but in Ahaggar there are only a few scattered families. The political position of the *Ineslemen* varies greatly from one group to another. Certain tribes in Ayr which are *Ineslemen* by origin have the same status as the true vassals to be mentioned below, while other *Ineslemen* tribes like the *Iforas* of the *Kel Ajjer* have much the same status as noble Tuareg with the exception that they have no vassals. The *Ineslemen* perform religious duties connected with certain rites of passage. Any Tuareg can acquire the position of *Aneslem* after training in reading the Koran and education in the divine laws under the tutorship of another *Aneslem* or marabut.

[793]

*Echchikhen* (sing. *Echchikh*). This word also refers to people of religious status, and is used almost synonymously with *Ineslemen*. Certain tribes of Ayr (Damergu) have a kind of noble status and possess vassals. The word does not have the meaning of *Echcherifen* (sing. *Echcherif*), which refers to descendants of the Prophet. Individual Tuareg families – particularly in noble tribes – often claim relationship with the Prophet.

*Isekkemaren* (sing. *Asekkemar*). A class which is found only in the two northern groups – particularly among the *Kel Ahaggar*. The *Isekkemaren* Tuareg descend from Arabs, or from unions between Arab men and Tuareg women. They are vassals who have a somewhat different status from that of true vassals, who are mentioned below.

*Iregenaten* (sing. *Aregenat*). This name is not always applied to people of a particular class. It is used as a proper name for one Ahaggar tribe which has its origin from mixed marriages between (noble) Tuareg women and Arabs. In most groups the term *Iregenaten* (*Iregenaten*) is applied to Tuareg descending from unions between noble Tuareg men and vassal women.

212 Fig. 2. The Tuareg alphabet (*tifinar*). The distinctions between Tuareg alphabets of Ahaggar and Ayr are less essential
104 than appears from this list, for some differences are due to the fact that the Ahaggar Tuareg for certain letters prefer
184 an edged form, the Ayr Tuareg a curved one. But both forms are known to all Tuareg. The Ahaggar Tuareg normally write from the right to the left like the Arabs, while the Ayr Tuareg consider it correct to write the letters in vertical rows from bottom to top. It can be seen from the list that the Ahaggar Tuareg have an alphabet of 25 consonants while the Ayr Tuareg have only 21. At the end of words the Tuareg sometimes indicate vowels with a dot, which may stand for any vowel. This simple vowel letter is known to the Ahaggar Tuareg as *tagerit*, to the Ayr Tuareg as *tetemokit*. The dialect of the Ayr Tuareg is very little known and most Ayr words mentioned in this study have never been published previously. Even my collection of Ahaggar words seems to contain terms lacking in Foucauld's dictionaries. For certain geographical names the mode of spelling is in accordance with that generally used for geographical maps.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

565 619 *Imrad* (sing. *Amerid*). People of this class are sometimes called "serfs" in literature, but the word "vassals" is also used. I prefer to use the latter term, but add that the word *Imrad* is most difficult to translate into an European language. The vassal class is represented in all groups with the exception of the *Kel Geres*. Among the Northern Tuareg and also among the *Iwllemmeden* the word *Kel Ulli* (sing. *Agg Ulli*) is used synonymously with *Imrad*. Among south-western Tuareg around Timbuktu the word *Dagu* or *Dagu* is also used to designate vassals. The *Imrad* class is by far the most numerous in most groups. The relationship between these vassals (*Imrad*) and the noble Tuareg (*Ihaggaren*, *Imajeren*) forms the basis of most political systems which are described later (p. 393 ff.).

101 565 Members of the above-mentioned classes are true Tuareg, though the word *Ineslemen* is also used for marabuts of other peoples and for marabuts of various black-skinned castes found among the Tuareg. Among the Northern Tuareg all people of the above-mentioned classes with the exception of certain *Ineslemen* or marabuts are called *Imuhar* (sing. *Amahar*). The Ayr Tuareg have no such common term to designate the people known to us as *Tuareg*, but occasionally they use generically the word *Imajeren* though strictly speaking this term should be reserved for Tuareg of the supreme noble class.

101 The word *Tuareg* (sing. *Targi*) is never used by the Tuareg themselves, but by Arabs. Duveyrier claims it to be derived from an Arabic word of the root *terek* meaning "to abandon". The meaning of the word accordingly should be "those abandoned (by God)", and should refer to the fact that many Tuareg do not follow Islamic rules very strictly (Duveyrier 1864, p. 317 f.). The same explanation has also been given to me by an Arab of the *Ulad Ba Hammu* tribe of Tidikelt. However, the origin of the word "*Tuareg*" is perhaps a different one: – It may be related to the word *Targu* (Ayr) or *Turga* (Ahaggar and Tasilé-n-Ajjer), which name is used by the Tuareg to designate the part of the Sahara generally known to us by the Arabic word *Fezzan*. This is very likely, as we know from Arab authors of the Middle Ages that the word *Targu* or *Turga* was then used as a name for a very important Tuareg group living in that area and adjacent regions (cf. Benhazera 1908, p. 83 f.; Foucauld 1951 52, II, p. 534; Rodd 1926a, p. 273 f.).

142 144 The Tuareg are fair-skinned people who in certain regions and particularly in the south have mixed with Negroes. The Northern Tuareg are predominantly fair-skinned, and many of them are as "white" as Europeans though perhaps a little yellowish or brownish. It is difficult to determine their exact skin colour because they are burned and tanned by the sun and the hot wind characteristic of desert [291] climate. In addition, the Tuareg wear clothes dyed with indigo which comes off on the body, and they [518] rarely wash. When I lived among them my own skin-colour and that of the Tuareg were practically identical. Among the Ayr Tuareg there are also many fair-skinned people, but the Ayr Tuareg are more mixed with Negroes than the Northern Tuareg, and most *Kel Ewey* are predominantly negroid. Very mixed also are the *Kel Geres* and the same seems to hold for other Tuareg groups of the south. A few blond individuals have been recorded from the *Kel Aijer* living around the oases of Rat and Radames, and they may be the offspring of unions between Tuareg women and caravan traders of the north (cf. Lhote 1955a, p. 162 f.). The blond individuals met in Southern Ayr are the offspring [648] of the fairly numerous marriages between Frenchmen and Tuareg women, but it is claimed that a few years ago a very blond girl was born to parents of families which had never contracted marriages

142 with the French. I have myself never seen a genuine blond Tuareg, but I have met a few albinos though
144 albinism seems to be rare. These observations agree with those of Lhote (1955a, p. 163). All the Tuareg
[143] I have seen had curly or straight black hair, and dark brown or almost black eyes. Many individuals had fairly broad faces with protuding cheeks which gave them superficially a mongoloid appearance,
142 while others had features more like Mediterranean Europeans. In literature the Tuareg are generally described as very tall people. I did not myself carry out anthropological measurements, but will not hesitate to state that in my opinion a great many Tuareg are far from big. Very many adult men in the groups I have visited were considerably shorter than myself (1.73 m). Tuareg men are generally dry
[147] and meagre, bearing the stamp of their roaming life in the desert. Their most outstanding quality is
[157] that of endurance and contempt of hunger and hardship. The appearance of Tuareg women is often quite different – they tend to grow fat. This is probably to some extent due to the fact that married
826 women spend most of their life in the tents and get little physical exercise. But fatness is also a sign
832 of feminine beauty, and some women make a great effort to grow fat by drinking milk or eating
[261] certain fattening plants (cf. p. 177, 178). According to some Tuareg fat women symbolize wealth – large flocks and herds, and much milk – but many Tuareg also say that they prefer fat women because they

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

826 get more sexual satisfaction from intercourse with them. "A fat woman is like a woman who has never
832 known a man", they say. Some women are steatopygous though never to the same extent as women
142 among the Bushmen and the Hottentot. Very comprehensive studies of Tuareg physical anthropology
114 are lacking. Readers are referred to the chapter written by Lhote who has also published a brief bibliography of studies on this subject (Lhote 1955a, p. 158–170, 433), and to the recent and valuable publication by Briggs (Briggs 1958, p. 163 ff., 183 ff.).

291 The custom of Tuareg face veiling has attracted the curiosity of many scholars and travellers. Much has been written about the fact that Tuareg men wear a veil (*tagulmust* in Ahaggar, *tagulmust* in Ayr) while their women are unveiled in contrast to Arab custom. There have been given various explanations of the origin of the custom of Tuareg face veiling. Most authors refer it to hygienic conditions: the veil protects the face from sand and dust, and it prevents mouth, nose, and throat from drying up in hot weather. The fact is that the veil has the latter function, and Arab bedouins of the Sahara will also frequently veil their faces during journeys in the hot season. But the hygienic explanation is definitely not the reason why the Tuareg also veil themselves in many situations where face veiling is unpractical and unpleasant. Another explanation of the custom of face veiling is that the veil may perhaps have certain religious or magic functions. This explanation is apparently also insufficient. A
[254] few Tuareg have claimed that the veil may yield protection from persons having an "evil eye" or an
291 "evil mouth" - beliefs known in Ahaggar as *tehof*, in Ayr as *tagarchet*. But as I have stated elsewhere
576 (Nicolaisen 1957a, p. 112; 1961, p. 114) the proper function of face veiling seems to be a social one.
[609] Many Tuareg will leave their face uncovered in family camps or on journeys, but they will always
[604] cover mouth, nose, and brow in the presence of foreigners (particularly foreign women) and in the presence of their parents-in-law (particularly their mothers-in-law). Towards such persons it is also considered very indecent to show one's legs. It has been overlooked by most authors that Tuareg women wear a head-cloth (*ekerhey* in Ahaggar, *adalil* in Ayr), which is similar to the veil worn by men in form and shape. The headcloth and the veil are properly made from Sudanese indigo cotton, and both the veil and the headcloth are therefore also known as *alechehu*. It is true that Tuareg women
[609] do not veil their face by means of this headcloth in the same way as do the men. But in the presence
[604] of foreigners (particularly foreign men) and towards fathers-in-law the women will draw their headcloth over their mouth (cf. Fig. 297*a*). The man's veil and the woman's headcloth have identical social functions which is also proved by the fact that young men and women adopt veil or headcloth at initiation (Ahaggar), or at marriage (Ayr). Both the veil and the headcloth are worn by people of various black-skinned castes of Tuareg country but the custom of face veiling seems to be more strictly observed among the true Tuareg.

181 The custom of face veiling is one characteristic of all Tuareg. Another quality peculiar to all Tuareg, and particularly to those of the noble class, is their "snobbishness" as it is frequently called by many Frenchmen living at Tamanrasset and Agadez. There are a great many things a Tuareg cannot do, and there are many situations in which he will have to act in a very special way if he is to be regarded as a man worthy of respect and prestige. Tuareg attitudes to etiquette are not easily described in words. Gait, gestures, and postures are all intended to express qualities of elegance, arrogance, refinement, and strength. Vanity with regard to dress and ornaments is another characteristic of all true Tuareg.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

291
565

[144]

Fig. 5. Veiled vassal Tuareg. Ayr, the *Imezzureg* tribe.

Fig. 6. Irrigation farmer of the *Ibureliten*, that is descendants of mixed marriages between fair-skinned Tuareg and Negroes. The man is patrilineally related to the noble *Tayiok* tribe, matrilineally to slaves. Ahaggar, Amsel.

181 and there are indeed many Tuareg both in Ahaggar and in Ayr who wear Islamic amulets which are believed to make the wearers look "great and important". "Prestige" is constantly in the mind of all Tuareg who are much more sophisticated than other people living within their country.

181 Most true Tuareg are nomadic stock-breeders who will not engage in the strenuous work of irriga-
433 tion agriculture. The Tuareg will readily engage in any strenuous work connected with stock-breeding,
461 caravan trading, and in the past also in raiding expeditions, which were organized by people of the nobility, but agricultural work is generally much despised. However, there are in all groups certain families or tribes the members of which subsist predominantly by agriculture, and are nevertheless considered true Tuareg by pastoralists. These agricultural Tuareg will be mentioned in a later chapter,
564 and we shall now pass on to a brief description of various negroid castes and of other non-Tuareg
567 people living within the boundaries of Tuareg territory:—

*Iklan* (sing. *Akli*). These are the proper slaves who are very negroid. Nicolas believes that the word *Akli* (pl. *Iklan*) is in fact derived from a k-l root meaning "to be black" (Nicolas 1950a, p. 189), but

142
302
565

Fig. 7. Tuareg boy of the vassal tribe *Imezzureg* in Ayr.

564 567 Foucauld states that it does not refer to black skin-colour but only to membership of a particular caste (Foucauld 1951–52, II, p. 787). However, Tuareg slaves are Negroes taken during raids and warfare in the Sudan or bought from slave markets in Sudanese towns and cities. The Sudanese origin of slaves is also indicated by the Ahaggar word *Ibenheren* (sing. *Ébenher*), which term refers to a slave who speaks only a Sudanese language. It is frequently used by Northern Tuareg as an abuse of their [648] slaves, particularly of slave children. Among the Northern Tuareg slavery is still practised with the tacit consent of the French military administration. Most Tuareg of Ahaggar and Tasilé-n-Ajjer have slaves to take care of flocks and herds and to perform various domestic tasks. These slaves live in pastoral camps of the Tuareg, and in Ahaggar they have frequently told me that they felt superior to the black-skinned agriculturists though the latter largely descend from freed slaves. In the Southern [649] Tuareg groups slavery is officially abolished, perhaps because the Southern Tuareg are governed by civil administrators. But it seems as if the official abolition of slavery in the south was also a result of the Tuareg revolt against the French 1916–1917, and very few Ayr Tuareg have slaves nowadays. However, the manumission of slaves is not just a recent phenomenon due to European influence. Slaves have been freed long before the advent of French colonization at the beginning of our century. There are in the south whole groups of slaves who have been manumitted at an unknown date in the past, and these people are known among the Ayr Tuareg by the term *Irawélen* most of whom are nomadic stock-breeders culturally akin to true pastoral Tuareg. They are also known by the Hausa term *Buzu*, which term again corresponds to the Sonray word *Bélla*. This latter word, however, may sometimes refer also to people who are considered a kind of slaves by the Tuareg. Nicolas divides the freed slaves among the *Iwllemmeden* into three groups, viz. *Ikian-n-Egef*, *Irawelan*, and *Iderfan*. The two first groups comprise pastoralists also known as *Buzu*, or *Bélla*, while most members of the last

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

group are sedentary agriculturists (Nicolas 1950a, p. 190). In Ahaggar most freed slaves have become incorporated in the negroid caste now to be mentioned. 564 567

*Izeggaren* (sing. *Azeggar*). This term designates the caste of agricultural Negroes known to the Arabs as *Ḥarratin* (sing. *Ḥartani*). In Ahaggar this caste has a rather mixed origin. It did not exist in this 564

291 301 565 751

Fig. 8. Vassal woman with amulet cases and snail-shells hanging around her neck. Ahaggar, the *Ajuh-en-ishil* tribe.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

564 region until about a hundred years ago. During the reign of the Ahaggar *Amenukal Elkhaj Akhmed*
[463] (1830–1877) black-skinned agriculturists of the Tidikelt oases immigrated to Ahaggar to cultivate
[567] gardens on behalf of the pastoral Tuareg. The agriculturists of Tidikelt when settled in Ahaggar were joined by many Tuareg slaves (*Iklan*) who are now free and known as *Izeggaren*, or *Ḥarratin*, like the
[191] immigrants. People of this particular caste, as a result of its mixed origin, are frequently bilingual, speaking Arabic as well as Tuareg language (*tamahaq*). The *Izeggaren* (*Ḥarratin*) are generally less
[144] negroid than the slaves. They are racially very mixed and many of them have certain europid features.
[142] Their skin-colour is less frequently black than dark brown, and the name *Izeggaren* (sing. *Azeggar*) refers to that particular colour. An agricultural caste identical with that of *Izeggaren* does not seem to exist in other Tuareg groups, but a negroid agricultural population of the Ṛat oasis known as *Ikewweren* apparently has much the same status. A few families of the agriculturists living at Abalessa in Ahaggar claim descent from *Ikewweren* immigrants.

[561] *Kel Ĝanet* (sing. *W' Ĝanet*). This word refers to the inhabitants of the Ĝanet (Djanet) oasis in Tasilé-
[144] n-Ajjer. The population of this oasis is a very mixed one. Negroid types are prevalent but fair-skinned
[565] europid types are not uncommon. In Tasilé-n-Ajjer the *Kel Ĝanet* have much the same position as Tuareg vassals (Imṛad), while in Ahaggar, where there are *Kel Ĝanet* immigrants, their status is rather
[567] like that of other sedentary agriculturists mentioned above. In their homeland the *Kel Ĝanet* may possess slaves like other Tuareg vassals, but those living in Ahaggar are never slave-owners.

564 *Ineden* (*Ineden* in Ahaggar) (sing. *Ened*). These are the blacksmiths who are found in all Tuareg
326 groups. They form a very important caste as Tuareg craft is little developed. The Tuareg obtain their weapons and many other implements from the blacksmiths who also make silver ornaments for Tuareg women. If it were not for the blacksmiths the Tuareg material culture would indeed be a poor one. People of the other black-skinned castes are also highly dependent upon the blacksmiths who make hoes, sickles, and the like. In the two groups of Northern Tuareg there are very few blacksmiths – only
[162] a few families who live in agricultural settlements. In Southern Tuareg groups blacksmiths are very numerous, and many of them lead a pastoral life similar to that of the true Tuareg. The origin of the
564 blacksmith caste is unknown. Many blacksmiths claim their ancestor or patron saint to be *Sidna*
173 *Dawud*, that is "Our Lord David", who is said to have lived in an eastern country near Mekka. This myth intimates Jewish descent and it is a fact that there are many Jews among smiths and goldsmiths in Northern Africa and in the Middle East. This is well documented in literature (cf. Nicolaisen 1963). A relationship between Tuareg blacksmiths and Jews is also in accordance with two traditions told about the immigration of blacksmiths to Tuareg countries:— 1) According to a tradition collected by Lhote, the blacksmiths descend from Jews who originally lived in the oasis of Tementit in Tawat. At the end of the 15th century they were driven southwards by the Arabs (Lhote 1955a, p. 210 f.). 2) A tradition collected by Foucauld claims the blacksmiths to be Jews from Morocco. They followed Berber-speaking tribes from that area on their southwards migration along the Atlantic coast (Foucauld 1951–52, III, p. 1300). These traditions are interesting and they do not disagree with the fact that most blacksmiths among the Northern Tuareg comparatively recently have immigrated from Ayr and
564 Adṛaṛ-n-Foṛas. It is difficult to state the original racial position of the blacksmiths. Though most of
144 them are predominantly negroid there are also rather europid types among them, and Tuareg of Ayr

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

291

565

[184] Fig. 9. Vassal woman with her child straddling over the right hip. The Tuareg generally carry their children in this way though certain Ayr Tuareg have adopted the Sudanese fashion of carrying children on the back. Ahaggar, the *Aḫsh-en-tehli* tribe.

544 144 have expressed as their opinion that the blacksmiths originally constituted a fair-skinned Tuareg population who mixed with black-skinned Sudanese people like so many true Tuareg. It is interesting 564 198 that Tuareg blacksmiths have a peculiar language of their own known as *ténet*. This language has unfortunately never been studied. It is used by the blacksmiths mainly as a secret language spoken when they do not want other people to understand them, whereas blacksmiths use Tuareg (*tamaḫeḳ*) as their family language. The Ayr Tuareg consider the *ténet*-language an invention of the blacksmiths.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

142
291

564

Fig. 10. Young man of the sedentary *Kel Ganet* of Tasilé-n-Ajjer. He is yet too young to wear the veil which is used also by these Tuareg-speaking people of Ganet.

Fig. 11. Unveiled blacksmith. His racial features are predominantly negroid though his skin colour is yellow-brown rather than black. Ahaggar, Abalessa.

564
198
[192]

From Ayr Tuareg who had much contact with blacksmiths I collected the following words of *ténet* language:—

| *ténet* | *tamachek* | *English* |
|---|---|---|
| *wochimbagen* | *ineden* | blacksmiths |
| *wosilkum* | *echink* | porridge |
| *tikulkumin* (pl.) | *tikammarin* | cheese |
| *ohundegan* | *aman* | water |
| *ogera* | *éṛef* | head |
| *tokonderey* | *timezzugin* | ears |
| *tedroragen* | *titawin* | eyes |

Prasse is of the opinion that the secret language of the blacksmiths is a kind of slang consisting of circumlocutions of everyday words, but derived from nothing but the local dialect itself. He suggests the following tentative interpretations of some of the words I have noted:— *wa chenbeyen* = "the blackheaded one"; *wa s ilkem* = "the one it follows" or: "sticks to"; *agera* = "leather bag".

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

The Ayr Tuareg say that the blacksmiths do not have *iénet* words for everything, but always use 564
Tuareg words for certain objects and animals. It is in fact possible that the *iénet* language has been 198
created by the blacksmiths to be used as a secret language. This explanation agrees excellently with
the social position of blacksmiths. They make weapons, ornaments, household implements, and the 564
like for the Tuareg. The Tuareg therefore consider them indispensable, and admire them for their
skill. But this is only one aspect of the Tuareg attitude towards blacksmiths who are also looked down [578]
upon because of their obscure origin and their predominantly negroid appearance. Furthermore,
blacksmiths are frequently wearisome to the Tuareg. They claim gifts from the Tuareg on every [431]
possible occasion, and if they are given nothing when they ask it is believed that they can do severe
harm to the persons from whom a gift is claimed. For the blacksmiths possess a mystic power known 564
to the Ayr Tuareg as *ettama* or *tezma*. This mystic power has nothing to do with black magic. It comes 754
into action automatically without any physical performance by the blacksmith if his demand is ignored.
The *ettama* power is dangerous to children and to animals but not so much to adults. Children
frequently fall ill with a swollen belly, while the effect on domestic animals is more severe and often
causes their death. Though blacksmiths do not perform any physical act to put their mystic power
into operation, they are nevertheless held responsible for damage ascribed to it by the Tuareg. This
can be illustrated by the following example from Southern Ayr:— An Ayr Tuareg was on his way
from Damergu to Ayr with a caravan of camels loaded with millet. One evening at dusk, when he was
just about to lead his camels out for grazing at night, a blacksmith came to him to ask for a gift of
millet. The Tuareg said that the blacksmith had better wait until next morning as it was already
getting dark. The blacksmith went away, and shortly after his departure one of the Tuareg's camels
fell ill and died. The Tuareg was convinced that the death of his camel was due to the blacksmith's
*ettama* power, and therefore wanted revenge. He mounted a camel, pursued the blacksmith and killed
him with an axe. This event happened only a few years ago. It illustrates how firmly many Tuareg
believe in the evil *ettama* power of blacksmiths. In fact many Tuareg openly declare that they dislike 564
and fear all blacksmiths. They do not like to associate with them except on festive occasions when [578]
blacksmiths frequently act as singers and musicians. The Tuareg never intermarry with people of the
blacksmith caste, and even people of other negroid castes are reluctant to intermarry with blacksmiths.
In Ahaggar a marriage may be contracted between blacksmiths and *Ḥarratin*, and in Ayr there are
said to be a few marriages between blacksmiths and people of other negroid classes or castes. But on
the whole the caste of blacksmiths (*Ineden*) can be characterized as endogamous. This is quite natural [754]
in view of the fact that blacksmiths possess the evil mystic power (*ettama*, or *tezma*), which I have
described in more detail elsewhere (Nicolaisen 1961, pp. 134 f., 146).

Between fair-skinned, true Tuareg and other black-skinned castes but that of the blacksmiths, 563
marriages are contracted now and then, and it seems as if mixed marriages of this type are becoming 582
more and more numerous. In Ahaggar there are some marriages between Tuareg and women belonging
to the castes of slaves (*Iklah*) or sedentary agriculturists (*Ḥarratin*, or *Izeggaren*) and there are even
marriages between fair-skinned Tuareg women and negroid men though such marriages are less
frequent. Mixed marriages are even more frequent in Ayr. The offspring of such unions are known in 563
Ahaggar and Tasilé-n-Ajjer as *Iburelliten* (*Aburelli*). This word is also known to the Ayr Tuareg, but

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

291
564

Fig. 12. Blacksmith woman. Ahaggar, Abalessa.

563 they more frequently refer to mulattoes as *Ichardanen* (sing. *Acharda*). Such mulattoes do not form any particular class or caste.

It is stated in almost all writings on the Tuareg that the offspring of mixed marriages will acquire the social status of their mothers, but though this may be theoretically true in some Tuareg groups actual conditions are more complicated. Among *Ineslemen* Tuareg and generally in southern Tuareg [564] groups there is a strong tendency to acknowledge patrilineal affiliation. In Ahaggar classes and castes [565] should ideally be matrilineal organizations. However, this is not always so. A man who descends from a vassal mother and a noble father will not become a true vassal. He will not have to perform any of the obligations characteristic of the vassal class, and to-day he is normally considered noble 563 though he cannot succed to chieftainship in his father's tribe. If a pastoral Tuareg marries a woman 591 of one of the black-skinned castes the children who grow up in the father's camp will frequently remain there as pastoralists and members of their father's tribe. Conversely children descending from a black-skinned father of an agricultural settlement and a fair-skinned pastoral woman will often remain in the settlement to practise agriculture even after their father's death. As to offspring of marriages between Tuareg men and slave women, they will continue to live in the father's tribe as pastoralists, and will frequently acquire the social position of the father as mentioned later in the description of Tuareg slavery. Mixed marriages between fair-skinned Tuareg and people of black-skinned castes constitute a minority. But it seems as if such marriages are on the increase.

101 All the above mentioned peolpe are Tuareg-speaking though part of the sedentary agriculturists of 563 Ahaggar (*Harratin*, or *Izeggaren*) have Arabic as their mother tongue. In Ahaggar there are also many [197] true Arabs – particularly at the administration centre of Tamanrasset. There are also Arabs at certain other villages in Ahaggar, and there are Arab pastoralists. They have largely mixed with the Tuareg, and certain Arab pastoralists such as the *Ahl Azzi* (*Kel Rezzi*) should be classed rather with Tuareg than with Arabs. There are also some Arabs in Ayr. There are Arab traders at Agadez, Iferwan, and Ingal, and there are a few Arab pastoralists who have mixed with pastoral Tuareg of Northern Ayr.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

But pastoralists of Arab descent are limited to a few scattered individuals or families in the Ayr area in contrast to the extended Sudanese country around the Niger, where whole pastoral tribes claim patrilineal descent from Arabs, while matrilineally most of them are Tuareg. 101 563

There are many other people within the extended country inhabited by the Tuareg. Very important in the south is a numerous population of Hausa-speaking Negroes. The so-called *Imeggedezen* (sing. *Ameggedez*) of Agadez speak Hausa which language is spoken by various other sedentary people of that region and further south. There are also a few Sonray-speaking people at Agadez, and Ingal further west is predominantly inhabited by Sonray-speakers known to the Ayr Tuareg as *Isaweren*. The Sonray, as is well known, are now found almost exclusively along the Niger, but Ayr was once conquered by the Sonray, and Barth describes Agadez as a Sonray-speaking city. [197]

In the south the pastoral Fulani are now invading the grazing grounds formerly reserved to and owned by the Tuareg. Camps of pastoral Fulani are frequently seen nowadays even as far north as the southern outskirts of the Ayr Massif around Agadez and Ingal. When grazing is good the Fulani may even move further north into the Talak plains with their herds of long-horned cattle. Many other people are frequently met in Tuareg country, e.g. the Tebu, and the Kanuri, who frequently come to Agadez. In Ahaggar and in Tasilé-n-Ajjer there are even a few individuals who descend from Tebu women.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

177 The Tuareg have contact with a great many people speaking other tongues, and most Tuareg men
[191] know one or two languages in addition to their mother tongue. A great many Northern Tuareg speak
Arabic, and some of them even Hausa, as these two languages are important to them during caravan
[192] trading. In Ahaggar and in Tasilé-n-Ajjer the Tuareg language has adopted many Arabic words. This
is not the case to the same extent in Ayr, where most loan-words are taken over from Hausa which
language is spoken by most Tuareg men. Even the *Kel Ewey* dialect is extremely mixed with
177 Hausa. It should be mentioned that Tuareg women have very little knowledge of foreign languages.
189 They generally speak neither Arabic nor Hausa.

The women have played a great part in the preservation of the Tuareg language and culture. But the latter has nevertheless been much influenced by contact with culturally different peoples. Foreign influences are responsible for certain distinctions in the Tuareg cultures of the north and the south.

# Environment

Tuareg country ranges from comparatively fertile savannah in the south to barren desert in the north, where the nomads live in or near mountainous regions. Four Tuareg groups are named after the dominant mountains of the Western Sahara, namely those of Ahaggar, Tasilé-n-Ajjer, Adɾaɾ-n-Foɾas, and Ayr. 133 [101]

The mountains of Ahaggar are by far the highest. They consist predominantly of archaic and proterozoic rocks, and of basalt and tufa from a relatively recent period. They are generally of a very dark colour and characterized by formations of rugged ranges, craters and isolated peaks which also bear evidence to former volcanic activity. But the rugged contours of the Ahaggar Mountains are also created by a complicated network of river valleys eroded mainly during the pluvial periods contemporary with the European Ice Age.

The Ahaggar Mountains fall into three main massifs of which that named Atakor is the most important and the highest, with peaks up to 3000 metres above sea level (Ilaman, Tahat). To the north is the massif of Téfedest with peaks which surpass an altitude of 2000 metres, and to the east the lower massif named Anahef. In geological structure these three mountain massifs of Ahaggar differ from the mountains of Ahnet, Immidir (Mouydir), and Tasilé-n-Ajjer which surround Ahaggar in the north. These latter massifs consist predominantly of paleozoic sandstone. They are not so high above sea level and form comparatively flat plateaux. The maximum altitude of Ahnet is 1300 metres while the peaks of Immidir rise to 1680 metres. The extensive plateau of Tasilé-n-Ajjer is on average 1200 metres above sea level, but a few peaks in the south exceed 2000 metres. Parts of the Tasilé-n-Ajjer mountains are covered with basalt rocks, and the river valleys of the comparatively level plateau often form true canyons which make traffic much more difficult than in the higher and more rugged mountains of Ahaggar. Between and around the northern mountain massifs the country consists mainly of flat plains covered with gravel and stone. Extensive areas of sandy desert are rare except in parts of the *Kel Ajjer* territory. [137]

Far to the south of Ahaggar are the low mountains of Tasilé-ta-n-Ahaggar, which are structurally related to the *tasilé* mountains in the north. This area is of little importance to the Tuareg and, in contrast to the higher and more extensive massifs of Adɾaɾ-n-Foɾas and Ayr, is not regularly inhabited. [131] While the mountains of Adɾaɾ-n-Foɾas are everywhere below 1000 metres, the peaks of Ayr rise to almost 2000 metres above sea level in the east and the north where the country is covered with basalt rocks. Idukalen in the Begzen Mountains is 1900 metres above sea level, while the Tamgak Mountains in the north have a maximum altitude of about 1800 metres. In its most mountainous parts the Ayr

[p. 25]

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

133 Massif resembles Ahaggar, but it is on the whole much more level with broader valleys and in between the lower mountains there are clayey plains. Immediately east of the Massif is the very extended sandy [131] desert which is uninhabited. Further south than Adrar-n-Foras and Ayr there are no considerable mountains. Between the two massifs are the plains of Tamesna and Talak which continue into the plains of the Sudanese savannah.

Tuareg country consists predominantly of rocky mountains and flat, extensive plains of gravel and stone. This configuration is basic to our understanding of Tuareg economy as will become clear when we have outlined the characteristic features of climate.

132 Tuareg country is very hot in summer – so hot that even the nomads born and bred in the country suffer much from the heat at that season. The hottest months are May, June (farthest south) and July (farthest north). During these months temperature may exceed 50° centigrade, and is on average 30°–35°, or higher. In the uppermost mountain zone of Ahaggar nights are comparatively cool even in summer, while in the lower country there is often little difference between day and night temperatures. This is true in particular when, as often happens in summer, the sky is overcast during the night and consequently there is little radiation of the heat absorbed by rocks and sand in daytime. The day temperature in summer is normally higher than the temperature of the human body, and the [484] temperature of sand and rocks will rise to 60°–70°. Travelling is extremely hard under such conditions, [271] and most people spend the day in the shade of rocks and trees, sleeping and drinking water of which an adult person consumes 8-10 litres a day. Violent winds are common in the Sahara most of the year and in particular in the daytime; in summer these winds are usually very hot and add considerably to the discomfort of the climate, as do the numerous flies.

The country of the Northern Tuareg has a rather continental climate characterized by great fluctuations of temperature during the year. Although Tuareg suffer from heat in summer, they do not generally complain much about it, and they consider the comparatively cold winter much worse than the hot summer. In winter, temperature in the country of the Northern Tuareg averages about 10°. The absolute minimum temperature however is very much below this. Thus in Ahaggar the village of Tamanrasset (1400 m) has in January an average temperature of 11,7 , but an absolute minimum of -6,6°. Frost is very common during winter nights, and even snow may fall in the higher parts of Ahaggar at that time of the year. In the country of the Southern Tuareg frost may also occur, but in Southern Ayr around Agadez frost is said to be very rare and snow is unknown; the winter period [511] in the south is on the whole milder than in the north, where the changes between relatively cold and [164] very hot temperatures, allied with inadequate dwellings and clothes, are responsible for pneumonia and similar diseases, which give rise to frequent deaths – especially among children.

The most important climatic distinction between the countries of Northern and Southern Tuareg is due to differences in the annual precipitation as will be seen from the following figures (in m/m) for the annual rainfall 1931–1945 in the territories of seven Tuareg groups:—

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

132

| *Kel Ahaggar* | | *Kel Aijer* | |
|---|---|---|---|
| Iwallen | 18.6 | Bat | 11.4 |
| Édeles | 18.9 | Ft. Flatters | 13.7 |
| Tamanraset | 40.7 | Ft. Polignac | 17.6 |
| | | Ganet | 17.8 |
| | | Radames | 37.8 |
| *Kel Adrar* | | *Kel Ayr* | |
| Agelhok | 75.0 | Iferwan | 74.1 |
| Kidal | 123.2 | Agadez | 179.3 |
| *Iwllemmeden Kel Ataram* | | *Iwllemmeden Kel Dennek* | |
| Burem | 172.0 | Tawa | 351.4 |
| Meneka | 221.5 | | |
| Gao (Gewgo) | 233.9 | *Kel Geres* | |
| | | Tessawa | 525.0 |

Thus the annual precipitation in Tuareg country ranges from 11.4 mm in the north to more than 500 mm in the extreme south. In the territories of the Southern Tuareg there is a fixed rainy season in summer, and although the annual precipitation may vary from one year to another there will always be enough rain for the regeneration of perennial plants and the sprouting of annual herbs and grasses. The territories of *Iwllemmeden* and *Kel Geres* largely consist of savannahs where trees and grasses grow over extensive plains. Compared with this we have entirely different conditions in the north, where the territories of the *Kel Ahaggar* and the *Kel Aijer* are situated on the extreme frontiers of two different rainfall belts, namely that of the Sudan where rain falls in summer, and that of the Mediterranean with a wet season in winter. Therefore there is no special wet season for the whole country of the Northern Tuareg, the most northern parts of which have maximum rain late in autumn or in early spring, while the southernmost regions have summer rain like the Sudan. Rain from the north may however occasionally penetrate as far into the Sahara as the northern outskirts of Ayr, where during my journey from Ahaggar to Ayr in April 1955, I found pastures of annual plants due to winter rain. As far as Ahaggar is concerned rain has, over an extensive period of years, fallen most abundantly late in summer. But what is characteristic of this region as well as of the territory of the *Kel Aijer* is the fact that rain does not fall every year. In Ahaggar, including the northern massifs of Immidir (Mouydir) and Ahnet, four years out of ten are almost completely dry (Dubief 1947, p. 7–23), and in the flat plains outside the mountains many years may pass between two rainfalls on one and the same spot. These plains have little or no vegetation of perennial plants and are known to the Tuareg as *ténéré* or *tanezruft*. In or round the mountain massifs there is always a better possibility of rain, and when rain falls in Ahaggar late in summer it is normally accompanied by violent thunder-storms and is very heavy. This in conjunction with the morphology of the mountains makes a perennial vegetation possible.

137

137

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

132 When rain is falling in Ahaggar water immediately flows down the rocky mountain slopes into the sandy river valleys, which may become flooded shortly after rain has started. Indeed, the flood will often rise so suddenly and violently that camels and other animals grazing in the valleys are caught by the strong foaming stream of water. Even humans have been killed by the sudden rise of a flood, but most people will not camp in the river bed itself late in summer when heavy rainfalls are expected to occur. A river valley will generally not be flooded for more than one or two days, but it may, after extremely heavy rain, contain water for a week or even longer. This was the case in the summer of 1953 when the valley of Abalessa in Ahaggar turned into an immense river more than a hundred metres
137 wide. Owing to such heavy rainfalls it is possible for perennial plants with a well developed root-system to survive near the river valleys even in dry years. Outside the river valleys there is very little vegetation of perennial plants in Ahaggar. The bulk of the country has no permanent vegetation, and permanent plants are always more abundant along the broad river valleys of the lower country than along the narrow valleys higher up in the mountains.

Pastures of annual plants may spring up almost anywhere in the desert – even in the otherwise barren countries of *ténéré* and *tanezruft*, where they then constitute valuable fodder for the camels of passing caravans. Rainfall in Ahaggar is most common in the highest parts of the country, where, on the other hand, little perennial vegetation is found. In periods of drought this region is so to speak nothing but rocks and boulders, while after rain in summer it becomes covered with a green curtain of annual plants. South of Ahaggar important perennial vegetation is not found until we arrive at the outskirts of the Adrar and Ayr Mountains, where it is extremely rich compared with Ahaggar. Indeed in Southern Ayr trees and bushes may form dense forests in the valleys outside of which there is also some perennial vegetation. The Ayr Mountains belong to a special zone of vegetation termed *sahel* by French geographers (cf. Capot-Rey 1953a, p. 26 ff.). From an economic point of view the main [132] characteristic of this zone, which includes Ayr and Adrar, is that it has a fixed wet season and consequently pastures of annual plants spring up every year over large areas. South of Ayr and Adrar the zone of *sahel* gradually changes into the Sudanese savannah.

137 Tuareg country thus falls into three distinct zones of vegetation with rather different conditions
311 for stock-breeding:—
233

1) *True Desert* comprising the territories of *Kel Ahaggar* and *Kel Ajjer*. Rainfall is irregular, and pastures of annual plants do not spring up every year. The main livestock are goats, while sheep are bred only to a very limited extent, and the nomads have no cattle.

2) *Sahel* comprising Adrar and Ayr and part of the plains situated between these two mountain massifs. This zone has some of the characteristics of the true desert, but it has a fixed wet season in summer and consequently pastures of annual plants develop every year. Goats are very important and so are sheep; most nomads keep a few cows (zebus).

3) *Savannah* covering mainly the territories of *Kel Geres*, *Iwllemmeden*, and *Kel Tademaket*. Perennial plants grow over extensive plains, and there is a regular spring of annual vegetation. The main kinds of livestock are cows and sheep. In the savannah Tuareg nomads frequently have horses as riding animals, whereas in the two former zones horses are normally bred only by sedentary people. – Camels and donkeys are bred by all Tuareg.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

The climatic and botanical differences between Ayr and Ahaggar can be seen directly from Tuareg division of the year into four seasons each having a duration of about three months. Ayr has a summer season and a winter season between which there are two seasons termed *akasa* (sometimes also called *él*, or *érafit*) and *ṛarat*. These two words as seasonal terms indicate that rain and annual vegetation in Ayr are recurrent events. For the word *akasa* literally means "green annual plants" while the word *ṛarat* refers to "dry annual plants". The season *ṛarat*, most of which is extremely dry, is followed by the winter season *tiǵrest* where rain does not fall, though the northern outskirts of Ayr sometimes have a little rain at this season. The transitional period between winter and summer known as *tabsit* is not considered a main season, but it is frequently mentioned by the Tuareg because certain perennial plants germinate at that time of the year. The summer season *éwilen* is extremely hot and rainless. It is the season of defoliation for acacias and various other perennial plants which change their leaves – generally in the way that they do not loose all leaves at one and the same time. Therefore, even in summer most acacias have some green leaves, though in certain places where rain has not fallen abundantly acacias may loose all their leaves in summer. In certain unfavourable regions outside of the Ayr Massif, acacias may even be without green leaves for a few years, but such trees become verdant again with heavy rainfalls. Scattered barren acacias are found mainly to the north of the Massif. The Tuareg say that acacias can survive an extremely long period of drought during which they are entirely dry. But they normally become green again when rainfalls start. The beginning of the rains is known to the Ayr Tuareg as *t'ézewek*.

In Ahaggar the Tuareg reckon with a summer season named *éwilen* and a winter season called *tǵrest*. These two seasons are separated by the autumn known as *amewan* and the spring termed *tafsit*. The Ahaggar Tuareg know the words *akasa* and *ṛarat*, but do not employ them for seasonal terms because rain and annual pasture do not recur annually in their country. The summer season *éwilen* is extremely hot, but it is not the proper season of defoliation for acacias, which under favourable conditions are green in summer and defoliate in winter. The autumn *amewan* which follows upon the summer is characterized by less hot temperatures and gradually changes into *tǵrest* (winter) when frost is extremely common during night, and snow falls in the mountains. This cold winter season is followed by the spring *tafsit* when many perennial plants germinate.

As will be seen from this description of the year in Ayr and Ahaggar these two countries differ much in regard to climate and plant development. Within each of the two areas there are climatical and botanical zones which are very different.

The Ahaggar Mountains, according to Maire, fall into three distinct zones of vegetation:— 1) *A Tropical Zone* up to 1700–1800 metres above sea level. 2) *A Lower Mediterranean Zone* between 1800 and 2300–2400 metres above sea level. 3) An *Upper Mediterranean Zone* from about 2400 metres up to 2918 metres which is the extreme altitude of Ahaggar (cf. Maire 1933 & 1940; Lhoté 1955, p. 41 f.). This division of the Ahaggar Mountains into zones of vegetation by a learned botanist seems to correspond largely with the division of the mountains into three distinct zones by the Tuareg. These three Tuareg zones and their characteristic perennial plants are the following:—

1) *Abada*, the lower parts of Ahaggar where perennial plants are abundant along the broad river valleys. Trees are very important the main species being various acacias (*abser*, *Acacia Raddiana* &

|---|---|
| FEB. MAR. | TABSIT |
| APR. MAY | EWILEN |
| JUNE JULY | TÉZEWEK |
| AUG. SEP. | AKASA |
| OCT. NOV. | RAKAT |
| DEC. JAN. | TIGREST |
| FEB. MAR. | |

Spring of certain perennial plants.
The fruit-pods of *tamat* (*Acacia flava*) and *agar* (*Maerua crassifolia*) fall to the ground.

Very hot. Most pastures dry.
Normal season of defoliation of acacias. Wells go dry. Dry annual plants form the best pastures.

Beginning of the rains.
*Afagag* (*Acacia Raddiana*) and *afezu* (*Panicum turgidum*) begin to germinate.

Proper rainy season.
Spring of annual plants.
Temperature decreases owing to the rains.
Water abundant in ponds.
Dew (*raba*) is heavy.
People suffer from malaria.

Rainfall decreases.
Most annual plants are drying and ponds go dry.
Increase of temperature and very hot winds (*agzir*) in daytime, while nights are cool.
The fruit-pods of *afagag* (*Acacia Raddiana*) fall to the ground.

Cool season begins.
Frost may occur during night while snow is said never to fall.
Acacias are green and form good pasture together with dry annual plants. A few annual species – notably *alwar* (*Schoenia purpurea ssp. Schimperi*) remain green throughout winter.

Fig. 14. Division of the year into seasons among the Tuareg of Ayr and Ahaggar. Climatic and botanical characteristics are indicated. The *alwar* season is also known to the Ayr Tuareg as *ifi* and *ifeghi*.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

*tamat*, *Acacia seyal*) and tamarisks (*tabarekkat*, *Tamarix apkylla* & *azawa*, *Tamarix gallica* and related species). Other important perennial species are the grasses *afezu* (*Panicum turgidum*) and *tullult* (*Aristida pungens*) the latter grass being found especially around the northern massifs of Anhet and Téfedest, and in Tasilé-n-Ajjer. 137

2) *Tarayin*, the middle mountain zone which has the following characteristics:— Acacias are lacking or are very rare and badly developed. The big tamarisk (*tabarekkat*) is lacking while the smaller species (*azawa*, *T. gallica*) is common in certain valleys. Two trees are found which do not grow in the lower zone, namely *tahunek* (*Rhus oxyacantha*) and *alew* (*Olea Lapperrini*). The *tullult* grass (*Aristida pungens*) is missing and the *afezu* grass (*Panicum turgidum*) is scarce.

3) *Atakor*, the highest part of Ahaggar with the following characteristics:— There are no trees with the exception of *alew* (*Olea Lapperrini*), and there are on the whole very few perennial species while annual species are abundant in case of rainfall.

It should be noted that only the important characteristics of the three Tuareg zones are here mentioned, and I add that a few perennial plants are found within all three zones. Thus the perennial species *aramas* (*Atriplex Halimus*) occurs along the valleys in all three zones, but it is of very low stature high up in the mountains, while it forms very high and bush-like tufts in the lower parts of the country.

In Ayr there is also a change of vegetation according to altitude but a general description of this is rather complicated. The lower parts of the Ayr Massif as well as the southern plains are dominated by acacias (*afagag*, *Acacia Raddiana* & *tamat*, *A. flava*) like the lower parts of Ahaggar, and the *afezu* grass (*Panicum turgidum*) is very common almost everywhere throughout the country, while the *tullult* grass is found only in sandy regions at the eastern slopes of the Massif. Species of tamarisks are extremely rare, and this is true of certain other species which are common in Ahaggar. The trees *tahunek* (*Rhus oxyacantha*) and *alew* (*Olea Lapperrini*) grow only in isolated mountainous parts of Ayr. The extensive plains west of the Ayr Massif around Ingal are dominated by acacias and the *afezu* grass, but these perennial plants become less and less common towards the north, so that the regions around I-n-abanrerit have very little persistent vegetation but a rich vegetation of annual plants. For further information on the botany of Ayr I refer to the study of Miré & Gillet who describe all known species and indicate their division into particular vegetational zones (Miré & Gillet 1956). I conclude this outline of Tuareg botany with the statement that Ahaggar and Ayr have many important species in common. But there are northern species which do not thrive in Ayr while some southern species are unknown in Ahaggar, e.g., the dum palm *tagayt* (*Hyphaena thebaica*) which plays a great role with the Ayr Tuareg. [114]

Climatically as well as botanically the Ahaggar Mountains are situated on the frontier of two distinct zones, namely the Mediterranean and the Tropical zones, while Ayr is predominantly tropical. This seems true also zoologically, as the Ayr fauna contains a great many species of birds and mammals characteristic of tropical Africa. The bird life of Ayr seems very akin to that of the Sudanese savannah, and, for instance, guinea fowl is extremely common even in valleys of the northern-most parts of the Massif. As example of tropical mammal life in Ayr we may here mention that the wart-hog lives in Central Ayr, and that oryx antelope and giraffe are found in the plains immediately south and west of the Massif. I do not wish here to compare in detail the natural history of Ayr and Ahaggar, but [132] 136 13

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

13 would emphasize the fact that climatically, botanically, and zoologically a certain dividing line runs between these two Tuareg countries. This should not be overlooked in an anthropological description of these parts of Northern Africa.

144 174 At present both fair-skinned europids and black-skinned negroid people live all over the Sahara, and are frequently mixed. There seems to be little doubt that in the north most Negroes have come in with the slave trade. We cannot entirely exclude the possibility that part of the northern Negroes in the Fezzan constitutes an ancient population of the Sahara (cf. Capot-Rey 1953a, p. 167 ff.), but in Ahaggar the ancestors of the present Negroes seem to have arrived later than the fair-skinned Berbers. Until a hundred years ago all Negroes of Ahaggar were apparently Tuareg slaves bought or captured in the Sudan, but the negroid *Ḫarratin* then immigrated from Tidikelt to make gardens for the Tuareg. Another immigration of predominantly black-skinned and negroid agriculturists came from Tasilé-n-Ajjer and in particular from the oasis of Ġanet. It is not quite certain whether they came before or after the *Ḫarratin*. – Negro slaves have also been introduced from the Sudan to Ayr by pastoral Tuareg, but there is no doubt that Ayr originally was a pure Sudanese country anthropologically, as it is Sudanese in regard to climate, botany, and zoology. In other words, the oldest known inhabitants of Ayr were Negroes while the fair-skinned Berbers arrived at a later date. It is stated both by Nicolas and Urvoy that, before the Tuareg, Ayr was inhabited by negroid Hausa or Proto-Hausa (Nicolas 1950a, p. 45; Urvoy 1936, p. 138 ff.), and Barth claims the word *Ayr* to be relatively late and of Tuareg origin, the word *Azben* also used as a name of the Massif, to be of Hausa origin and older (Barth 1857, I, p. 369). My investigations seem to confirm these statements. All Tuareg [173] [192] questioned about the history of Ayr have admitted that the negroid agriculturists have lived in the country before the Tuareg, and in the Berber dialect spoken by these people there are a great many Hausa words. It is, I think, of particular interest that the negroid village population of the *Kel Ewey* [60] [164] group is said to have a kinship system quite distinct from that of all true Tuareg and related to the system is use among the black-skinned citizens of Agadez. These people draw no distinction between parallel cousins and cross-cousins, while distinct terms for these relatives are characteristic of true Tuareg systems (Figs. 293–294).

# Stock-Breeding

The aim of this chapter is to describe the general techniques of stock-breeding, and to define the economic role of the various types of domestic animals bred by the *Kel Ahaggar* and the *Kel Ayr*. 233*

## GOATS

Goats constitute one of the most important kind of livestock to the Tuareg. Two main breeds can be distinguished. In the south the animals are of relatively high stature and have very short hair in contrast to the northern breed which is relatively small and long-haired. A few animals of the southern breed have been introduced among the Northern Tuareg by caravans from Adṛaṛ-n-Foṛas and Ayr, though this particular breed is not held in very high esteem by the *Kel Ahaggar* who claim their own animals to be superior in all respects. I add that even in Ayr there are Tuareg who claim that the northern animals are better than their own short-haired breed.

According to Lhote the northern breed is found in all the mountain massifs of the Sahara including Ayr, Adṛaṛ-n-Foṛas, and Tibesti (Lhote 1955a, pl. XIII p. 368). However, I have myself never seen such small and long-haired goats in the Ayr Massif where certain animals have a coat of long hair on the hind part of the body, while I have seen animals of the northern breed among Ahaggar Tuareg living in the plains of Tamesna to the west of the Massif. In Ayr the common breed is the short-haired, southern one which is also said to be dominant in the mountains of Adṛaṛ-n-Foṛas. This latter breed has on the whole a very wide distribution south of the true desert country and is found everywhere in the zone of *sahel* and in the savannahs (Doutressoulle 1947, p. 202 ff.). Short-haired goats are also described from the Tebu by Nachtigal (Nachtigal 1879, I, p. 214), but judging by the description given by Le Coeur, the goat-breed of Tibesti seems to be akin to the long-haired northern breed as claimed by Lhote (Le Coeur 1950, p. 152). A comparatively small and long-haired breed among the Berber-speaking Chawiya of Aurès is perhaps racially related to the breed of the Northern Tuareg. The goats bred among Arab pastoralists of the High Plateau and on the outskirts of the Northern Sahara (e.g., the *Ulad Nail*) are very different, of high stature and very heavily built in comparison.

Zoologically the most important characteristic of goats is the form of their horns (Antonius 1922, p. 126 ff.). The hairy breed found among the Northern Tuareg generally have horns formed like scimitars though often curved somewhat more backward. Occasionally horns show a tendency towards a screw-form. The short-haired southern breed most frequently has straight, oblique horns the extreme

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

*233 [137]

Fig. 15. Goats of the long-haired northern breed. The animals are emaciated and feed on acacias which are almost leafless owing to severe drought. Ahaggar 1955, the *Tayaḥ* tribe.

points of which turn slightly inward and forward. He-goats of both breeds generally have strong oblique horns of screw-form. Both in Ahaggar, Tassilé-n-Ajjer, and in Ayr there are in most flocks one or two goats which are born hornless.

*233 436 Although goats are bred intensively by the Tuareg they take little interest in these animals. Before the arrival of the French, goats formed the most important currency and, though money has now come into general use, they are still used in payment as for example, to the blacksmiths for the making of bracelets, weapons, and various implements. In Ahaggar goats are also used for certain payments to the *Amenukal* from his vassals, such payments being known as *ábéré*. This word, which is also common in Ayr, means literally "a big flock of goats" (or sheep), but it may equally well be translated as "fortune" or "money".

*233 192 Owing to the practical importance of goat-breeding there are a great many terms to designate the animals according to sex, age, and various characteristics. In Ahaggar there are the following age-terms:—

| *Age* | *Female* | *Male* |
|---|---|---|
| New-born kid . . . . . | *amaywa* | |
| Kid from its birth to the appearance of its horns . . | *téreydet* | *éreyd* |
| Weaned kid with horns, and of bigger growth than above | *tuxrift* | *uxrif* |
| Weaned kid . . . . . | *tabunkelut* | *abunkelu* |
| Animal not yet fully grown . . . . . | *tabulek* | *abulej* |
| Animal not yet fully grown . . . . . | *tadawalt* | *adawal* |
| Fully grown animal . . . . . | *tiyse* (pl. *ulit*) | *akaḥay* |
| Fully grown animal . . . . . | *tayat* | |
| (The common term for a fully grown goat in Ayr; it is used occasionally also in Ahaggar). | | |

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

These terms are used frequently in discussions of prices. Thus a blacksmith will claim that the price of an axe is *abuleǵ* (*adawal*) while for the manufacture of smaller objects or for certain repairs he will only claim *sazif* or *dreyd*. 233* 192 [436]

By the combination of age and colour terms, if necessary with the addition of a covering to certain other characteristics, the Tuareg are able to describe the exact appearance of any animal. Goat-terms have a practical value in enabling the Tuareg to speak about their animals with precision. A few of the terms indicating colour and other characteristics in Ahaggar are mentioned below:—

| *Characteristics* | *Female* | *Male* |
|---|---|---|
| Black animal | *tasettefut* | *asettefu* |
| Red animal | *tézeggek* | *ézegger* |
| Black animal with a red belly | *takahamit* | *akahami* |
| Animal white on the hind part, and black on the fore-part of the body | *téǵehé* | (No term for males which never have this combination of colours) |
| Black animal with white colour on the lower part of the legs | *tazeburt* | *azbur* |
| Black animal with a white blaze (Foucauld, 1951–52, III p. 1194 f., states that this term is used for horses, donkeys, camels, and oxen, but he does not mention goats and sheep) | *tamulast* | *amulas* |
| Black animal with white colour on the ears | *tahreyt* | *ahrey* |
| Animal of any colour having very small ears | *tadermak* | *adermag* |
| Animal of any colour having no horns | *tabiyawit* | *abiyawi* |

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

*233 192 The actual number of such terms is not known to me, and the Tuareg say they are almost innumerable. A colour term connected with an age term will, as mentioned above, generally be sufficient to describe the appearance of any animal, but colour terms have practical value also in another sense. They are, as the Tuareg put it, like names of men and dogs, and are used by the women to call individual animals to be milked. The names are then followed by a special sound (cf. p. 39, 135).

It is remarkable how intimately goats are attached to their masters. If the flock, as often happens, is grazing alone at some distance from the camp in the evening after darkness, it will immediately gather round the tents, when a special cry is uttered, or if the dogs bark. On the utterance of another cry by the goatherd the whole flock of goats will follow her quickly. On the whole goat herding is easy, and even very big flocks can be guarded by a single boy, or a girl. Kids still too young to follow the flock during grazing normally browse around the camp all day. In Ahaggar and in Tasilé-n-Ajjer these kids will not, as a rule, be let out of the sight of the camp, but this is not so in Ayr where vegetation is very dense in the river valleys. Kids in the latter area easily get lost and eaten by the numerous jackals. In order to know where the kids are a woman, while occupied with her domestic task in the tent, utters at short intervals a sharp, shrill cry to which the kids respond by bleating loudly.

*233 [234] Goats are chiefly useful for the milk they provide. In general, goat-breeding is organized in such a way that the maximum possible milk is obtained by the nomads, and kids are allowed to suck freely only for a short period after birth. At this period a kid is known as *asarwas*, which term is used for all sucklings without restriction. The duration of the entire period of suckling is dependent on the pasture. If grazing is good, the kids will suck for two to four weeks, while under severe conditions the period of suckling may be up to two months.

To prevent kids from drinking more than their proper share of milk the Tuareg use various devices. *233 4/7 In Ahaggar and in Tasilé-n-Ajjer small kids are frequently placed in stone enclosures (*agror*). Such enclosures are also used to prevent kids from following the mother animals when the flock leaves the camp for grazing in the morning, and they serve as a protection against beasts of prey during the night. They are about one metre high, and have a diametre of about one metre (cf. Fig. 17). Similar stone enclosures are said to exist among the *Kel Ewey* Tuareg but not elsewhere in Ayr, where the Tuareg generally make larger round enclosures from boughs of thorny acacias, so that one enclosure is big enough for all kids of a household. These enclosures are often known as *zeriba* (Ar.), but the proper Tuareg name is *afarag* (in the north *afarag*). They are said to be used also by certain Northern *233 Tuareg who camp in the lowland where acacias are common. To prevent small kids from running away, get lost or eaten by jackals, the Tuareg may attach them to a tree or to one of the tent-posts by one of their hind legs, which attachment is known as *témdit* among the Ayr Tuareg. Kids are also sometimes tied with a cord around their necks to prevent suckling when the mother animals are resting in the camp. If there are very few kids they are frequently attached to individual cords (sing. *témetrek*), but several kids are also frequently tied to one and the same cord, which is then known as *ẓseddi* or *asëddi*. Such a cord has several loops into which the heads of the kids are put, while the other end [17] of the cord or rope is fastened to pegs or trees. These methods are not only practised by the Tuareg. I have frequently seen them in use also among pastoral Arabs of the Sahara and of the Algerian High Plateau.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

Weaning takes place gradually. Long before the end of the suckling period the kids eat green annual plants around the camp or, if such plants are not available, fresh shoots of acacias and tender herbs brought to the camp by Tuareg women. At the end of the suckling period kids, if very abundant, will sometimes be taken to grazing grounds away from the camp, and the flock of kids will then be forced to live exclusively on plant food. But there are also certain devices to wean kids which graze together with the mother animals. Such devices are normally applied to kids when they are about two months old – at which age the Ahaggar Tuareg claim that kids should also be marked and castrated. These devices to wean kids will now be briefly mentioned. 233*

In Ahaggar and in Tasilé-n-Ajjer kids are generally weaned by means of a small stick placed in the mouth. This stick can be fixed in two ways. It is frequently placed transversally in the kid's mouth and attached at both ends with a thin piece of cord or leather fastened behind the animal's horns (Figs. 18–19). But it may also be placed in the mouth of the kid in a very simple and apparently rather crude way, namely by piercing right through the cheek of the animal (cf. Fig. 20). Both methods are known to the Northern Tuareg as *asedres*, or *akara*, and the latter method of piercing the stick right through the cheek is claimed to be the better, as in this case the stick does not easily fall out. Both devices are practised by other North African stock-breeders.

According to Foucauld the term *akara* is used among the Ayr Tuareg to denote these practises (Foucauld 1951–52, II, p. 848), which allow the kids to graze without any difficulty but effectively prevent them from suckling. But according to my investigations among the *Kel Ferwan* of Southern Ayr, the methods are unknown in their above mentioned forms. Devices to wean kids among these Tuareg are known as *asedres*, or *ameru*, and the most common one consists of a piece of dum palm leaf rolled together and drawn through two holes pierced in the upper lip of the kid, a knot being tied at each end of the piece of palm leaf. Another device consists of a cord of dum palm leaf placed in the kid's mouth and fastened behind its horns, but this method is used mainly temporarily (e.g., during movements of the camp to a new place) when small kids mix with the milk-yielding goats. It is possible that devices as those just described from the Northern Tuareg are also found among certain Ayr Tuareg, for many now living in and around Ayr have immigrated fairly recently from the north. A peculiar method should finally be mentioned. It is described from Ahaggar by Lhote, who states that the Tuareg of that region attach the spiky skin of a hedgehog to the head of kids so that they prick the udder of the mother animals when sucking with the result that the mother animals kick them away (Lhote 1951a, p. 136). The use of spiked devices to wean kids and lambs is certainly not a common method among the Tuareg or among other stock-breeders, though spiked devices are commonly applied to the young of certain other domestic animals (cf. p. 52, 62 f.). [166]

Effective goat-breeding is more than anything else a question of an appropriate birth control of the goats. Although goats, if not mated again soon, may yield milk up to two years after the birth of kids, they give much more milk when they have kids. The period of gestation is about five months, and the same goat may be capable of bringing forth kids twice a year.

There are some Tuareg who always let their goats mate freely, but this is not common practice. With free mating the flock will increase enormously, as most goats bring forth two kids, and the same goat may thus have four kids in a year. But there will then be little milk for the nomads, as milk-

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

133
*233
417
567

Fig. 17. A slave-boy takes kids out of the stone-enclosure (*agrow*) to let them suck. Ahaggar, the *Aɣnb-en-ishli* tribe.

*233 yielding decreases after mating. It is said that some goats yield milk in the whole period of gestation, while others have no milk whatever during most of that period.

The advantage of free mating is further reduced because goats, if mated too often, become emaciated, and for the northern breed their coat of long hair, so important to craft (cf. p. 263 ff.), will not develop fully. Added to this, kids born in the hot summer season will often be of inferior quality, as they suffer from heat and the lack of fresh annual plants during their period of growth. Again, the mother animals may yield so little milk in summer that it is not even sufficient for the nourishment of their kids.

The free mating of goats is not generally desirable, and therefore most Tuareg practise a system of regulation which varies with the qualities of pastures. If reproduction of the flock is badly needed it may happen that all goats are mated twice a year, but it is considered an ideal in good years to divide the animals into two parts which bring forth kids and yield milk at different seasons.

*233 In Ayr when the flock is divided into two parts to bring forth kids and yield milk at different seasons,
132 one part brings forth kids during the season of *akasa* when the pastures of annual plants are very
[137] rich, the other at the end of the winter season during the period known as *tabsit* at which time certain other plants germinate, and fruit-pods of the *afagag* acacia (*Acacia Raddiana*), which are extremely good for fodder, fall to the ground. If kids are wanted for a flock during the season of *akasa*, which is the best season for the birth of kids, the goats are mated in winter. When all the she-goats have been covered, the penis of the he-goat is bound around the foreskin by means of a cord – a method which is known to the Ayr Tuareg as *ekkan*, to the Northern Tuareg as *ɣrun* (cf. Fig. 25). If kids are wanted for a flock in spring at the season of *tabsit*, mating stops with the binding of he-goats at the

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

end of the *akasu* season. In other words:— When the inhabitants of a camp have their collectively guarded goats divided into two parts, one of these brings forth kids at the time when the other is mated. 233* 132

This method of mating-regulation is that ideally used by prosperous goat-breeders both in Ayr and among the Northern Tuareg. If in the north a flock is divided into two parts the kids are born in autumn (*amewan*), and in spring (*tafsit*) the former season being the better. Kids brought forth between these two seasons are known as *amesahar*. But as climatic conditions and consequently also the quality of pastures change from one year to another in the true desert country, the mating-system of division into halves cannot always be practised in Ahaggar and in Tasilé-n-Ajjer. In severe periods of drought goats may be too meagre for mating for a whole year or even longer, during which time the he-goats will have their penis bound. Thus during the dry year 1954/55 no goats were mated in Ahaggar. – It should be noted that the best season for the birth of kids is the late summer or the autumn (*akasu*, *amewan*) when the tender annual plants spring up. Kids borne at this season will be fully grown for mating after one year so that they bring forth kids at the season of spring (*tafsit*, or *tabsit*), while kids born in spring will be mated after a year to bring forth kids late in summer or in autumn (*akasu*, or *amewan*).

Milking takes place twice daily – early in the morning before the flock leaves for grazing, and late in the evening one or two hours after the return of the animals to the camp. Milking is done by women, or occasionally by male slaves. The individual animals to be milked are frequently called by their names and a special sucking sound is made to calm the animals, which are milked differently in Ayr and Ahaggar. In Ahaggar the milk-maid holds the wooden milk-bowl (*akus*; Fig. 21 b) in her left hand, presses the left hind leg of the goat firmly under the upper part of her right arm, while she milks with her right hand (Fig. 23–24). In Ayr milking of goats is frequently performed in a standing position the milk-maid then holding the milk-bowl (*takabart*; Fig. 37) in her left hand, keeping the left hind leg of the animal firmly between her knees, and milking with her right hand. If the milk-maid milks 234 462 192 184 415

*233
171

Fig. 19. Photograph illustrating how the stick (*akara, asedres*) is attached to the head of a kid. This photograph shows the semi-nomadic Berber-speaking *Chawiya* of Aurès.

234 squatting, she puts the left hind leg of the goat between her right thigh and calf. Goat-milk is drunk,
[262] added to food, or made into butter and cheese as described in detail p. 221 ff. Both in Ayr and in Ahaggar it is claimed that goats under favourable conditions yield about two litres of milk a day. But this is to be considered the maximum yield obtained only from goats with young kids when fresh-green annual pasture is available.

*233 Meat is not a staple food among the Tuareg. Most of them are reluctant to kill their animals except
[263] at certain feasts. But most meat eaten by the Tuareg is goat's meat. In Ayr I was told that some pastoralists keep their goats as well as other domestic animals as long as possible, that is until the animals die a natural death. However, the Tuareg are generally not so irrational. They say that goats may live for about twenty years, and that they are capable of bringing forth kids and yield milk until 15 years old. When goats have reached that age they are sold or killed, but many Tuareg prefer for obvious reasons to keep their milk-goats only to an age of eight or ten years. There is a limit to the number of goats that can be bred by the members of a small camp, because it is not possible to have more than a certain number of goats in one and the same flock, and there will not always be sufficient labour to tend several flocks. Therefore it is evidently preferable to substitute old milk-goats with

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

younger animals which yield more milk. Again, the meat of very old goats is of inferior quality. Much goat-meat derives from he-goats of which a very limited number is needed for mating. Some Tuareg claim that one he-goat is able to cover about a hundred goats, but as a rule I doubt whether it would be called upon to do so. In any event, too many he-goats are brought forth, and even very young male kids are frequently killed and eaten as there will be more milk for the nomads when such animals do not have to be suckled. It is considered ideal that male kids which are not needed for reproduction, and which are not killed at very early age, should be castrated at the time when weaning takes place, but even old he-goats may be castrated to make them fat for slaughtering.

Though meat is not a stable dish of the Tuareg they have to kill a certain number of goats every year to obtain skin for the manufacture of various domestic utensils. The roaming life in the desert necessitates a great many containers for water, butter, milk, grain, dates, and the like, and bags made from goat-skin are appropriate for this purpose. Indeed, goat-skin is so important to Tuareg craft that in speaking of the manufacture of most domestic articles one can hardly avoid mentioning the word "goat". Thus, my fairly large collection of ethnographic specimens from the Ahaggar Tuareg contains about fifty different objects made entirely or mainly of goat-skin, which is also used for the manufacture of tents among the Northern Tuareg. Even nowadays, a few articles of dress are made from goat-skin, and goat-skin was in general use for this purpose in the past (cf. p. 287 ff.).

Goat-hair is extremely useful to the Northern Tuareg. The hair is cut once a year in the hot season when the animals do not suffer from cold (cf. Fig. 98). It is spun into strong cords used for tethering animals, for tying up caravan loads, for reins, and the like. In certain tribes of Ahaggar it is also used for a very primitive kind of weaving (cf. p. 265 ff., Figs. 209a–b).

To understand the economic role of goat-breeding one must briefly touch on the question of size of flocks. Statistics concerning the ownership of livestock must always be regarded with much suspicion, as it is extremely difficult to obtain data. It is not only most impolite to ask Tuareg about the size of

Fig. 20. A kid with the stick (*akara, azaghrez*) pierced through the mouth as described in the text. Tasilé-n-Ajjer, the *Kel Terwit* tribe.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

*233 their flocks, but it is, on the whole, inproper to show any interest in their animals. Some nomads will
128 even claim that although they know all their goats by sight, they do not know, or never mention, the
[172] total number of their animals, as this is believed to bring bad luck. This belief is probably explained by the idea of the evil eye. To this may be added that it is difficult to judge the ownership of goats by merely watching the flock of a household which may also have animals grazing on other pastures.

*233 According to official statistics for 1948, the average number of goats per household among the *Kel Ahaggar* is fifteen (Capot-Rey 1953a, p. 265). This figure is probably derived from the tax lists, and it seems to be much too low – even when households of slaves and sedentary agriculturists are included. Lhote has stated that the number of goats per person, under ideal conditions, is 35–40. If they increase above this, the surplus is slaughtered or sold to the sedentary peoples of the oases (Lhote 1951a, p. 9). This latter figure for ownership of goats under ideal conditions is probably true for the
*233 more wealthy Tuareg of Ahaggar. Thus among the vassal Tuareg of the *Dag Rali* tribe many house-
565 hold are said to possess 100–200 goats, but this tribe is considered extremely rich in goats, and households of other tribes will not generally own so many animals. From rough calculations made in a great many camps of vassal Tuareg, and Tuareg of the *Isekkemaren* class, I estimate that households on an average possess 60–70 goats when pastures are not too badly developed, for it must be emphasized that the size of flocks changes with climatic conditions. For the sedentary agriculturists of Ahaggar I estimate, on the basis of calculations made at Amsel, Abalessa, and Taṛhawhawt, that a household possesses on average 15–20 goats.

234 In good years the amount of milk products supplied by a flock of 60 goats is rather considerable. This is clear when we consider the fact that a goat, during the period of three to four months in autumn and early winter when pasture of annual plants is green, will yield up to two litres of milk every day. When annual pasture gets dry the milk yield decreases but milk is still comparatively plentiful
[272] and important for food all the winter. In summer, however, there is little milk for reasons already
*233 referred to, and in dry years goats, even in the cold season, yield little or no milk. The flocks decrease during such periods of drought and some nomads may even lose most of their animals. During my stay among the Tuareg of Ahnet and Ahaggar from November 1954 to April 1955, goats suffered much from lack of fodder. In many camps one or two goats died of hunger every day.

*233 The Ahaggar Tuareg cannot subsist entirely on goat-breeding because severe droughts occur
73 frequently in their country. During drought-periods the goats are so to speak valueless as subsistence for the nomads. But it is remarkable that goats emaciated in consequence of severe drought quickly grow fat and start to yield milk once rain has fallen abundantly enough for the regeneration of pastures. In connection with this we shall point to another characteristic of goat-breeding: The animals have a very short gestation period, and the kids are fully grown for mating in one year. And as one goat may have four kids annually with free mating, a household, which has lost most animals during a drought, will be able very quickly to re-establish a flock large enough for its needs.

*233 Goats are also highly important for the subsistence of the pastoral Tuareg of Ayr. I do not know of any statistic material about the size of flocks in this area, but for Tuareg of Kidal (Adṛar-n-Foṛas) flocks are officially estimated at 74 goats and sheep per household (Capot-Rey 1953a, p. 269), and this region is environmentally related to Southern Ayr. The *Kel Ferwan* Tuareg say that a household

to be considered rich in goats (and sheep) should own about 300 animals. They also say that in the past the Tuareg of their group owned more goats (and sheep) than nowadays. A household at that time might even possess up to a thousand animals, but it would not have many camels and very few zebus, or none. In Southern Ayr, according to the Tuareg, there has been no severe period of drought within the memory of man, and goat-breeding is consequently a much more stable industry than in the desert proper. 233* [132]

## SHEEP

Sheep are very important domestic animals to most North African pastoralists. In the Atlas and on the outskirts of the Northern Sahara sheep belong to various woolly breeds. Woolly sheep are also known in isolated parts of the Western Sudan around Macina south-west of Timbuktu (Doutressoulle 1947, p. 191 ff.). I have myself seen many woolly sheep along the Niger between Niamey and Ayoru – among the Zerma-Sonray and other semi-sedentary peoples – but I have not seen them in the camps of pastoral Tuareg and *Bella*. These sheep belong to the so-called "Goundoum" breed (Zerma) and according to Doutressoulle they constitute a degenerate type of the Macina breed (cf. Doutressoulle 1947, p. 195). It is recorded by Aymard that there are some woolly sheep among the south-western Tuareg (Aymard 1911, p. 118). However, Tuareg sheep in all other groups belong exclusively to the hairy breed which is known as *Ovis longipes*. [171]

It is admitted by zoologists that *Ovis longipes* characterized by a short cover of hair, high stature, and a long thin tail, is the oldest known type of domesticated sheep (cf. Adametz 1920, p. 59 ff.; Antonius 1922, p. 213 ff.; Hilzheimer 1936, p. 199; Doutressoulle 1947, p. 196). In North-western Africa this hairy sheep falls into two types:— (1) The rams have large circular or snailshell-formed horns. This is the breed known to all Northern Tuareg, the Ayr Tuareg, and the *Kel Geres*, and apparently also to other Southern Tuareg. (2) The rams have very long horns of corkscrew form which protrude horizontally. This type is found among some Southern Tuareg, and it is occasionally seen in Tuareg camps immediately south of the Ayr Massif. The Ayr Tuareg say that this breed is typical of the Fulani, and this is in agreement with Doutressoulle's statement (Doutressoulle 1947, p. 200). This latter type of *Ovis longipes* sheep is also known among Nilotic peoples of the Anglo-Egyptian Sudan, and it seems to have been known in Ancient Egypt. It is perhaps the oldest type of *Ovis longipes* sheep (cf. Adametz 1920, p. 59 ff.).

In Ahaggar and Tasilé-n-Ajjer sheep are of relatively little importance to pastoral Tuareg. I believe that very few Tuareg of these regions have more than one sheep to ten goats. The reason for this lies in climatic conditions, for effective sheep-breeding is not possible where pastures do not regenerate regularly, as sheep cannot feed properly on the thorny acacias as can goats. Conditions of sheep-breeding are much more favourable in Ayr than in the north, and certain pastoral Tuareg of Southern Ayr have more sheep than goats, though sheep in Ayr suffer from lack of fodder in the dry hot season when they are extremely thin and meagre. With good grazing sheep yield more milk than goats, but otherwise goats are better milch animals. The meat of sheep is considered superior to goat meat, and [262]

*233

Fig. 25. Ram prevented from mating by means of a cord (*ufun*) tied around the foreskin of the penis and also around the scrotum. A longitudinal hobble-rope (*amahus*) also serves to prevent copulation.
Tasilé-n-Ajjer, the *Kel Terwit* tribe.

435 the price of sheep for slaughtering is very high compared with the price of goats. Sheep are also con-
742 sidered the proper animals for Islamic sacrifices, and it should be added that sheepskin is considered
237 very suitable for the manufacture of certain articles (cf. p. 288 & p. 298; Figs. 232, 240).

825 The Tuareg say that sheep are more "stupid" or less "intelligent" than goats. Sheep do not respond to their names, they get more easily lost during grazing, and they do not return to the camp by themselves. It is difficult to herd sheep if there are no goats in the flock. Among the Tuareg, as elsewhere in North Africa, sheep and goats are normally mixed in one flock. The goats then always march at the head of the flock, obeying the orders of the herdsman, while the sheep follow behind. It may happen, however, that goats and sheep become divided during grazing, as goats march too quickly for sheep to follow them, while on long journeys sheep show more endurance than goats.

The techniques of sheep-breeding are largely identical with those of goat-breeding mentioned above.
234 It should be observed, however, that goats can be milked without any difficulty whether they have kids or not, while this is not always so with sheep. It is said that they are more easily milked when they have lambs. Both in Ahaggar and in Ayr I have noted more than once that a good milch-sheep which had lost its lamb was given another lamb belonging to a sheep yielding less milk.

*233 Sheep can lamb until an age of seven or eight years, but it is considered appropriate to kill them for

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

food or to sell them when they are five years old. Many rams are killed or sold at a younger age, and male lambs are frequently killed when half-grown, but the Tuareg do not kill very young lambs. 233*

It is well known from literature that pastoralists of Tibet use sheep as beasts of burden (several authorities; cf. Bell 1928, p. 116; Hermanns 1949, p. 84). Among the Tuareg sheep are not used for this purpose, but I have seen herdsmen attach their empty water bags to the belly of rams, which are very tall, strong animals. [492]

## CATTLE

The oldest African cattle is believed to have been a type of the *Bos primigenius* breed characterized by comparatively long horns. This breed was known in Ancient Egypt, and also in Prehistoric Sahara, where its former existence is documented by numerous rock engravings (cf. Monod 1932; Gautier 1908; Lhote 1955a, 1958; Erman 1922; Faulkner & Epstein 1957, p. 142 f.). It seems as if cattle of this particular type was found in parts of North Africa even in antiquity (Bates 1914, p. 95 f.), and we can adequately quote Faulkner & Epstein on the former distribution of humpless longhorn cattle in the north: "All along the shores of the Mediterranean, from Palestine through Egypt to North West Africa, and from Asia Minor through the Balkans to the Appenine and Iberian peninsulas, an ancient stratum of longhorn cattle can be traced, extending to the north and south as far as Mediterranean man or his culture spread" (Faulkner & Epstein 1957, p. 143). *Bos primigenius* cattle are still found in certain parts of Africa. It is known in isolated regions of the Western Sudan – notably in Guinea and Liberia (cf. Doutressoulle 1947, p. 79 ff.; Faulkner & Epstein 1957, p. 87 ff.; Johsi, McLaughlin & Phillips 1957, p. 118 ff.). It is perhaps this breed to which Maqrizi refers in his description of the Beja (Maqrizi, p. 561). The very special thick-horned Lake Tchad breed is probably to be considered a *Bos primigenius* type (Doutressoulle 1947, p. 88 ff.; Faulkner & Epstein 1957, 233* 174 233* 171

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

p. 93 ff.), and this seems to be true partly also of the so-called Watusi-cattle and related breeds, which have been mixed with zebu-cattle and therefore frequently have well developed humps (cf. Adametz 1920, p. 10 ff.; Faulkner & Epstein 1957, p. 148 ff.; Johst, McLaughlin & Phillips 1957, p. 146, 178, 259). 233* 171

Adametz believes that zebus were introduced into Africa from Northern India about 2000 B.C. (Adametz 1920, p. 10 ff.). Nowadays Zebus no doubt form the most important types of cattle in Africa, and Tuareg cattle are of the zebu type. The West African zebus fall into a number of sub-breeds described in detail by Doutressoulle. The zebu type found in Ayr and adjacent regions and also introduced into Northern Tuareg country is known as the *Azawar* breed (Doutressoulle 1947, p. 102 ff.). In Southern Ayr, which nowadays has a fairly large population of pastoral Fulani, a particular type of zebu is also very common. This zebu is characterized by very high stature and extremely long horns often resembling the form of a lyre (Fig. 27). This breed is named Borodji, Bororo, or M'Bororo. The Fulani zebu is esteemed by certain Ayr Tuareg because of its fatter milk, but it is claimed that its meat is not so delicious as that of their own cattle. 233* [174] [262]

Pastoral Tuareg of Ahaggar and Tasilé-n-Ajjer do not breed cattle (zebus), which do not thrive in their barren countries where pastures of annual plants do not regenerate annually. An attempt to breed zebus among the pastoral Ahaggar Tuareg some years ago failed, and zebus are nowadays found only among settled agriculturists who use these animals as draught-animals at irrigation wells (p. 189; Fig. 132 a–b). A few agriculturists also have cows to raise calves, and to utilize their milk. It is comparatively easy for settled agriculturists of Ahaggar to keep cattle. In dry years, and when pasture is scarce and dry in the hot season, cattle can be fed on vegetables and the straw of certain plants grown in the garden. It can also be mentioned that many agriculturists live in the very broad river valleys of lower Ahaggar where water is not very deep under the sand, and at some agricultural settlements there are even permanent springs. In such places (e.g., the settlements of Abalessa and Amsel) there are even in dry years fresh grazing of a few permanent plants suited to cattle, notably the four following species: – *tahlé* (*Typha elephantina*), *tésengelt* (*Saccharum Ravennae*), *ilegga* (sing. *aleggi*) (*Scirpus Holoschoenus*), and *taysest* (*Eragrostis bipinnata*). The regeneration of these plants is not dependent upon annual rainfall, for the soil is always sufficiently humid for their annual regeneration. Therefore it is very common in Ahaggar (e.g., at Abalessa and at Amsel) to burn down the old dry plants late in winter so that new fresh plants can germinate in spring. This method of renewing pasture by the burning down of old dry plants is not generally possible in desert countries. In Ahaggar it is practised only for the four above mentioned species within very limited humid areas, and the method is said to be entirely unknown in Ayr. [361] [137] [324]

The Ahaggar agriculturists who possess oxen very frequently use these animals for riding, sitting on the hind part of the animals which are kept under control by means of a rein (*tazerkit*) placed through their nostrils, or by means of a halter. No saddle is used apart from a casual piece of cotton, or a blanket (Fig. 28). In Tasilé-n-Ajjer, it is said, the settled farmers have no cows but only bulls and oxen to be used at irrigation wells, and these animals are not used for riding as in Ahaggar. [492]

The zebus found in the settlements of northern agriculturists are all introduced from the south where conditions for ox-breeding are much more favourable. Many, and perhaps most, northern zebus have come from Ayr from which region they are still introduced to Ahaggar and Tasilé-n-Ajjer.

137
234

Fig. 29. Milking a cow. The calf is attached to a tree by means of a cord (*témetrek*) around its neck, the mother cow being attached to the same tree with a cord (*ayan*) around its horns.
Ayr, Tuareg of the *Kel Ferwan* group.

233 Zebus are able to cross the barren desert country of the Sahara in winter, and even with so hot a temperature, as that prevailing at the end of April, I have met Ayr Tuareg of the *Kel Tédalé* tribe leading zebus from Northern Ayr to Tamanraset in Ahaggar.

The Ayr Tuareg seem to admit that they have always had zebus, but they say that in the past they had very few cattle. Nowadays there are zebus in so to speak all camps and villages of the Massif and in the plains to the west of it. At the village of Iferwan sedentary farmers possess three to four animals per household, and figures are much bigger for households of true pastoralists. It is quite normal for a nomadic household to possess a dozen zebus, and this is true even of pastoral Tuareg roaming in the northern outskirts of Ayr where precipitation is lower than in the south.

In fact zebu-breeding is a very profitable industry to the nomads, the more so as very little work is connected with it. The animals leave the camp early in the morning to return again entirely by themselves in the evening before darkness. They are never accompanied by herdsmen as there are no beasts of prey strong enough to attack them nowadays. I have met Tuareg who were evidently very fond of [171] their zebus, but they never showed the same interest towards their cattle as do the Fulani, who always accompany their herds. During grazing Tuareg zebus normally roam freely, but certain animals which are difficult to get hold of are provided with a cord (*ayan*) around their horns to which cord is attached [364] a long piece of wood trailing on the ground. When oxen are driven to the market place (at Agadez or Ingal for selling)

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

or Iagal) for selling, they are also frequently provided with a wooden prong (*aburi*) loosely attached around one foreleg to prevent them running away. I have never seen this practised among the Fulani who have much more control over their cattle than have the Ayr Tuareg. 233* [171]

Cows continue to bring forth calves and yield milk until they are about 15 years old, and the duration of their life is estimated at about 20 years. But it is considered appropriate to keep milch-cows until they are ten or twelve years old when they should be sold or killed. The period of gestation for cows is about ten months, and there is no regulation of mating. The Tuareg say that cows will be on heat and mate again shortly after the birth of a calf, and that milk-yielding does not stop until five months after mating. Free mating of the cows agrees well with Tuareg interests as prices of calves are high. [435]

Milking of cows takes place twice daily and is generally done by women – in rare cases by men. 234 Milking is performed as follows:— Just before the herd returns from grazing in the evening every [462] calf is firmly attached to a tree by means of a cord (*témetrek*) around its neck so that it cannot reach the udder of the mother cow. When milking is to take place the mother cow is attached to the same tree by means of a cord (*aran*) around its horns. The calf's rope is now loosened and it will immediately start to suck while the milk-maid fastenes another rope or cord (*akarah*) around the hind legs of the cow. When this is done the calf is attached to its tree again, and milking begins. The milk-maid squats at one side of the cow (generally at the right side) holding the large milking bowl (*akabar*) (Fig. 37) between her legs and knees, and milks with both hands (Fig. 29). When the milk-maid has taken the milk she wants she releases the calf to let it drink what is left in the udder, but the calf is thereupon attached to its tree again in order that it may not suck during the night. Before the cows leave the camp in the morning milking is performed again as just described, but it may happen that the cows leave for grazing already during the night, and they are then not milked again until next evening. Tuareg who possess a great many calves may guard them within a so-called *zeriba* (*afarag*) made of [417] thorny acacia boughs.

Most cows will not yield milk unless they have their calves close to them. If a cow loses its calf it may be replaced with the calf of another cow so that milking can be done, but it is also common to [237] use the so-called dummy-calf (*azeyuz*) made from the dead calf's skin stuffed with hay. This puppet is then set close to the cow which is deceived by it. It feels that its calf is standing by, it licks the skin, and milking can then be done without much difficulty.

The dummy-calf is not used by the zebu-owning agriculturists of Ahaggar, though I have met one of these *Harratin* (*Izeggaren*) who had once made a calfskin-puppet after he had seen the method practised among *Iforas* Tuareg at Kidal. The method of blowing into the cow's vulva is known to the Ayr Tuareg as *askuf*; it is used particularly for cows which are difficult to milk shortly after the birth of a calf. During migrations, when young calves march together with the mother cows, suckling is prevented by means of a piece of dum palm leaf attached around the calves' mouths. Such an attachment known to the Ayr Tuareg as *adabar* may be used also for other domestic animals.

Weaning of calves takes place according to one of the following methods:— (1) *ikembar*, that is 233* cuttings made with a knife in two or three places on the bridge of the calf's nose. The wounds of these cuts hurt the calf when it tries to suck, but the method is effective only for a very short period until the wounds have healed. On adult animals the scars of these wounds appear as small bumps (Fig. 30).

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

*233

Fig. 30. Young zebu ox with *ikembar*, that is cuts made with a knife on the bridge of the animal's nose, and with a cord (*asebar*) placed through the nostrils. Ayr, sedentary *Kel Ewey* Tuareg near Agadez.

(2) *tabellut*, that is a small pronged stick about 40 centimetres long placed through the nostrils of the calf which is thus prevented from reaching its mother's udder (Fig. 31). (3) *ikemban*, that is two small pointed sticks crossing each other and attached over the calf's nosebridge. When the calf tries to suck it hurts the udder of the mother cow which will kick the calf away. I have only seen this device once in Southern Ayr, and I am not quite sure that the term mentioned is correctly spelled, as I did not take it down in *tifinar*. (4) *akimbab*, that is a muzzle. It is not in general use among the Ayr Tuareg
[W4] though they know of it. It is in current use among the Tuareg of the plains west of the Massif (Tamesna)
[L3] where I have seen it among the *Ireqenaten* Tuareg, who politically belong to the *Kel Ṛela* drum-group of Ahaggar (Fig. 32). I have seen the same device also known as *akimbab* among the *Kel Tahabonat* of the *Western Iwllemmeden*. Similar muzzles are used among the *Iwllemmeden* around Tahoua (Musée de l'homme, nos. 36.44.50 & 41.19. 1111–1114) and also among the Tuareg of Adṛaṛ-n-Foras (Musée de Neuchâtel, no. 49.2.39). – These are the weaning devices used in Ayr, the method most commonly applied being that known as *tabellut*, the small pronged stick passed through the calf's nostrils.

234 Cow's milk is drunk fresh, added to food, or made into butter and cheese according to methods
[262] described in a later chapter. The Tuareg say that an extremely good milch-cow yields up to seven litres of milk a day. This agrees with Doutressoulle's statement that cows of the *Azawaṛ* breed yield six to eight litres daily at the beginning of their lactation period, while at the end of this period the daily

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

yield decreases to about two litres (Doutressoulle 1947, p. 104). It should be added that, as for other domestic animals, the daily yield of milk depends very much on the conditions of pastures, and cows always yield little milk when pastures are dry – even at the beginning of their lactation period. 234

Bulls are frequently castrated two or three years old to be used for riding and transportation. Oxen are used for this purpose particularly among the Tuareg of the plains towards the south and west, while most pastoralists of the Massif almost exclusively use donkeys and camels. Oxen are ridden without a saddle. The rider sits on the back of the animal which is covered with a blanket or a piece of cotton as in Ahaggar. The animals have a cord (*asabar*) placed through their nostrils, but plaited halters (*ameror*) are also used for riding oxen. 492 [232] [184]

The Tuareg have terms to cover the age and sex of their cattle, and they also have a certain number of colour terms; but they say that there are very few colour terms for cattle (about ten terms according to Tuareg of the *Kel Ferwan* group). They explain this lack of colour terms by the fact that cattle did not play any important rôle to their subsistence in the past. Cattle do not respond to their names, but some of them will come to the camp on the utterance of a certain cry (cf. p. 135). 233* 192 [433] [178]

## CAMELS

*233 433 171

Camels are very important domestic animals in all Tuareg groups, and they also play a great part in the subsistence of most Arab pastoralists of the Northern Sahara. The common Arab camel breed, which is known to the Tuareg as *marroki*, is also found in Northern Tuareg country – particularly among the *Kel Aijer*. It is heavily built and is extremely well fitted for transportation. It is a very strong breed in spite of its relatively low stature, and it has large feet which is considered an eminent quality for pack camels. This *marroki* camel has a thick cover of wool on the hump and on the fore-part of the body, while Tuareg camels, which are of higher stature and more elegantly built, in general have little or no wool, but only a short coat of hair much like that of cows and horses. Tuareg camels may have long hairs around the hump but true Tuareg camels have no proper coat of wool. Though the *marroki* breed is excellent for transportation and is considered a better milch-animal than the southern Tuareg breed, the Tuareg generally prefer their own elegantly built camels, and they look down upon the heavily built camels of the north. However, as mentioned, there are some *marroki*

camels among the Northern Tuareg, as there are cross-breeds between camels of this type and Tuareg 233*
camels. There are also to-day some Tuareg camels among Arab pastoralists of the Sahara, but I was [17]
told among *Ulad Ba Hammu* Arabs that originally all their camels were of the *marroki* type, while
camels of the southern Tuareg breed were introduced among them more recently. I have not been [14]
able to prove or to refute Cauvet's theory that northern and southern camel-breeds differ in dentition

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

*233
133

Fig. 35. A young camel (about 14 months old) sucks its mother before milking. The Tuareg boy bends up the right foreleg of the she-camel and ties it in this bent position to the left foreleg – a method known as *ésemmetil*; it is applied to she-camels that are restless during milking. The she-camel has the colour name *téserift*, its big calf that of *aslay*. Ayr, the *I.sezzweg* tribe.

*233 (cf. Cauvet 1925–26, 1, p. 15, 76 ff.). I have inquired about this, and the Tuareg seem to hold that
[114] all camels have an identical number of teeth.

She-camels should ideally be reserved for breeding which is a very slow process. A severe loss of goats during a drought can be restored quickly once rainfalls start again, but this is not so with a loss of camels. She-camels are not generally mated until they are about three years old, and their gestation period is about one year. In addition, she-camels get only one calf which has a long period of sucking so that a she-camel is frequently not mated until one year after the birth of a calf. In other words:—
[435] One she-camel has only one calf every two years. For this reason, and because a grown camel has about the same value as 25–30 goats, the Tuareg pay much more attention to camel-breeding than to the breeding of goats and sheep.

Most she-camels are mated during the cold season in Ahaggar, while the proper season of mating in Ayr is *akasa* with the beginning of *ṛarat*, though some she-camels are also mated in the spring period known as *tabsit*. As the gestation period is about one year most camel calves are born during the cold season in the north, in the rainy season when annual plants are well developed in the south. The rutting male camels roam freely in search of she-camels on heat, and a Tuareg may own several she-camels and not even possess a bull-camel for breeding. Both in Ahaggar and in Ayr there are Tuareg who try to keep their very excellent bull-camels away from herds other than their own, but this is considered very bad conduct. In fact, there are Tuareg who do not know with which bull-camels their she-camels mate though the act of mating is normally seen and heard by somebody. Mating is also very frequently arranged by the Tuareg who then assist the bull-camel in introducing its penis into the she-camel's vagina. The act of mating may be connected with some difficulty for the bull-camel because the she-camel has to lie down on the ground during copulation.

A she-camel is well looked after during the period it is expected to have a calf. She stands upright while bearing the calf, and the umbilical cord breaks when the calf falls to the ground. The birth of a calf is not always seen by the owners but they will generally be present at least a few hours after birth.

234
291
133

Fig. 36. Two Ayr Tuareg milking a she-camel with the colour name *tawimk*. Ayr, the *Imezzureg* tribe.

They draw out the placenta (in Ayr known as *t'imidin*) by the attachment of a heavy stone to the membrane (*abayor*). It is also common a few hours after birth to draw a little milk from the mother camel and pour this milk into the calf's mouth in order that the new-born animal may be able to stand upright and suck its mother quickly. When this has been done it is normal to bleed the mother-camel. Some milk drawn on the day a she-camel has borne a calf is frequently consumed by the Tuareg (cf. *éderes*, p. 221), but with this exception the new-born calf is allowed to drink all its mother's milk for the first days after birth. The period during which the calf sucks freely varies. It depends on the yield of the mother-camel and is also determined by the amount of milk available to the owners from other animals. Milking may exceptionally start already four or five days after birth, but this is not normal. The calf is frequently allowed all milk for a fortnight, or even for a whole month. In Ahaggar when pastures are very dry it is quite normal not to milk a mother-camel at all for a still longer period. 233* [272] [234]

The entire suckling period, that is the period in which the calf is allowed to drink part of its mother's milk, including the short period when it sucks freely, also varies. But here there is one main rule: a calf is allowed to suck as long as its mother-camel is milked, for she-camels, like cows, do not generally yield milk unless they have their calves close to them. It is normal to mate a she-camel about one year after the birth of a calf. She will then yield milk for about six months after mating, so that the total suckling period is about 18 months, at the end of which period the calf will be allowed very little milk. If a she-camel is not mated so soon it may yield milk for a longer period, and the suckling period may even be up to about two years when the calf is a grown animal almost as big as its mother. 233* 234

There are various methods to secure milking in case a camel has lost its calf. The dead calf may be substituted by another calf, but the dummy-calf is also used with she-camels. This device is known as *ahayoy* (Ahaggar), or *azeyuz* (Ayr). Both in Ahaggar and in Ayr it is claimed that some she-camels can be milked without their calves if their udder is patted in a particular way with the hands – which treatment is known to the Ayr Tuareg by the name *ewlewl*. The method of blowing into the vagina described above for cows (p. 51) is never employed with she-camels. But there is another method for 234

she-camels which are difficult to milk because they will not allow the calf to suck. The method has been described to me by Tuareg of Ayr. It is named *arazak* and is as follows:— Fresh camel-dung is put into the nostrils of the mother-camel, and its nose is thereupon pierced at three places with an awl a hole being made in each nostril and one hole between them. A cord of dum palm leaf is thereupon drawn through these three holes so that the nostrils are firmly closed, and the animal can consequently breathe only through the mouth. It is said that a she-camel which has carried this bandage for one day will be fond of its calf and will allow it to suck so that milking can be done. 234 [412]

Milking of she-camels is usually done twice a day, early in the morning and very late in the evening. In Ayr certain Tuareg milk their she-camels several times during the day, as the animals generally graze close to the camp and frequently come to the tents to see their calves. Milking between the two proper milking times may also be done with other domestic animals in Ayr if milk is needed for some purpose or other during the day, but it is practised particularly with she-camels, as milk gathers in the udder of these animals very quickly after milking.

Milking of she-camels is done by two men standing at the sides of the she-camel and leaning their heads against the animal (Fig. 36). One of the men holds the large wooden milk-bowl *akabar* (Figs. 37-38) [462] [415]

The rope is plaited from leaves of the dum palm *tagayt* (*Hyphaene thebaica*) and falls into two parts: The short rope to be nooked around the calf's one foreleg and known as *tesserrefut* is fastened to the long rope (*témdit*) which has a loop for the tethering peg. The whole system is known as *témdit*. Ayr, the *Imezzureg* tribe. Dimension: ca. 109 m long. (N. M. G. 6660).

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

37–38) and milks only with one hand, but the milk-bowl may also be held by a woman or a boy so that both milkers have two hands free. If men are absent from the camp, milking may be done by women though properly this is the task of grown men. Certain she-camels are very difficult to milk so that milking should be done as quickly as possible. If a she-camel is very restless and therefore difficult to milk it is customary to bend up its right foreleg and attach it in this bent position to its left foreleg before milking is done. This method is known to the Ayr Tuareg by the term *ésemmetil* (cf. Fig. 35). 234 [462]

The Tuareg have various devices to prevent camel calves from drinking more than their proper share of milk. In Ayr and also among the Ahaggar Tuareg of the Tamesna region it is common to keep the young calves tethered by means of a particular cord (*témdit*) fastened to the calf's forelegs (Fig. 39–40). The calf is not allowed to follow its mother during grazing, and in the night when all she-camels rest in the camp they are kept lying on the ground so that the calves cannot suck them. When young calves are tethered in the camp they are fed on fresh annual plants collected for them by the Tuareg. When calves grow older and plant food constitutes their most important nourishment, 233* [P24]

Fig. 42. She-camel provided with the plaited pouch (*abeǧu*) which covers its udder. The pouch is attached as follows:— A cord is tied around the body in front of the animal's hump while another cord runs along the back at both sides of the hump to pass under the tail. The three cords which form part of the pouch are tied to the tail cord in front of the hind thighs and at the tail. To milk a she-camel carrying a pouch around its udder the hind pouch-cord fastened at the animal's tail is untied. Tasilé-n-Ajjer.

[234]

*233 they are hobbled by means of a cord (*iéffart*) attached around their forelegs (p. 72, Fig. 45b–e) and
[284] are kept away from the mother animals during grazing in day-time. In Ahaggar as well as elsewhere in Northern Tuareg country suckling of calves are normally regulated by another method, namely a plaited pouch (*abeǧu*) which covers the udder of the mother camel, and the calf can thus be allowed to graze freely together with its mother (Fig. 41–42). This device is known to the *Kel Ferwan* Tuareg of Ayr as *ébeyembey*, but though they know it by name they do not use it. They say, however, that it is in use among the *Kel Ewey* of the Ayr Massif.

The plaited pouch just described also serves as a means of weaning half-grown calves, but there are other weaning methods, namely the following:— (1) *ikembar*, that is cuttings on the bridge of the nose as described above for cow calves (p. 51). In addition to these cuttings, the scars of which form small bumps, it is common to cut the calf also under the chin, the visible result of such a cut being a hanging patch of skin. This method is known both among the Northern Tuareg and in Ayr, and it is, I believe, nowadays carried out mainly for aesthetic reasons as the bumps and the hanging patch of skin adds, in Tuareg opinion, to the beauty of riding camels (Fig. 43). In fact, the cut made under the chin does not seem to hurt a sucking calf, and this cut is not made on cow calves (cf. Fig. 30). (2) A method
[114] which is described by Cauvet from the oasis of In Salah may perhaps also be known to the Northern Tuareg though I have not recorded it. It consists of a thorn put into a patch of skin cut loose on the

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

bridge of the nose of a calf, so that it hurts its mother when it tries to suck (Cauvet 1925, I, p. 359). – 233*
(3) *aktimbab*, that is a plaited muzzle which allows the calf to graze, but prevents it from sucking. I have been told both in Ahaggar and Ayr that such muzzles are used for camel calves, but apparently they do not constitute a normal weaning method. – (4) *asedres* or *ameru* are said to be synonymous terms for the weaning method generally adopted among the *Kel Ferwan* Tuareg of Ayr. The method is as follows:— The upper lip of the calf is pierced on both sides of the harelip so characteristic of all camels. A piece of thin root of the *afagag* acacia (*Acacia Raddiana*) is drawn through these holes so [824] that the ends of the root protude at both sides, and a knot is made at both ends that the root will not fall out. These knots hurt the udder of a she-camel when the calf starts to suck, but this is not the real idea of the device. For the root-piece keeps the pierced holes open and the calf is therefore unable to suck at all.

A she-camel may yield about ten litres of milk at the beginning of its lactation period, but at the 234 end of this period it does not yield more than two or three litres even with good grazing. The yield is always dependent on grazing conditions. Thus during my stay in Ahnet and Ahaggar 1954–55, a Tuareg who owned about twenty she-camels acquired only two litres of milk a day in all from these animals. But conditions of camel-breeding are much better in Ayr and in the southern plains where [433] she-camels are tolerably good milk-yielders most of the year, and camel's milk is therefore very important to some pastoralists of these regions. Camel's milk is drunk and not generally used for food [272] in other ways. It is much esteemed by all Tuareg, who claim that it possesses a particular power and gives strength. It is never stored in the shape of butter or cheese. The Tuareg of Ahaggar and Ayr [262] never eat camel's butter which they consider possesses a poor taste, and, besides, it is very difficult to churn. They make butter of camel's milk only when butter of milk from other domestic animals is [302] lacking for the greasing of the hair. Both in Ahaggar and in Ayr butter is then churned by the men in a rather peculiar way:— A skin bag containing an amount of camel's milk is attached to the riding [415] saddle of a camel which is then ridden at very fast speed for some time. But even with this method, it is said, camel's milk gives very little butter, and it is also definitely stated that the milk cannot be used for cheese-making. These Tuareg statements seem to be confirmed by analyses of veterinaries, [114] who claim camel's milk to contain very little casein, and it has been proved difficult to separate butter from camel's milk (cf. Cauvet 1925, I, p. 707 ff.).

She-camels can mate and yield milk until an age of about 25, and their average length of life is 233* estimated by the Tuareg at about 30 years. But pastoral Tuareg do not generally keep their camels until they die a natural death. In Ayr I was told that she-camels more than twenty years old should be sold or killed. Most Tuareg sell their old camels in the oases of the Central or Northern Sahara [432] where a large population of sedentary farmers is constantly yearning for meat. Very few camels are [366] killed by the butchers of Agadez, where meat from oxen, sheep, and goats is always available and [262] fairly cheap, but a great many old camels are slaughtered at the market places of the oases further north.

Pastoral Tuareg of Ayr very rarely kill their own camels to eat them. They will slaughter a camel 262 which suffers from some severe disease as all animals dying by accident or from disease are unlawful to eat. However, there are also some Ayr Tuareg who will never eat camel's meat. They say that they [261] would feel very sick at heart were they to do so, and some Tuareg even say that they would vomit

262 if they had to eat the meat of camels. I have also been told that all members of certain tribes (e.g.,
261 the *Ikezkezen*) will refuse to eat any food served in a receptacle which has once contained camel's meat.
262 I have never heard about Tuareg in the two northern groups who would not eat camel's meat, though most Tuareg in the north consider meat of sheep and goats superior to camel's meat. People of all tribes in Ahaggar and Tasilé-n-Ajjer will eat it, and there seems to be a certain prestige attached

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

to the killing of a camel for wedding guests. Otherwise the Northern Tuareg like those of Ayr only 262
kill sick animals for food.

There are certain practical reasons why camels should not normally be killed for food among the Tuareg. Even very old camels fetch high prices at markets of the northern oases (Tamanraset, Tidikelt), [435] and the Tuareg prefer to get the money instead of eating their old camels. This is easily understood [252] when we consider the fact that one camel contains so much meat that it cannot be eaten quickly by the members of a household, and camel's meat is rather tough and must be boiled for several hours to be eatable. Besides, camel's meat is not very well suited to be preserved for eating at a later date [251] on journeys. However, it can be dried and when sick camels are killed part of their meat is often prepared in this way.

A camel is killed in a very particular way quite different from the method of slaughtering other 233*
domestic animals and game. It is killed as follows:— Cords are attached very firmly around the legs of the animal which is kept to the ground by several men who sit on its back and draw its head backwards. The artery is thereupon opened at the lower part of the neck close to the chest, and the knife is thrust into the animal at this place, but not so deeply as to touch the heart or the entrails. This stab is quite sufficient to kill the camel, but some people also cut its throat close to the head in the way other domestic animals are killed. Very peculiar also is the way camels are skinned. While other animals are skinned in such a way that the hide can be removed as entire as possible (cf. Fig. 173), the carcass of a camel is cut up before skinning. The four legs with their thighs are cut loose close to the carcass, which is thereupon cut into several parts by means of a large chopping-knife or an axe (cf. Fig. 44). The hide is thus removed from the carcass after partitioning; but it is difficult to remove the hide as it sticks firmly to the meat, and only part of it is taken off for later use. In Ayr the Tuareg do not 000

In Ayr the Tuareg do not 237
use camel's hide in their crafts, but give it to the blacksmiths who use it for lashing, or to people [564]
who manufacture beds from ribs of palm leaves (cf. Fig. 257). The Northern Tuareg use camel-skin [352]
for the manufacture of a few household implements and also use it for lashing (cf. p. 84, 110, 222, [824]
270 f. & Figs. 70, 86, 132a–b, 161a–d, 162, 213). But even in Ahaggar and Tasilé-n-Ajjer the skin of camels is little used compared with the skin of goats, sheep, and barbary sheep.

When employed in craft, camel's hide is normally used raw and unprepared after soaking in water, 281
but the Ahaggar Tuareg say that for certain purposes the hide is treated with salt. In literature there 114
are many statements about the tanning of camel's hide. Thus it is stated by Cauvet that the hide is tanned with plant material in Algeria, and Cauvet also quotes Duveyrier's statement that the Northern Tuareg tan camel's hide to use it for tents and various other implements (Cauvet 1925–26, I, p. 714 ff.). I very much doubt the correctness of this, as all Tuareg asked about it have stated that the hide of camels is not fitted for proper tanning. Camel's hide is therefore of very limited use to the Tuareg, and the same is the case with camel's hair or wool. Tuareg camels in Ayr have very little wool, and 237
among the Northern Tuareg most animals have less wool than Arab camels of the Northern Sahara. The Northern Tuareg pluck a little wool with the hands or cut it off with a knife. It is spun into cords 283
to be used for certain minor objects, notably for the manufacture of the plaited pouch (*abegu*) to prevent the suckling of calves (p. 62, Fig. 41) and for the particular cord (*anaqus*) tied around the forelegs of camels to keep them in a reclining position (p. 72, Fig. 45a). Mixed with goat's hair the wool is 286
also used for a kind of primitive weaving (p. 265 ff., Figs. 209a–b).

Camels are very important to the Tuareg as pack-animals for long caravan expeditions which will 492*
be mentioned in a later chapter when other means of subsistence have been described. 484

In the past camels were also extremely valuable as riding animals on raiding expeditions which 492*

*492

Fig. 47. The *akalo* rope noosed around the lower jaw of a pack-camel and prevented from loosening by the insertion of a small stick. Ayr, *Kel Ferwan* Tuareg.

*492 played an important part for all Tuareg. Raiding expeditions were carried out to gain all kinds of
721 booty, but camels were the main objective, and it was difficult to carry off other kinds of domestic animals over long distances. Thus camels were the main cause of raiding and also the means by which
721 raiding expeditions were carried out. In Ahaggar large scale raiding stopped long ago with the advent
175 of the French at the beginning of our century, though it recovered again during the revolt of 1916–17. This was also true of Ayr, but it seems as if raiding in and around this Massif continued still later
685 (cf. Rodd 1926a, p. 187 ff. & Buchanan 1921, p. 209 ff.). Nowadays raiding has ceased everywhere among the Tuareg, but theft of camels has been on the increase in the south. There are many camel thieves among the Ayr Tuareg, for it is very easy to steal grazing camels during the night and to lead them to some distant market and sell them. The Tuareg claim that in pre-European times there were
[640] hardly any camel thieves in Ayr as such persons were punished very severely. They say that the theft of camels became normal with the French who have great difficulty in proving the guilt of thieves.

685 648 One of the principal tasks of the Ayr camel patrol consists in hunting down camel thieves to take them to Agadez and prove their guilt. Most Tuareg sympathize with this judicial work of the French but claim that it is too ineffective.

232 * 492 435 The Tuareg still take a very great interest in the breeding of riding camels, and extremely good riding animals are occasionally sold for a price equal to that paid for five or six normal camels. When a calf is born they at once recognize whether it will be well fitted for riding or not, for there are certain basic characteristics of riding camels. Ideally they should have a relatively short body, be deep-chested, and of high stature with small feet and slender limbs. For pack-camels they prefer heavy and strong animals with very large feet. Both for riding and for transportation they prefer bulls or castrated animals. Geldings are calmer than bull-camels which are often very fierce and dangerous when she-camels are on heat. Rutting bull-camels may even attack people, and they will fight each other – sometimes with the result that one of them is bitten to death. But there is another reason for castration. For bull-camels which have not been allowed to mate freely with she-camels are generally not very difficult to handle. Castration makes bull-camels stronger and more enduring as they more easily grow fat and get larger humps than non-castrated animals. Castration is never carried out until the bull-camel is fully grown, and both in Ahaggar and in Ayr castration is performed comparatively late when the animals are about five or six years old, or later. Many bull-camels are castrated at an age of ten or eleven years.

* 233 * 492 She-camels are not generally used for riding and transportation, but are reserved for breeding. But some Tuareg may use their she-camels even for extensive trading expeditions, and there are Tuareg who prefer to ride she-camels because of their smoother walk. If a Tuareg has a very good she-camel as a riding animal he may even desire to prevent it from mating by the insertion of a very small pebble into the uterus of the she-camel which will then not be able to mate until the pebble is removed. However,

very few Tuareg use this method as they are on the whole most interested in the increase of their camel-herds. According to Duveyrier it was even common practice among the Northern Tuareg, who in the past had comparatively few camels, to destroy the fetus of she-camels which could then be used as riding animals on raids (Duveyrier 1864, p. 354). I have never been told about that among the Tuareg, and I do not believe that this custom is practised among modern Tuareg who have more camels. It

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

*233 *492 should be remembered that she-camels possess less endurance than bull-camels and geldings on very long journeys.

*233 She-camels and the few bull-camels which are reserved for breeding graze free and unhobbled; pack and riding animals are hobbled with a short rope between their forelegs during grazing. Both in Ayr and among the Northern Tuareg this hobble-rope is known as *téffart* (Fig. 45b–e). In Ayr it is generally [137] rather short because pasture is rich in the valleys where camels are also difficult to find because of the dense vegetation and because the animals frequently leave no trace. In the two groups of Northern Tuareg, vegetation is on the whole more scattered and camels have to wander more freely to find suitable fodder. The Northern Tuareg therefore in general use a somewhat longer hobble-rope, and they find their animals again without much difficulty because of the open country and because the camels leave foot-prints which differ from one animal to the other. When the camels are out of sight they are easily traced by the Tuareg who know their foot-prints. The Ayr Tuareg make their hobble- [283] ropes from dum palm leaves twisted together, while Northern Tuareg use bast of the date palm trees, which latter material is considered the better for hobble-ropes. If hobbled camels are left to themselves for longer periods the Northern Tuareg also use ropes made of goat's hair or ox hide as such ropes do not so easily break (cf. Fig. 45c, e).

[171] Arab pastoralists of the Northern Sahara do not always let their camels graze during night but frequently keep them lying in front of the tent after darkness; the animals are then tied around one of their forelegs by means of a short rope provided with a small stick. The same device (*asaṛun*) is also known to the Northern Tuareg (p. 67, Fig. 45a), but it is unknown to the Ayr Tuareg who use for this purpose a short rope (*aṛenfud*) without a stick and made from twisted dum palm leaves. The Tuareg may keep camels in the camp during night and then tie one of their forelegs with the ropes mentioned. This is done with she-camels which rest close to their calves at night time, and in Ayr also with most camels during the short period of the year (*akasa* and the beginning of *ṛarat*) when dew falls heavily upon annual pasture, for camels may contract stomach diseases from eating wet annual plants. In Ahaggar I have noted that camels are attached in the way mentioned and kept in camp during the night in order that they might not eat noxious plants growing close to the tents (cf. p. 124). However, camels normally graze during the night and do not sleep much. On the very long trading expeditions they eat almost exclusively through a few hours of the night. When a camel sleeps it stretches out its long neck in a slightly curved position and its head rests upon the chin (cf. Fig. 46). It sleeps very lightly, and the Ahaggar Tuareg say that a boy who is able to creep under the neck of a sleeping camel and not awake it will never loose his way in the desert.

*492 Pack-camels of a Tuareg caravan walk one behind the other in a long line. Every pack-camel is provided with a rope noosed around its lower jaw, the loop being prevented from loosening by the [283] insertion of a small stick (Fig. 47). This rope is known as *akalu* to the Ahaggar Tuareg, who use ropes made from twisted pieces of date palm bast, while the Ayr Tuareg make similar ropes from dum palm leaves. The loose end of the *akalu* rope is attached to the pack-camel walking in front, fastened either to its luggage or, more frequently, to its neck around which camels of a caravan carry their hobble-ropes.

*233 *492 True halters made from goat's hair or from palm material are used mainly for young untrained

Fig. 52. The *akeskabbu* shakles connected with a leather rein richly decorated with fringes of the same material. This headgear is now in the National Museum (N.M. G. 5192). Hanging around the camel's neck is also a neck collar (*tahawi*) with a brass bell (*anayna*) which is also now in the National Museum (N.M. G. 5191) (cf. Fig. 74b). Below the brass bell is an amulet case fixed to a piece of goat's hair. Ahaggar, the *Aguh-en-tehlé* tribe.

*233 *492 camels and for other animals which are difficult to control (Fig. 48). Such halters are known by the term *amerar* among the Ayr Tuareg. Certain camels which are difficult to catch even when hobbled during grazing constantly wear a halter provided with a short rope hanging down from the head – a device applied to many fierce bull-camels (Fig. 56).

*492 To break-in young riding camels the Tuareg frequently use a double rein one end of which is tied around the animal's head to serve as a halter while the other end is noosed around the lower jaw according to the method generally used for pack-camels and described above. But for trained riding [237] camels the nomads normally content themselves with the use of a single rein (generally known as *tarant* in Ahaggar, in Ayr as *trézem*) plaited of goatskin or goat's hair and attached to a copper ring (*tigemt* in Ahaggar) inserted in the right nostril of the camel (cf. Fig. 43). This is done by the black- [584] smiths who also manufacture a very special headgear (*akeskabbu*, or *taryet* in Ahaggar) for riding camels which are difficult to control. The rider when using such a head-gear has a double rein one end of which is attached to a nostril ring (*tigemt*) while the other end is connected with two iron shackles known as *akeskabbu* (*taryet*) and *amadel*. When the rider pulls the right rein the camel is pulled at the nostril ring, but when he pulls the left rein the two iron shackles are tightened around the bridge of the nose and the lower jaw of the animal. The system is illustrated Figs. 50–52. Black- [826] smiths also make very elaborate halters of this type to be used mainly as an ornament of riding camels [531] on festive occasions. In such cases the halter as well as the rein are richly decorated with coloured

*492
531 leather fringes (cf. Fig. 52). Some very elaborate halters are found in the Musée de l'homme (Nos. 5.66.5; 30.61.228; 95.46.3; D $\frac{3A}{1}$ 42; D $\frac{3A}{1}$ 25).

*492 Foucauld describes a peculiar method for leading camels, as follows:— A little wooden stick (*agula*) is stuck into the skin between the chin and the lower jaw of the animal, and the lead is attached to this stick. The method is practised with camels which have no nostril ring and cannot be led by means of a rope attached around their lower jaw (Foucauld 1951–52, I, p. 426). I have seen this peculiar method practised once in Ahaggar.

Pack-camels are rarely used without some type of saddle, but it happens that camels are used for water-transportation from the well to the camp without a saddle. The waterbags are then hung over the animal's back, their cords resting upon a layer of straw or sprays. In Ahaggar, and more so in Ayr, it is also common instead of a proper saddle to use two skin-bags filled with grain, straw, or the like to form cushions. One of these is placed before, the other behind the hump so that the cords of luggage bags can rest upon them (cf. Fig. 53–54). These cushions are known as *imaytalen* (sing. *amaytal*), and they may serve as a pack-saddle even on long journeys, though the Tuareg in general use proper saddles on trading expeditions.

[171] Pack-saddles of the Northern Tuareg correspond to saddles found among the Arabs of the Sahara. The common type is that known to the Arabs as *ḥawiyya* or *ḥiddāge*, and called *élaki* by the Northern
[824] Tuareg. It consists of a wooden frame (*élaki*) generally made from pieces of palm leaf ribs (Fig. 55).
[284] It is made up of two crossbars placed close to each other, each of them being composed of two short and slightly curved pieces of palm leaves' ribs lashed together at the top with raw camel-hide. The

pair of cross-bars is connected with four short sticks of the same material, each being lashed with hide horizontally to the crossbars. This frame is generally manufactured by sedentary agriculturists of Tidikelt, who also make the large cushion (*tihekam*) of date palm bast to which the saddle-frame is attached with cords. On rare occasions the Tuareg also have saddle-frames of wood (*taharekkat*, that is *Tamarix aphylla*) made by the blacksmiths on the same pattern, and they may also use cushions of hay stuffed into a piece of matting. The *élaki*-saddle is used in the following way:— The short, looped cords of the loading bags rest upon the wooden frame in front of the camel's hump and on the rear part of the saddle-cushion. A bunch of grass or date palm bast (*aselki*) is placed under the loading cords that they may not gall the back of the camel. In addition to the proper camel-load divided into two halves (e.g., two large bags) there are frequently many smaller objects to be transported, and these are then attached to the wooden saddle-frame. The *élaki*-saddle normally rests loosely upon the camel's back, but it may be fixed to the animal's back by a girth (*ahayif*). It is also occasionally

*492 fixed with a rope running under the tail and/or a rope around the camel's chest. The *elaki*-saddle is [104] unknown to the Ayr Tuareg, but I have seen it in use among Arab traders living at Iferwan of Northern [171] Ayr. It is by far the most common type of pack-saddle in both groups of Northern Tuareg.

Another type of pack-saddle named *tebeyut* or *tkhawit* corresponds to the *herej* saddle of the Arabs. It is used occasionally by the Northern Tuareg, but I have only seen it among the *Kel Aijer*. The saddle-frame is made from date palm ribs and consists of two cross-bars connected with each other by two crossed sticks at both sides. One of the cross-bars rests in front of the animal's hump, the other behind. The frame is lashed together by means of strips of raw camel-hide and is fastened to [283] two pads of palm bast as can be seen from the photograph Fig. 57. As far as I know this saddle-type, [563] like the type above-mentioned, is manufactured by palm-growing agriculturists of the oases. This saddle type seems to be unknown among the Ayr Tuareg.

The proper pack-saddle used among the Ayr Tuareg is known to them as *aruki*. It consists of one [28] wooden arch lashed to two flat boards (Fig. 58). These two sideboards are attached to two pads made from hay stuffed into tubular pieces of dum palm matting. The two pads or mat cylinders are fitted on each side of the camel so that the wooden arch rests in front of the hump. But there is also a rear pad consisting of a stuffed skin-bag laid over the camel's back behind the hump and attached to the wooden arch by means of cords. The loading cords bear on this stuffed skin-bag and on the mat-cylinders in front of the wooden arch. The wooden arch is manufactured by blacksmiths, while the [564] side pads and rear pad are made by the Tuareg. The saddle is not generally fixed to the camel by means of girths or cords. The place of origin for this saddle-type seems to be Ayr. It is used also among the *Kel Geres* Tuareg, and it seems as if related saddle-types occur elsewhere in the south (cf. p. 311).

*492 Transportation bags of various types are used for camel loads, but the very large bags woven from 415 a mixture of goat's hair and camel's wool so typical of northern Arab pastoralists are not in current use among the *Kel Ahaggar* and the *Kel Ajjer*, and are entirely unknown to the Tuareg of Ayr. The [563] Northern Tuareg generally use bags made from the skin of barbary sheep, or bags made from date palm bast by the sedentary agriculturists of Tidikelt (cf. Fig. 59). In Ayr the Tuareg normally use transportation bags of plaited dum palm leaves.

The ideal load of a camel consists of two bags forming a total weight of up to 200 kgs for a very strong animal. The two bags, which together form one load, are each provided with two short loading loops. They are known to the Ahaggar Tuareg as *elferwet* when bags are woven, as *tadekmert* when the bags are of skin. The loading is done as follows:— The two bags are lifted up and supported against the sides of the recumbent pack-camel by two men who put the loops of one bag into those of the other and insert between them two little sticks, known in the north as *tihdad* (sing. *tehedit*). To unload the camel all one has to do is to pull out the two small sticks inserted between the loops, and the two bags fall to the ground. This same system is also used in Ayr, and, I believe, among all [171] camel-breeders of North Africa. - To secure the load in a fixed position it is very common to surround its two halves with a rope (*takhamit* in Ahaggar), which is laid over the saddle-frame before loading and another rope around the luggage and the belly of the pack-camel is also used if considered necessary.

*492 When camels are taken to the camp from pasture, they are sometimes mounted without a saddle

Fig. 58. Wooden saddle frame of the *oruki* type. The curved piece of wood is fastened to two boards with strips of raw hide. The frame is manufactured by an Ayr blacksmith. Bought at Tamanrasset. Dimension: 0.337 m long, 0.275 m high. (N.M. G. 5247).

*492 [171] by men and boys, who sit sideways in front of the hump resting their feet upon the animal's neck, or, more rarely, behind the hump with their feet hanging down, as is the custom of Arab pastoralists of the Northern Sahara. It should be added that on long trading expeditions the Tuareg frequently content themselves with sitting on the top of their loaded pack-camels. But riding in these ways is not very pleasant, and whenever possible the Tuareg use proper riding saddles placed in front of the camel's hump so that the rider sits cross-legged in the saddle with his feet resting upon the lower part of the animal's neck.

Most Tuareg have saddles of the well-known type with a cruciformed pommel. This saddle is known as *térik* which term is used for three distinct sub-types. One is known as *tekokeyt* (Fig. 60); it differs [531] from the type known as *tamzak* mainly therein that the latter is provided with peculiar ornaments and designs (Fig. 61). These two saddles are those normally used by the Tuareg, while the third sub-type known as *bertekes* is extremely rare; it resembles the *tamzak*-saddle, but is provided with many small bells fastened to be back (Fig. 62). Such saddles are hardly ever manufactured by the black-[564] smiths of Northern Tuareg countries, but are made in Ayr, notably in Agadez, where the Northern [432] Tuareg also buy their riding saddles. Even the Arab pastoralists of the tribes *Chamba* and *Ulad Ba*

*492

Fig. 60. Riding saddle of *tekokeyt* type (*térik*). Bought in Ahaggar by Olufsen, manufactured in Ayr. Dimension: 0.70 m high, 0.50 m long, 0.35 m broad. (N.M. G. 1.126).

[284] *Hammu* obtain their riding saddles from Ayr. All three sub-types of the *térik*-saddle are construc-
[237] tionally identical, being made from pieces of wood lashed together with raw hide and then covered
[113] with coloured leather. The structure of this *térik*-saddle is described and depicted in literature (cf. notably Gabus 1949, pl. XII; 1957, p. 176 & Nicolas 1950a, Fig. 48, p. 179).

492*
531

Fig. 61. Riding saddle of *tamzak* type (*térik*). Manufactured in Ayr, Agadez. Dimension: ca. 0.77 m high, 0.31 m broad. (N.M. G. 6655).

A less elegant type of riding saddle known as *takyast* (Ahaggar) or *akyas* (Ayr) is used rather frequently among the Northern Tuareg and occasionally in Ayr. The wooden structure of this saddle (Fig. 63) does not differ much from that of the cruciformed *térik*-type. It is lighter and less solid, and the saddle is not much esteemed among the Tuareg who use it because it is cheaper. It is manufactured 492* [564]

Fig. 63a. Riding saddle of the *tahyast* type. The saddle is made of wood of the *turha* tree (*Calotropis procera*) which is often used for riding saddles. The wooden frame is lashed with strips of raw hide and covered with depilated ox-hide which is coloured with the dyes known as *herki*, *temesarak*, and *tawakent* (cf. p. 282). Bought in Ahaggar, manufactured in Adrar-n-Foras, or in Ayr. Dimension: 0.55 m high, 0.51 m broad. (N.M. G. 5189).

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

*492 that it is manufactured by pastoral Tuareg of these regions and not by blacksmiths, though the latter
[564] may also make such saddles for their own use. The wooden structure is made of two cross-bars, which
[412] are natural prongs fashioned with knife and axe, and these two cross-bars are lashed to each other at their lower ends, or are connected with each other by means of two sticks crossing each other at
[824] the two sides. A wreath of slender roots of *afagag* (*Acacia Raddiana*) covered with a network of dum
[283] palm rope may serve as a saddle seat, which can also be covered with a piece of matting plaited from
[289] the leaves of the dum palm tree. This very simple saddle may perhaps be considered the prototype of the more developed riding saddles of the *térik* and *tahyast* types.

All the above-mentioned types of riding saddles are placed in front of the camel's hump and rest upon two to four saddle cloths, the number depending upon their quality and also upon the nutritional condition of the animal. Two saddle-cloths are considered enough for a fat camel while four should be applied to a very thin one. Saddle cloths are frequently called *ésatfar* (Ayr) or *asetfer* (Ahaggar), but this name is in fact used for everything placed upon the back of an animal to protect it against galling from the luggage and/or the saddle. Saddle cloths for camels are properly termed *éselis* (Ayr)
[286] and *ameslaḳ* (Ahaggar). Both among the Northern Tuareg and in Ayr saddle cloths are generally made of cotton, but they are also made from dum palm matting and a piece of leather among the Ayr Tuareg (Figs. 66–67). The riding saddles are fixed to the camel by a single girth known as *ahayif*
[237] (Ahaggar) or *azaw* (Ayr). In the north such girths are normally made from goat-hair while the Ayr Tuareg use plaited leather (goat-skin). Girths in both regions are frequently furnished with a very
[541] large tassel hanging down from the right side of the camel (Fig. 69). On rare occasions when the Tuareg
[648] ride their camels with all possible speed, e.g., at the annual camel races organized by the French administration, the riders often secure the position of their saddles by means of a long cord (*ihwéweren* among the Northern Tuareg) tied around the hind part of the camel as shown by the photograph Fig. 68.

The camel rider sits in the saddle cross-leged with his feet resting upon the camel's neck. To accelerate the speed of his riding animal he pushes one of his feet against its neck in step with the rocking gait
*492 peculiar to camels. A whip (*alekkoḍ*) also belongs to the equipment of the rider. Most whips have a
237 single lash made from a twisted strip of hide, but whips provided with two lashes of hide attached to a wooden handle are also found and are common in Tasilé-n-Ajjer (Figs. 70a–b). The whips used in the north are said to be made from camel's hide soaked in water; the raw hide is twisted and kept in this position until it is dry. The Ayr Tuareg say that camel's hide is not well fitted for whips, which among them are manufactured from the raw hide of a newly-killed ox. A piece of this hide is twisted and left to dry as in the north. The handle of the one-lash whip is made of cotton wrapped around the upper part of the lash and covered with coloured goat-skin.

*492 The Ahaggar Tuareg have a particular implement to hasten the speed of riding camels. It is described in literature notably by Foucauld. It consists of a slender iron rod 0.35–0.50 metres long, fixed into a wooden handle. It has a small crook much like that of a staple and is used for scratching the animal and thus to incite it to greater speed. It is called *aẓallu*, or *asekreḍ* (Foucauld 1951 52. II, p. 856 & IV, p. 1960). I have never seen this peculiar implement among the Tuareg.

*492 A camel rider's equipment comprises various types of skin bags of which the most common is a
415

*492
237

Fig. 63b. cf. Fig. 63a.

*492 415 huge saddle bag known as *ejjebira*, manufactured exclusively by the sedentary people of Agadez, the *Imeggedezen* (Fig. 72a). Other bags are often used by riders and some of them will be mentioned in the description of skin and leather work.

[283] An important part of the rider's equipment is the drinking bowl (*tamennast*) made from metal and attached to the saddle pommel with a plaited leather cord (*iémetsek*); it is particularly common *492 among the Northern Tuareg (Fig. 71). The Tuareg also possess a great many objects which serve [531] exclusively as ornaments for riding camels. The Northern Tuareg adorn their animals with a collar (*tahawt*) made from fine cords of goat's hair, while the Ayr Tuareg use another type of collar called

*492
285

Fig. 66. Saddle cloth (*ésélis*) made of dum palm matting. Ayr, the *Imezzureg* tribe. Dimension: 0.28 m high in bent position (N.M. G. 6657).

*492 *ilgam* (Fig. 73–74) made of leather by the *Imeggedezen*. Camels may also be provided with a bell (*anayna*) attached to a neck-collar (Fig. 74b). The Ayr Tuareg also use bells for roaming bull-camels, as I have myself seen, and for rams and he-goats, but never for oxen.

*492 562 565 The camel is used for riding by Tuareg men, while many women never mount camels. Among the Northern Tuareg most women of the true vassal class (*Imrad*, or *Kel Ulli*) only mount camels very occasionally, when they sit behind the saddle of their husbands or close male relatives. Their proper riding animal is the donkey. Women of the *Isekkemaren* class more frequently mount camels which are the correct riding animals for women of the nobility (*Ihaggaren*). Noble women never ride donkeys.

In Ahaggar proper riding saddles for women are found only in noble tribes, in the *Ireqenaten* tribe, *492 562 and in tribes of the *Isekkemaren* class. Such saddles are constructionally related to the transportation

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

saddle known as *tebeyut* or *tkhawit* and described above p. 76 (Fig. 57). The Ahaggar Tuareg have four sub-types of women's saddles:— (1) *akhawi*, that is a very large saddle at each side provided with a wooden arch; (2) *tkhawit* (*ta-n-tkéwin*), a lighter saddle provided with similar wooden arches; (3) *aragen*, a large and heavy saddle without side-arches; (4) *tkhawit* (*ta-n-tehdad*), a light saddle without side-arches. These saddle types, particularly the former type known as *akhawi*, are exhaustively described by Foucauld in his dictionary (Foucauld 1951-52, II, p. 723), and a very beautiful specimen is here depicted from the collection of the Musée de l'homme (Fig. 75). Very elaborate saddles as that depicted are always made by the blacksmiths, but light saddles of the *tkhawit* types may also be manufactured by Tuareg women. Thus women of the *Iregenaten* tribe south of the Ahaggar Massif make saddles of the lighter type themselves. Women's saddles may sometimes be provided with a roof made from curved and bent boughs covered with cotton or blankets. This peculiar construction is known to the Ahaggar Tuareg as *ahennaka*.

541

Fig. 68. Tuareg camel riders prepared for a camel-race. The fixed position of the saddles is secured by means of a long cord (*ihwéweren*) tied around the hind part of the camel. Tasilé-n-Ajjer.

*492 The saddle types just mentioned are unknown to the *Kel Ferwan* Tuareg and apparently also to
[562] other Tuareg of Ayr. Tuareg of the *Kel Ferwan* drum-group refer to these women's saddles as "Arab saddles", and when their women mount camels on festive occasions they do not use proper saddles but a kind of chair built up upon two very large cushions manufactured by the *Imeggedezen*, and stuffed with hay. The arrangement of this saddle-chair is complicated and it takes some hours to finish it. It is built as follows:— The two large cushions (*éstigen*, sing. *ésteg*) are placed on the camel's back in front and behind the hump. They support a superstructure known as *tésogaley* and made from various objects belonging to the tent in the following way:— (1) Two large and oblong skin-bags are stuffed with hay or old cotton pieces and each of them is wrapped with a coloured blanket to form an oblong parcel. (2) To stay these parcels a rolled bed mat (Fig. 212b) is tied horizontally to each of
[205] them, and they are laid parallel with each other on the ground. (3) A very long mat plaited from dum palm leaves is rolled up and wrapped into a coloured blanket or a coloured piece of cotton. It is bent into a U-form and thereupon attached to the two oblong parcels by means of cords. This superstructure is further covered with coloured blankets and pieces of cotton. It is placed upon the two large cushions and tied to them and fastened to the camel by means of cords and girths. When a woman rides in such a saddle-chair she sits behind the animal's hump so that she cannot reach the camel's neck with her feet. The back of the U-formed mat prevents her from falling backwards. The structure
*492 of the saddle-chair may be seen from the photographs (Figs. 76–77). It should be understood that a
562 saddle made in so difficult a manner is not used by the women except on festive occasions, such as
[409] travelling to attend a marriage or an Islamic feast. Apart from the very few noble women belonging
[568] to the two noble tribes within the *Kel Ferwan* group all women of this drum-group normally ride

*492 562 donkeys, but, as in the North, they sometimes mount the riding camels of men sitting across the animal behind the saddle.

*492 531 The Tuareg take a keen interest in the adornment of all objects used for riding camels. The richly decorated saddles and the ornaments of the riding gear express the particular value attached to the animals used for riding. But Tuareg interest in camels is perhaps more clearly understood, when we 233 consider their rich camel vocabulary.

192 The Tuareg have one word which can be used for any camel regardless of its sex and age, its colour, and all other particular qualities. This word (*amaǧur*, pl. *imuǧar* in the northern dialect) does not seem to have its equivalents in vocabularies of other domestic animals which collectively are referred to by means of a sex term of adult animals (e.g., *ulli* = "goats"). The word *amaǧur* (pl. *imuǧar*) is used in conversation, but it is heard less frequently than camel terms which have a very definite meaning.

**b. Large luggage bag (*ebaun*). Collected in Ahaggar by Olufsen. Dimension: 1.20 m long. (N.M. G. 1.136).**

In a few words camel vocabulary has the characteristics mentioned under the following items:— 233 (1) Sex terms; (2) Age terms which, like most camel terms, also refer to the sex; (3) Colour terms; 192 (4) Terms for very special qualities; (5) Terms for camels according to their training and use; (6) Terms for camels in very definite situations; (7) Terms for the number of camels in a herd; (8) Many entirely synonymous terms.

The Northern Tuareg use the term *amis* (pl. *imnas*) for all male camels including geldings, and the term *talemt* (pl. *tellemin*) for all she-camels. In Ayr a male camel is known as *alem* (pl. *imnas*) and a

the-camel as *talemt* (pl. *tollemin*). In both groups a bull-camel is termed *amali* which word is generally used only for bull-camels reserved for breeding. 233
192

The Tuareg of Ahaggar and Tasilé-n-Ajjer have definite age terms for camels until they are eight years old. These terms may be seen from the list on p. 102 where they are mentioned in their feminine forms. At the age of eight years the dentition of a camel is fully developed and later it becomes more difficult to state its exact age. Camels older than eight years are therefore generally known by one and the same term as long as they are strong enough to be used for riding and transportation, or for breeding. The age terms used among the *Kel Ferwan* Tuareg of Ayr are different from those mentioned from the north. They are used with precision for camels up to eight years old, and if the exact age of a camel is known by the owner he may continue to apply such terms for camels up to fifteen years old. Older camels are just referred to as "camels" or "old camels".

Colour terms of camels are many. I find it appropriate to list colour terms of the Northern Tuareg

*492
531
562

Fig. 75. Women's camel saddle (*akhawi*). Ahaggar, noble tribes. (Musée de l'homme).

233 and the Ayr Tuareg separately, because they frequently use different terms for the same colours and
192 because the Ayr Tuareg have a great many piebald animals which seem to be rare in the north. In the north most animals are of one colour, and the common terms of Ahaggar camels are the following:— *adegnas* (dirty white), *ébeydeg* (white), *éberim* (whitish yellow), *atlaṛ* (mahogany), *abzaw* (whitish), *émengel* (dark grey), *alemlaṛ* (grey), *ézerif* (metallic grey), *ahaggar* or *ézeggeṛ* (red), *abhaw* (reddish-brown), and *ékawél* (black). There are a few other terms. I have noted the following terms of piebald camels in Ahaggar:— *éḍemḍem* (a dark or red camel being white on the nose or around the mouth), *iigen* (a camel with white legs), and *azerṛaf* which term seems to be applied to all camels of two colours, and also to other piebald domestic animals.

I have noted the following terms of camels of one colour among the *Kel Ferwan* Tuareg of Ayr:— *adegnas* or *wa mellen* (white), *abzaw* (whitish), *atlaṛ* (mahogany), *égadé* (light brown), *awraṛ* (something between light grey and light brown), *éberhey* (something between whitish and light grey), *aberog* (greyish), *ingal* (dark grey), *ézerif* (metallic grey). Most camels of one colour belong to one of these shades, which are frequently so close to each other that a correct description and translation into European colour words is difficult. Most one-coloured camels I have seen in Ayr were *adegnas*, *abzaw*, *atlaṛ*, and *ézerif*, but piebald camels seem to be more common than the unicoloured animals. I have noted the following terms of piebald animals:— *amulas* (white blaze, white colour around the mouth, the remainder of the animal being dark), *agusrer* (the back and partly also the neck greyish

brown, the remainder of the animal white), *énil* (dark grey with white colours on the belly, the hind thighs, and the four legs), *awinak* (dark grey back but with white on the sides close to the hump, on the hind thighs and legs, on the forelegs, and on the tail), *azurzum* (white on the hind thighs, the remainder plain), *ajmilal* (camel with numerous small circular spots close to each other), *azerraf* (camel of two colours, black and white, or black and red; there is no definite rule for the distribution of these 233 192

233 two colours on the animal). There are other terms for piebald camels, but I have only mentioned the
192 colours I have seen myself, as it is extremely difficult, not to say impossible, to note down colour terms without seeing the animals. One characteristic of many piebald Ayr camels has not been mentioned above: They very frequently have red-white eyes, and such animals according to the Tuareg are always deaf. Red-white eyes and deafness seem to go together with certain forms of piebaldness, so that all camels termed *azerraf* and *ajmilal*, and some camels termed *agusrer*, *awinak*, and *azurzum* are deaf.
*[492] This, however, does not prevent the Tuareg from using these animals for riding and transportation, and even deaf bull-camels are frequently used in breeding.

The Northern Tuareg have a great many different terms for particular qualities of their camels which are named after their way of roaring and walking. The following examples come from the Ahaggar Tuareg:— *ahenderremma* or *arenennas* (a camel which has the habit of neighing with joy when it sees something very agreable; e.g., a she-camel seeing its calf when it returns to the camp from grazing), *émerregreg* (camel which roars mournfully when it becomes separated from its master, or from another camel with which it normally grazes; certain camels are particularly attached to each other and never separate during grazing), *arewaha* (a camel which has the habit of uttering the plaintive roaring named *tarewahit* during loading and unloading), *asekkelela* (a rutting camel uttering the sound named *terelelit*). The Ahaggar Tuareg have other terms for camels to denote their behaviour. Thus there is a particular term for a camel which becomes scared when walking in a caravan after sunset so that it throws off its load and gives rise to a lot of panic among the other caravan animals.

As examples of camel terms given according to the animals' way of walking, mention should be made of following examples from Ahaggar:— *ategemtegam* (camel which takes very short steps), *aseffakas* or *alemdeyyas* (camel which takes very long steps). The Tuareg of Ahaggar have many special terms for camel-gaits. To indicate this I quote the detailed description of gaits given by Fou-

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

133
233

Fig. 78. She-camel with the colour name *tazurzumt*. Ayr, the *Imezzureg* tribe.

cauld:— ***sekkedi*** (to let camels trot very slowly at an artificial gait known as *téṛedeyt*), *setteles*, or ***sellwen*** (to let camels walk at a normal ambling pace), ***eg senat-senat*** (to let camels trot slowly at a gait known as *senat-senat*), ***sekkeber***, ***keburet***, and ***keberkeber*** (a kind of trotting named *akabur* which is somewhat faster than *senat-senat*), ***regiregi*** (to let camels pace or trot at the types of gait known as *tétalist*, *senat-senat*, and *akabur*), ***eg yukey-eḍer-tayit*** (to let camels adopt a fast trot known as *yukey-eḍer-tayit*), ***uylal*** (to let camels adopt a sharp trot), ***enteg*** (to let a camel gallop), ***awdet*** (to let camels trot or gallop; this verb does not refer to any particular type of gait but to several, from the slow trot known as *senat-senat* to the very fast gallop known as *tabedeṛat*). These gait-terms are used only for camels, but the Tuareg also have terms for gaits of other domestic animals – particularly for those of horses (cf. Foucauld 1951–52, II, p. 553 ff.). The gait known as *téṛedeyt* is considered very elegant by the Tuareg, who train camels to walk in this way already when the animals are very young. This is done by means of a large and wide bobblerope tied around the forelegs above the knees the animals being forced to walk by whipping them lightly on the legs (cf. Foucauld 1951–52, IV, p. 1696). As far as my knowledge goes the Ayr Tuareg have terms very similar to those mentioned above, but I have not taken them down in my notes and only remember very few of them, e.g. *tarajawit* (a camel which roars during loading and unloading), ***alem-n-akabur*** (a camel walking with very quick steps), ***alem-n-emehal*** (a camel which takes very long steps). 233 192

Considering the very special camel terms just mentioned, it is only natural that the Tuareg also have many terms to cover the use and training of camels. Thus the Ahaggar Tuareg can refer to a normal heavy pack-camel by one of the following terms which are synonymous:— ***abakhul***, ***dekhkhe-dekh***, ***agelgali***, ***akhelkhali***, and ***ḍrikhi***. For riding camels the following terms can be mentioned:— ***aṛlam*** (any riding camel), ***aserensera***, ***tanegmoṭ***, ***taletmot***, ***arretus*** (excellent and very fast running riding animals). There is also a term for a fully-trained riding camel (***amanun***), and another for a camel which is not yet fully-trained (***asanan***). 233 492* 192

Fig. 79a–d. Children's toy camels. a. Jaw-bone of goat provided with saddle and rider. It is known as *aknar n amis*. Ahaggar, *Ḥarratin* of Abalessa. (N.M. G. 5914).

b–d. Three roughly-cut stones used as toy camels by Tuareg children. Ahaggar, the *Kel Ahnet* tribe. Dimensions: 0.067, 0.063, and 0.073 m. (N.M. G. 6604 b, d, a).

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

As an illustration of camel terms given to animals in very special situations, I give the two following examples:— (1) A she-camel when driven out for grazing while its calf is tethered in the camp is known as *tamantak* to the Ahaggar Tuareg, as *tenteg* to the *Kel Ferwan* Tuareg of Ayr; (2) A pack-camel when walking in a caravan is known to the Ahaggar Tuareg as *amekkalu*, while the corresponding term in Ayr seems to be *alaway*. 233 192 [492]*

For the size of herds the Ahaggar Tuareg have the following terms:— *tazegga* (a small herd of 20-40 camels and/or she-camels), *ahammal* (from very few animals up to about one hundred, the herd consisting mainly of male camels), *adyaw* (a very large herd comprising about one hundred animals at least, regardless of their sex). As far as my investigations go these terms are not known among the *Kel Ferwan* Tuareg of Ayr. They refer to a small number of camels as *immas* (10 to 15 animals comprising male and/or female camels), while a bigger herd is known as *tollemin* (comprising male and/or female camels).

All the above-mentioned camel terms are with very few exceptions used exclusively for camels and not for other animals. Extensive vocabularies are found also for other domestic animals and for many aspects of stock-breeding, but the camel vocabulary is extremely large by comparison. This seems understandable as camels have a many-sided use to the Tuareg, and there can be no doubt that camel-terms like goat-terms are primarily a linguistic technique of practical value – a technique which enables the Tuareg to speak about their animals with precision. But this is evidently not the sole reason why the camel vocabulary is so extensive that a detailed description of all terms would necessitate an independant book on this subject. For the camel vocabulary is extremely large not only because of its practical value, but also because Tuareg interest in camels is not solely confined to their practical uses. This is intimated, I believe, by some of the peculiar terms mentioned and above all by the very many synonyms. [181]

Camels, in contrast to most domestic animals, have social functions among the Tuareg. It is true that bride-wealth in vassal tribes of the Northern Tuareg may be paid in goats (25–30 animals), but this is the case mainly among the *Kel Aijer* while most Ahaggar vassals will claim that bride-wealth should be paid in camels. The true vassals of Ahaggar give one to three camels for a wife, the payment being dependent upon the bride's tribe – in most tribes it is the custom to give only one camel, while two tribes will claim two and three camels respectively for their women. Among the Ayr vassals of the *Kel Ferwan* group bride-wealth may be paid in cash, though the bride-wealth in these tribes is generally one camel as among most northern vassals. But the size of bride-wealth among the Ayr Tuareg is frequently discussed by representatives of the families, and it depends much upon the age, quality, and wealth of the bride. For very desired girls the payment may rise to two or three camels while for others the payment is only "two camel feet", that is a "half share in a camel"; it is said that even "one foot" is sometimes accepted as bride-wealth. This system of giving shares in camels may give rise to trouble between the persons who share the same animal. Among noble Tuareg, both in the north and in Ayr, bride-wealth can be paid only in camels. Among noble tribes of the Northern Tuareg the bride-wealth to be paid is fixed at seven camels, while among the few noble Tuareg now left in the *Kel Ferwan* drum-group the price, it is said, varies between ten and twenty camels. Camels given for bride-wealth are generally *ilusan* (sing. *alegges*) (fem. *tilusin*, sing. *taleggest*), 233 583 565 [578] 233 583 601

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

233 583 601 that is camels two to three years old, and the same word is also used in kinship terminology for brothers and sisters-in-law.

233 436 593 431 584 684 643 The Tuareg make social payments and many indemnities in camels. If, as may happen, a woman permits her husband to take a second wife, she will claim at least one camel from him. Again, if a woman feels herself badly treated by her husband she will go to her parents' camp and not return to her husband until she has been presented with a camel. Parents will sometimes induce their children to marry against their own feelings by means of a gift of camels. In Ahaggar the indemnity for adultery is fixed at three camels paid by the seducer, while one camel is given by an unfaithful wife. However, these camels are not given to the deceived spouse, but to the supreme chief of Ahaggar, the *Amenukal*.

603 For the knocking out of a tooth two camels must be given, but if the injured person is a woman the payment is five camels. For the destruction of an eye the indemnity is fixed at 25 camels. The same payment is made for the cutting off of a hand or a foot, the cutting of a finger or a toe being fixed at a price of five camels. In agreement with this system blood-wealth in Ahaggar was fixed at one hundred camels in the past. There were quite definite rules governing the age and appearance of the camels to be paid for a slain man. They should all be she-camels of different age, and of ten distinct colours as follows:—

233 436 682

| | *Age* | | | *Colour* | |
|---|---|---|---|---|---|
| 10 | *tilgad*, or *chét awétay* | (one year old) | 10 | *tibeydegin* | (white) |
| 10 | *tihusin* | (2 years old) | 10 | *titlarin* | (mahogany) |
| 10 | *tekkenifaklen* | (3 years old) | 10 | *tizeggerin* | (reddish) |
| 10 | *tiruyar* | (4 years old) | 10 | *tibhawin* | (reddish brown) |
| 10 | *chét essin* | (5 years old) | 10 | *tilemlarin* | (grey) |
| 10 | *chét okkoz* | (6 years old) | 10 | *tizerifin* | (metallic grey) |
| 10 | *timesseḍas* | (7 years old) | 10 | *timengelin* | (dark grey) |
| 10 | *chét tahalt* | (8 years old) | 10 | *tikewelin* | (black) |
| 20 | *tirégganin* | (more than eight years old; she-camels considered neither young nor old) | 10 | *tizerrafin* | (piebald) |
| | | | 10 | *tiwinarin* | (white cornea) |

233 822 * 492 643 The actual value of a camel is never judged from its colour, but colours have a certain æsthetic value, and wealthy Tuareg who keep several riding camels will always have animals of different colours. This is the case with the present *Amenukal* of Ahaggar, who is said to possess between ten and twenty camels trained for riding.

233 857 565 524 232 324 868 181 Camels play a great part in the life of the individual. Boys of the vassal class may be set to herd goats, but their games centre round camels, and they take no particular interest in other domestic animals. For their games very small boys have camel puppets which are jaw-bones of sheep and goats (Fig. 79a), or roughly-cut stones (Fig. 79b–d). These playthings are their "riding camels", "she-camels", and their "caravans". Boys learn to travel on camel-back at a very early age. When three or four years old they sit behind their father's riding saddle or on the top of a loaded pack-camel, and all boys can ride a trotting camel without a saddle before they are ten. Boys grow up with an intimate knowledge of camels and camel-breeding, and with very little interest in any other subject.

[565]

Boys and girls may play together, but there is a tendency for them to separate in their games. Boy-games centre round camels, while the games of girls centre round the family life of the tent and certain domestic tasks. But though camels are never tended by women, girls also make camel figures from cotton stuffed with hay, though they do not make figures to represent goats and donkeys which among vassals are connected with women and tended by them. The emphasis on camels in girl's games is due to the fact that camels have important functions in social life as described briefly below.

[531]

Tuareg initiation consists in the adoption of the veil by young men, and a similar piece of cotton used as a head-cloth by young women. The veil is adopted by men when 16–18 years old, the head-cloth by women somewhat earlier shortly after the first menstruation, or at marriage. At initiation the young man is presented with a sword, and if he does not already possess a riding camel with a saddle it will be given him on this occasion by his father, perhaps by his mother's brother. The young man is now a warrior and a camel man, and he will take part in nightly gatherings of young people of both sexes to sing and make music. These nightly gatherings are very often followed by love-making, and the riding camel and the ability of the young man as a rider play a great part for his success in love. The beauty of the riding camel, its saddle gear, and the way it is ridden are all to some extent considered qualities of the rider. Thus when women at nightly gatherings praise young men in their songs they will also praise the riding camels. And when a girl likes a young man she will present him with coloured skin bags, reins, embroidered saddle clothes, and similar objects to be used as ornaments for his riding camel.

526
*492
685
[562]
[533]

In a ceremonial ride termed *ihuton* (*ihugan* in Ayr), which is performed at weddings and certain other feasts, the young men have a particular opportunity to display the beauty of their camels and their own ability as riders. The ride takes place not far from the wedding tent on a level sandy place where the women gather to sing and drum, while the men dressed in their finest clothes ride their ornamented camels to and fro past the women, who praise the beautiful camels and the skilled riders by their songs, their music, and by shrill cheers. In this ceremonial ride the emphasis is not so much on such

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

Fig. 82b. Cf. text Fig. 82a.

qualities as strength and speed, but rather on elegance and sublimity. The riders sit straight in the saddles without watching the crowd of women, and the camels are ridden at a gentle trot (generally that known as *senat-senat*; cf. p. 99) with their heads drawn back. In this way the men may also ride their animals round the women in a circle as I have seen in Ayr (cf. Fig. 82).

Camels have important social functions among the Tuareg who take an interest in these animals far beyond their practical value. It may perhaps be useful to compare Tuareg interest in camels with Nuer interest in cattle so brilliantly described by Evans-Pritchard. Nuer caress their animals, and there is a tendency for human beings and cattle to form, so to speak, a single community (Evans-Pritchard 1940, p. 16–50). This is not exactly true of Tuareg and camels. The Tuareg do not pat their camels which will not respond to caressing, and they do not live in very close contact with their animals, most of which frequently graze far away from the camp under the supervision of one or two herdsmen. But the Tuareg nevertheless have much the same feeling towards camels as Nuer have towards their cattle. They are very fond of their animals. They may abstain from camel's flesh because they are fond of camels and would feel very sick at heart when eating them. But though the Tuareg are fond of camels as such, they are delighted particularly at the sight of a very fine camel (*akemhur*; Ahaggar) and may even speak disparagingly of a badly built animal (*amugey*; Ahaggar). Fine camels add to the prestige of a man, while too many animals of poor build may even harm his reputation. When girls and young women praise camel-riders in their songs they praise those mounted on fine and richly-decorated animals. When camels are mentioned in poetry this may also be done as praise to their owners, as in a poem composed in honour of noble Tuareg of the *Uraren* (*Kel Aïjer*) of whom it is said that "their pack-camels have feet as large as a drum, and the loads they carry are like the crests of mountains" (Hanoteau 1896, p. 218). Such reference to pack-camels, however, seems to be rare in Tuareg poetry, while riding camels are frequently mentioned in connection with warfare and love. Riding camels have much the same esteemed position as had horses in Medieval Europe. Tuareg interest in camels is particularly focused on riding camels and there is a tendency towards identification

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

* 492 181 [214] of riders and their camels. This is intimated by the following poem quoted from Foucauld's excellent books on the poetry of the Ahaggar Tuareg:—

[539]

| | |
|---|---|
| *Ébeydeǧ, é ti n ami mellen* | My white camel, O woman with white teeth |
| *W-allahi! iḍeǧ ul ifel kem* | I swear by God, it shall not go raiding, shall not leave you |
| *Ula daṛ ikk am akal ien* | It shall not go away from you to another country |
| *U t ḍineṛ ar y arabuh ennem* | I lead it to the pastures only to visit you with love again |
| *Ula taharǧit d asemmeḍren* | Neither in dreams nor in thought |
| *Innin é ham yekk akal ien* | Shall it go away from you to another country |

(cf. Foucauld 1925-30, I, p. 210 f. for a literal translation).

## DONKEYS

231 Donkeys are very important domestic animals in the Tuareg groups I have studied. Most animals [192] are grey or greyish but there are other colours for which the Tuareg have special terms. From Ahaggar the following colour-terms can be mentioned:— *adebara* (greyish), *afawa* (greyish with a white stomach), *ewriṛ* (yellow-brown), *éhenbey*, or *takenbawt* (donkey with a black head), *ékawél* (black). Black donkeys seem to be more common among the Arabs of the Northern Sahara than among the Tuareg.

231 Donkeys vary less in colour than other domestic animals among the Tuareg. It is interesting to note 136 in this connection that there are fairly big herds of wild donkeys, or asses, in the mountainous massifs of Ahaggar, Tasilé-n-Ajjer, and Ayr. These animals are generally greyish like most domestic donkeys.

492*

Fig. 84. Boy and woman mounted on donkeys. Ayr, the *Imezzureg* tribe.

But the wild animals are bigger, which the Tuareg ascribe to the fact that they roam freely in the desert 231
and always can find the very best fodder – an explanation which seems reasonable as the Tuareg 136
camp where fodder is reserved to their milk-yielding animals (cf. p. 491 ff.). It can be added that 231
domestic donkeys are frequently tightly hobbled by means of a narrow rope (*iéffart*) around their forelegs (Fig. 45) and sometimes also with another rope (*amahus* in Ahaggar) running from one foreleg to a hind leg.

If donkeys are not hobbled, there is always a great risk that they will disappear in the mountains and join the herds of wild animals. Unhobbled donkeys are often caught with great difficulty. They are sometimes driven together by the inhabitants of a camp, and when mares have foals it may even become necessary to run down the foals on riding camels in order to get hold of their mothers. In some regions where donkeys depend on water from deep wells it is customary not to give them too much water to drink, in which case unhobbled animals can always be caught at the well, where they will wait for water. But donkeys are very well fitted for desert life. They can do without water for several days even when weather is extremely hot, and where water is very near the surface so that the sandy soil is humid donkeys dig small holes with their hoofs to drink the water which quickly gathers in these depressions. I have myself witnessed this in Ahaggar where the Tuareg say that among domestic animals only donkeys are able to make such water-holes. [312]

The Tuareg distinguish between the domestic donkey (*éyhed* in the north, *éyjed* among the Ayr Tuareg) and the wild donkey or ass (*ahulil* in the north, *émedrer* in Ayr), but they are well aware that there is no important distinction between them for many Tuareg even nowadays obtain domestic donkeys by catching wild animals. Wild donkeys or asses were hunted for domestication still more eagerly in the past, and there may perhaps be some connection between donkey-breeding and true hunting – that is hunting for meat. Nowadays the Tuareg never eat donkey's meat, nor do they utilize 231
the skin of these animals. But it is known that the Ahaggar Tuareg have eaten donkey's meat in periods 262
of hunger even fairly recently, and Duveyrier states that old animals caught in traps are killed for their 237

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

*492

Fig. 85. Tuareg breaking in a young newly-caught donkey. The donkey is prevented from escaping by means of hobble-ropes (*téffart* and *amahus*) and is also tethered to an acacia tree. Ahaggar, the *Aguh-en-tehlé* tribe.

231 262 237 [175] skin (Duveyrier 1864, p. 231). It is most possible that the taboo on donkey's meat and skin is due to Islam – meat of donkeys and horses is considered unlawful by the Koran. Leo Africanus states that the nomads of the Sahara eat meat of donkeys which they catch in snares (Leo Africanus II, p. 944).

136 224 The wild donkeys, or asses, of Tuareg countries are very shy, and it is most impressive to watch a herd of some twenty animals galloping over the desert plains. Because of their shyness they are often hunted much in the same way as game animals. Among the Northern Tuareg they are caught in the spiked wheel-trap, are run down by men mounted on camels, or are driven into closed river valleys surrounded by steep rocky walls. In certain parts of Ayr wild donkeys can be caught in the same way – notably in valleys of Mount Tamgak (Northern Ayr) and around Anu Mekkeren (Central Ayr) – while the method of running down wild donkeys with riding camels is said not to be practised. Whether the so-called spiked wheel-trap is used for catching donkeys or not, I do not know, as the Ayr country is very extensive and inhabited by Tuareg of different origins. The Tuareg belonging to the *Kel Ferwan* group claimed that it was not used for donkeys or asses for which they have a kind of snare called *turunt*, which is also the name used among them for the noosed rope connected with the spiked wheel-trap. The snare used for donkeys is said to consist of a rope some twenty or thirty metres long and [283] plaited from dum palm leaves. The rope is noosed at one end to be used as follows:— The loop is laid out where donkeys come to drink, the whole rope being covered with sand. The hunter lies hidden behind some natural object, a rock or tree, and when a donkey puts one of its legs within the loop he pulls the rope. It is said that this method is also sometimes used for other domestic animals [231] which have gone wild, as happens frequently with oxen. But it is never used for hunting proper game 231 224 animals such as gazelle, antelope, and barbary sheep. To catch domestic animals which have gone

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

wild the Ayr Tuareg also know another type of snare, or rather lasso, which is also known as *tuṛami*. 231
It consists of a long rope noosed at one end, but the loop in this case is thrown against the animal 224
by means of a short forked stick. The *Kel Ferwan* Tuareg say that this type of lasso is not widely found [171]
among them, and claim it is typical of and traditional for the pastoral Fulani, who use it to catch cows which are difficult to approach.

The wild donkeys caught for domestication are young animals, for very old ones cannot be tamed. 231
When an animal is caught by one of the above mentioned methods it is beaten a heavy blow between the ears so that it falls unconscious to the ground. It is thereupon given a rope around its mouth, for wild donkeys are fierce and have a dangerous bite, and is also tied with ropes around its legs so that it cannot run. When the animal comes to after the blow it is led to the camp where it is tethered. It remains tethered and fitted with hobble-ropes in the camp for one or two months during which period it gets a very brutal treatment. It is trained for riding by the men who mount it daily during [492]* this period of training (cf. Fig. 85) until it can be ridden as freely as domestic donkeys. The Tuareg say that not all donkeys survive the heavy blow on the head but that most of them do.

Donkeys constitute the important riding animal of all vassal women, and there are also some men 492* of the true vassal class who ride donkeys though most of them have riding camels. Donkeys are also [562] extremely important pack-animals. They are used by most Tuareg for the transportation of tents and [565]

[283]

Fig. 86. Donkey saddle (*aruka*) of the type described in detail in the text (cf. p. 110). It is fixed to the animal by two cords of goat's hair: the girth (left), the cord passing under the tail (right). Ahaggar, the *Dag Ɣali* tribe. Dimension: 0.585 m long, 0.360 broad. (N.M. G. 5246).

*492 household goods during nomadic migrations, and are employed daily in all camps to carry water in skin-
[415] bags from wells and waterholes to the tents. They are very strong animals considering their low stature,
[512] and good pack-donkeys can carry up to one hundred kilograms even for very long trips. Donkeys
[262] are occasionally used for long journeys by the Northern Tuareg, and many Ayr Tuareg use them to
[484] fetch provisions of millet around Tanut in Damergu. Caravans of donkeys are frequently observed
in these regions, and one even sees mixed caravans of donkeys and camels. There can be no doubt
[179] that before the introduction of the camel the donkey was still more important for riding and transportation than is the case nowadays. This is clearly demonstrated by historical material from Egypt and adjacent regions (cf. Erman 1922, p. 518 f., 529, 592 f., 636).

23 It has already been mentioned that donkey's meat and skin are not utilized nowadays by the Tuareg.
[262] The same is true of mare's milk which, however, is used as a remedy against a kind of cough known
[257] to the Ayr Tuareg as *khamkham*. There is no regulation of mating for donkeys which in many ways are semi-domesticated animals. In Ayr male donkeys are never castrated, while the Ahaggar Tuareg say they castrate such stallions as constantly run after the mares and in this way cause too much trouble. The Tuareg also have no methods to prevent foals from sucking, while a method of this kind is sometimes applied by sedentary people in and around Agadez. This method known as *éfinjar* consists in the cutting of the nostrils of half-grown foals so that they cannot suck pregnant mares. Both stallions
*492 and mares are used for riding and transportation, but female animals are much preferred for these purposes. Mares are used almost exclusively for the transportation of water-bags hanging under the animals, as the bags might be squirted by stallions' urine.

The Northern Tuareg saddle their donkeys, using the same saddle type for riding and for transport-
[462] ation (Fig. 86). This is known as *aruku* and is manufactured by the women in the following way:—
[824] Two fresh boughs of the *tahunek*-tree (*Rhus oxyacantha*) are heated, or slightly burned, over the fire.
[322] The boughs are thereupon barked and bent into the curved form wanted, and are then kept in this position by cords. After drying for a few days the boughs will retain their curved form, and the cords are untied. The boughs are then cut up and their ends are connected by two pieces of camel's hide
[237] soaked in water, and sewn together by means of a large iron needle (*tasugla*, or *tasubla*) (cf. Fig. 220b)
[412] and a thread which is also cut from camel's hide. The wooden saddle frame is attached to three cushions. These cushions are generally made of goat-skin or sheep-skin stuffed with hay or with date
[237] palm bast, but may also be plaited from leaves of the date palm tree. Cushions made from goat-skin
[412] are sewn together with strips of the same material by means of the little awl known as *tistent* (cf. Fig. 218a). The two long cushions resting lengthwise upon the animals back are known as *tastek*, and the small cushion resting over the animal's back close to its shoulders is called *tafelledut*. The saddle is fixed to the donkey by two girths consisting of cords made of goat-hair. One of these cords (*tidmechart*) passes under the tail, the other (*ahayif*) is tied around the chest of the animal. This saddle type is well fitted for the transportation of burdens and in particular of water-bags, the cords of which are attached to the pommels. When the saddle is used for riding it is frequently covered with a blanket or a piece of cloth. Saddles of this type are found in all camps of the Northern Tuareg, and Lhote states that they are also found in Adrar-n-Foras and in Ayr (Lhote 1947a, p. 120). This may be so but I have myself never seen them in the latter region where they are unknown to the *Kel Firwan*

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25
Hausa MS12

T *492 Tuareg. Some Ayr Tuareg use a kind of saddle for the transportation of water-bags. It consists of two pieces of wood with grooves to support the cords of the water-bags; it corresponds to the type of saddle described and depicted by Lhote from the *Iullemmeden* (Lhote 1947a, p. 114, 134) which type I have seen also among the *Kel Tahabanat* of the *Kel Ataram* group. However, most Ayr Tuareg do not employ this device. They content themselves with a layer of thin green twigs placed on the donkey's back so that the cords of the water-bag, which hangs under the animal's belly, shall not hurt and gall. T [484] This method is also sometimes used by Northern Tuareg. To transport the tent and its belongings during nomadic migrations, the Ayr Tuareg use one or two rolled-up mats of the tent-covering for saddle, while on trading expeditions to Damergu they place their skin-bags filled with millet directly on the donkey's back. Such bags (*alelu*) may also serve as a kind of saddle for luggage. When the Ayr Tuareg ride donkeys they sit on the naked back, on a blanket, or on a piece of matting. The Tuareg T [17] never use bridle, bit, or rein for riding as do some people of the northernmost parts of the desert and the Atlas. They control their donkeys with a short stick and constantly beat them over the neck to keep up their speed. I have never seen them prick the animal's neck with a spiked stick as is frequently done in the Atlas and adjacent regions. Here many donkeys wear iron shoes which are also unknown among the Tuareg.

## HORSES

T 231 Horses play a very small rôle with the Tuareg I have studied. There are very few horses in the Northern [171] Sahara where they are bred mainly by sedentary people who are able to feed their animals on barley, [565] millet, and other garden products. Some years ago there were a few horses in the noble *Kel Rela* tribe of Ahaggar, but nowadays there are no horses among pastoral Tuareg of this region, and in all Ahaggar

H 291 492 531

*492

Fig. 88. Riding saddle of the type manufactured at Agadez and used by horse-riding Tuareg and Negroes in Ayr and further south. Note the very narrow stirrups which are often used for the insertion of only one or two toes. (Musée de l'homme, Collection Henri Lhote, 38/617).

231 there are perhaps less than ten horses which are all owned by sedentary people (blacksmiths and
[563] Arabs). Conditions for horse-breeding are better in Ayr, but even there pastoral Tuareg do not generally breed horses which for a large part of the year must be fed on barley, millet, or on milk. In Ayr,
[563] horses are mainly bred by sedentary Tuareg of the *Kel Ewey* group and by the negroid citizens of Agadez who hold horses in very great esteem. There are perhaps 100–200 horses in and around Agadez, where the animals are kept in or at the houses most of the year to be fed on cereals and on hay of annual grasses cut with a sickle (cf. Fig. 143 f). During the period of *akasa* it is common to let the animals graze on annual pasture, and they are then very tightly hobbled. The Ayr peoples use a bit
*492 (*araba*) (Fig. 89) similar to the type used by Arabs in the North, but their saddles are not of the
[171] general Arab type (cf. Fig. 88). The very broad Arab stirrups also seem to be unknown to the *Kel Ayr* and to the *Kel Geres*, who have many horses. The stirrups used by horse-riding Tuareg are generally very thin and slender, and they are frequently used for the insertion of only one or two toes.
[13] The riding-gear used by the *Kel Ayr* (including the *Imeggedezen*) and the *Kel Geres* is described in detail in literature (cf. Foureau 1905, III, p. 879 ff. & 921 ff.). This is very complete, and was, perhaps,
[175] introduced fairly recently, for we know that the Libyans of Antiquity rode without a saddle and governed their horses mainly by means of a stick (Bates 1941, p. 96 f.), and we are informed by Ibn Batutah that in the Middles Ages the people of Ayr rode without saddles (Ibn Batutah IV, p. 442).
231 The history of the horse in Africa constitutes a very important problem. It is generally admitted
174

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

492*
326

Fig. 89. Horse bit of iron. Made by blacksmith of Ayr, Agadez. Dimension: ca. 0.11 m broad. (N.M. G. 6667).

that the horse was introduced to Egypt with the Hyksos invasion about 1700 B.C. From Egypt it 231
spread to other African peoples, and it was common among the Libyans during the reign of Rameses 174
III (about 1200 B.C.). This first horse-breed introduced among the North African Berbers seems to have been of the pony type (cf. Bates 1914, p. 96 f.; Adametz 1920, p. 46 ff.; Antonius 1922, p. 284) which is still represented in Africa. I believe that the so-called Togo-pony which is found in scattered and isolated parts of the Western Sudan belongs to the old pony-breed, though this theory is not accepted by Doutressoulle on the ground that such ponies are not found nowadays in North Africa and Egypt (Doutressoulle 1947, p. 238). Doutressoulle has made a detailed study of the horse-breeds 231
of the area formerly known as French West-Africa. Apart from the pony-type just mentioned above, 171
there are three main types:— (1) the *Aryen type* known in Ayr as the Begzen horse. It is an Arab breed [114]
introduced from the North – from Tripolis according to tradition. Horses of this type are found scattered throughout Ayr, Adṛaṛ-n-Foṛas, and Hodh. (2) the *Barbe type* found mainly among the Moors west of Timbuktu. (3) *the Dongolawi type* mainly found to the east of the Niger (Doutressoulle 1947, p. 237 ff.).

Horses become valuable riding animals to many Tuareg living in the true savannah country. The 492*
*Kel Geres* Tuareg use horses for short riding trips though they prefer camels for riding on long journeys. They claim horses of the Begzen breed to be the very best riding animal. In the remote past when the 492*
horse was introduced into North Africa and the Sahara, horses may have been important also to 174
Libyans and Tuareg living further north in the desert, where the climate may then have been more favourable to horse-breeding than it is in modern times. Lhote has studied the ancient rock-pictures representing horses, horse-riders, and horse-drawn waggons in the Sahara, and he ascribes to the horse very great importance for the opening up of the desert country and invasions into these regions by fair-skinned Berbers (cf. Lhote 1953a). This theory is perhaps supported by the fact that the Ahaggar [192]
Tuareg though they do not breed horses have a fairly extensive vocabulary connected with horses and horse-breeding. Briggs states as his opinion that horses were probably never common in the Sahara (Briggs 1960, p. 21). This, of course, we cannot know, but it seems safe to say that in the Sahara the horse has never had the same economic value as the camel later has had.

231
415
284

Fig. 90. Tuareg dogs of the breed which is common among the Ayr Tuareg. Dogs suffer much from heat in summer when they hide under water-bags. Ayr, the *Imezureg* tribe.

## DOGS

231 The Northern Tuareg distinguish between three types of dogs (sing. *eydi*) as follows:— (1) a long-haired breed (*aberhoh*); (2) a short-haired slender breed (*akhami*); (3) a very slender and elegantly
[173] built greyhound (*oska*) (Fig. 91). The Ahaggar Tuareg speak of a tradition, according to which the greyhound (*oska*) was introduced fairly recently through contacts with the Northern Arabs. The Ayr Tuareg do not make similar distinctions between dog breeds. They have only one breed which is known as *ijji* (Fig. 90). It is short-haired and slenderly built though less so than the true Arab greyhound.

[136] Dogs are kept to guard the camp and in particular to protect the animals from the attack of jackals or hyenas during night. If the Tuareg had no dogs it would be most difficult for them to breed goats and sheep. Dogs may also follow the flocks in daytime to protect the animals against beasts of prey, though this is not generally considered necessary. Dogs are not trained as "sheep-dogs", but it is said that a few "intelligent" dogs will assist the herdsman in keeping the flock together during grazing,
[224] and many dogs will drive away domestic animals which belong to foreign flocks. Some Tuareg use dogs in hunting barbary sheep, gazelle, antelope, and hare (cf. hunting, p. 159, 166).

[17] It is well-known that the Arabs consider the dog an unclean animal. This is also so among Arab nomads of the Sahara, but they do not consider their greyhounds unclean in this sense. Thus pastoralists of the Chamba group told me that among them a fine greyhound is esteemed in much the same way as are noble riding horses and camels. The Tuareg have very few true greyhounds and I do not believe that they have this same feeling of interest in them. But many children and young
[521] people are fond of all types of dogs, and one can hear them discuss the qualities of their animals and
[541] the daily dogfights which are considered a kind of entertainment to everybody in the camp.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

the daily dogfights which are considered a kind of entertainment to everybody in the camp. Colour- 231
terms are also used for dogs, and I have heard one Tuareg boy claim that he preferred dogs that were black and white. Adult people in general treat dogs differently, and they are frequently cruel to them. [177]
which may be due to Islamic influence which is on the increase among the Tuareg. Though the Tuareg may be cruel to their dogs they acknowledge that they are very "wise and intelligent". They say that the dogs are much like humans with the exception that they cannot speak. Therefore they should also be fed like humans, and they are given millet-porridge – with milk if the yield is abundant. The Tuareg kill their old and superfluous dogs by hanging them from a tree in a noosed rope, and they consider this method very effective.

## CATS

The domestic cat is found in many Tuareg camps. It is generally termed *muchch* which is Arabic by origin. I believe that domestic cats have been introduced to Tuareg countries later than the Arab [174]
invasions and that they have been introduced by the Arabs. This is in agreement with Lagercrantz's statement that domestic cats in most parts of North Africa outside of Egypt are post-Arabian (Lagercrantz 1950, p. 65). Cats are allowed to live in tents and huts, and are well treated as among the Arabs. The Tuareg keep cats not only for pets to their children, but they much like to have them in their [136]
camps as cats catch numerous scorpions and also attack snakes.

Among sedentary people of Ahaggar and particularly at Tamanṛaset the hedgehog (*ékenisi*, or *tékenisit*) is sometimes kept in the house or within the courtyard as it hunts beetles and scorpions during the night. This custom of keeping tame hedgehogs is no doubt recently adopted from Europeans [177]
living at Tamanṛaset.

## DOMESTIC BIRDS

235 Many sedentary people within Tuareg countries breed fowls of which a few may also be found in pastoral camps of the Ayr Tuareg, though fowls seem to be of very little use to them. For the hens kept by pastoralists do not hatch out their eggs, and these are not always found by the Tuareg. I think that most pastoralists of Ayr keep fowls mainly because they like to have them walking around the camp, and I believe that their owners in general are children. Domestic guinea fowls are bred by some sedentary people of Agadez, and young Tuareg who find a guinea fowl chicken in the bush may even [262] take it to the camp to keep it as a pet. In Ahaggar there are no fowls among pastoralists, many of whom will refuse to eat fowls and their eggs (cf. p. 162).

[174] Domestic pigeons are bred by some sedentary people living within Tuareg countries. I believe that they have been introduced by the Arabs – in accordance with the theory advanced by Stuhlmann and Lagercrantz (cf. Lagercrantz 1950, p. 74).

# Rationality and Beliefs in Stock-Breeding

Literature on so-called primitive pastoralists often states that these peoples are irrational stock-breeders. It is said that they attach an enormous value to big flocks and herds which overgraze and deteriorate pastures, that they take too little interest in selective breeding with the result that they do not castrate their superfluous male animals or perform this operation too late, and that they take an overwhelmingly large interest in the aesthetic qualities of their animals. 121

Tuareg stock-breeding is essentially rational and is well adopted to environment. This viewpoint can be proved by reference to the description of stock-breeding given in the preceding chapter. I have here described in some detail the system used in the mating of sheep and goats, and how mating is regulated in accordance with the development of pastures. From this description of mating regulations it also appears that the Tuareg are not only interested in having large flocks. They also want flocks of healthy and strong animals, and they generally kill or sell domestic animals before they grow barren. It should be added that the Tuareg very well know that there is a limit to the number of animals (goats and sheep), which can be herded in one and the same place. The Tuareg certainly want to be rich and to possess large flocks and herds, but they are also aware that there is a limit to size. Regarding Tuareg interest in the aesthetic qualities of their animals, I have mentioned that it is mainly focused on camels, and I have described in some detail the value attached to colours. It is clear, however, that the Tuareg interest in their animals is not confined to the aesthetic. The true value of any domestic animal is always judged rationally, and takes into consideration such qualities as age, build, stature, and the like. The Tuareg also know that qualities of domestic animals are inherited and are aware that it is necessary to have good breeding animals. Cauvet states that pastoral Tuareg attach very little importance to the quality of she-camels used in breeding, while greatly interested in the build and stature of bull-camels. In this, he says, the Tuareg differ from Arab pastoralists, who think that camel calves inherit their qualities mainly from the mother-camels (Cauvet 1925–26, I, p. 348). This statement, I believe, is not quite correctly expressed, for the Tuareg I have asked about this have stated that a camel-calf inherits qualities from both parents and they have also stressed the necessity of having good she-camels to produce the best possible calves. But most Tuareg have so few camels that they are forced to mate all their she-camels. They cannot afford to select certain she-camels for breeding, while it is easy for them to select one or two good bull-camels. All Tuareg I have asked admitted the great value of selective breeding, and said that superflous rams and he-goats should be castrated or

233* 232 [356] 232 [171] [114]

232 [114] killed. This does not agree with Nicolas' statement that selective breeding is unknown among the *Iwllemmeden Kel Dennek* for all types of domestic animals (cf. Nicolas 1950a, p. 133).

Superfluous bull-camels are generally castrated very late – rarely before they are six or seven years old, and frequently much later. But this is not to say that all bull-camels are used in breeding, as those used for riding and transportation are generally hobled during grazing and copulation is thus effectively prevented. Bull-camels used in breeding are not always used for riding and pack animals, as they may be very savage and dangerous. In the rutting season they are left unhobled among the she-camels.

The Tuareg consider it best to castrate bull-camels late, and say that bull-camels if castrated at a very early age will not develop fully, or become such good riding and pack animals. Bull-camels which have not been allowed to mate are not so difficult to control during the periods when she-camels are on heat. Nevertheless, when bull-camels are castrated they become more docile. But to the Tuareg it is more important that gelded animals easily grow fat and thus acquire the strengh and endurance to enable them to perform the long and arduous expeditions connected with caravan trading and, in the past, also with raiding. In brief, castration of bull-camels is done as follows:— The legs of the animal to be operated are tied tightly with strong cords, and it is kept firmly to the ground by the weight of people sitting upon it. The operator thereupon cuts two slices in the animals scrotum and pulls out the testicles together with the spermatic cords. This must be done with great care because, it is said, the animal may die if one of the spermatic cords breaks. This method of castration by extraction is the only method used foı camels, and it may also be applied to other domestic animals such as bulls, rams, he-goats, and in Ahaggar also to donkey stallions. In the north this extraction method is known as *aselbi* while the *Kel Ferwan* Tuareg of Ayr use the word *azam*. The latter people claim that castration by means of cutting and extraction should be performed in spring (*tabsit*) or during the early rains (*akasa*), as the wounds will heal properly at these seasons. The other important castration method used among the Tuareg is that of chrushing the spermatic cords, it is known to the Ayr Tuareg as *éddaz*, and is never used for camels but is frequently applied to he-goats, rams, and [4/2] bulls. Chrushing of the spermatic cords is done by means of stones or pieces of wood – frequently by beating with the heavy wooden pestle of the large millet mortar (cf. Fig. 177). I believe that this method is that most commonly applied to he-goats and rams, and Tuareg of Ayr claim that they can use this method all the year round as it leaves no wounds to be healed. Rams and he-goats may be castrated at any age and even very old animals are castrated to make them fat for slaughtering. It is claimed that it is best to castrate superfluous lambs and kids very early, preferably as soon as they are weaned.

I believe that the examples given above confirm my statement that the Tuareg are mainly rationalists in their stock-breeding methods. To elucidate this in more detail I shall now present my material on Tuareg veterinary knowledge. This material is unfortunately not very precise because the Tuareg distinguish between very many stock-diseases, and the treatments applied can be studied scientifically only by a veterinary surgeon. A description of stock-diseases is available for the northern parts of the [113] Sahara ("Notice sur l'Institut Pasteur d'Algérie", I–II, 1934–1949), but there seems to be no particular study of Tuareg stock-diseases, which I know only by their Tuareg names. As I have not studied this [114] rather special subject in great detail, I supplement my own material with informations gathered from literature.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25
Fulani MS11

The most dangerous African cattle disease is the rinderpest. It is known to have entered Egypt in the year 1884 from the regions around the Black Sea, and about 1890, or somewhat later, it came to Eastern Africa and to the Sudan. Rinderpest is nowadays widely found in Africa but it is rare or unknown in Northern Tuareg countries. Rinderpest is apparently very rare in the Ayr Massif and it occurs mainly south of the Massif in savannah country. The Tuareg have no remedy against this disease. It is stated by St. Croix that the Fulani of Northern Nigeria once deliberately exposed their cattle to mild rinderpest to make them immune from this disease in its more severe and dangerous form. However, this method did not work and the Fulani gave up further experiments of this kind. It is also mentioned by St. Croix that the Fulani practise a kind of vaccination against cattle pleuro-pneumonia and that this is done as follows:— A piece of infected lung is put into milk for two to three days and thereupon placed into a small opening cut under the nose-skin of the animal. The method is claimed to be effective (St. Croix 1944, p. 24 f.). Vaccination methods are also known to some of the Southern Tuareg, e.g. the *Iwllemmeden*. These people vaccinate human beings against small-pox by inserting the pus of this disease into wounds cut with a knife (Aymard 1911, p. 108), and they also vaccinate their cattle against cattle pleuro-pneumonia ("peripneumonie bovine"). They do this in much the same way as described above for the Fulani:— An infected piece of lung is placed in sour milk or in the soil for a few days, and is thereupon inserted under the skin of the forehead. Nicolas describes the method as dangerous because the infection attacks the whole forehead and also the nose-bone (Nicolas 1950a, p. 133), but two veterinary surgeons who practised among the *Iwllemmeden* of Tawa told me that they considered this kind of vaccination effective. The method is unknown among the Ayr Tuareg of the Massif where this contagious lung-disease is unknown or very rare.

I have no great knowledge of the contagious diseases in the Tuareg groups I have studied, but such diseases seem to occur comparatively rarely, and there is no veterinary surgeon attached to the French administration of Northern Tuareg countries. There is one veterinary surgeon in Agadez, but his most important field of work lies outside of the mountain massif to the south.

Among the *Kel Ferwan* Tuareg of Southern Ayr I have been told about two contagious diseases which, when they occur, may give rise to very heavy losses. One of these diseases is known to the Tuareg as *changa*. It attacks only cows, which die very quickly, but if cattle suffering from the disease are ritually killed their meat is nevertheless considered edible. One Tuareg told me that some years ago about thirty cattle of his camp died in one day from an attack of *changa*.

The other contagious disease I have recorded from Southern Ayr is called *tandert*. It attacks sheep and goats, and I collected the following notes about it:— The blood penetrates the animal's flesh which becomes quite red. If sheep or goats suffer from *tandert* and are ritually killed for eating, very great care must be taken in the preparation of the meat. It must be boiled until it contains no blood, and must not be eaten until it is cold and dry. It is said that if these precautions are not taken the people who eat meat from animals suffering from *tandert* will themselves become attacked by the disease, with the result that blood and pus may penetrate the skin at any part of the body. They say that a man who has eaten unboiled meat of an animal suffering from this disease with consequent infection is treated in the following way:— A species of ant more venomous than the normal small

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

757 ants is collected and put into the millet mortar and pounded. The pounded mass of ants is then placed
164 on the affected individual at the spot where blood and pus have penetrated the skin. The disease is characterized as very dangerous for human beings as blood and pus may emerge at any place of the
232 body, and can, for instance, destroy an eye. The Ayr Tuareg say that they have no remedy against
*233 *tandert* when it affects their sheep and goats. The disease *tandert* can hardly be anything but anthrax. According to information from the veterinary surgeon Niels Grunnet much indicates that the contagious disease *changa* is also anthrax.

*233 Foucauld has recorded a few contagious stock-diseases from Ahaggar:— *tarut*, a lung disease
231 affecting cattle, goats, and camels. The lungs are filled with pus, and the animals die in four to ten days. *tehareṛet*, a disease attacking sheep and goats which will die with yellow entrails. *weñhet*, a contagious disease attacking jackals, dogs and related animals which will die quickly. It is not the true rabies. *talekmet*, apparently a kind of scrofula which affects the udders of female domestic animals. These do not necessarily die from the disease but their udders may wither (Foucauld 1951–52, IV, p. 1558, 1663, III, p. 1509, 1044). Dr. Grunnet has informed me that *tarut* could be the pulmonary form of *pasteurellosis* also called *haemorrhagic septicaemia*, while *weñhet* may very well be distemper. The *talekmet* disease according to Dr. Grunnet is not easy to identify by the present information, but
[232] three conditions are possible:— 1) cow pox, 2) *actinomycosis* of the udder, and 3) *mastitis*. The Ahaggar Tuareg, like the Ayr Tuareg, do not seem to have any remedies against such contagious diseases which incidentally are rare. But there are many other stock-diseases and treatments for them.

*233 The Ayr Tuareg have mentioned to me about thirty different names of camel diseases. The descrip-
232 tion of these diseases was frequently difficult to understand, and I noted only the following names:—

*azni*, that is a disease of congestion due to heat-apoplexy which is cured by bleeding with a knife or with tobacco powder put into the camel's eyes.

*tadanak*, an eye disease cured by cutting around the eyes and by the insertion of salt.

*ichilchal*, a nose disease cured in the following way:— The handle of a wooden spoon is put up through the nostril to pierce the septum, and heated butter is poured into the animal's nose.

*inefdan*, a diseases which gives the camel a swollen and inflamed head. A cure is effected by cutting with a knife and by burning.

*toza*, a kind of chill which causes pregnant she-camels to miscarry. There is no good remedy for it, but it is normal practice to pour water over the affected animal.

*lejwad*, a paralysis of the hind thighs of camels. The affected animals cannot stand up. The only remedy is a very difficult operation:— A vein is opened in the hind thigs to let out a great quantity of blood. Bleeding is stopped again by sewing together the cuts, which are finally treated with fire.

*tibayak*, a disease which prevents the pregnancy of mated she-camels. The remedy for this consists in cutting slices around the vagina and under the tail so that blood flows. After this operation, which I have frequently attended, it is said that she-camels will become pregnant when mated.

*sanes*, a disease which prevents the pregnancy of she-camels. It is treated by putting the hand and the arm deeply into the anus of the camel. I have seen it performed once, and in this particular case the she-camel became pregnant shortly afterwards. According to Dr. Grunnet this disease is very probably *corpus luteum* which is squeezed out of the ovary by the manipulation.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

A chest disease for which the Ayr Tuareg have no particular name. It is cured by cutting two rows of small slices through the animal's skin at both sides of the fore thighs so that blood flows. 233* 232

*awaras*, that is swelling of the foot caused by an acacia-thorn or other pointed object. The remedy is to remove the thorn by means of knife and awl and then burn the upper side of the foot with a red-hot iron.

*tafadé*, that is wounds on the camel's back caused by galling of the saddle and the loads. Very many camels have such wounds which are treated by pressing out the pus, by cutting, and by burning.

*ajawad*, that is scabies (*Sarcoptes scabiei* var. *Cameli*) which is extremely common. The Tuareg living around Agadez treat it in two distinct ways:— (1) an animal bone is crushed in a large mortar and the pounded mass is put into a cooking pot to be heated over the fire. A black liquid with a consistency like that of liquid butter comes out of the bone-substance after heating. It is rubbed into the skin of the infected animal. (2) Fruit of the *aborak* tree (*Balanites aegyptiaca*) are put into a cooking pot to be heated over the fire. A black liquid comes out of the fruits after heating. This is rubbed into the skin. [824]

Camels in Africa are considered to suffer from only three major infectious diseases (*anthrax*, *pasteurellosis*, *trypanosomiasis*), but several types of local infections can be met with. 233*

I believe that camel diseases of Ayr and Ahaggar are not very different, but I have not collected much material on the subject in the north. I give a few additional examples from Ahaggar: *adder*, that is a bunion close to the junction of leg and body of camels. The bunion is produced by rubbing of the fore thigh against the chest during walking, and some camels suffer from such bunions during long journeys. I do not know if there is any treatment for it. *ǵelek*, that is the swelling of camels which have drunk too much water after the consumption of salty plants; this swelling disappears by itself. *iṛelenṛwahen*, a nose disease which attack camels and goats. The nostrils are filled with pus so that the animals have difficulty in breathing. The treatment is burning. *ameṛwas*, swelling of the feet which are washed with hot water. *toẓa*, a chest disease considered contagious. The animals lose their appetite. The remedy is burning. Dr. Grunnet thinks that it could be an oedematous form of *pasteurellosis* (*haemorrhagic septicaemia*). – For scabies the Ahaggar Tuareg seem to know several treatments. They use pounded leaves of *ahoyyaṛ* (*Cleome arabica*) and of *telulut* (*Capparis spinosa*) added to sour milk and rubbed into the camel's skin. According to Maire, who has made use of information from Voinot, there are other treatments for scabies, namely the use of ashes of the *aferegak* plant (*Chrozophora Brocchiana*), tar extracted from the *azawa* tree (*Tamarix gallica* ssp. *nilotica*), charcoal of *turha* (*Calotropis procera*) which is pounded and mixed with butter, seeds of *teǵellet* (*Colocynthis vulgaris*) which are boiled into a black oil called *akaha* (cf. Maire 1933, p. 145, 156, 172, 200). Congestion due to heat-apoplexy (*ahni*) is cured as mentioned in the case of the Ayr Tuareg. [114] 233* 232 232 824

From the above description of camel diseases and their treatment it will be seen that the Tuareg know several types of veterinary methods. In brief the veterinary techniques can be summarized under the following five items:— 232

(1) Treatment by the hand, e.g., *Corpus luteum* which is squeezed out of the ovary by the manipulation (cf. *sanes*, p. 120), and massage treatments which the Tuareg practise with human beings and with domestic animals. [257]

232
283

Fig. 92. Wooden splints (*iafasast*, pl. *ifesasin*) applied to broken legs of sheep and goats by means of a long thin cord of goat's hair. Ahaggar, the *Dag Ɣali* tribe. Dimensions of wooden splints: about 0.12 m. (F.M. 282).

232 (2) Operation with a knife. Such operations are often very simple. Thus I have once seen sheep with swollen throats and ears which were scratched with a knife to let out some water-like pus, but I do not know the name of this disease. The knife is used for many different operations some of which have been mentioned above. It is also used for bleeding which plays a great part in Tuareg veterinary [757] practise. Bleeding is applied to humans and to domestic animals as a treatment for various diseases. The Tuareg may bleed individuals and animals bitten by snakes or stung by scorpions, but bleeding [759] is used for many different diseases, as the Tuareg believe that these can be removed away with bad blood which is considered their cause. Bleeding is practised with camels. Thus in summer camels are frequently bled because they get slow and tired owing to *azni* (*ahni*), that is congestion due to heat-apoplexy, and a she-camel will normally be bled two or three hours after it has brought forth a calf. I frequently attended the bleeding of camels among the Ayr Tuareg where the method is as follows:— The camel is forced to stand upright while its head is turned downwards by a man (or a woman) who grasps the head firmly at the upper lip with one hand and pulls at a rope fixed to the animal's lower jaw with the other. A rope is tied around the camel's neck close to its chest so that the neck vein can contain as much blood as possible. The neck vein in this way will swell with blood particularly close to the animal's head at a place known to the Tuareg as *abayor*. A slice about two centimetres long is cut in this place with a small sharp knife, and immediately blood will flow from the neck vein in a thin but powerful squirt. Shortly after bleeding has started the rope tied around the animal's neck is loosened, but blood is allowed to flow for several minutes, and I believe that at least two or three litres of blood is tapped. When the operation is to end the animal's head is raised, the skin around the wound is pressed together with two fingers, and bleeding immediately ceases. Once blood has started to flow from the camel it does not protest at the operation which is illustrated by the photograph Fig. 93. When a camel has been bled it will normally rest for a few hours before it starts eating again. When Tuareg get lost in the desert and lack water, they bleed their camels and

When Tuareg get lost in the desert and lack water, they bleed their camels and drink the blood (cf. p. 235). In situations of great distress they may also kill their camels in order to obtain the water supply conserved in the animal's stomach. 261

(3) Treatment by burning. Wounds are cauterized by means of a redhot iron known as *tamak* (Ayr), or *taterkemt* (Ahaggar). Burning with a redhot iron is also practised for camels with swollen feet as already described (p. 121). It is also common to burn a line around wounds or other sites of disease in order that it shall not spread, and burning is even practised for internal diseases, as is the case with the *toza*-disease of camels (p. 121). Redhot irons are, on the whole, used particularly for camels. Wounds of sheep and goats, e.g., wounds from jackal bites, are cauterized by means of glowing camel dung. Certain stomach diseases, such as types of tympanites, are cured by a bunch of flaming grass swept under the animal's belly. I have seen this practised with donkeys which, like horses, may suffer from a kind of tympanites known in Ahaggar as *tahagd*. 232

(4) Instruments and bandages. Enema should be mentioned under this heading. It is known in Ahaggar as *sebegiwen*, and is applied to humans and to animals by means of a funnel or by a special apparatus made from a piece of hollow cane connected with a skin-bag. I never had the opportunity to see this apparatus, which is depicted by Lhote who also gives some information about the use of enemas with human beings (Lhote 1955a, p. 303, Fig. 36). He mentions that an enema is also given by a mother to her little children by blowing water into the anus with her mouth. I have seen this done to children in Ahaggar, but I do not know whether this method is practised with animals also. Both in Ahaggar and in Ayr the Tuareg apply wooden splints to their domestic animals with broken legs. I have seen this device only in Ahaggar where wooden splints are known as *tifesasin* (sing. *tafasast*). They are used for sheep and goats (Fig. 92), and, by the sedentary agriculturists, also for cows. The wooden splints applied to goats are sometimes replaced by a leather bandage solidly tied around the broken leg. I mention under this heading that camels bred and born in stony or mountainous countries cannot always stand the long journeys through plain and sandy deserts. Their feet suffer 232 757 [113] 232 [237] 492

232

492 from the constant friction against the sand, and it may become necessary to provide the animals with leather shoes, that is pieces of ox-skin sewn around the hoofs. These leather shoes are known to [113] the Ahaggar Tuareg as *tissal* (sing. *tasselt*). Their appearance is excellently depicted by Lhote (Lhote 1951b, photographs p. 224).

232 824 (5) Medical treatment which forms an important part of Tuareg veterinary knowledge. I have mentioned in the description of camel diseases the use of certain plants for the external treatment of scabies. The Tuareg also use various plants for drugs. Seeds of certain annual plants are mixed with milk and given to goats and sheep which suffer from stomach-diseases. Leaves of various plants are also considered laxatives. The Tuareg know many drugs made from wild plants, and they are aware that there are several wild plants that are dangerous to domestic animals. A very dangerous venomous plant is *élel* (*Nerium oleander*) which is extremely common in the higher parts of Ahaggar. It contains a kind of strychnine, and camels which eat *Nerium* leaves will die from this poison. The Tuareg say that camels bred and born in Ahaggar know the plant to be dangerous. These camels do not eat the *Nerium* leaves but others introduced to Ahaggar from the south may do so. To prevent camels from eating *Nerium* leaves the Tuareg put a leaf of the plant into their nostrils, or burn *Nerium* leaves so that the smoke and the scent of the plant enter the animal's nostrils. In this way camels come to loathe it. There are, according to Foucauld, other venomous plants in Ahaggar, e.g. *awrhed* (*Perralderia coronopifolia*), *arenked* (*Leptadenia heterophylla*, and/or *Cocculus pendulus*) which are fatal to goats and sheep (cf. Foucauld 1951–52, III, p. 1524 & IV, p. 1647; Maire 1933, p. 230, 236). The species [682] known to the Ahaggar Tuareg as *éfelehleh* (*Hyoscyamus muticus* ssp. *falezlez*) is very venomous for human beings, and in the past was used by the Tuareg to poison their enemies.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

human beings, and in the past was used by the Tuareg to poison their enemies. However, this plant does not seem to be venomous for domestic animals which grow fat from eating it (cf. Maire 1933, p. 192). One plant (*téhereggelé*) (*Artemisia judaica*) is said to have an intermediate position: When camels eat its green shoots they may contract entrail diseases, but the plant is also considered a remedy for entrail worms. Domestic animals which have eaten venomous plants are generally treated with liquid butter which is poured into their mouths. Venomous animals are also very dangerous for domestic animals, notably scorpions and snakes which abound everywhere. The treatment of swollen limbs caused by snake bites or scorpion stings is sometimes bleeding, but the Northern Tuareg also consider it effective to give the affected animal fat from a female barbary sheep and to place a little fat over the place where the animal has been bitten or stung. Under this heading of veterinary medicine mention must finally be made of the fact that tobacco is considered to possess curative qualities in the case of certain diseases. When camels get tired and slow owing to congestion during the hot summer season the Tuareg consider it an excellent remedy to put, as mentioned above, powdered tobacco leaves in the animals' eyes. This was frequently practised with my own camels, and it seems to me that the method is efficacious.

It is evident that many veterinary methods among those mentioned above are effective, and I believe that Tuareg veterinary methods are largely to be considered rational. It is a true that it is most difficult for an anthropologist without any veterinary training to judge objectively the value of all treatments of stock-diseases. But French veterinary surgeons I consulted at Agadez held the view that the Tuareg methods they knew of were effective, though in specific cases of disease they could do better than the Tuareg, and one veterinary surgeon admitted that the Tuareg knew far more about camel-diseases than did modern veterinaries. It can be added that the Tuareg possess an anatomical knowledge of their animals which is no less than astonishing. Apoggi has noted 43 terms used by the Tuareg of Tasilé-n-Ajjer to describe the exterior parts of a camel (Apoggi 1933), and this list is not complete. It goes without saying that the Tuareg also have a large vocabulary for internal organs which they know in detail from slaughtering. And I believe they have a fairly good knowledge of physiology.

I have elsewhere given some information of Tuareg medical methods applied to human beings (Nicolaisen 1961; cf. also Humann 1933), and I have stated that Tuareg medicine cannot be understood entirely without reference to religious and magic beliefs. This is to some extent also true of their veterinary methods. But as far as I know there are many medical methods based on magic and religious ideas which are applied solely to human beings. This may seem quite natural.

Domestic animals may run the risk of being attacked by evil forces such as the evil eye and the evil mouth (*tehoł* in Ahaggar; *tugarchet* in Ayr), the *Kel Asuf* spirits, and the mystic power known as *eltama* or *tezma* in Ayr (cf. p. 21), and valuable animals may carry Islamic amulets as a protection against these evils. I have seen such amulets carried by a few rams and he-goats, but they are used particularly for camels, and I believe that most camel amulets are meant to protect the animals from the evil eye (the evil mouth). Against this malignant force camels may also be provided with a donkey's hoof hung around the neck as an amulet. Another non-Islamic amulette is used for riding camels in Ayr:— Some Tuareg of this region hang the foot of a turtle around the camel's neck in order that their riding animal may not stumble.

778 Religious beliefs also interfere with Tuareg stock-breeding and create usages of an irrational kind.
[23] Thus the Tuareg, like other North African peoples, firmly believe in the mystic benevolent power,
[171] or benediction, known as *elbaraka*. This is a power that emenates from God. It is given by God to
[784] man and it cannot act unless certain taboos, or rather religious prescriptions, are followed. The bene-
[783] diction *elbaraka* is more than anything else hurt by impurity. Cleanness is an absolute necessity for this good force to be sustained in the same way that a man cannot approach God through prayer if
[841] he be unclean. Women are considered unclean during their periods of menstruation and cannot, there-
[262] fore, then pray to God. They are also forbidden to drink the milk of domestic animals which have very young kids, lambs, or calves, and they must not drink water which has been conserved in newly-made skin-bags. These taboos are maintained in order not to hurt the benediction given the animals
778 by bringing it into contact with impurity. For the same reason milk taken from animals which have
784 recently brought forth young should not be given to strangers – they might be unclean and harm the
234 *elbaraka*. It is also believed that soil is an impurity dangerous to *elbaraka*, and milk must never be spilt on the ground. Even when milk-bowls are cleaned with water, this liquid should be poured out upon plants or stones, and never be spilt on the ground. Should this be done, God will withdraw his *elbaraka* and the result will be severe periods of drought without milk. I have frequently heard Tuareg ascribe the lack of rain and the dry pasture – the lack of *elbaraka* – to the fact that somebody had spilt milk upon the ground. This had caused God to be angry and to withdraw his benediction. Some Tuareg have also said that *elbaraka* is harmed by a person who blows upon milk. When a man drinks milk he must not blow away impurities before drinking but must remove them by means of a piece of straw.
*233 In the two groups of Northern Tuareg and also in Ayr it is considered very disgraceful for a person
577 who watches the animals away from camp to drink milk directly from an animal's udder. Some Tuareg
272 say that a man when staying alone among milk-yielding animals should not utilize their milk even if he performs milking in the usual way. A person who breaks these rules is called *émenkes* or *émehled* among the Ahaggar Tuareg, *émehled* in Ayr. The Tuareg say that there are some people, and in particular many slaves, who do not follow this rule, and that they are despised if known to have broken it. When two or more people are alone with a herd or flock away from the camp they can freely utilize the animals' milk. And it is very normal for camel herdsmen to live with a herd of she-camels in isolated places for long periods. They then live almost exclusively on camel's milk taken from the herd they guard.

272 Certain usages connected with stock-breeding are rationally explained by the Tuareg. Thus when they heat milk by means of hot stones (cf. p. 221) put into the milking bowl, they claim that this is done in order that the milk shall not get dirty as would happen were it heated in an ordinary cooking
272 pot. Another custom which by other stock-breeders has been explained as being based upon magic,
262 namely the usage not to drink milk and eat meat at the same time, is also rationally explained by the Tuareg. They say that there is no taboo on taking these kinds of food together, but it is very unwise to do so because the mixture will act as a laxative and upset the stomach. Therefore, if a Tuareg has drunk much milk he will not eat meat shortly afterwards, and if he has eaten meat he will not take milk for some hours, though he may do so should ample water have been added to the milk. The
*233 Tuareg to my knowledge have no other special customs in connection with stock-breeding and milk
234 than there mentioned

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

*233
824

Fig. 95. A Tuareg feeding his riding camel with *afezu* grass (*Panicum turgidum*). Many Tuareg feed their riding animals with stems of this perennial grass – partly to obtain a docile camel for riding, partly to change its fodder which consists largely of acacias and annual plants. The photograph is taken near Agadez at the *akasa* season. Annual plants grow between trees and bushes (*afagag*, *Acacia Raddiana*; *ébezgin*, *Salvadora persica*; *tadent*, *Boscia senegalensis*). Ayr, the *Isakaranan* tribe.

234 than those mentioned. Thus they can use any kind of receptacle for milk and milking, and they do
416 not clean their milk-bowls with urine as is normal among certain East African stock-breeders, and,
237 perhaps, also among certain of the Fulani living south of Ayr. The taste of urine is detested by the
262 Tuareg, who know this taste all too well as the water drawn from pools and wells is frequently flavoured
237 with urine and the excrement of domestic animals. Nor is camel urine used by Tuareg women for
302 hairdressing as is done among the Arabs, but it is said that it may have a medical value in curing
752 wounds. The custom of drinking blood has been mentioned above (p. 122 f.) and will be described later (p. 235).

*233 The Tuareg apparently have comparatively few superstitious usages in stock-breeding, which is
232 mainly to be considered rational. We have seen that stock-breeding is adapted to environment, and we have also mentioned that there are veterinary methods which doubtless have their origin in considerable knowledge of the anatomy and physiology of domestic animals. This knowledge forms one corner-stone of rational stock-breeding, and another is the very detailed knowledge of botany. In
*233 824 Ahaggar there are more than 600 different plant species for which the Tuareg have particular names, though a few related species are sometimes known by one and the same name. Every Tuareg know about the ecological conditions of these plants, and he knows exactly their fodder value for domestic animals. He knows that certain plants form excellent fodder for all domestic animals, but he is also well aware that the different types of stock have different needs, so that certain plant species are valuable for camels, other species for other domestic animals.

231 The Tuareg are occasionally cruel to donkeys, and to dogs, but they take the greatest care of all other domestic animals to ensure their wellbeing and reproduction. Women bring acacia pods or tender annual plants to kids, lambs, and calves, and to sick animals which remain in the camp. On
484 *233 long trading expeditions, when the camels have little time for grazing, some Tuareg will walk along

484 the caravan and feed the animals with annual grasses, and a camel-rider, when he meets plants con-
*233 sidered excellent for fodder, will stop for a while to let his riding camel eat them.

*233 Saliferous plants are highly important to all types of livestock, and camels and sheep in particular
824 need much salt nourishment. In Ahaggar there are certain plants of this kind almost everywhere, and the following species serve as fodder:— *aramas* (*Atriplex Halimus*), *issin* (*Salsola foetida*), *tabarekkat* (*Tamarix aphylla*), and *azawa* (*Tamarix gallica* and related species). *Aramas* in particular is very important. It is found almost everywhere within the Ahaggar Massif and at all altitudes. Benhazera states that *aramas* forms the most important fodder plant of Ahaggar (Benhazera 1908, p. 65), but this is not quite correct. It is most important because of its salt content as domestic animals do not thrive without salt, but the saliferous plants mentioned are very little nourishing for most domestic animals, and if the animals constantly eat such plants they become very thin. The most nourishing fodder plants of Ahaggar are tender annual species which spring up after abundant rainfalls. These plants are collectively known to the Ahaggar Tuareg as *akasa*; they comprise many different species and those considered most excellent for fodder are: *tageruft* (*Tribulus terrester*), *adreylal* (*Astragalus* sp.), *taymast* (*Echium humile*), *azren* (*Monsonia heliotropioides* & *M. nivea*), *tamaghé* (*Moricandia arvensis*), and *tanesmimt* (*Rumex vesicarius* & *R. roseus*). To these annual fodder plants can be added another important annual species, namely *alwat* (*Schouwia purpurea* ssp. *Schimperi*) which grows in the lower parts of Northern Tuareg countries. It is apparently not so common and important to the Northern Tuareg who live in and around the mountainous massifs, though it is a common and very valuable fodder for domestic animals of the Ahaggar Tuareg who live towards the south in the plains of Tamesna. It is one of the best fodder plants for camels and is also fairly good for sheep, while less valuable for other types of livestock. Annual plants may germinate over a large part of the
[132] year in Ahaggar, but as rainfall is most common late in summer (June, July, August) the best annual pasture will spring up at this period, and under very favourable conditions the plants may keep fresh and green for up to four months. When annual plants wither they are known to the Ahaggar Tuareg as *ṛarat* (*ṛarat n akasa*). Such dry annual plants have lost much of their fodder value, but they are important for fodder even at this stage. The perennial species which are most important for fodder have their optimal value at particular stages of their development at particular seasons. Important are the perennial grasses known to the Tuareg as *tulluit* (*Aristida pungens*) and *afeçu* (*Panicum turgidum*). The *tulluit* grass is extremely common in the Northern Sahara, and it forms perhaps the basic fodder plant among the Tuareg of Tasilé-n-Ajjer. It is also common in Ahnet and in the other mountain massifs surrounding Ahaggar to the north, but it is not found in the mountain massif proper of Ahaggar where most Tuareg live. The grass grows at Abalessa where cattle, goats, and sheep of the sedentary farmers feed upon it. The *tulluit* grass is valuable when green in winter, and hay of this
[484] grass is used for camel fodder on caravan expeditions to Tidikelt. The Tuareg cut it with a sickle and
[137] take it with them on the journey to the northern oases, because there is normally little vegetation on the road and no pasture around the oases where the Tuareg remain to trade for several days. The *afeçu* grass is extremely common in the lower parts of Ahaggar and is found in practically all river valleys. It is valuable for fodder when green after rain, but it is of little value when withered. There are other perennial herbs and grasses which are eaten by domestic animals, but herbs and grasses are

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

not the most important perennial fodder plants for goats and camels as the very best fodder plants of this kind are acacia trees, notably the species of *tamat* (*Acacia seyal*) and *abseṛ* (*Acacia Raddiana*) which are, perhaps, the most common trees in the lower parts of the Ahaggar Massif. In Ahaggar the acacias defoliate in winter, and they are then not very nourishing fodder, though they do not apparently loose all leaves at one and the same time. Very nourishing are the fruits or pods of the two acacia species mentioned. They are eaten by all domestic animals.

The most valuable fodder plants in Ahaggar consist of annual plants and the acacias, with the addition of saliferous plants. The tender annual plants are those considered most nourishing for animals. The annual plants may spring up everywhere at all altitudes, but the three vegetational zones of Ahaggar do not possess exactly the same species, and there are still greater distinctions between the perennial species found within these zones, which as fodder areas have the following main characteristics:—

(1) *Abada*

| | |
|---|---|
| *Annual fodder-plants* | *taġerufi* (*Tribulus terrester*) |
| | *taynast* (*Echium humile*) |
| | *adreylal* (*Astragalus* sp.) |
| *Perennial fodder-plants* | *tulhult* (*Aristidà pungens*) |
| | *afeẓu* (*Panicum turgidum*) |
| | *abseṛ* (*Acacia Raddiana*) |
| | *tamat* (*Acacia seyal*) |
| *Saliferous plants* | *aramas* (*Atriplex Halimus*) |
| | *issin* (*Salsola foetida*) |
| | *tabarekkat* (*Tamarix aphylla*) |
| | *aẓawa* (*Tamarix gallica* and related species) |

(2) *Tarayin*

| | |
|---|---|
| *Annual fodder-plants* | *taġerufi* (*Tribulus terrester*) |
| | *taynast* (*Echium humile*) |
| | *tamaghé* (*Moricandia arvensis*) |
| | *aẓren* (*Monsonia heliotropioides* & *M. nivea*) |
| *Perennial fodder-plants* | *afeẓu* (*Panicum turgidum*) Scarce |
| | *abseṛ* (*Acacia Raddiana*) – |
| | *tamat* (*Acacia seyal*) – |
| *Saliferous plants* | *aramas* (*Atriplex Halimus*) |
| | *aẓawa* (*Tamarix gallica* and related species) |

(3) *Atakor*

| | |
|---|---|
| *Annual fodder-plants* | *taġerufi* (*Tribulus terrester*) |
| | *tamaghé* (*Moricandia arvensis*) |
| | *tanesmimt* (*Rumex vesicarius* & *R. roseus*) |
| *Perennial fodder-plants* | They are scarce and of little value |
| *Saliferous plants* | *aramas* (*Atriplex Halimus*) |

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

*233 Each of the three vegetational zones of Ahaggar has its advantages and disadvantages. If we consider
824 a good year when rain has fallen abundantly with a resultant regeneration of all fodder plants, the
137 *Atakor* zone has very-excellent pasture. For the plains and the stony mountain slopes are then entirely
132 covered with annual plants which by the Tuareg are considered the very best fodder. The Tuareg also
133 claim that the upper mountain zone is preferable because of its cooler climate, which has a beneficial influence on the lactation of domestic animals. The disadvantage of the *Atakor* zone is the lack of acacias to which can be added the scarcity of fuel. The *Tarayin* zone possess characteristics of the *Atakor* zone and of the *Abada* zone. The *Abada* country is botanically very different from *Atakor*. It has annual pastures of great value when abundant rainfall has been experimented and it also has valuable pastures of perennial plants. With heavy rain the *Abada* country is excellent for stock-breeding, and fuel can be found everywhere. But the Abada country is hotter than are the zones of *Tarayin* and *Atakor*.

If rain falls abundantly all over Ahaggar there is good pasture in all three zones. But rainfall is more frequent and heavier at high altitudes than in the *Abada* zone, so that *Atakor* normally has by far the best pasture of annual plants which spring up late in summer or in autumn. The *Abada* zone on the other hand has the very best pasture of perennial plants, notably acacias that grow around the lower parts of the valleys which are always flooded when it rains in the high mountains.

221 The fluctuations of plant development determine the nomadic migrations of the Ahaggar Tuareg.
*233 A few tribes have their normal grazing grounds in *Atakor* (e.g., the *Dag Ṛali* and the *Kel Tazulet*).
824 They camp in this zone at most seasons to let their goats and sheep feed on fresh and dry annual pasture.
[132] In dry years and during the hot summer season they may move to the *Tarayin* zone where there are perennial fodder plants, but they rarely camp in the *Abada* country. Many tribes have their normal grazing grounds in the *Abada* zone (e.g., the *Aguh-en-tehlé*, the *Ayt Lowayen*, the *Iheynwen Hada*,
[342] and the *Kel Ṛela*), but move to the *Atakor* when annual pasture is good in this region. They live in *Atakor* with tents and flocks when annual plants are green, while the rest of the year they camp in the *Abada* country to let their animals feed on acacias and other perennial species. Finally there are two tribes (*Tégehé-n-Efis* and *Iklan-en-tawsit*), the members of which camp in the *Abada* country all the year round even when rich annual pasture is found in *Atakor*. However, members of these tribes may send their camel herds to the *Atakor* zone, accompanied by herdsmen, while tents and flocks remain in the lower country.

221 With the exception of a few noble households which keep up their old tradition to subsist largely
*233 on camel's milk, the Ahaggar Tuareg do not keep their she-camels in Ahaggar unless there are excellent
[565] pastures of annual plants in this area. They take their camels to pastures far away from Ahaggar,
[262] notably to the Tamesna region where they have their animals guarded by herdsmen who are frequently
[567] slaves. In very dry years there are very few camels in Ahaggar – just the animals needed for riding and transportation. It is in fact very easy to take camels to distant pastures, and it is most necessary to give these animals the utmost care as they are most valuable and their breeding is a very slow process
*233 (cf. p. 56). Goats do not need such excellent fodder as do camels. They can eat almost everything, but
731 in dry years goats may also suffer severely from lack of suitable fodder. This was the case in the year
[36] 1954/55 when I stayed in Ahnet and in Ahaggar. In the small camps of three to four tents each it was

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

*233 normal every day to loose one or two goats which died of hunger. The goats were too thin to be mated,
731 and even in winter there was no milk, or so little, that it was all consumed by small children. In spite of these very severe conditions most Ahaggar Tuareg stayed in Ahaggar with their flocks which subsisted on dry perennial plants and annual plants that were two years old. Conditions were extremely bad in
221 the region of Ahnet, and about half of the Ahnet Tuareg left their country to go southwards with
*233 their camps and goats, to the regions of Ti-n-ẓawaten. In severe drought periods some Tuareg may
731 move their camps far outside of Ahaggar, but even then most of them will remain in their native country for extensive goat migrations are difficult and cannot be realized without a loss of the meagre animals. Most Tuareg therefore prefer to remain and to avoid the strenuous journey connected with these migrations. They may loose many animals during a drought, but they know that sooner or later rainfall will occur so that pastures will regenerate quickly to let the animals grow fat to yield milk and to be mated. The increment of goats is extremely quick in comparison with that of camels.

*233 Stock-breeding conditions are on the whole not very favourable in Ahaggar, but pastoral Tuareg
731 of this region have developed an economic system which secures their existence even in very bad years of extreme drought.

137 In the introductory description of Tuareg environment it was stated that the Ayr Massif and the
*233 surrounding plains have far better possibilities of stock-breeding than Northern Tuareg countries. The broad river valleys of Ayr are very rich in persistent plants which also grow on slopes and in depressions outside the valleys, and the spring of annual pastures is an annually recurrent event. One
132 informant told me that there had not been any drought in the Agadez region throughout the many
*233 years the French had reigned over Ayr. At an unknown date in the past, it is said, a very severe drought persisted in the country for a period of seven years, and the Tuareg who had many goats and sheep fed these animals on charcoal. Since then rain has fallen every year and though more

*233

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

*132 233 abundantly in one year than another there has always been rain enough to allow the annual pastures to spring up.

*233 824 In Ayr there are three species of trees or bushes which remain green all the year round, viz. *ébezgin* (*Salvadora persica*), *tadent* (*Boscia senegalensis*), and *turza* (*Calotropis procera*). They are extremely common, and the two first species play a certain role for fodder during the hot and dry summer season (*éwilen*), but dry annual plants then constitute the best fodder for all domestic animals. The annual plants comprise various species; around Agadez they are mainly grasses, but the small thorny seed-plant *ageruf* (*Tribulus terrester*) is also very important. These tender plants spring up shortly after the rains but they wither even before rainfall stops at the beginning of the *ṛarat* season. The perennial fodder plants are of little value in the hot season. The *afezu* grass (*Panicum turgidum*), which is extremely common everywhere, germinates at the beginning of the rains and is dry and contains little nourishment in summer. Acacias form very important fodder plants for camels and goats, but they are also of little value at this season when they defoliate. The two most important acacias are *afagag* (*abser* in Ahaggar) (*Acacia Raddiana*) and *tamat* (*Acacia flava*). The *afagag* acacia germinates shortly after the first rains (*akasa*) and has its highest fodder value in the season of *ṛarat* when the fruit pods fall to the ground providing excellent fodder for all domestic animals. The *tamat*-acacia starts germinating somewhat later and its fruit pods, which are equally important for fodder, do not fall until the beginning of the season known as *tabsit*, at which period the fruit pods of the *agar* tree (*Maerua crassifolia*) also fall. For southern Ayr it can be said that grazing conditions are tolerably good most of the year. They are extremely good when annual plants are green during the period of *akasa*, and they are bad in summer (*éwilen*) when the lactation of domestic animals is low.

Grazing conditions within the Ayr Massif are much more favourable than in Ahaggar, but one thing is lacking:— There are very few saliferous plants. Thus, for instance, there are very few tamarisks (*temeyut* = *Tamarix aphylla*; *azawa* = *Tamarix gallica*), which are found only within limited areas of the Massif; species of *Salsola* are very rare, and the very important saliferous plant, known to the Northern Tuareg as *aramas* (*Atriplex Halimus*), is not found within the Massif. The Ayr Tuareg there-
*233 317 fore have to feed their animals with salty earth which can be dug in certain parts of Ayr, or with Bilma salt, which plays an enormous part for most stock-breeders of Ayr and adjacent regions. The Ayr Tuareg cannot so easily take their flocks and herds to salt pastures as can the Northern Tuareg. But there is south and southwest of the Ayr Massif a narrow belt of salt-containing soil and water. This region is known to the Tuareg as *Azawar* because of its particular reddish soil. With this particular
(221) 824 type of soil, well water and pools will contain some salt, as do most plants, and many Tuareg of the Ayr Massif migrate to the *Azawar* country at the end of the rains to allow their animals to benefit
221 from the salt-content of the water and plants there. There is another reason why some Ayr Tuareg,
*233 who have their normal grazing areas within the Massif, migrate south and westwards into the plains,
824 namely the appearance in these regions of a small annual plant known as *emchéken* (*Ipomoea verticillata*). The Ayr Tuareg consider it one of the very best fodder plants for camels, goats, and sheep, but claim it to be less valuable for cattle and donkeys. – At the end of the rains the Ayr Tuareg who migrate to the *Azawar* country camp among pastoralists of different and distant regions. At this season most *Kel Geres* Tuareg migrate northwards to camp around Tegidda-n-edrar and Tegidda-n-

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

221 *233 824 tagayt, while the *Iwllemmeden Kel Dennek* at this period will camp around Ingal. Many Southern Tuareg leave the savannah country to avoid its heavy rainfalls and stock-diseases to let their animals benefit from the salty water and plants in the *Azawaq* country.

133 162 137 In the country west of the Ayr Massif, the Tamesna Plains, there is in addition to the Ayr Tuareg a numerous population of Ahaggar Tuareg who live constantly in these regions. These plains are botanically different from the mountains. Perennial vegetation is scarce though there are some *tamat*-acacias (*Acacia flava*), but there is a very rich vegetation of annual plants of great importance to *233 824 domestic animals. Among these plants can be mentioned *alwat* (*Schouwia purpurea* ssp. *Schimperi*), which is very valuable for camels and also good for sheep, *adreylal* (*Astragalus Vogelii*), and *tagellet* (*Colocynthis vulgaris*). The two latter plants are valuable as fodder for all domestic animals. It is noteworthy that these three species of annual plants last longer than other annual species. They do not wither at the beginning of the *ṛarat*-season, but remain fresh and green all through the winter until about *tabrit*.

It is evident that Tuareg knowledge of botany is extremely comprehensive, and that they use this knowledge to make stock-breeding as rational as possible. They may perhaps not be so rational in protecting pastures, for they cut acacias' boughs to feed the kids resting in the camps, and it is most possible that they also overgraze certain pastures. However, the grazing grounds are very vast in comparison with the number of pastoralists, and I believe that overgrazing and arboreal devastation take place mainly around villages and towns where the flocks of sedentary people graze continuously in the same area. In Ahaggar the valuable fodder plants and plants which are important for collecting are often protected for two or three months in order that they may become fully developed (cf. p. 150, 179).

*233 The Tuareg take great care that their animals do not lack water. It is true that camels and also donkeys can do without water for many days even in summer, but at this season camels should preferably be watered every two or three days, and goats are always watered every two days when the weather is hot. In winter the animals are not watered so often, and this is true particularly if the animals feed on fresh annual plants. Camels can do without water even for weeks and months under such favourable

Fig. 98. A slave watering goats by means of the leather bucket called *aga*. Water is drawn from a well and poured out into a hole dug in the clayey ground. The goat standing to the left is sheared – a token of the summer season. Tasilé-n-Aijer.

*233 conditions, and herdsmen, who live with camelherds far away from camps and wells subsisting on
[272] camel's milk, do not consider water necessary. Should domestic animals have eaten salt or salty plants
[271] they are very eager for water even in winter. When I lived in Ahaggar with my camels during the winter 1954/55 they had rightly to be watered every ten days, but in regions where they fed mainly on saliferous plants they had to be watered more frequently. However, domestic animals must not be watered too often as this would make them slow and emaciated, and a camel must not be worked too hard the day after it has been watered.

312 Tuareg camps are always found around wells, pools, or other types of water places for which there
[361] is a large vocabulary. But the Tuareg never camp too close to water places where there is little pasture, many foreigners and consequently little peace. The distance from camp to water place varies, but is
[132] very frequently 1–3 kilometres. During the rainy season (*akasa*) water is very aundant all over Ayr, but outside this period conditions of water supply for human beings and livestock are more favourable
[415] in the north than in Ayr, where water most of the year must be drawn from wells. To raise water the Tuareg use a leather bucket known to the Ahaggar Tuareg as *aga* (Fig. 97–98). The water drawn for
[237] the animals is poured out into a hole dug in clayey soil, or into a hole covered with a piece of skin or leather known in Ahaggar as *taforawt*. This skin is nowadays frequently substituted by canvas (cf. Fig. 99). Where water is scarce and must be drawn from narrow wells, as in Ayr during the summer
312 567 season, the watering of flocks and herds gives rise to frequent quarrels between pastoralists. For
[423] though the right to the use of wells is free to all there are many disputes and fights frequently

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

start around wells. It may happen, for instance, that two men who draw water from the same well get the ropes of their leather buckets entangled. They will then start to quarrel and the result may be a fight with swords. 312 529 [411]

I conclude this chapter with a brief description of the signals used by the Tuareg for their domestic animals. As these animals do not have the same needs for food and water and are frequently mixed with each other in camps and around wells, it is only natural that the Tuareg have different signals to call, stop, or drive away their various types of domestic animals. I have noted these signals among the *Kel Ferwan* Tuareg of Southern Ayr:— 231 233* 192

Signals to call domestic animals:—

| | | |
|---|---|---|
| goats . . . . . | *ay, ay* | |
| sheep . . . . . | a rolling sound | the three rolling sounds are somewhat different though resembling each other |
| cows . . . . . | a rolling sound | |
| camels . . . . . | a rolling sound | |
| donkeys . . . . . | *ahay, ahay* | |

Signals to stop animals:—

| | |
|---|---|
| goats . . . . . | *aw* |
| sheep, cows, camels . . . | *ôr* |
| donkeys . . . . . | *as* |

Signals to drive away animals:—

| | | |
|---|---|---|
| goats . . . . . | *ây* | pronounced emphatically |
| sheep, cows, camels . . . | *hey* | |
| donkeys . . . . . | *aheyt* | |

233* 312

Fig. 99. Tuareg drawing water for camels which drink from a piece of canvas (*tafarawt*) placed over a hollow in the ground. Ahaggar, the *Kel Ahnet* tribe.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

*233 192 [492] [171] I have referred to the use of such signals above in connection with goat-breeding, and I have mentioned that goats will respond to signals and also to names more willingly than other domestic animals with the exception of dogs. Some of the signals used in Ayr and Ahaggar differ, and it is interesting that the Tuareg of these regions use different sounds to accelerate the speed of riding camels. The riders in Ahaggar use the same signal as the Arabs – a gutturally pronounced *ha* – while the Ayr Tuareg use a rolling sound *ur*. The signal used by the *Kel Tahabanat* of the *Western Iwllemmeden* is *ut*.

# Social Aspects of Stock-Breeding

Pastoral Tuareg have (or had) important matrilineal traits of social organization and also patrilineal traits which have been adopted partly through contact with the Arabs from whom they have taken over the Islamic rules of inheritance. Koranic inheritance rules are followed both in Ahaggar and in Ayr, but some social aspects of Tuareg stock-breeding differ in these two areas. 611 428 177

## AHAGGAR

I shall briefly describe the Koranic rules valid for inheritance of all kinds of individually owned property, e.g., livestock, material goods, and money, though most Tuareg do not regard money as something to be conserved. It is a main rule that children inherit their parents in such a way that a son gets a portion twice as large as that allotted to a daughter. Important details of these rules can appropriately be illustrated with a few examples which I took down in Ahaggar:— 428

(1) A married couple having a son and a daughter. When the husband dies all his property is divided into eight parts of equal value. One of these parts is given to the widow, and the remaining seven parts are thereupon re-divided into three parts, two of which are allotted the son while one part is given to the daughter. When the widow dies her property is divided into three parts – two parts for her son, one part for her daughter.

(2) A married couple having a son and a daughter. The wife dies and her property is divided into four parts – one for the widower, another for the daughter, and two parts for the son. When the widower dies his property is divided into three parts – two parts for the son, one part for the daughter.

(3) A married couple having no children. At the death of the husband his property is divided into four parts. Only one of these parts is allotted to the widow, while the remaining three parts are taken over by individuals of the husband's family according to the rules mentioned below for inheritance from an unmarried man.

(4) A married couple having no children. At the wife's death her property is divided into two parts. One part is given to the widower, the other to the deceased wife's family.

(5) At the death of an unmarried man one sixth of his property is given to his mother (or to his mother's mother), while the remainder is taken over by his father.

(6) An unmarried man who has lost his father, but has alive his father's father, a brother and a

[p. 137]

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

428 sister, and his mother (or his mother's mother). At the death of the unmarried man one sixth of his fortune is given to his mother (or to his mother's mother), and the remaining parts are collected and re-divided into three parts, two of which are given to the brother, one to the sister.

(7) An unmarried man who has lost his father but has alive his father's father, his father's brother, and his mother (or his mother's mother). At the unmarried man's death his fortune is divided into six parts, one of which is given to his mother (or to his mother's mothers) while the remaining five parts go to his father's father.

Patrilineal rules predominate in the system of inheritance. With the exception of the mother (or the mother's mother), who inherits one sixth, no matrilineal relative can inherit a deceased person. If a deceased person has no mother or mother's mother alive, all property left is inherited by patrilineal kinsmen, and even very remote relatives in the paternal line have inheritance rights. Bissuel states [114] that sisters' children can inherit (Bissuel 1888, p. 110), but the Tuareg I have asked in Ahaggar (and in Ayr) denied this.

428 Furthermore, it is claimed in Ahaggar that if a deceased person of the *Kel Rela* drum-group has 643 no patrilineal relatives alive, his fortune is taken over by the *Amenukal* with the exception of one sixth in case the mother or the mother's mother of the deceased person is alive. The *Amenukal*, however, [632] will not keep livestock thus inherited for himself, but will leave it in the tribe to which the deceased person belonged, and the animals will be under the supervision of the tribal chief who has usufructs of them. Livestock thus inherited by the *Amenukal* is known as *éhéré wa n effebel* ("the fortune of the drum-group)", or *éhéré wa n butelma* ("the fortune of the public"); cf. p. 400).

422 It appears from the rules of inheritance just mentioned that domestic animals are owned individually, [850] and almost everybody among the Tuareg is a stock-owner. Even little children (boys and girls) may [553] own a few animals which are given them by their parents and their close relatives on various occasions, e.g., on the naming day seven days after birth. The offspring of these domestic animals also belong 422 to the children who own them, but milk, butter, meat, and the like derived from the animals should 592 serve the needs of the household to which the children belong. Within the household the husband and his wife also have their individual animals. Husband and wife can freely kill or sell the animals they own without asking permission of each other, but the meat and the money acquired from sold animals should serve the benefit of all members of the same household. A household forms an economic 422 unit of closely related stock-owners.

*233 All Northern Tuareg use ear-marks, cut with a knife, for their goats and sheep. There are a great many types of cuts which have particular names. I have noted some of these marks among the Ahaggar [114] Tuareg (Fig. 100). But I did not investigate this subject in great detail as it is considered very impolite [576] to ask a man about ownership of goats (cf. p. 41 f.). The cuts illustrated Fig. 100 are all family marks [602] so that each mark is used by several patrilineally related persons. But though the Tuareg know their goats and sheep by sight a small and not very deep cut is frequently added to indicate individual 422 ownership. The earmarks are preferably cut when kids and lambs are weaned (cf. p. 37) at which *233 time superfluous male animals should also be castrated (cf. p. 118). All true vassals of Ahaggar mark 565 their donkeys with earmarks similar to those used for goats and sheep, though in one vassal tribe (the *Dag Rali*) donkeys are also branded with a redhot iron, like camels. The noble Tuareg of Ahaggar

422
*233

Fig. 100. Earmarks of the types used for goats and sheep among the Northern Tuareg. Ahaggar, the tribes *Dag Ball* and *Aǵuh-en-tehlé*.

422
*233 never use earmarks for donkeys which are branded like their camels, and I believe that this rule also
565 holds for the *Isekkemaren* Tuareg, though I do not know this to be true for tribes other than those of
422 *Kel Terurit* and *Kel-I-n-tunin*.
*233 The property brands of the Northern Tuareg are burned into the skin of the camel (donkey) by
[413] means of a redhot iron known as *éndel* (Figs. 102a–b), but if this implement is not available another piece of iron is used, e.g., the iron tripod for suspension of kettles and cooking pots. The brands are known as *ahwalen* (sing. *éhwel*), and there are a great many different ones which have their particular
422 names. These brands are frequently depicted in literature (cf. Foucauld 1951–52, II, p. 629 f.; Lhote
*233 1955a, p. 235), and spoken of as "tribal brands". However, as property marks are patrilineally
614 inherited while tribal membership is ultimately matrilineally determined, the members of the same
[582] tribe will possess more than one camel-brand. For marriages are contracted between different tribes, though some of these units are predominantly endogamous. Furthermore there are a few Tuareg who
[277] use different camel-brands for camels inherited from the father and the mother, as there are some who have adopted the mother's father's brand because their father's brand was believed to have brought bad luck in camel-breeding. For these reasons there are frequently more than one brand within a
[613] tribe, and individuals or small patrilineages generally add to their main brand (*éhwel*) a supplementary
brand known as azezlu.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

brand known as *aṣeẓlu*. To illustrate all this I reproduce the camel-brands used within three tribes of Ahaggar (Fig. 101a–c).

The term *tawsit*, which is the Tuareg word generally applied to the unit here called a tribe, seems to have the meaning of "a hand-root from which fingers issue". But the word may have other meanings, e.g., "a mat (*téseberi*) plaited from *afeẓu*-grass" (cf. Foucauld 1951–52, III, p. 1533). The latter meaning intimates something kept firmly together, while the word *tawsit* in its first sense seems to indicate a lineage structure. I have sometimes heard Tuareg indicate tribal relationship between two persons saying that they belong to the same hand (*afus*), or that they are of the same root (*éké*, that is the root of a tree). There are other words which are sometimes used for "tribe". One term is *teḳḳebilt*, another is *aṛref*, but the meaning of these words seems to be the more general one of "people" or "race". An interesting word, namely *hama*, which has the definite meaning of "mother's kin", is according to Foucauld also used synonymously with "tribe" (Foucauld 1951–52, II, p. 603), but according to information I have gathered in Ahaggar these two words are not entirely synonymous.

It is most remarkable that the Ahaggar Tuareg do not follow any particular rule for the naming of tribes. Some tribes are named after an ancestress (e.g., *Kel Ṛela* = *Kel Kella*, that is "people descending from the woman *Kella*"), while other tribes have avuncular names (e.g., *Téṭṭehé-n-Éfis*, that is "the man *Éfis*'s sister's children"). Both these principles intimate that the tribe is a matrilineal unit, but certain tribes have patrilineal names much like those of Arab tribes (e.g., *Dag Ṛali*, that is "sons of the man *Ṛali*"; *Ayt Lowayen*, that is "sons of the man *Lowayen*"). Reference to an ancestor is also made in another way (e.g., *Ikadeyen*, that is "those descending from the man *Kadi*"). In addition we have tribal names which seem to be a kind of nick-names (e.g., *Aḡub-en-tehlé*, that is "the Achilles-tendon of *tehlé*" – the word *tehlé* being the name of a perennial plant (*Typha elephantina*), and we have geographical names (e.g., *Kel Ahnet*, that is "the people of the Ahnet country"; *Kel Taẓulet*, that is "people of the Taẓulet region", etc.).

Previously I have used the term "clan" for the Tuareg term *tawsit* in agreement with the fact that many people claim it to be a matrilineal unit (cf. Nicolaisen 1959). Thus the noble Tuareg of the *Kel Ṛela* tribe say that they all descend from the woman *Kella*, who lived about seven generations ago and had a maternal female cousin *Sokina* (or *Skina*) who became the ancestress of the other prominent noble tribe in Ahaggar named *Taytoḳ*.

The very numerous vassal tribe the *Aḡub-en-tehlé* is also said by its members to constitute a matrilineal unit. They claim descent from a common ancestress and occasionally use the name *Téṭṭehé-n-Eltmen* for their tribe. Actually the *Aḡub-en-tehlé* tribe falls into three sub-tribes known as *Kel Taṛhawhawt*, *Isandan*, and *Kel Aṛefsa*. They are said to be matrilineally related, but nobody is able to prove this genealogically, and among the *Isandan* there is a matrilineage of four generations which is matrilineally related to people of the *Ibettenaten* tribe and not to their fellow tribesmen.

Members of the important vassal tribe the *Dag Ṛali* will also frequently claim common matrilineal descent. However, they do not know the name of their proper ancestress. They say that they descend from a woman named *Takama* who was also the ancestress of the vassal tribes known as *Ayt Lowayen* and *Kel Ahnet*. The *Dag Ṛali* tribe was founded by the man *Ṛali* who lived about seven generations ago. It falls into two halves known as the *Dag Ṛali* proper and the *Imezziliten*. Some Tuareg of the

Fig. 101 a–c. Camel-brands of three Ahaggar tribes.

a. Brands of the *Kel Ḥeis* tribe.

b. Brands of the *Aḫnḫ-en-tahlé* tribe. The main brand of this tribe is V called *tamasori*. The brands ⊤ & ⊤ are due to intermarriage with the *Iklan-en-tawsit* tribe where the principal brand is ⊤ called *amesloḳ*.

c. Brands of the *Dag Ṛali* tribe. The main brand characteristic of this tribe is | placed on the right side of the camel's neck. This brand was that used by the founder of the tribe named *Ṛali* and to-day it forms part of most *Dag Ṛali* brands which are always placed on the right side of the camel's neck. The *Dag Ṛali* brands have individual names. [532] The last one is known as *tikkilt n ayaleḳ*, that is "the raven's foot".

*Dag Ṛali* tribe may claim that these two halves are matrilineally related to one another, but also that they do not descend from sisters. It seems in fact as if these two halves stand in a cross-cousin relationship to one another, and it is in agreement with this that the *Dag Ṛali* proper speak of the *Imessiliten* as "children of their mother's brother". The two halves in the past intermarried much though marriages between them are very rare nowadays. Thus in 1951 there were only two marriages between people of the two tribal halves.

614
611
565
613
602
582

I believe that other tribes of Ahaggar have a structure similar to that of the *Dag Ṛali*, but the structure of Tuareg tribes is extremely difficult to grasp because very few Tuareg know their genealogies more than three or four generations back. [114]

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

114 Many Tuareg claim that their tribe is an endogamous unit, but to-day there is no tribe that is exclusively endogamous. All tribes intermarry more or less with people of other tribes. The most endogamous tribe is perhaps the *Dag Ṛali* of which the half known as the *Dag Ṛali* proper has contracted a few marriages with people of the *Aguh-en-tehlé* (the *Isandan* sub-tribe) while the other tribal half known as the *Imessiliten* has intermarried with the *Ikechchemaden* tribe.

591 The rules of residence are based upon both patrilineal and matrilineal principles as follows:—

(1) When the wedding ceremony is over the newly-married couple will stay one year in the camp of the wife's parents. This one year's stay in the camp of the wife's family has nothing to do with bridal service. Very frequently the husband does not live continuously with his wife throughout this period, but lives in his parents' camp and pays occasional visits to his wife. Some Tuareg say that the main reason for this one year's stay in the camp of the wife's family is due to the fact that about one year is needed to prepare tent, household implements, and the like for the newly-married couple (cf. p. 460 f., 472). The stay in the wife's family camp is not always strictly one year, but may be longer or shorter. But if the wife is pregnant she must leave her parents' camp to bear her child in the camp of the husband's family. [844]

(2) After the one year's stay the couple will settle with the husband's father to remain with him as long as he is alive.

614

Fig. 103. Illustration of the rule of residence for persons descending from a man of the *Aguh-en-tehlé* tribe ($A^1$) and a woman of the *Dag Rali* tribe ($B^1$). The *A*-people belong matrilineally to the *Aguh-en-tehlé* tribe, the *B*-people to the *Dag Rali*.

People living with the *Aguh-en-tehlé* tribe.

At the death of $A^1$ of the *Aguh-en-tehlé* tribe all persons will settle in the territory of the *Dag Rali* tribe with maternal kinsmen of $B^1$, and they will remain there also after the death of $B^1$.

At the death of $B^2$ his wife $A^2$ and her children $A^4$–$A^6$ will go to her father or maternal kinsmen of the *Aguh-en-tehlé* tribe as will be the case with $A^3$ and her child $A^7$ at the death of $B^5$. At the death of $B^3$ his wife $B^4$ and children $B^8$–$B^{10}$ will remain with the *Dag Rali*.

People living with the *Dag Rali* tribe.

If $B^6$ dies while $A^1$ is still alive, $B^7$ and her children $B^{11}$–$B^{13}$ will go back to the camp of $A^1$ in the *Aguh-en-tehlé* territory. After the death of $A^1$ they will return to the *Dag Rali* to join the camp of $B^2$, $B^3$, and $B^5$. [768]

If for instance $B^3$ kills a man of a third tribe (e.g., the *Ayt Lowayen*) the *Aguh-en-tehlé* and the *Dag Rali* tribes are both responsible for the payment of blood-wealth as long as $A^1$ is alive and $B^3$ lives with the *Aguh-en-tehlé* tribe. If $A^1$ has died and $B^3$ consequently lives with the *Dag Rali*, this latter tribe alone will be responsible for the payment of blood-wealth. [682] [672]

(3) After the death of the husband's father the couple will join the husband's matrilineal kinsmen (his mother's brothers) together with his mother should she still be alive.

(4) At the husband's death his wife and their children will move back to the wife's kinsmen. [768]

As may be seen from this complicated rule of residence, a single death may in fact give rise to a change of territory and camp for a great many people. This is illustrated in Fig. 103 which depicts the rules of residence in the light of actual marriages between the two vassal tribes, *Dag Rali* and *Aguh-en-tehlé*.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

614 591 Should a man descend from a father and a mother of different tribes he will start his life as a member of the father's tribe and end as a member of the mother's tribe. However, a man who descends from such a mixed marriage will, even as a member of his father's tribe, have an intimate connection with the tribe of his mother. Thus it is said that if, in the past, a man of a mixed marriage between two [682] [672] tribes lived in his father's tribe and had to pay blood-wealth for a murder, his mother's tribe should pay half of the blood-wealth, while in case his father had died and he lived in his mother's tribe his father's tribe should not contribute.

614 611 Tribal membership is ultimately matrilineally determined, and though we cannot characterize a tribe as a pure matrilineal unit the matrilineal principle plays a great part in tribal organization. It is [428] valid for succession to tribal chieftainship, for succession to land-rights and to property considered indivisible; in noble tribes it is also valid for succession to rights and obligations towards vassals, in [565] vassal tribes for rights and obligations towards noble Tuareg. These rules have been strictly followed 614 by most Tuareg tribes of Ahaggar up to modern times. Within all tribes there seems to be one par- 613 ticular matrilineage from which the tribal chief should be elected. Thus in the vassal tribe of *Dag Ṛali* the chief must be elected from the *Dag Ṛali* proper, while a man descending from the ancestress of the tribal half known as *Imessiliten* cannot become elected chief. In the *Aǧuh-en-tehlé* tribe the supreme chief of the three sub-tribes should be elected according to matrilineal rules within the *Kel Taṛhawhawt* sub-tribe.

614 565 631 423 Tribes are territorial units. The dominant noble tribes have as their territory the very large area which is divided into territories of vassal tribes within their drum-group. Several vassal tribes are named after the territory where they live, and the vassal tribes which have ancestral names are also attached to a particular territory. The Tuareg frequently speak of "*amaḍal n Dag Ṛali*", "*amaḍal n Aǧuh-en-tehlé*", etc., that is "the land of the *Dag Ṛali* tribe", "the land of the *Aǧuh-en-tehlé* tribe", etc., though they do not claim that these tribes own the particular territories but merely that they have [643] particular rights to them. For the land of these tribes is owned by their drum-chief, the *Amenukal* of Ahaggar. It is stated in literature that such tribal territories are grazing grounds reserved exclusively for members of tribes. Lhote says that nobody has the rights to graze flocks and herds in the territories of foreign tribes without permission from their chiefs or from the *Amenukal* (Lhote 1955a, p. 279). Kilian also mentions that tribal territories are grazing grounds (Kilian 1925, p. 132), and in a study by Malaurie there is a sketch-map of some of the more important territories (Malaurie 1953, p. 339). [162] Nowadays foreign camps are very frequently found in the territory of a tribe as mentioned by Capot-Rey (Capot-Rey 1953a, p. 265 f.), and it is said that this could also happen in the past. The territory [578] of a tribe was possibly once reserved as grazing grounds for its members, but it is said that one of the *Imenukalen* (sing. *Amenukal*) in the past decided that grazing should be free all over the country as the division of the country into tribal grazing grounds gave rise to much inter-tribal trouble.

614 613 621 A tribe is always subdivided into sections which with few exceptions have geographical names – generally the names of important river valleys in the usual camping area. The number of such sections within a tribe varies. In the numerous vassal tribe *Aǧuh-en-tehlé* there are eight sections while the *Dag Ṛali* tribe has four sections. These sections are kin groups with a depth of 4–6 generations, and within a section there is always a dominant matrilineage from which the section leader, who is

Fig. 104. Map showing the sub-areas of the territory of the *Aǧuh-en-tehlé* tribe. The sub-areas have no proper limits towards the south where the country changes into barren and uninhabited desert. The hatched areas are mountainous regions which are not considered parts of sub-areas. West of the *Aǧuh-en-tehlé* territory is the territory of the *Téǧehé-n-Efis* tribe where two sections of the *Aǧuh-en-tehlé* have their normal grazing grounds. To the north are the territories of the *Dag Ṛali* and the *Kel Taẓulet* tribes. The *Kel Aẓernen* section frequently camps in the *Dag Ṛali* territory and intermarries with the *Kel Tamanṛaset* section of that tribe. To the east is the territory of the *Ṛelayddin* who are now considered part of the *Aǧuh-en-tehlé*. The *Aǧuh-en-tehlé* territory chiefly belongs to the *Abada* zone, but the northern parts of the two northernmost sub-areas are within the zones of *Tarayin* and *Atakor*.

613
621

**Fig. 105. The section camp of the *Kel Azerwen* (the *Isandan* sub-tribe of the *Agub-en-tehle*). The camp comprises three goat-herding units of four, five, and seven tents forming three independent camps in case of dry pasture. When grazing is good the three goat-herding camps which co-operate in camel-herding and caravan trading will camp on the same spot with a small distance between each in order that the flocks of the three units shall not mix. - The household to the extreme right does not follow the general rule of residence illustrated Fig. 103. Its members accordingly should camp together with the husband's family, which, however, lives in Ayr whence he has emigrated to Ahaggar.**

[591]

614 also the representative of the section towards the tribal chief, should preferably be elected. The members
613 of one section will frequently intermarry with members of another particular section, but members
621 of a section will generally marry into more than one particular section and sometimes into sections
[582] of foreign tribes.

613 When grazing is good the sections are identical with camps of 10–20 tents, which otherwise are
621 split up into minor camps of 2–7 tents. These minor camps generally consist of an extended family
596 which co-operates in goat-herding and in various other tasks, although all animals are individually
*233 owned and every tent or household is self-supporting – "it has its own churning bag and its own millet
[592] bag", as the Tuareg put it. The section camps formed during good grazing are made up of three or four small goat-herding camps which constitute extended families, but the small camps within the section camps remain co-operative in goat-breeding, and there is generally a distance of 50–100 metres
[476] between each in order that their flocks shall not mix. When the small goat-herding camps of a section
[484] join each other and form bigger camps under favourable grazing conditions, it is not only because
[161] kinsmen appreciate each other's company, but also because the big camp of a section is a co-operative unit in camel-breeding and caravan trading, for which tasks a goat-herding camp cannot spare the labour. Should the small goat-herding camps of a section be unable to remain together, they camp so close to each other that contact between them is comparatively easy. A section camp is illustrated in
361 the diagram below (Fig. 105). The formation of such camps is not generally possible without annual
621 pasture, and section camps are particularly common in the *Dag Rali* tribe resident mainly in the

361 *Atakor* zone. In this area kin groups of five or six generations, comprising about twenty tents, may
621 form a section camp for long periods. Thus I was told that all members of the *Kel Tamanṛaset* section
*233 camped together in the same place for eight months of the year 1952. Among the Tuareg, who have their grazing grounds mainly in the *Abada* country, section camps are not so easily formed as annual pasture springs up less frequently. People of such tribes as the *Iklan-en-tawsit*, the *Téġehé-n-Efis*, and part of the *Aġuh-en-tehlé* tribe, generally live in goat-camps, which are often smaller than those of the
[824] *Dag Ṛali* tribe of the *Atakor* region. Where goats feed mainly on acacias it is not possible to keep such large flocks together as when grazing consists of fresh or dry annual plants. Acacia leaves are very important for fodder and their fruit-pods are still more valuable, but the trees grow scattered and consequently fodder is not so concentrated. We see again how stock-breeding among the Ahaggar Tuareg is an industry adapted to environment. The size of camps is determined by natural conditions.

| KHOFA of the *Kel Tarayin* section. No position as leader | Cultivation grounds at I-n-aǧriwal and I-n-dalaǧ. Hunting of barbary sheep. Wild donkeys | 2 donkeys |
| DEYNI, chief of the *Kel Aṛefsa* sub-tribe forming only one section | No particular value | No land-rent |
| AKAWALI, chief of the *Isandan* sub-tribe and leader of the *Kel Afaro-he hin* section | Cultivation grounds at Tahifet<br>Hunting of barbary sheep<br>Wild donkeys | 1 donkey |
| HANU, *khalifa* of the *Kel Azermen* section of the *Isandan* sub-tribe | Cultivation grounds at Tamanṛaset<br>In the past wild donkeys | 1 donkey |
| KHOSENI, *khalifa* of the *Ṛelayddin* now attached to the *Aǧuh-en-tehlé* tribe | *Khoseni* is in command of the *Ṛelayddin* territory to which all members of the *Ṛelayddin* have equal rights. Each of them gives two goats annually to the *Amenukal* | |

The Ahaggar Tuareg have various terms to indicate the size of a camp. A large camp is always known as *amezzaṛ*, while a small camp is called *éṛéwen* or *tamezzaḳ*. These two terms are used to distinguish between goat-camps and section camps (camel camps) though they do not have so absolute a meaning. Two camps placed close to each other (100–200 metres between them, whether of the same tribe or not) are known as *heregen* (or *amezzaṛ n heregen*) and a camp very far from wells or water pools is called *aharaǧen*. Apart from the migrations between the *Abada* and the *Atakor* zones and those beyond Ahaggar in case of severe drought, nomadic migrations of the Ahaggar Tuareg are not very extensive and occur within a limited area. The Ahaggar Tuareg are not "grands nomades" like

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

many tribes of the northern desert, and migrations are on the whole independent of caravan trading. Migrations are to some extent determined by agriculture in cases where the households possess irrigated gardens cultivated on their behalf by the *Ḥarratin* (*Izeggaren*). Some goat-camps may move their tents close to the agricultural settlements when wheat and barley are harvested in April. Date palm-owning Tuareg of two vassal tribes (*Iklan-en-tawsit* and *Ikechchemaden*) will also visit the oases of Silet and Tibeghin where dates are harvested in August and September. But the Tuareg visiting these oases will generally not take flocks and tents with them when collecting their dates, which are harvested mainly by black-skinned *Ḥarratin* of Abalessa. It should once more be mentioned that most Ahaggar tribes in dry years keep their camel herds outside of Ahaggar – mainly in Tamesna – and the members of a section have their herds guarded collectively in these distant regions.

The territory of a vassal tribe is generally divided into sub-areas, the right to which is vested in individual tenants. These sub-areas may be valuable grazing grounds, but most of them have an economic value in other respects also. Some are important hunting grounds for barbary sheep or for the catching of wild donkeys for domestication, others have a value for the collection of wild seeds, or have soil and water suitable for agriculture. A few areas possess all these qualities. I have studied the division of the tribal territory into sub-areas only in the two tribes *Dag Ṛali* and *Aguh-en-tehlé*. In the *Aguh-en-tehlé* tribe there is a certain correspondance between sections and sub-areas in the way that most sub-areas belong to individuals of the matrilineage which forms the core of a particular section. Consequently the Tuareg of the *Aguh-en-tehlé* tribe sometimes speak of sub-areas as section territories. However, two tribal sections living outside the tribal territory have no particular sub-areas, and one section has two sub-areas, the rights to which are vested in two individual tenants (cf. p. 149). In the *Dag Ṛali* tribe there are more sub-areas than tribal sections, and some sub-areas have two tenants who belong to distinct tribal sections, members of which all have the right to use these sub-areas (cf. p. 148). When a tenant dies his rights to a sub-area should be taken over by a maternal kinsman who lives in the section to which he belongs matrilineally. Tenants of sub-areas are frequently section-leaders. In the lists p. 148–149 where I mention the sub-areas in the *Dag Ṛali* and *Aguh-en-tehlé* tribes are indicated the names of tenants, the value of their sub-areas, and the annual land-rent paid to the *Amenukal*, who is the true master of the land inhabited by tribes of the *Kel Ṛela* drum-group.

For the land-rent (*éhéré-n-amaḍal*) paid to the *Amenukal* the tenants obtain the following rights over their sub-areas:—

(1) They can forbid grazing within their area or in part of it in order that plants may germinate and become fully developed. For plants valuable exclusively for grazing domestic animals the period of protection will be up to two months, but certain plants which have seeds valuable for collecting are protected for three months.

(2) They have the right to half of all the wild donkeys caught in their areas.

(3) They have the right to part of all barbary sheep killed. Foucauld says that in certain hunting grounds the hide and the meat of a slain animal must be given to the tenant, while the hunter can keep only the head, the paunch, and the intestines (Foucauld 1922, p. 81; Foley 1930, p. 43 f.). My own information agrees with Lhote's statement that the tenants in general have the right to the hide,

423
422
224 the head, and half the meat (Lhote 1955a, p. 284), but for certain hunting grounds there are different rules (cf. list p. 148).

423
241 (4) The tenants have the right to dues from the crops of every garden in their sub-areas, but for sub-areas of the *Dag Rali* tribe these payments are now given to the *Amenukal* because, it is said, the *Dag Rali* Tuareg consider such dues incompatible with Islamic law. In the *Aguh-en-tehlé* tribe the tenants receive 10 kg per garden from a crop of wheat and barley (grown in winter), 10 kg from a crop of millet (grown in summer), and 4 kg from a crop of tomatoes.

685
643 Should the rights of tenants be violated, the offenders will be fined by the *Amenukal*, the indemnity falling to him and not to the tenant. In the past there was a fixed indemnity of three goats for the
423 violation of protected pastures. Nowadays the price is determined by the *Amenukal*. When a tenant
[422] dies his rights and obligations should preferably be taken over by a maternal kinsman. Traditionally
[613] the usufructs of a sub-area are reserved to people of the same section as the tenant, but should the tenant be identical with the chief of the whole tribe they belong to all tribal members. These traditional rules, however, do not seem to be observed very strictly nowadays except for the hunting of barbary
[114] sheep in certain areas. Lhote seems to be wrong in stating that the chief of the tribe has the right to forbid grazing and protect pastures in the whole tribal territory (Lhote 1955a, p. 279). In the two tribes here described this right is invariably vested in the tenants of sub-areas.

## AYR

422
* 233 The Ayr Tuareg follow the Islamic rules of inheritance described from Ahaggar p. 137 f., and property
[422] marks as in Ahaggar are patrilineally inherited in the way that people take over their father's mark. However, property marks play a less important role in Ayr, where the Tuareg with the exception of the *Igdalen* Tuareg (vassals) do not mark goats, sheep, and cattle. Other tribes of Ayr mark only camels and donkeys, and branding with a redhot iron as well as earmarks cut with a knife are used for these animals. Both types of marks are known as *ejwel*. Some Ayr Tuareg and all Tuareg of the *Kel Geres* group use brands for camels and donkeys, and this seems also to be the case with the
[113] *Iwillemmeden Kel Dennek*. Some of the brands used among the *Kel Ayr* are published by Rodd and Nicolas (Rodd 1926a, pl. 21 p. 195; Nicolas 1950a, p. 268 f.). The earmarks used for camels and

422
*233 donkeys by certain Ayr Tuareg are most interesting. Though such marks are used by many tribes there does not seem to be a great variety of them, and I have noted only the following marks:—

[565] (1) *tallayt*, that is the tip of right ear cut off while a slit is cut into the left ear. This mark is said to be used by all vassals of the *Kel Ferwan* group, but the members of the two tribes *Kel Akerra* and *Imezzureg*, who claim to be noble by origin, have an additional brand burned into the left hind thigh close to the animal's anus. This brand is called *ekomed*.

(2) two slits in the animal's left ear. Though different from the mark just mentioned it is said also [565] to be called *tallayt*. It is used by the noble *Kel Ferwan* Tuareg (the *Irawatten*), and also by the negroid *Irawélen* who in the past were once slaves of the nobility.

(3) *tabelechchat*, that is one slit in the left ear. This mark is used by the *Ikezkezen* Tuareg who are politically attached to the *Kel Ewey* Tuareg.

[428] Though all property marks are patrilineally inherited it may happen in Ayr, as in Ahaggar, that a [77] Tuareg use two marks. For certain Tuareg will use the mother's father's mark for animals given them by their mother's family, other Tuareg have been brought up among matrilineal kinsmen whose mark they have adopted, and there are also people who have adopted their mother's family mark because they believed that their father's mark brought them bad luck in camel-breeding.

614 The Ayr Tuareg of the *Kel Ferwan* group fall into a number of units which are known by the word *tawchit*. It seems to have much the same meaning as the word *tawsit* of Northern Tuareg dialect, but is also used to designate the so-called spiked wheel-trap. I call these units for tribes as they do not seem to correspond to unilateral descent groups. Many tribes have a tradition of their descent from a common ancestress, but though tribal members may know her name they are never able to connect her with their genealogies which are very badly known. To my knowledge there are no tribes of true Ayr Tuareg that are named after an ancestress or have avuncular names. The Ayr tribes have geographical names or are called after an ancestor to whom they are also unable to connect their [59] genealogies. It is possible that the *Kel Ferwan* Tuareg in the past have followed the rules of residence

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

outlined above from Ahaggar, with the exception that the Ayr Tuareg have never practised the one year's stay in the bride's family camp after marriage. To-day the *Kel Ferwan* tribes of Southern Ayr do not follow very strictly any particular rule of residence. There is a strong tendency to patrilocal residence, but a man will usually continue to live with kinsmen of the camp where he was brought up as a child. If a man has grown up with maternal relatives owing to the loss of his father as a boy, or because his mother and father have divorced, he may remain with matrilineal relatives. I believe that all tribes of the *Kel Ferwan* group of Southern Ayr are bilateral kin groups. And if in the past these Tuareg practised the rules of residence outlined above from Ahaggar, the tribes have been bilateral units as there have always been many marriages contracted between people of different tribes. Two tribes of Ayr, namely the *Imezzureg* and the *Kel Akerra*, claim that they have intermarried regularly from very ancient times, because the father of the *Kel Akerra* tribe was the brother of the mother of the *Imezzureg* tribe, while the father of the *Imezzureg* was a cross-cousin of *Kel Akerra*'s mother. These two tribes possess their individual chiefs, but have always been very mixed. It seems as if chiefs were elected according to matrilineal rules in the past, but to-day it is claimed that a son of a deceased chief should be the first in line of succession (cf. p. 456 ff.).

In Southern Ayr camps of all possible tribes to-day live among each other. There are no grazing grounds or particular territories nowadays when everybody is free to go where he likes with flocks and herds. No Tuareg have particular rights over land, and ban on grazing within certain areas, as in Ahaggar, is unknown. This is said also to have been the case in the past. But in the times preceding the French occupation of Ayr, all vassal tribes had their particular territories which, according to Capot-Rey, were formerly marked by walls (Capot-Rey 1953a, p. 265). I have not been able to confirm this, but the Tuareg told me that in the past tribal territories had frontiers marked out by river valleys or by natural objects such as large trees. The vassal tribes did not own these territories, which were allotted them by the drum-chief of the noble *Kel Ferwan* tribe, the *Irawatten*. The traditional territories or grazing grounds of most *Kel Ferwan* tribes are indicated in the list on p. 423 ff.

At present there seem to be no sectional division of the *Kel Ferwan* tribes corresponding to the division into sections in Ahaggar. The *Kel Ferwan* Tuareg generally live in small camps comprising a few tents. These camps, which co-operate in stock-herding, do not generally exceed four or five tents inhabited by kinsmen who generally constitute an extended family, e.g., (1) husband, wife, married sons, and their children; (2) two brothers, their wives, married sons, and their children; (3) a brother and a sister together with their spouses and children; (4) husband, wife, unmarried children, husband's mother and mother's sister, and his sister's daughter with her husband. These small camps, as may be seen, are not based upon any particular rule of residence in agreement with what has been said of residence rules above. The households of a little camp of this kind will remain constantly together to co-operate not only in goat-herding, but generally in camel-breeding also. The labour for camel-herding and caravan trading is more easily provided for in Ayr than in Ahaggar. For camels are rarely taken to very distant grazing grounds, and caravan trading is often limited to expeditions to Damergu where the Tuareg fetch their millet. The Tuareg tribes of the *Kel Ferwan* group living around Agadez have no true co-operative units apart from the small camps of up to four or five tents. Such small camps of extended families may temporarily join each other in a bigger camp during the

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

361 *akasa* period when there is green annual pasture, but the large camps have no co-operative functions
621 and no particular leader. The small camps join together to form big camps because their members are linked to each other by bonds of kinship, and consequently like to come together.

361 Most of the year the Ayr Tuareg live in very small camps around wells, and certain camps remain
221 on almost the same spot throughout the year. However, most camps move about in the *akasa* period, and later, at the end of the rains, many camps move southwards and westwards to the salt plains of Azawaŋ.

## DIVISION OF LABOUR IN STOCK-BREEDING

462 Before we consider other activities, we shall briefly describe the division of labour in stock-breeding according to sex.

462 In all Tuareg groups noble women do very little work. They engage in a few very esteemed crafts
565 such as embroidery, neat decoration of leather work, and in the north they cut ornamented milk-
[567] bowls from wood. The true domestic duties of a noble household are performed by slaves. This to some extent is also true of other social classes among the Northern Tuareg, while the Ayr Tuareg vassals have very few slaves nowadays. But even in vassal camps among the Northern Tuareg women have their duties and engage in all kinds of domestic work, also in stock-breeding. In the two groups
462 of Northern Tuareg the division of work in stock-breeding can be seen when one enters a tent of a
*233 vassal camp:—
342
[865]

One half of the tent (the left part) is occupied by the woman and contains such implements as are connected with tanning, leather-work, cooking, butter- and cheese-making, and generally all implements connected with the breeding of goats, sheep, and donkeys. The other half of the tent (the right part), occupied by the husband, contains saddles and all other objects connected with camels. The tending of goats, sheep, and donkeys is the task of women, while camel-breeding is the business of men.

462 Before initiation Tuareg boys may be occupied with herding goats, sheep, and donkeys, but when
*233 they have adopted the veil they should preferably take care of camels only. There are, however, a
[857] few occasions where men engage in tasks connected with goats and donkeys:—

Goats like any other animal can be killed only by adult men, who also undertake the skinning and partition of the meat.

Castration of he-goats and rams may be done by men, but it is said that it is also performed by women.

When goats suffer from certain diseases they may in a few very special cases be taken care of by men. Thus when a goat has broken a leg and wooden splints are applied to the fracture this is generally performed by the husband of the household to which the animal belongs.

When goats and sheep are lost in the desert they may be searched for by men mounted on camels.

On the whole there are not many situations where the assistance of men is needed in tending goats and sheep, and most men have so little to do with goat-breeding that they do not know the exact meaning of many colour terms for goats.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

462 Among Northern Tuareg vassals donkeys are tended by women, who use them for riding and
231 transportation over short distances. Tuareg men rarely ride donkeys, but the assistance of men is
[492] needed in connection with some of the tasks of donkey-breeding:—

it may become desirable to increase the stock of donkeys by catching wild animals as already described above. This is always done by men who also break-in the captured animals for riding. The assistance of men is also frequently needed for catching half-wild, though domesticated donkeys.

The marking of donkeys, castration, which is rarely performed, and the curing of diseases, which are also rare, are said to be tasks which should properly be carried out by men.

[565] Vassal women only tend camels when all men are absent from their camp.

The above rules of division of labour are in general also valid in Ayr among the *Kel Ferwan* Tuareg. But there are in Ayr vassal Tuareg who have no camels and vassal men in Ayr frequently ride donkeys. The tending of cows in Ayr is mainly the work of women, who are also more familiar with cattle terms than are the men. – Among the *Kel Ewey* the skinning of goats and sheep, as well as the partition of the meat, are done by women.

428 In the Tuareg groups I have studied both men and women inherit camels, goats, sheep, and donkeys according to Islamic rules of inheritance.

# Hunting

For the pastoral Tuareg hunting is not an important occupation, and nowadays it is practised mainly by those few Tuareg who possess rifles or guns. Traditional hunting methods are thus of far less consequence than in the past, but some of them are very interesting and most significant for a historical analysis of Tuareg culture.

## AHAGGAR

Northern Tuareg areas are not very rich in game. In Ahaggar the main types of game are the gazelle (*ahenkof*, fem. *tahenkof*; *Gazella dorcas* sp.) and the barbary sheep (*udad; Ammotragus lervia*). The big gazelle (*énir; Gazella dama permista*) and the addax antelope (*amelhul; Addax nasomaculatus*) are very rare; they are occasionally seen in the plains outside of the mountains. The ostrich (*anhil*; *Struthio camelus*) was very common in the past, but is now exterminated.

The small gazelle is rare and shy within the Ahaggar Massif, while fairly abundant and comparatively easy to hunt with a rifle in the northernmost massifs and their surrounding plains. Of seven camps visited in Ahnet 1954, gazelle hunting was engaged in by the members of two households, and I estimate that they killed one or two gazelles every week. In most camps of the Northern Tuareg there are no true gazelle hunters, and when a rare gazelle is killed its meat is easily eaten in one day by the members of a single household – in addition to three or four pounds of wheat-bread or millet-porridge. Gazelle skin is of little practical value to Tuareg craft. It is not generally used for the manufacture of important domestic articles such as water bags and containers for milk and butter, but it is suitable and much esteemed for certain types of decorated leather work and for fine leather cords, e.g., necklaces for amulet cases, reins for riding camels.

Barbary sheep are extremely shy, and they live mainly in inaccessible mountains. They are still fairly common in certain isolated parts of the mountains, but they were more numerous in the past when hunting was practised without rifles.

The Tuareg estimate that the amount of meat obtained from two gazelles corresponds to the meat of one grown goat, while a big barbary sheep provides as much meat as that of four goats. Meat of barbary sheep is better suited for drying than meat of other game animals, and the thick hide of these animals is valuable for the manufacture of tents and for large bags used for the conservation on journeys of dates, grain, flour, and the like. The horns of barbary sheep are used as butter containers (Fig. 165), and some Tuareg add the powder of crushed horns to butter before heating it (cf. p. 222). Barbary sheep are of greater economic value to the Ahaggar Tuareg than other types of game, and

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

411

Fig. 112a–c. Tuareg spears.

a. Spear of the *taṛda* type used for hunting. Ahaggar, Olufsen's collection. Dimension: 1.80 m (N.M. G. 1.156).
b. Iron spear of the *allaṛ* type which is mainly a war weapon. Ahaggar, Collected by Olufsen. Dimension 1.82 m (N.M. G. 1.155).
c. Iron point of the barbed Tebu lance (*taṛda*) occasionally used by the Ayr Tuareg. Dimension: 0.265 m (N.M. G. 6619).

224 they are eagerly pursued by many rifle-owning nomads. Lhote estimates that in the year 1939 the Ahaggar Tuareg killed 300 barbary sheep by means of their traditional hunting methods, while in the winter season 1949–50 more than 200 animals were killed with rifles in the central parts of Ahaggar [432] (Lhote 1955a, p. 284). In 1954 the meat of one barbary sheep was sold for 4000 French francs, the [648] hide for 2000 francs. Though hunting of these animals is officially prohibited by the French, it *is* tacitly permitted and meat is frequently sold at the market place of Tamanṛaset.

The traditional methods used mainly in hunting gazelle and barbary sheep are as follows:—

[411] (1) The spear (*taṛda;* Fig. 112a) is nowadays used mainly by slaves, who never possess rifles. Before [567] rifles became common it was the typical hunting weapon of all vassal Tuareg. Hunting with the spear [565] takes place during the hottest time of the day, when the animals hide under rocks and trees to seek protection from the burning sun and the flies. It is then possible to creep very close to the game, and even the otherwise very shy barbary sheep can be taken in this way. When the hunter is close to the hiding place of a barbary sheep he claps his hand, and the animal rises, bewildered, and is then speared. In the past many barbary sheep were killed in this way, and it is said that a skilled and lucky hunter may even secure four or five animals in one day.

[171] (2) The use of stalking animals. Hunting by this method is used by some African stock-breeders (cf. Lagercrantz 1950, p. 97 ff.). There is a detailed description of the use of camels trained for this purpose among the Arabs of the Northern Sahara (Harding King 1903, p. 171 ff.). As far as I know the Ahaggar Tuareg do not train their camels for stalking, but on journeys they frequently hide behind their animals to approach and kill gazelle. In this case the hunting weapon is normally a rifle. But the method is perhaps an ancient one and used also for other hunting weapons in the past, as game animals do not fear domestic animals among which they frequently graze in the desert. In fact, [172] the ancient use of stalking animals in Northern Africa is clearly substantiated by a rock engraving at

Wan Abu (Tasilę-n-Ajjer) from the pre-historic cattle-breeding period ("periode bovine"). The picture 224
shows a hunter armed with a bow and hiding behind an ox (?) which is provided with a lead held in /72
the left hand. The hunter approaches an ostrich and perhaps also giraffes and gazelles which are also depicted. This rock engraving was discovered by Lhote, who believes that the stalking animal depicted is an antelope (cf. Lhote 1958, Fig. 69 p. 147, p. 264).

(3) Hunting in disguise. True hunters do not use their ordinary dress of indigo or white colours 224
during a hunt as it is seen by game animals at a great distance. The hunters use preferably a shirt and [292]
a head-cloth of yellow-brown colours which resemble the colours of sand and dry plants. I do not know whether other types of disguise are known. It is very likely (cf. Ayr Tuareg below p. 166).

(4) Hunting from artificial hiding-places. The use of artificial hiding-places consisting of walls built of stone is mentioned by Foucauld, who does not explain their use. They are known as *timuyal* (sing. *tamayilt*) (Foucauld 1951–52, III, p. 1179).

(5) Hunting with dogs. Greyhounds and greyhound-like dogs are used in hunting barbary sheep. The dogs surround the animal and prevent it to escaping, so that it can be killed by a hunter with a spear. There are very few greyhounds among the Ahaggar Tuareg, but slender greyhound-like dogs [231]
are fairly common (cf. p. 114 f.). The true greyhounds may succeed in running down gazelle, and I was told among the *Kel Ajjer* that greyhound are trained not to kill the game but to bite its legs, and then to return to their master to lead him to the ferociously-bitten animal so that he can kill it ritually. However, most Tuareg dogs are not able to run down adult gazelle. Occasionally they catch young animals of which they are allowed to eat such entrails as are not eaten by the Tuareg. Dogs can more easily catch hares. It is said that some dogs are trained to bring caught hares alive to their masters, but most dogs are not too well fed and therefore eat on the spot the hares they catch.

(6) Riding camels are sometimes used for the running down of game animals. Gazelle can be taken in this way only if they are wounded, and barbary sheep normally graze in mountains inaccessible to camels. But it happens that barbary sheep descend into sandy plains to feed on certain annual plants, and can then easily be taken by camel riders as they get very exhausted when they have to run quickly

[124]

Fig. 113. The spiked wheel-trap (*ifetaw*) connected with a noosed rope (*taqant*) attached to a stick. The wheel is made from straw of the *afeza* grass (*Panicum turgidum*) bent into circular form. Small pointed sticks (*iḡulan*, sing. *aḡala*) are inserted into the straw circle and fixed to it by means of bast of the *absey* acacia (*Acacia Raddiana*) which is wrapped around the straw-wheel and the pointed sticks. The noosed rope is made from date palm bast, but frequently it is also made from *absey* bast. The small pointed sticks are made from twigs of the *azawa* tamarisk (*Tamarix gallica*). Ahaggar, the *Aḡah-en-tehlé* tribe. Dimension of the wheel: about 0.20 m (F.M. 141a–b).

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

224 on sandy ground. This same method is also used to catch asses or wild donkeys for domestication (cf. p. 108).

(7) It has been mentioned above (p. 108) that wild donkeys are also caught by driving them into closed valleys from which they cannot escape. As far as I know the Ahaggar Tuareg do not hunt proper game animals in this way, but the driving method is used in fishing as described below (cf. p. 164).

(8) The spiked wheel-trap (*éfetaw*) (Fig. 113) connected with a noosed rope (*taṛant*) attached to a piece of wood (*aṭula*) is used to catch gazelle, barbary sheep, and donkeys. Such traps are easily and quickly manufactured by the Tuareg, and when they want to trap gazelle in this way they make a great many traps which are placed in the sand around young acacias upon which the animals feed. [43] The arrangement of the spiked wheel-trap is brilliantly illustrated in literature (cf. Lhote 1951a, photos p. 112-113; Brouin 1950, p. 454).

(9) A torsion trap (*tenḍerbat*) provided with a noosed rope is used particularly for barbary sheep. This trap is also depicted in literature (Lhote 1951a, p. 113; Mérite 1942, p. 185). The trap is rare in Ahaggar nowadays. The Ahaggar Tuareg claim that the trap was introduced from Adṛaṛ-n-Foṛas. It is said to be unknown to the Tuareg of Tasilé-n-Ajjer (cf. Fig. 114a).

[564] [177] The Ahaggar Tuareg nowadays engage little in trapping in contrast to the negroid agriculturists (the *Ḥarratin*), most of whom have steel traps (*elkhewiyet*) manufactured in Europe, or made by native blacksmiths on the European pattern. A few agriculturists have large steel traps to be used for gazelle, barbary sheep, and even for the big gazelle and antelope, but the common steel traps are small and are used mainly for hares (*émerwel*, fem. *témerwelt*; *abekni*; *Lepus harterti*), jackals (*ébeggi*, *aggwr*; *Thos aureus* sp.), and fennecs (*akhorhi*, *éṛechter*; *Fennecus zerda*). Still smaller traps are used for minor rodents (*éḍewi*; *Gerbillus gerbillus*?) (*akundar*; *Masoutiera* sp.) and for certain birds such as ravens [223] (*aṛaleṛ*, *taslaft*; *Corvus ruficollis ruficollis*), pigeons (*akekkemaz*; *Columbia livia targia*), turtle-doves (*téḍebirt*; *Streptopelia turtur hoggara*), and sand grouse (*téḳaḍewi*, *téḍebirt*; *Pterocles* sp.).

Steel traps are now widely used, and traditional trapping methods for small animals and birds are therefore rarely resorted to. Among the *Kel Ajjer* small rodents are caught in snares (*asendi*) made of leather. Snares of this kind are known both to pastoral Tuareg and to sedentary agriculturists of Ganet and Ṛat. Among the latter there are also two different trap-systems used for small rodents, which in both systems are killed by a flat, heavy stone falling upon them. One of these traps is named *téselseli*. I do not know whether these traps exist in Ahaggar.

223 564 Small birds, including pigeons and turtle-doves, are caught in torsion traps by sedentary agriculturists of the oases. Traps of this kind, which are normally provided with a net (cf. Fig. 114b), are found in most oases of the Northern and Central Sahara, but I have never seen them in use among pastoral Tuareg. Pigeon, turtle-dove, sand grouse, and also partridge (*Alectoris barbara duprezi*) are caught in snares made of hair. Ten or twenty of these snares (*éṛgefey*) are attached to a string so that several birds can be taken at the same time. Bird-snaring is practised mainly by sedentary agriculturists.

262 565 Sedentary agriculturists, slaves, and some vassal Tuareg are not squeamish. Even meat of beasts and birds of prey is eaten by certain vassals, though such animals are unclean and inedible according to Islamic rules. The meat of fennecs, jackals, and a large eagle-like bird known as *tamkhla* is eaten

516

Fig. 115. Negroid agriculturist (*Ḥartani*) with a hare caught in a steel-trap (*elkhenijet*) of European type. Ahaggar.

262 by many people in vassal tribes, and jackal's meat is popular as it is considered an excellent remedy
565 against fever (cf. Nicolaisen 1961, p. 146). But there are also many Tuareg who refuse all types of game
757 with the exception of such animals as gazelle, barbary sheep, and antelope. Some Tuareg consider hare's meat unlawful, but this, perhaps, is a conception introduced with Islam, for many people of the religious *Ineslemen* class claim that hare should not be eaten because their blood resembles that of menstruating women. The food taboos strictly followed by all noble Tuareg are older than Islam: they never eat birds, eggs, reptiles, and fish.

These rules are not traditional for vassal Tuareg, though some of them have adopted the taboos of the noble Tuareg.

224 In Northern Tuareg areas two big lizzard types are found. One of them is called *aggezzeram* (*dobb*
564 in Arabic; *Uromastix acanthinurus*). This is caught and eaten by slaves, agriculturists, and by many
565 vassals. It is frequently taken by hand, but there is also a special implement (*taskumt*, *takoḍa*) consisting
262 of a stick provided with an iron crook for catching lizzards hiding in holes and under rocks. When
432 vassal Tuareg are able to catch a great many *agezzeram*-lizzards they cut them up and dry them for
464 sale on their regular trading expeditions in autumn to the sedentary agriculturists of Tidikelt (cf. p. 210). The *agezzeram*-lizzard is said to be the ancestor (the mother's brother) of the negroid blacksmiths (*Ineḍen*), because the lizzard's tail resembles a file. I do not know whether the few blacksmiths found in Northern Tuareg country eat this lizzard, but do not think they do. The lizzard is not considered very delicious, and blacksmiths have emigrated from the south where it is not generally eaten.

The other edible lizzard is named *arata* (*Varanus* sp.). It is much bigger than the *agezzeram*-lizzard just mentioned, and its meat is excellent according to the taste of most Europeans. But this big lizzard

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

is refused by noble Tuareg and in general also by vassals. One reason for this is that the Tuareg have a myth saying that the *aṛata*-lizzard is the ancestor (the mother's brother) of the noble Tuareg. Some vassals claim that it is the ancestor of all true Tuareg, but this statement does not agree with mythology (cf. Benhazera 1908, p. 61). However, this lizzard is eaten mainly by slaves and by certain agriculturists, though its meat is considered a remedy against snake-bite and scorpion stings (cf. Lhote 1951a, p. 168 f.). The head of an *aṛata* is considered an excellent amulet against these poisonous animals (Lhote 1951a, p. 168 f.), and the skin of this lizzard is not only utilized for the manufacture of amulet cases but also for small bags of various types (Fig. 116a).

224 565 564 262 757 757 237

Small animals are not necessarily killed with any particular hunting implement. The animals may be taken with the hand or killed with sticks and stones, as is the case with the hedgehog (*ékenisi*, *tékenisit*), which is eaten by some people, and with small rodents. Even hares can be taken with the hand when they hide in the grass or under rocks. The hunter may then approach the hare swinging one of his sandals over his head. This, it is said, makes the animals believe that it is hunted by a hawk or an eagle, and it will therefore remain stubbornly in its hiding place. Even gazelle are sometimes taken without any proper hunting weapon. Some Tuareg say that on journeys through the barren desert country in the summer they have met gazelle so exhausted from thirst that they could take these animals with their hands. Although this is rarely possible, I know Tuareg who have crept up to gazelle hiding from the sun in daytime and killed them with a stone. Finally it can be mentioned that the

224 262

415 237 825

Fig. 116a–b. Two small skin bags.

a. Skin bag (*abelbof n aṛata*) made from the skin of the big *aṛata* lizzard (*Varanus* sp.). Ahaggar, *Ḫarratin* of Taṛhawhawt. Dimension: 0.325 m long. (N.M. G. 5834).

b. Skin bag (*abelbof n témerwelt*) made from hare-skin. Ahaggar, bought from *Ḫarratin* at Taṛhawhawt, manufactured in the *Aḫah-en-tehlé* tribe. Dimension: 0.350 m long. (N.M. G. 5833).

224 Tuareg are also aware of the use of poison. I have gathered no information about this myself, but
[824] Lhote states that certain poisonous grain is used for the destruction of jackals and small rodents (Lhote 1951a, p. 43 f. & 132).

226 It is obvious that fishing cannot be an important industry to people of the Sahara, but fishing is practised in certain areas. One species of fish (*Clarias Lazera*) is found in a few permanent pools of Central Ahaggar, but it is particularly common in the numerous permanent ponds of Tasilé-n-Ajjer, where there is also another, perch-like species. I have myself caught and eaten both species. Duveyrier states that there are three distinct species in Tasilé-n-Ajjer:—(1) *asoulmeh* (*asulmey*) (*Clarias Lazera*); (2) *isattafen* (*i-setfefen*); (3) *imanan* (pl. *imenan*) (Duveyrier 1864, p. 227, 238). Fishing is described
[262] by Duveyrier as follows: "Les poissons des lacs de Mihero donnent lieu à une pêche qui contribue
[565] à l'alimentation des serfs riverains. A cet effet, ils creusent sur les bords des lacs de petits canaux étroits, aboutissant à des réservoirs dans lesquels les poissons viennent pour y chercher une nourriture qu'ils ne trouvent pas dans les profondeurs des lacs. Quand ils y sont entrés on renferme les conduits et on les prend" (Duveyrier 1864, p. 238 f.). Another fishing method is described by Lhote: "Ils construisent des espèces de fascines avec des tiges de mrokba ou des branches de tamarix, puis, entrant à plusieurs dans l'eau ils forment une espèce de barrage au moyen de ces fascines en les mettant bout à bout et les poussent ensuite doucement devant eux. Ils prennent bien soin de drainer le fond de sorte que le poisson soit systématiquement chassé. Lorsqu'ils arrivent près de la rive opposée à celle d'où ils sont partis, ils poussent rapidement par un dernier effort et éjectent le poison sur le sable ou ils le ramassent. Ils recommencent ce manège plusieurs fois jusqu'à ce qu'ils aient capturé la majorité des poissons" (Lhote 1951a, p. 53). In Tasilé-n-Ajjer I was told about a third fishing method, namely the use of a piece of cotton (e.g., an old cotton shirt) attached to two poles. The cotton piece serves as a net over which the fish are fed. There seem to be no other fishing methods, as both the fish-hook and the harpoon are unknown.

## AYR

136 The Ayr Massif with adjacent plains is very rich in game in comparison with the true desert country inhabited by the Northern Tuareg. Barbary sheep (*éjital*; *Ammotragus lervia Angusi*) are common in the mountains and also south of the Massif around the cliff known as *Falaise de Tigeddi*. Gazelle (*achenkod*; *Gazella dorcas* sp.) (*énir*; *Gazella dama permista*) and the addax antelope (*amellul*; *Addax nasomaculatus*), which are found in Northern Tuareg countries, are more abundant in Ayr where there are also bigger types of game, notably the oryx antelope (*ézem*; *Aegoryx algazel algazel*), and the giraffe (*amder*; *Giraffa camelopardalis*) which is found south and southwest of the Massif (e.g., around Ingal and Aderbissinat). The ostrich (*éuhal*; *Struthio camelus*) is still very common in isolated regions of Ayr including the northern outskirts of the mountains, where I have seen flocks of more than twenty birds. There are in Ayr as mentioned above (p. 31) many bird species which are unknown or rare further north in the desert, e.g., the guinea fowl (*taylalt*; *Numida clappertoni clappertoni*) and a bustard species (*agayis*; *Chorlotis arabs stieberi*). Game birds are extremely abundant in certain parts of Ayr. The birds come in amazing numbers to waterholes and open wells to drink in the evening at

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

133

Fig. 117. Fishing pool (*aɣelmam*) in Tasilé-n-Aljer.

136 sunset. There are wild pigeons by the thousand and innumerable flocks of guinea fowls and partridges (*Alectoris* sp.). Two species of turtle-dove are almost as common in Ayr as is the sparrow in Europe.

224 Possibilities of hunting are much more favourable in Ayr than in Northern Tuareg countries, yet,
[411] nevertheless, the Ayr Tuareg engage even less in hunting than do the Ahaggar Tuareg. One reason for this is perhaps that very few Ayr Tuareg possess guns. It is extremely rare to meet hunters in Ayr.

224 They are found mainly within one tribe, namely that of *Imedderaren* (or *Kel Tamgak*) living in the
433 Tamgak Mountains of Northern Ayr. I have myself never visited camps of these people, but all Tuareg
[114] agree that they live largely as hunters and possess few domestic animals. Unfortunately, these people
[222] have never been studied in detail. Buchanan, who met a hunting band of these Tuareg in 1920, says that they have neither goats nor grain, but live by hunting and the collection of wild edible plants (Buchanan 1921, p. 191), while Campbell, who met them at Iferwan in 1926, describes them as hunters who also breed goats and sheep (Campbell 1928, p. 204 f.). Rodd also states that the *Kel Tamgak* have goats and sheep, but that they do not possess camels (Rodd 1926a, p. 307). This is in agreement with information gathered by myself at Iferwan where I met a few Tuareg of this group. There are

224 no Ayr Tuareg who live exclusively by hunting and collecting. The number of game animals killed

224 annually among the Ayr Tuareg is apparently also a low one. Brouin estimates that about 200 oryx antelopes, 3–10 of the protected giraffes, and 100–1000 gazelles are killed annually by native hunters within the Cercle d'Agadez (Brouin 1950, p. 435).

Traditional hunting methods in Ayr are as follows:—

[411] [177] (1) Hunting by means of the spear (*taṛda*). This weapon is fitted with a wooden shaft like the hunting spear used in Ahaggar, but the slender barbed spear of the Tebu is also used by many Ayr Tuareg.

(2) The use of stalking animals. Cf. the Ahaggar Tuareg above (p. 158 f.).

(3) Hunting in disguise. The Ayr hunters employ a disguise of straw. Bundles of straw are attached to the hunter's body, and the hunter furthermore carries a big straw-bundle in each hand. Walking in a bent position he is able to approach the game (gazelle and antelope) in this way. It is very probable that skin-clothing has also been used as a disguise (cf. Brouin 1950, p. 447 f.).

(4) The running down of game animals by men mounted on camels or horses is a method rarely employed within the Ayr Massif, though practised by certain Tuareg inhabiting the southern plains.

(5) Hunting with dogs. This is practised in the mountains. Barbary sheep are attacked and surrounded by the dogs, and normally killed by means of the spear. – It is said that a hunter having no dogs at his disposal can make a barbary sheep stop if he barks like a dog.

(6) Hunting by driving the animals into closed river valleys. The method is said to be used for

223

Fig. 118. Snares (*t'izagin*, sing. *tazek*) made from hair and inserted into a piece of sun-dried clay. Used for little birds which are fed with millet placed upon the piece of clay. Ayr, boys of the *Imeggadesen*. Dimension: 0.15 m in diameter. (N.M. G. 6622).

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

catching wild donkeys in the mountains around the valley of Anu Mekkeren. The method is not used 224
for proper game animals.

(7) A pulling and a throwing snare are both known as *turunt*. They are said not to be used for hunting, though commonly employed to catch wild donkeys and domestic animals which have gone astray; cf. p. 108 f.

(8) The spiked wheel-trap (*tawchit*) provided with a noosed rope (*turunt*) attached to a stick. This is used for gazelle and bigger game animals in isolated places rarely visited by representatives of the administration. According to Buchanan, the spiked wheel-trap is used for ostriches in the plains south of Ayr (Buchanan 1921, p. 117 ff.). Large traps of this type are also used for giraffe by certain hunters within the Cercle d'Agadez (Brouin 1950, p. 453).

(9) The torsion trap (*tenderbat*) akin to that of Ahaggar. It is used for big game animals, notably for barbary sheep.

(10) Snares (*tazek*, pl. *t'izagin*) made from strips of dum palm leaves are used for guinea fowl and [223]
other edible birds. They are generally set near water where birds come to drink. Little boys of the [857]
negroid *Imeggedezen* of Agadez also make snares of hair to catch small birds (Fig. 118).

These are the hunting methods known to the Ayr Tuareg, who do not engage much in hunting with the exception of the *Kel Tamgak* mentioned above. Most Ayr Tuareg refuse the small types of 262
game and beasts of prey, and reject not only the *arata* lizzard (*Varanus* sp.), but also the smaller lizzard known in Ahaggar as *aggezzeram*, in Ayr as *emekkechchu* (*Uromastix acanthinurus*), though it is claimed that the latter is eaten among Tuareg of the *Kel Ewey* group. The two lizzards do not play any part to Tuareg mythology – the *arata* lizzard is greatly detested by the Ayr Tuareg who kill it with stones or sticks, whenever possible. The Ayr Tuareg, including those of noble descent, have no taboos about birds and eggs, and many pastoral Tuareg collect guinea fowl eggs late in summer after the rains. There are a few animals not mentioned above which are considered edible among the Ayr Tuareg, e.g., the tortoise (*afaras*) which is found in the plains south of the Massif. With the exception of the *Kel Ewey* Tuareg the people of Ayr do not collect locusts (*tahwalt* in Ahaggar, *achwal* in Ayr). Locusts are eaten by all people of the two Northern Tuareg groups. The animals are roasted in the ashes or [262]
are boiled in a cooking pot to be pounded in the large mortar together with dried dates. This dish is [832]
very esteemed by the women who say that it is fattening and in this way adds to their beauty.

Certain weapons have not been mentioned above because they either cannot be considered proper 411
hunting weapons, or because it is doubtful whether they exist among the Tuareg or not. [114]

Traditional Tuareg arms comprise an iron lance (*allar*), a sword (*takuba*), and a dagger (*télek*) carried in a sheath fastened to the left arm. The iron lance may serve as a hunting weapon, and this is true also of the sword. Thus the Ayr Tuareg of the *Kel Ferwan* group said that wild animals were occasionally killed with the sword, and they claimed that two Tuareg of the past had killed lions with this weapon.

The bow (Ahaggar, *tarayyé* or *tagahhé*; Ayr, *taganzé*) and arrows (Ahaggar, *imurren*, sing. *amor*, or *tinassabin*, sing. *tanassabi*; Ayr, *imeran*, sing. *amer*) are not traditional Tuareg weapons. Nowadays [524]
very ineffective bows and arrows are used as toys by little Tuareg boys, but they are never used by

adult people, though bow and arrows like those depicted Fig. 119 are in general use among the Hausa 411
and the Fulani within the territory inhabited by the Ayr Tuareg. It is very possible that bow and arrows
were used as weapons among the Tuareg in the past when fire-arms were uncommon. This is claimed [174]
by certain older authorities, but it seems as if the weapons were manufactured in Damergu south of
Ayr where the bow is traditionally used by negroid peoples (cf. Duveyrier 1864, p. 445, pl. XXV,

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

411 p. 447; Bissuel 1888, p. 94 f.; Harding King 1903, p. 272, photograph opposite title-page; Rodd 1926a, p. 235; Lhote 1955a, p. 375).

In Ayr I collected evidence of the fact that the sling known as *éfezemfes* was very common in former days. It was made from plaited dum palm leaves, but the Tuareg claim that it was not a hunting weapon, as it could not be used with precision. For the same reason, it is said, the sling could not be used for herding domestic animals – there would be a great risk of wounding them. It seems as [524] though the sling among the Ayr Tuareg was used mainly as a toy. It has apparently disappeared, and a Tuareg of the religious *Ineslemen* class told me that the sling was a bad thing to use, because of a story in the Koran of a sling that was once used to throw a man into the fire. I do not know whether the sling is, or was, used among the Northern Tuareg, but think it very likely. The sling has an extremely [171] wide distribution in Africa, and it has been recorded from various northern Berber tribes and from the Fezzan (cf. Lagercrantz 1950, p. 214 ff.).

The Tuareg of Ahaggar and Ayr, like pastoral Arabs of Algeria, frequently carry a short, heavy stick (*aburi*). A stick of this kind is sometimes used as a throwing stick, or throwing club, by Tuareg and Arabs, but cannot be characterized as a proper throwing stick. It is only occasionally used as a hunting implement thrown against birds and small animals and serve many different purposes. I believe that most Tuareg carry such heavy sticks as a weapon for personal protection and for killing [114] poisonous snakes. In literature it is stated that true throwing clubs or throwing sticks occur among the Tuareg (cf. Lindblom 1925, I, p. 117, 137 f.), but they seem to be unknown both in Ahaggar and in Ayr. A large wooden club, collected at Timbuktu by O. Hagerup and now in the National Museum (Copenhagen), is rather to be considered a weapon than a hunting implement (cf. Fig. 120 b). The throwing knife that is sometimes stated to be a Tuareg weapon is not traditionally used by these [177] people. A rare throwing knife may be introduced into Ayr from the Teda together with spears and knives of Teda type (cf. Lagercrantz 1950, p. 202 f.).

224 Hunting may have been important to many Tuareg in the past when game was more abundant. To- [189] day true hunters are found mainly in tribes living in isolated and mountainous regions, notably among the *Kel Tamgak* or *Imeddeqaren* (Ayr), and among the *Dag Rali* (Ahaggar). It is very interesting [31] that proper hunting territories are found within the territory of the *Dag Rali* tribe, and it is significant that it is strictly forbidden to graze domestic animals withing two hunting territories where barbary sheep are also protected for a period of three months every year (cf. p. 148). It is also interesting 224 825 that the Tuareg have certain age-terms which are used exclusively for game animals. Thus the Ahaggar Tuareg have three age-terms for gazelle:—

| Age | Male | Female |
|---|---|---|
| Kid from its birth to the appearance of its horns . . | *awhim* | *tawhimt* |
| Animal not yet fully grown having small horns . . . | *ahyar* | *tahyart* |
| Fully grown animal . . . . . | *ahenkoḍ* | *tahenkoṭ* |

224 Certain superstitious usages and beliefs are connected with hunting among the Tuareg:—

754 (1) When a gazelle is killed its black tail-tuft is immediately cut off and placed in one of the animal's 777 nostrils (Fig. 122). This is common practise among all Tuareg and also among Arabs of the Sahara.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

224
754
777

Fig. 122. Gazelle's head with the black tail-tuft inserted into one of the nostrils as a remedy against the mystic evil power called *ettama* (*tezma*). Tasilé-n-Ajjer.

This custom is believed to afford protection against the mystical power known to the Ayr Tuareg as *ettama*, or *tezma* – an evil power possessed by certain Tuareg and by all blacksmiths (cf. p. 21). A person who possesses this evil power may, if he does not receive part of the booty, spoil the hunter's luck when seeing the killed gazelle. The tail-tuft put into the animal's nostril eliminates this risk.

(2) When a hunter returns to his camp with booty he should not show the killed game to other people, and if asked about the results of his hunting trip he should deny that he has had any luck. This custom is also explained as being a protection against the evil power *ettama* (*tezma*) just mentioned.

(3) When a man leaves his camp for a hunting trip he must not talk about it, nor must it be mentioned by other people. This belief has its root in the conception of the "evil mouth" (the "evil eye") known in Ayr as *tugarchet*, in Ahaggar as *tehof*.

(4) If a hunter has given meat from his killed game to another man, the latter should not praise it. This belief is due to the belief in the "evil mouth" – the belief that a man's luck can be spoiled by praise.

224 777 (5) In a *Dag Rali* camp I have noticed that a piece of bone of a barbary sheep was conserved in a skin bag. I was told that this was done in order that the hunter might have good luck in his future hunting of barbary sheep.

[P25] (6) Certain omens bring good luck in hunting as well as in other projects, e.g., to walk between two black ravens (Ayr), or to see two black ravens (Ahaggar); to see a jackal; to see the hawk called *ahullam*; to see three gazelles.

224 787 (7) The Tuareg have various methods of divination some of which are frequently used in connection with hunting. The hunter will frequently inquire into the result of a planned hunting trip by means of a method known in Ahaggar as *igehan*, in Ayr as *igazan*. In brief the method is practised as follows:— The diviner presses his thumb or his forefinger quickly into the sand to make two rows of holes close to each other. He does not know ahead how many holes he has made in the two rows. He counts

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

224 the number of holes in each row and makes a special sign in the sand for even and uneven numbers.
787 There are four possibilities of different signs:— (1) A sign called *tezli* if there is an uneven number of holes in both rows; (2) A sign known as *ehlli* if there is an even number of holes in both rows; (3) A sign, *eggur*, if the number of holes is uneven in the right row, but even in the left row; (4) A sign, *tamazit*, if the number of holes is even in the right row, but uneven in the left. The diviner makes two rows of holes six times successively. Each time he makes one of the mentioned signs according to the distribution of holes, and the result of his divination depends upon the character of the signs and their relative position to each other (cf. Nicolaisen 1961, p. 151 f.). – The Tuareg have other methods of divination which are perhaps also used to predict the result of planned hunting trips. They also know to take omens from the shoulder-blades of wild and domestic animals. When a hunter has killed [262] a gazelle he will often keep the shoulder-blades for himself, and having eaten the meat he will take omens of future happenings from the structure of these bones. Such shoulder-blades will not be thrown to the dogs – they are hidden under rocks and stones (cf. Nicolaisen 1961, p. 150 f.).

224 Some of the above mentioned usages and beliefs have been mentioned also by Lhote (Lhote 1951a, p. 180 f.), who has noted a few other customs connected with hunting:—

[225] (8) If a hunter kills a snake he will get nothing. (A particular snake species known to the Ahaggar Tuareg as *emegel* is never killed, as it is considered "sacred" and is referred to as a "marabut").

(9) If two men hunt together, but separate to meet later, the man who comes upon the other must not receive food from him.

(10) Handling the skin of game animals one must not put fingers into a bullet hole. This would cause bad shooting or accidents on future hunting trips, and the rule is observed even with tanned skin.

A few other superstitious usages have been recorded from Ahaggar by Captain Florimond (Rapport Annuel. Ouargla 1940). They are here quoted from Lhote 1951a, p. 181 f.:—

(11) Hunters of the *Dag Rali* take omens from the breaking of sandal straps in the pursuit of barbary sheep. If the straps passing between the toes break the hunter will kill a male, while he will get a female animal if the side-straps break.

[776] (12) When Tuareg of the *Kel Mertutek* (*Dag Rali*) leave for a hunting trip they put a stone or pebble on their heads and utter an invocation to hunting spirits which is rapidly repeated ten times.

(13) When *Dag Rali* Tuareg set out hunting they take with them a stone from a pre-Islamic tomb. When game is seen they throw this stone far away crying at their dogs: "Go! What you kill shall be *hallal* and lawful!"

[777] (14) When a barbary sheep has been killed by people hunting with dogs, the head of the animal is cut off and thrown on the fire while the following words are uttered:— "The smell from the burned skin of the head of the barbary sheep shall forever flatter the hunter's nostrils so that he may have good luck in future hunting also!" Tuareg of the *Kel Mertutek* will add:— "I have taken you from the *Kel Asuf* and I have taken only the blessing they have sold you that you may soon be followed by your peer!"

(15) At the partition of killed game the meat must be handled with slow motions. If not, the dogs will lose their fierceness.

(16) It is believed that a hunter should fix a burning piece of wood in the soil by the fire in which

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

his game has been prepared. If this wooden piece is removed by another hunter he will spoil all the hunting luck of the first hunter, who will then have to find the offender and spit three times between his shoulders in order to regain the lost hunting luck. If he does not find the offender he will give all his hunting dogs the following treatment:— Black powder is set on fire, and one ear of every dog is held close to the burning powder so that the dog will cry as loudly as possible. The same treatment is applied to the dogs in case anybody has handled the meat of game with rapid motions. 224 [777]

There can be little doubt that some of these superstitious usages are pre-Islamic, and it seems as though there is a certain connection between hunting rites and the *Kel Asuf* spirits corresponding to the *jinns* of the Arabs. This is also quite natural in view of the fact that these pre-Islamic spirits are believed mainly to inhabit the isolated areas preferred by game animals (cf. Nicolaisen 1961, p. 125 ff.). [776]

Game animals should always be killed ritually by cutting the throat like domestic animals (cf. p. 231). If an animal is killed by a rifle bullet, its throat is cut as quickly as possible, but the Tuareg say that even an animal killed in this way die "slowly" and that its death is not accomplished until the throat is cut. If a knife is lacking the Tuareg sometimes use a stone to beat open the throat of birds such as pigeon and guinea fowl.

The berries are normally eaten fresh, but are also conserved in skin bags to be eaten later after soaking in water. Ahaggar, the *Dag Ball* tribe. Dimension of the skin bag: 0.33 m. (N.M. G. 5244).

# Collecting

In this chapter on collecting such edible plants are mentioned as play a part in Tuareg nourishment. 222
Wild plants are also collected for other purposes. Many species are important to craft or have a medicinal 824
value. Some of these latter species are mentioned elsewhere in this study.

## EDIBLE PLANTS OF THE AHAGGAR AREA

Wild plants which yield edible fruits, seeds, stems, or roots in Ahaggar comprise more than fifty 222
different species. But the importance of collecting should not be judged from this, as all these plants [262]
are never found within the same area, and most are eaten only occasionally as a kind of relish or when
agricultural food (wheat, barley, millet, dates) is lacking. I have supplemented my own list of edible [114]
plants with important information from Maire's study of Ahaggar botany (Maire 1933 & 1940). In
my list the letters Tr., L.M., and U.M. stand for Maire's botanical zones, namely the Tropical Zone, [137]
the Lower Mediterranean Zone, and the Upper Mediterranean Zone. The following edible plants
are collected in Ahaggar and adjacent regions:—

*tirfas* (sing. *tarfest*) (*Terfezia ovalispora*). Tr., L.M. A fungus which, according to Maire, lives on 222
the roots of *Helianthemum Lippii* & *H. ellipticum* known to the Tuareg of Ahaggar as *urrug* (Maire 262
1933, p. 22, 159 et suiv.). This white fungus, which is frequently termed *tirfas n urrug* by the Tuareg, 252
is prepared for eating together with various other dishes. It is frequently added to the so-called kus-kus.

*tahlé* (*Typha elephantina*) Tr. Roots and certain lower parts of the stem are eaten raw or boiled. When vegetable food is scarce they are also pounded or ground into flour.

*akeywod* (*Typha australis*) Tr., L.M. Roots of this plant are ground into flour.

*téseñgeli* (*Saccharum Ravennae*). Tr., L.M. "Cette plante ... laisse très souvent exsuder un liquide sucré qui se concrète en masses plus ou moins cristallisées; les Tuareg utilisent ce sucre" (Maire 1933, p. 54).

*afezu* (*Panicum turgidum*). Tr. A perennial grass extremely common in the lower valleys of Ahaggar. Seeds are collected in receptacles (e.g., *ahaga*, Fig. 213) by beating the ears of the grass with a stick. The seeds are not suitable for bread, but are esteemed for porridge and *tébik*, that is seeds pounded in the mortar and eaten without further preparation. Ashes of this grass contain soda and are often [276] mixed with tobacco for chewing.

[p. 175]

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

222 *aremmud* (*Aristida plumosa & A. Adscensionis*). Tr. Seeds are edible.

262 252 *tullult* (*Aristida pungens*). Tr. A perennial grass found in certain parts of Ahaggar and particularly common further north (Ahnet, Immidir) and in Tasilé-n-Ajjer. Seeds are collected by men and women in the following manner:— The ears are cut with a sickle and placed in a piece of cotton (e.g., a cotton blanket known as *abroŋ*). The ears are left for drying, and threshing is done by beating with a stick. The husks are winnowed as described for wheat and barley (cf. p. 206), and seeds are then stocked in *aĝera* (a skin-bag). According to Foucauld collecting may also be done by digging out the nests of ants as these small insects stock a great many *tullult* seeds (Foucauld 1922, p. 29 f.). – The *tullult* seeds [412] are used for bread and porridge, and are also eaten as *tébik* after pounding in a wooden millet mortar.

*lewliwen* (*Scirpus maritimus*). An annual plant having edible fruit in its roots (cf. Foucauld 1951–52, III, p. 1098).

*taleggit* (*Juncus maritimus*). Tr., L.M. Young shoots are edible.

*izéyan* (*Asphodelus tenuifolius*). Tr., L.M. Eaten when vegetable food is scarce.

*telokat* (*Ficus salicifolia*). Tr. "Les fruits murs, de couleur rouge, sont tendres, un peu sucrés et comestibles" (Maire 1933, p. 76).

[574] *adamam* (*Osyris alba*). (Tr.), L.M. Its red fruits or berries are eaten as a relish. A bowl of berries is frequently offered to guests of Tuareg camps.

*tanesmimi* (*Rumex vesicarius & R. roseus*). Tr. Inedible according to Foucauld (Foucauld 1922, p. 85), while Foley states that leaves of this plant are eaten after boiling (Foley 1930, p. 42).

*tawit* (*Chenopodium Vulvaria*). (Tr.), L.M., U.M. An annual herb which is particularly common in the mountain of Asekrem. The small black seeds are collected in bowls or similar receptacles by rubbing the plants with the fingers. The seeds are ground into flour, which is very suitable for bread and porridge.

*aramas* (*Atriplex Halimus*). Tr., L.M., U.M. Seeds and boiled leaves of this plant are eaten when vegetable food is very scarce.

*ébedébed* (*Boerhavia agglutinans & B. repens*). Tr. An annual plant with edible seeds.

*éhéyefyef* (*Aizoon canariense*). An annual plant resembling the *twuit* plant and particularly common in the upper mountain zone. Seeds are used for bread and *tébik*, but not for porridge.

*aĝar* (*Maerua crassifolia*). Tr., (L.M.). A tree yielding edible fruit.

*tadant* (*Boscia senegalensis*). A tree or bush which is extremely rare in Ahaggar where its edible fruit are consequently consumed very rarely.

*aggasit* (*Farsetia Hamiltonii*). Tr., L.M. A seed-plant.

*aherera* (*Alyssum libycum*). An annual plant which is rare in Ahaggar, while common in Tasilé-n-Ajjer. Eaten after boiling in water.

*azezzeĝa* (*Diplotaxis acris*). The plant is rare in Ahaggar. Its leaves are boiled and eaten.

*tanekfayt* (*Eruca sativa*). Tr., L.M. Leaves are eaten raw or boiled.

*tamaghd* (*Moricandia arvensis*). (Tr.), L.M., U.M. An annual plant – a kind of wild cabbage.

*alwat* (*Schouwia purpurea*). Tr. An annual plant. "Les Touareg mangent la feuille cuite et essorée, sans sel. La plante jeune donne une salade assez analogue à la Roquette, quoique d'un goût moins agréable" (Maire 1933, p. 111).

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

*abellengaḍ* (*Reseda villosa*). Tr., L.M., U.M. Seeds of this plant are edible, but of bad taste – 222
according to Foucauld 1951–52, I, p. 65. 262

*abseṛ* (*Acacia Raddiana*). Tr., (L.M.). Fruits are collected mainly for goat fodder, but are eaten by 252
human beings when vegetable food is scarce. The fruit is then crushed into flour. The resin of this acacia is also edible.

*tamat* (*Acacia seyal*). Tr. The resin (*taymwst*) is edible. I believe it is used mainly as a remedy against [257]
stomachache. This is perhaps also true of the resin of the *abseṛ*-acacia mentioned above.

*ahtes* (*Acacia albida*). Tr., L.M. "La gousse est même comestible pour l'homme" (Maire 1933, p. 120).

*ténefé* (*Tephrosia leptostachya*). Tr. "Les Touareg mélangent cette plante desséchée au thé vert" [272]
(Maire 1933, p. 125).

*lagul* (*Alhagi maurorum*). Unknown in Ahaggar, but found in Tasilé-n-Ajjer. "Les racines tuberisées sont mangées par les indigènes (Killian)" (Maire 1933, p. 131).

*alora* (*Peganum Harmala*). Tr., L.M., U.M. An annual seed-plant. Seeds are used for *tébik*.

*taburaḳ* (*Balanites aegyptiaca*). Tr., L.M. A tree having edible fruits which are macerated in water to remove the bitter taste.

*tedjoq* (spelling according to Maire 1933, p. 241) (*Pistacia atlantica*). L.M. Very rare according to Maire (1933, p. 148). According to my own observations the fruit of this tree is eaten by Arab [171]
pastoralists (e.g., *Ulad Nail*) of the so-called *daya* region south of the Sahara Atlas. It is possible that it is also eaten by the Tuareg.

*tahunek* (*Rhux oxyacantha*). Tr., L.M. A tree having edible fruit.

*téhaḳ* (*Salvadora persica*). Tr. A tree with edible fruit.

*tabakat* (*Ziziphus lotus* var. *Saharae*). Tr. The berries are crushed and mixed with millet flour.

*azawa* (*Tamarix gallica*). Tr., L.M. "La manne produits par ces arbres est receuillié par les indigènes qui l'emploient comme matière sucrante. (Voinot)" (Maire 1933, p. 156).

*tabarekkat* (*Tamarix aphylla*). Tr. "Les rameaux mannifères sont employés pour sucrer l'eau" (Maire [263]
1933, p. 159).

*tafeliast* (*Myrtus Nivellii*). (Tr.), L.M. "Les rameaux de ce Myrte sont récoltés par les Touareg, [439]
*desséchés et exportés par sac entiers au Soudan et au Mzab, avec l'Artemisia judaica* ssp. *sahariensis*. [752]
Ces deux plantes sont utilisées comme médicaments et comme condiments" (Maire 1933, p. 162). [263]

*awkal* (*Cynomorium coccineum*). Tr., L.M. A plant yielding edible roots which are dried and ground into flour (cf. Maire 1933, p. 163).

*aséyar* (*Anethum graveolens*). (Tr.), L.M., U.M. An annual plant. Its seeds are used as a spice and [272]
for adding to tea.

*takmezzut* (*Teucrium Polium*). Tr., L.M. An annual plant used for adding to tea.

*élel* (*Nerium Oleander*). Tr., L.M. This plant is extremely venomous particularly so for camels, which die from eating its leaves. "La cendre de bois de *Nerium* est employée par les femmes du Tidikelt [261]
pour se faire engraisser. A cet effet elles mélangent un peu de cette cendre avec des dattes pilées et du beurre, puis absorbent ce mélange dans du leben" (Maire 1933, p. 170).

*ayellachchem* (*Solenostemma oleifolium*). Tr. A perennial plant. Its leaves are used as a substitute [272]
for tea.

222
412
257
824

Fig. 126. A cheese-like mass of *adamam* berries (*Osyris alba*). The fresh berries are pounded in the large mortar (*iindé*) or are crushed between two stones to be formed into pieces of cheese form to be dried. This cheese-like mass of *adamam* berries is used by Tuareg women as a kind of face ointment against sun burn, pimples, and the like. They apply this ointment to the face as follows:— A little milk is poured upon a stone, the cheese-like mass of berries is rubbed against it, and the mixture of milk and berries is thereupon rubbed into the skin of the face with the fingers. Ahaggar, the *Dag Rali* tribe. Dimension: 0.075 m. (N.M. G. 5279a).

222
262 *enag* (*Leptodenia pyrotechnica*). Tr. A tree with edible fruit.

[272] *tañhart* (*Mentha longifolia*). Tr., L.M. An annual plant. Used as an aromatic for adding to tea.

*awit*, generally known by the collective name *awihat* (*Salvia Chudaei*). Tr., (L.M.). An annual plant used as an aromatic for tea.

[824] [482] *éfelehleh* (*Hyoscyamus muticus* ssp. *falezlez*). Tr. This plant is extremely venomous for human beings, though not for animals. In the past it was used by the Tuareg as a poison for enemies. Members of La Mission Flatters (1880–81) were poisoned by the Tuareg using poison of this plant inserted into dates presented to the expedition. "La plante, absorbée à petite dose, aurait la propriété de faire engraisser. Les femmes du Tidikelt l'emploient dans ce but, en en faisant cuire une petite quantité dans de l'eau avec de la farine et de la graisse; elles laissent réduire et absorbent la bouillie obtenue, puis se couvrent pour transpirer (Voinot)" (Maire 1933, p. 192). [261]

222 *ahahel* (*Cistanche Phelypaea*). Tr., L.M. A plant yielding edible roots. After drying the roots are
262 pounded in a large millet mortar to be used for bread which is much esteemed by the Tuareg. "Cette
252 plante est recoltée jeune par les indigènes, puis placée dans le sable sous une couche de *drinn* (*Aristida pungens*) jusqu'à noircissement et dessication. Le produit sec est moulu et utilisé dans l'alimentation (Voinot)" (Maire 1933, p. 196).

*éfetekchi* (*Orobanche aegyptiaca* & *O. cernua*). Tr., L.M. A plant yielding edible roots.

*tamzellit* (*Orobanche sp.*). Tr. Very rare. A plant yielding edible roots.

*tegellet* (*Colocynthis vulgaris*). Tr. Seeds are eaten after boiling and drying.

*alked* (*Cucumis pustulatus*). Tr. Rare. Seeds are eaten after boiling and drying.

[263] *takkilt* (*Cotula cinerea*). Tr. "Les Touareg utilisent cette plante comme condiment, principalement pour la viande qui commence à se gâter" (Maire 1933, p. 209).

[439] *téhereggelé* (*Artemisia judaica* ssp. *sahariensis*). Tr., (L.M.). "Cette plante, comme le *Myrtus Nivellei*, est récoltée en grande quantité, séchée et exportée au Soudan, où elle est employée comme aromate et condiment" (Maire 1933, p. 212).

[272] *zézzeré* (*Artemisia herba alba*). (Tr.), L.M. Used as an aromatic for adding to tea.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

***ajako***. According to Foucauld a small annual edible plant growing in the Ahaggar Mountains at an altitude above 2000 metres (Foucauld 1951–52, II, p. 712). Maire mentions this plant as unindentified (Maire 1933, p. 263).

Collecting is mainly the task of women, but males – particularly uninitiated boys and slaves – also participate. Seed-plants are generally harvested by rubbing the ears of the plants between the fingers, but the *tullult* grass (*Aristida pungens*) is cut with a sickle (*amreh*; Fig. 143 a–b) to be thrashed and winnowed like wheat and barley. Edible roots are frequently collected merely by hand. However, a digging stick (*ilaweg*; Fig. 123) provided with an iron point is also used to dig up certain wild plants such as *ahahel* (*Cistanche Phelypaea*) and similar root plants. This digging stick is characteristic of vassal women who use it for many different purposes, e.g., to make holes for tent poles.

The very best among the above mentioned seed-plants is the *tullult* grass (*Aristida pungens*). Its seeds are collected or harvested by certain Tuareg inhabiting the lower parts of Ahaggar, but are important particularly to the Tuareg living in and around Tasilé-n-Ajjer. Within the Ahaggar Massif the most important seeds are those of *afezu* (*Panicum turgidum*) and *tawit* (*Chenopodium Vulvaria*). The right to collect these seeds is free to everybody, and Tuareg of the *Abada* zone may send their slaves to the *Atakor* zone to collect *tawit*-seeds in the mountain plateau of Asekrem. The species of *afezu* and *tawit* are sometimes protected by an ban on grazing for three and two months respectively in order that their seeds may grow ripe for collecting. The right to put a ban on grazing of the two species belongs to the Tuareg in whom territorial rights of a sub-area are vested (cf. p. 150). It is said that under very favourable conditions a single household may collect some hundred kilos of seeds of the two plants mentioned. This may seem rather impressive, but even in good years when milk is abundant collecting will not provide pastoral Tuareg of Ahaggar with sufficient vegetable food, for seeds of wild plants are far less nourishing than are grains of wheat, barley, and millet. The collecting of wild plants important for food is as dependent on climatic conditions as is stock-breeding. In dry years, when domestic animals yield little or no milk at all, there will also be no wild seeds for collecting.

Fig. 127. Very small bag known as *ilem* ("skin") made from a kid's scrotum (*tigassait*). The bag contains a piece of resin of the *tamat* acacia (*Acacia seyal*). This resin is eaten by the Tuareg as a remedy against stomachache. Ahaggar, the *Ajjeh-en-tekki* tribe. Dimension of the piece of resin: 0.07 m long. (F.M. 149a–b).

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

222 Even in good years it may happen that edible seed-plants are eaten by locusts before they become
[134] ripe for collecting. Collecting is of secondary importance to the Tuareg of Ahaggar though to most
433 pastoralists it is more important than hunting.

## AYR

134 We have seen that Ayr has better grazing grounds and more game than Ahaggar, and it is only
137 natural that this southern area is also a more favourable one for the collecting of wild plants. Never-
222 theless, it seems as if collecting is not so important to the Ayr Tuareg who have more livestock for
[933] which millet and wheat can be obtained without much difficulty. The number of edible plants utilized in Ayr is probably a very large one. Thus it is said that certain *Kel Ewey* Tuareg collect many different plants, but my inquiries into the methods and the value of collecting were limited to Tuareg of the *Kel Ferwan* drum-group of Southern Ayr where the following species are collected for food: –

222 *afagag* (*Acacia Raddiana*). Pods of this acacia are dried and, after pounding in a large millet mortar,
262 mixed with milk to be eaten or drunk like the Tuareg dish known as *arejira* (cf. p. 245 f.).

252 *ibezgin* (*Salvadora persica*). Fruit is eaten without any preparation.

*taikut* (*Boscia senegalensis*). Berries are pounded in the millet mortar to obtain the limpid juice which is added to porridge.

[824] *tagayt* (*Hyphaene thebaica*). The dum palm, which is of extreme importance for the handicraft of the Ayr Tuareg, is also valuable as food. The young nuts are opened with a knife and the kernels are eaten. The old nuts have an edible outer coating which is eaten by children and even by adults when they are hungry. These old nuts are also pounded in the millet mortar together with seeds of *ageruf*, cf. below.

*afezu* (*Panicum turgidum*). This perennial grass is very abundant all over Ayr. Collecting of its seeds is done by rubbing the ears of the grass between the hands to allow the seeds to fall into a plaited bowl. Seeds are pounded in a millet mortar to be used for porridge.

*ichiben*, that is seeds of an annual grass – apparently identical with *Panicum longiflorum* and/or *P. spinosa*. The seeds are collected in two different ways: – (1) If the ripe seeds have fallen to the ground they are swept together with a bunch of straw. (2) The ears are cut with a knife to be threshed by pounding in a millet mortar. – The seeds are highly esteemed, being collected to a greater extent than seeds of other wild plants. The seeds are used particularly for porridge, but also for certain other dishes such as *arejira* (cf. p. 245 f.).

*ichit* (*Eragrostis* ssp.). A grass yielding red seeds collected in the following way: – The ears are beaten with the hands so that the seeds fall into a plaited bowl. The seeds are used only for porridge.

*wajieg* (*Cenchrus catharticus* & *C. Priceri*). Annual seed-plants with thorny seeds. The dry plants are beaten with a stick and the fallen seeds are collected in a heap to be threshed with a stick. The seeds are pounded in a millet mortar for porridge.

*ageruf* (*Tribulus terrester*). An annual plant with thorny seeds which are collected as just described for the *wajieg* plants. The seeds are pounded in a millet mortar to be eaten without further preparation

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

a dish known to the Ayr Tuareg as *tédérka*. For this purpose the pounded seeds may also be mixed with pounded dum palm nuts. 222 262

*ucheror* (*Sorghum virgatum*). A tall grass the seeds of which are swept together when fallen to the ground. They are used for porridge. 252

*agazagi*. Edible seeds of a grass. They are swept together when they have fallen to the ground, and are used for porridge.

*agehageln*. Seeds of an annual plant. When they have fallen to the ground they are swept together by means of a straw bundle. They are pounded in a millet mortar to be eaten as *tédérka* without any further preparation.

*malokhiya* (*Corchorus tridens*). A plant growing in the bush though also grown in gardens. The leaves of this plant are dried and thereupon pounded in a millet mortar to be used as an admixture to porridge-sauce.

*abezey* (*Cassia tora*). Leaves of this plant are plucked with the hand, or, if the plant is dry, shaken into a plaited bowl. They are pounded and used as an admixture to porridge-sauce.

*kat'aket'i* (*Cistanche* sp.). It is said to be known as *achelleven* among Tuareg of the *Kel Ewey* group. The edible roots of this plant are dug out with a stick. They are pounded and boiled for a kind of porridge.

*acheku* (*Glossonema Boveanum*). An annual plant with small lacteal fruit which is eaten as a relish without any preparation.

These are the plant species collected by the *Kel Ferwan* of Southern Ayr. It may happen that some of these plants are destroyed by locusts, but in most years there are excellent possibilities of collecting wild seeds. Most plants are collected late in summer after the rains (at the season of *farat*), or in winter (*tigrest*). It is said that in good years more than a thousand kilos of wild seeds can be collected by the members of a single household, but even this amount of wild seeds does not answer the need for vegetable products. Collecting is of secondary importance to the *Kel Ferwan* Tuareg. Very few of the plant species mentioned are collected if there is abundant millet. The main exceptions are the plants used for sauce-admixture, and the *ichiben* seeds. The latter are collected even by Tuareg who have enough millet, because porridge made from these seeds is considered a very delicious dish. 222 [221] [433]

The two groups of Northern Tuareg and also the Tuareg of Ayr acquire their vegetable food products mainly from agriculture, which occupation will now briefly be described. 433

# Agriculture

In the present chapter are described the agricultural techniques as I know them from Ahaggar (Tasilé-n-Ajjer) and from Ayr, and the economic role of agriculture to the subsistence of pastoral Tuareg is discussed. 241

## CULTIVATION WITHOUT ARTIFICIAL IRRIGATION

In the Sahara farming is almost exclusively based on artificial irrigation, and agriculture and stock-breeding are largely separated industries. Large-scale stock-breeding necessitates migrations, while irrigation agriculture must be practised by people who live on the same spot almost continuously. But nomadic stock-breeding and shifting cultivation are occupations which go well together at the borderland of steppe and desert in the north where nomads or semi-nomads sow wheat and barley. Lyon says that the bedouins of Tripolitania use a rude plough but more generally a hoe (Lyon 1821, p. 44). However, plough cultivation seems to predominate among the northern nomads nowadays. Shifting plough cultivation is an important subsidiary occupation for most northern nomads in an almost unbroken area between the Atlantic and the Nile or the Red Sea, but it does not penetrate very far into the true desert country. In Algeria I have not seen shifting cultivation practised further south than the oasis of Ghardaya, where nomads under favourable conditions of rainfall sow wheat and barley by means of a simple plough made of a forked piece of wood (Nicolaisen 1950, Fig. 9, p. 70; Capot-Rey & Marçais 1953, pl. II,5 p. 47, Fig. 6 p. 54). West of Ghardaya the plough is known as far south as Tinduf and Beni Abbes, while it is known at Brak of Central Libya towards the east (cf. Capot-Rey & Marçais 1953, map p. 40). Feilberg in one of his early works stated that the plough in Northern Africa is particularly attached to shifting cultivation as a sowing implement (Feilberg 1931, p. 199 ff.). This is in agrement with my own investigations in the Northern Sahara, and it is confirmed by the very remarkable study of Capot-Rey & Marçais, who state that the plough is not fitted irrigation agriculture of the Sahara because of the many fruit trees, notably date palm trees, and because of the whole complicated irrigation system (Capot-Rey & Marçais 1953, p. 51; Feilberg 1931, p. 199). But there seems also to be another reason why the plough is found only in the Northern Sahara: It is particularly fitted for the sowing of wheat and barley, but less suitable for the sowing of millet and sorghum which are the most important cereals grown in the south (cf. Capot-Rey & Marçais 1953, p. 51; Feilberg 1931, p. 201). Barth records that he saw a kind of plough at Auderas in Ayr. It was drawn by three slaves who were driven like oxen by their master (Barth 1857, I, p. 424). 433 241 171 [567]

[p. 183]

7:Nicolaisen E-5 (1951-1962) 1963 . MS25 Tuareg MS25

241 171 I, p. 424). Rodd thinks the implement seen by Barth was clearly an importation from the north (Rodd 1926a, p. 133), and Feilberg assumes that if the plough was once known in this southern area it might perhaps have disappeared together with shifting cultivation (Feilberg 1931, p. 200). All this may be so, for there has been much contact between Ayr and the regions of Fezzan and Tripolitania in the past. But Barth does not say that he saw a plough but "a kind of plough", which may perhaps point to a type of large hoe drawn by men like that described from Senegambia by Feilberg (cf. Feilberg 1931, p. 169 f.).

243 The plough is unknown in the extensive area inhabited by pastoral Tuareg but this is not so with a kind of shifting cultivation. Pastoral Tuareg of Tasilé-n-Ajjer sow wheat and barley along the river valleys when these have been heavily flooded. Sowing is then done in a very simple way:— Holes are dug into the sandy soil, usually merely with the hand, and a few seeds are put into these holes. Wheat and barley thus sown grow in tufts with a space of 0.30 to 0.50 metres between each, and there seem to be about fifty straws in a normal tuft – the largest tuft I have seen contained about 130 straws (cf. Figs. 128–129). The plots cultivated in this way are generally very small, and the scattered wild plants growing in the plot are not always removed before sowing. The corn plots are left completely to themselves until harvesting, which is done with a sickle (Fig. 143). Primitive corn growing of this type cannot be practised continuously from one year to another in Tasilé-n-Ajjer, and the Tuareg of that region say that a household never grows enough corn in this way to meet its annual needs.

[178] The primitive method of corn growing without artificial irrigation is unknown in Ahaggar nowadays, but it seems as if it was known in the past (cf. Duveyrier 1864, p. 372), and the Ahaggar Tuareg have a particular term (*tawgest*) for a field cultivated without artificial irrigation (cf. Foucauld 1951–52, III, p. 1466).

Rodd states that rain-grown crops could be raised most years in certain parts of Ayr and that in earlier days a fair amount of cereals seems to have been produced in this way in Ayr (Rodd 1926a, p. 133). There is little doubt that this statement is correct, and I think that even in parts of Ahaggar millet could be raised without irrigation in most years, for millet has a very short period of growth.

[22] In Ahaggar (at Abalessa) it is sown in June-July and is harvested in September. Though millet plots are irrigated they are never watered much, and never to the same extent as wheat and barley which are grown in winter. In regard to Ayr, millet in southern villages of the Massif very frequently ripens in two months, and late in summer, at the end of the rains (*akasa*) or in the early dry season (*rarat*).

[262] I have frequently seen well-developed small plots of millet and sorghum around deserted Tuareg camps where a great many seeds are always lost on the ground during the pounding and winnowing of millet for porridge. These self-grown plots, however, are not utilized by the Tuareg as the comparatively

[131] small yield is quickly eaten by the numerous millet-eating birds. Owing to these birds it would be difficult for pastoral Tuareg to grow cereals in flooded valleys like the Tuareg of Tasilé-n-Ajjer, and it is partly for this very reason that the sedentary agriculturists of Ayr grow very little millet. Millet could easily be raised without artificial irrigation during the rains, and, in fact, millet was grown by shifting cultivation not far from Agadez as recently as up to the French occupation of Ayr.

245 In addition to the species of grain mentioned above there is one very important plant which can be grown without artificial irrigation, namely the date palm. In Tasilé-n-Ajjer there are river valleys

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

245
133

Fig. 130. Semi-wild date palms in the canyon-like Aharhar valley of Tasilé-n-Ajjer. The palms are owned and harvested by pastoral Tuareg.

245 (Aharhar and Éherir) where "semi-wild" palms are abundant. These palms are owned by pastoral
221 Tuareg of various tribes. Their dates are harvested in the autumn when Tuareg palm owners with
342 their slaves live in straw-huts or huts covered with palm leaves situated among the palm trees.

Similar plantations of palm trees which are left to themselves most of the year are also found in
245 Ahaggar, notably at Silet-Tibeghin. Part of these palms are owned by members of the *Dag Ṛali* tribe
423 (the sections of *Kel Tamanrasset* and *Kel Terhenanet*) and by members of the very small tribe, the
651 *Ikechchemaden*. The palm-owners give as an annual payment to the *Amenukal* of Ahaggar one bunch
565 of dates from all palms which have more than two bunches. The yield of another part of the palms
651 belongs to the vassal tribe *Iklan-en-tawsit* (the sections *Kel Silet* and *Kel Tahalra*). For usufructs,
245 members of these two sections make a collective annual payments to the *Amenukal* comprising four
221 bags of dates, twenty goats, two ropes of goat's hair, and five water bags. The dates are harvested by
492 Tuareg of the above mentioned tribes in August-September. Harvesting is done with sickles and is
564 finished in three to four weeks when the palm-owners return to their camps with dates packed in bags
465 and loaded on donkeys and camels. In harvesting their dates most Tuareg are assisted by black-
463 skinned agriculturists (*Ḥarratin*, or *Izeggaṛen*) of Abalessa who are given a certain amount of dates for their work. These agriculturists build the huts in which the palm-owners live during harvest (cf. p. 338 f.).

133
312

Fig. 131. A *foggara* canal (*éfeli*) dug into the sandy river bed from where it is led into the gardens of the valley terrace. Southern Ahaggar, *Tafnut*.

245 [423] In Ayr there are also a few pastoral Tuareg who own date palms growing in river valleys, e.g., people of the *Imezzureg* tribe of the *Kel Ferwan* drum-group. These date palms, like those growing half wild in Northern Tuareg countries, yield very small dates of a quality inferior to those grown in the oases under constant supervision by agriculturists. Such dates are used only for local consumption.

## IRRIGATION AGRICULTURE IN AHAGGAR

241 176 Irrigation agriculture has been practised since ancient times within certain territories now inhabited by the Northern Tuareg. As early as in Roman times there is reference to *Radames*, *Rat*, and certain oases of the Fezzan, which were visited by Roman Expeditions (Lhote 1955a, p. 113 f.; Duveyrier 1864, p. 249 ff., 266 ff., 275 ff., 455 ff.). Lhote thinks that the oasis of Abalessa in the lowland west of the Ahaggar Massif was also visited by the Roman general Cornelius Balbus (Lhote 1955a, p. 88 f., 113 f., 286), but this, perhaps, is to be doubted. In the writings of Medieval Arab authors there is apparently no reference to oases within the Ahaggar country, though oases in neighbouring parts of the Sahara are mentioned.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

In literature there seems to be no reliable information about the existence of irrigation agriculture in Ahaggar until Duveyrier, who states that agriculture did not obtain a fixed position in the economic life of the Ahaggar Tuareg until the reign of the *Amenukal Elkhaj Akhmed* (1830–1877) (cf. Duveyrier 1864, p. 369). This statement is confirmed by most agriculturists and pastoral Tuareg in Ahaggar, who claim that prior to *Elkhaj Akhmed* irrigation agriculture was not practised in Ahaggar. During the reign of this *Amenukal* irrigation agriculture by means of the subterranean aqueducts known to the Arabs as *foggara* (*éfeli*, pl. *ifelan*) was introduced by *Ahl Azzi* Arabs and negroid *Ḫarratin* from the Tidikelt oases. Some people of Ahaggar claim that another irrigation system was introduced about the same time, namely irrigation wells from which water is drawn by oxen and donkeys. This system, known as *tanut*, is said to have been introduced by agriculturists from Ġanet (Djanet) (the *Kel Ġanet*). It should be noted that there are certain traditions which claim irrigation agriculture to be older in Ahaggar. One tradition says that it was practised at Silet-Tibeghin by Arabs who immigrated from Tawat to cultivate by means of the *foggara* system even during the reign of the *Inenan* (Lhote 1955, p. 286 f.). Another tradition, recorded by Foucauld, states that irrigation farming was known at a very remote date by the *Isebeten* – a pagan people said to be the ancestors of the oldest vassal tribes of Ahaggar (cf. Foucauld 1951–52, II, p. 535 f.). Traditions of the age of irrigation agriculture in Ahaggar are conflicting. If it was practised long before the reign of *Elkhaj Akhmed* by the ancient vassals, I believe that water was raised by human power, namely by the pole and bucket provided with a counterweight. For this system, which is known as *ajudid*, is said to have been very common in the past. It is extremely rare nowadys, and I have only seen it once at Terhenanet. There can be no doubt that this simple irrigation method is a very old one in North Africa, where it is more widely distributed than all other types of irrigation methods (cf. Capot-Rey 1953a, map VII p. 320). The very wide distribution of this system elsewhere in the Old World points to its great age, and it is perhaps to be considered the oldest true irrigation machine.

A few Tuareg in the northern groups practise irrigation agriculture, which does not seem to be one of their traditional occupations. Tuareg irrigation farmers are found mainly in the Fezzan, but mention should also be made of the people of three noble tribes, namely the *Ilemtéyen* (living at Ṛat), the *Ikadeyen* (at Tit in Ahaggar), and the *Kel-ahem-niellen* (roaming pastoralists north of Ahaggar or settled farmers at the oasis of Inṛer in Tidikelt). These sedentary or semi-sedentary noble Tuareg were originally true pastoralists, though but little is known of the original mode of livelihood of the *Ikadeyen*. A few individuals or families among the Ahaggar vassals have more recently taken up irrigation agriculture in addition to stock-breeding. There seems to be a growing tendency towards semi-nomadism in Ahaggar nowadays. There may be several reasons for this. Thus one can point to the decline of caravan trading and to the fact that pastoral Tuareg cannot so easily get the true agriculturists to cultivate for them. The true agriculturists of Ahaggar comprise the *Ḫarratin* (*Izeggaren*) of Tidikelt, who have mixed with the manumitted slaves now also known as *Ḫarratin* (*Izeggaren*), a few fair-skinned *Ahl Azzi* Arabs, and the *Kel Ġanet* who are predominantly black-skinned. All these agricultural people tend to mix with each other and also with tribes of pastoral Tuareg.

There are at present about 25 agricultural settlements in the river valleys of Ahaggar. Apart from the administration centre of Tamanṛaset (1600) and the oasis of Abalessa (547) these agricultural

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

312
241

Fig. 132a. The irrigation system known as *sanut*. Ahaggar, Amsel.

361 settlements contain less than 300 individuals, the majority not even a hundred (cf. Lhote 1955a;
[162] p. 292). Most agricultural settlements comprise only a few houses built of stone or mud, or a few
[342] straw-huts (cf. p. 327 ff.). The agriculturists of these small settlements generally keep some goats
[231] and sheep, have donkeys, which are important beasts of burden to all farmers of the Sahara oases,
and in certain families there are one or two zebus to raise water from irrigation wells. A few agri-
433 culturists may be characterized as semi-nomads. This is the case of some inhabitants of Abalessa
who guard their flocks at some distance from the village. Some of these agriculturists, who were
formerly Tuareg slaves, even make skin-tents like pastoral Tuareg.

312 The subterranean aqueducts known to the Arabs of the Sahara as *foggara*, to the Tuareg as *ifelan*
241 (sing. *éfeli*), constitute by far the most important irrigation system used in Ahaggar. However, these
*foggara* canals cannot be compared with the large extensive aqueducts of Tidikelt though their intro-
[166] duction to Ahaggar is due to the immigration of agriculturists from that area. The Tidikelt *foggara*
are very large aqueducts which are dug into water-bearing strata which can be situated at a consid-
erable distance from the oasis (cf. Capot-Rey 1953a, p. 324 ff., Lô 1953 & 1954; Chaintron 1958).
The Ahaggar foggara are generally very short (about one to two kilometres, or shorter), they are not

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

312
241
[231]

Fig. 132b. Cf. text Fig. 132a.

deep, and are dug into the sandy river bed to lead its water to the gardens of the valley terrace. A map of the foggara aqueducts placed in the river valley of Taṛhawhawt is reproduced by Capot-Rey (Capot-Rey 1953a, Fig. 18 p. 328). There are many advantages attached to the use of foggara systems of the Ahaggar type, for once the aqueducts are dug water automatically flows to the garden. But there are also disadvantages. If a foggara valley is heavily flooded after rains and changed into a roaring stream, the aqueducts are destroyed and the crops also. In general it will be necessary to abandon a foggara system after some years, as it must be cleaned at intervals and in time it becomes too dangerous to work in them as subsidences may occur and kill workers. It may also happen that a river valley is not flooded at all for a period of years when it becomes essential to move to another valley, rich in water under the sandy river bed, to make a new foggara there. For all these reasons deserted foggara systems are common in the river valleys of Ahaggar. [114]

The *foggara* system is unknown south of Ahaggar and has on the whole a rather limited distribution in the Sahara. One reason for this is perhaps that the construction and maintenance of the aqueduct imply the agricultural co-operation of several households. This is not the case with the other common system in Ahaggar, the use of wells (*tunin*, sing. *tanut*) from which water is raised by animal traction. The wells are usually shallow and not very difficult to dig out, and the maintenance of the whole system is usually limited to occasional mendings of the zebu's harness and of the large waterbag. While a foggara canal is always used for the irrigation of several gardens (6–12), the wells are used for single gardens. The irrigation wells are dug into the valley terrace so that they are not destroyed by a flood, and in dry years watering from wells is considered the better system. But in the period when crops need much water irrigation by means of wells is hard work for the garden owner who must drive his ox all day long. [184] [476]

Irrespective of the system resorted to irrigation of a garden is done in the same manner. Water from the *foggara* aqueduct or water raised from well flows into a large basin (*tihemt*) through a canal

312
241
[33]

Fig. 133. The large water basin (*ilhemi*) from which water is led into the gardens. Ahaggar, Abalessa.

(*teguhamt*, or *tahaft*) from which another canal (*tahaft*, or *teguhamt*) leads water out into the garden, which is always divided into a large number of garden beds (*igemmunen*, sing. *agemmun*) surrounded by low ridges and separated by narrow irrigation canals. The large water basin serves to regulate watering, which outside of the very cold season is done during the night. A flat stone with a hole in its middle and known as *anefif* is placed between the basin and the canal leading water into the garden; water for irrigating the garden flows through this hole when irrigation is needed at night, while the hole is closed by means of a cotton stopper during the day. The basin is thus filled with water during the day and its water runs into the garden at night (cf. Figs. 131–136).

243 [221] The irrigation systems described are most important for the cultivation of the winter crops of wheat and barley. The Tuareg word in Ahaggar for wheat is *éred* which is a collective name for several types of wheat known as *elkhamra*, *elmansuri*, *amekkawi*, *rati*, and *menga*. These special names seem to be derived from Arabic (cf. Foucauld 1951–52, III, p. 1058, 1211 & IV, p. 1789; Maire 1933, I, p. 246). According to Maire these types of wheat belong to the species *Triticum aestivum*. I have never myself seen fully-grown wheat in Ahaggar and was thus unable to collect ears for identification by botanists, but seeds brought home from Ahaggar and Tasilé-n-Ajjer have been identified by Dr. Hans Helbaek as belonging to common bread wheat. Barley is known to the Tuareg as *timzin*. Threshed seeds brought home from Ahaggar have been identified by Dr. Helbaek as belonging to the six-rowed type (*Hordeum vulgare*, though some, he thinks are perhaps of the two-rowed type (*H. distichum*). Barley, like wheat, is a winter crop though less common. At Abalessa I was told that two thirds of the seed-crops grown in winter were wheat, while only one third was barley.

[221] Wheat and barley are grown in the same way. Sowing is done in the autumn (*tober*), and the seeds are put into the garden beds with the fingers. Harvesting takes place in the month of April (*ibri*) and is performed with a sickle (Fig. 143). The growing of wheat and barley is a very strenuous task for irrigation agriculturists. Watering is done for the first time immediately after sowing. When I stayed at Abalessa, in the month of January 1955, the tender plants of wheat and barley were watered two days in succession, and the 10–12 gardens belonging to the same *foggara* were irrigated in succession [132] in this way. At that time of the year the plots are not generally watered at night because of the cold temperatures which may be below zero.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

temperatures which may be below zero. At a later date the plants of wheat and barley are watered less frequently, and watering ceases completely some time before harvesting in order that the plant may ripen more easily. 243

The agriculturists of Ahaggar do not manure the garden plots used for wheat and barley. Only a new garden plot never previously cultivated is manured, and when such a garden is made the wild vegetation of grasses, herbs, bushes, and trees is often set on fire. Wheat and barley can be grown in the same garden plot for three or four years in succession, and the soil then needs at least one year's rest. In this way, the same garden plot can be kept under cultivation for many years without manuring: this continuous cultivation on the same spot with a one year's rest for each three or four years cultivation is possible partly because there is a certain crop rotation with other plants grown in summer, but mainly because the agriculturists during the period wheat and barley are grown carry fresh soil to their gardens. This is done not only before sowing but also throughout a long period of the winter when the plants are tepder and green. When I stayed in the settlements of Abaiessa and Amsel in the [101] months of January and February (1955), all agricultural households worked strenuously from morning to night carrying soil to the green garden plots of wheat and barley. The soil was carried in plaited baskets [482] (cf. Fig. 135) on the head, or in bigger baskets carried by donkeys. The soil was left in small heaps [492] (one in every garden bed) to be spread over and between the green plants (cf. Fig. 137). This extremely [461] strenuous work, I was told, would continue until the month of March.

In spite of the fact that cultivation in Ahaggar is done intensively and much work is connected with it, the yield of winter crops is not a very considerable one. In Abalessa it is said that seed-corn of wheat and barley will normally amount to about 50 kgs, and about 500 kgs is to be considered a normal yield, though certain gardens which are extremely well cultivated may yield more and in rare cases up to one thousand kilogrammes. The gardens I saw at Amsel and Taṛhawhawt were smaller than those seen in Abalessa. At Taṛhawhawt the quantity of wheat and barley sown, was said to amount to about 35 kilogrammes.

312
241

Irrigation stops and the basin runs full of water when a cotton stopper is put into the round hole in the middle of the flat stone. Ahaggar, *Ahl Azzi* Arabs.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

243 Wheat and barley grown in winter constitute the most important crops in Ahaggar, but, as mentioned,
[262] the gardens are also cultivated at other seasons, and crops of millet and sorghum taken in summer
are most important substistence for irrigation farmers in Ahaggar. Millet is known to the Tuareg as
[171] *énélé*; it seems to be the same species as that so widely grown by African agriculturists of the savannah
countries (*Pennisetum typhoideum*, or *P. Americanum*). Millet is sown in June-July and harvested in Sep-
[221] tember, or in October. Little work is involved with the cultivation of this plant which is never watered
[461] much (cf. p. 184), and the agriculturists do not carry fresh soil to the millet plots as they do to plots of
wheat and barley. Species of sorghum are less important than millet. The common species is known as
*abora* or *tafsut* (*Andropogon Sorghum*). Another species is known as *tallak*; it has smaller seeds than
[388] the species just mentioned, and is grown mainly because of its stems, which are reduced to powder
to be used for dyeing skins red (cf. p. 282).

415

243

Fig. 136. Irrigation of a young wheat-plot. The canal ridges are opened with a hoe in order to let water penetrate into the garden beds. Ahaggar, Abalessa.

to be used for dyeing skins red (cf. p. 282). Maize (*Zea mays*) is also grown as a summer crop in some of the cultivation centres; it is called *engafulé*, or *engafulé masri* (masri = Egyptian) because it is said to have been introduced from Egypt.

Tomatoes (*tomatem*; *Solanum lycopersicum*) are grown mainly in summer and constitute a very important crop. The ripe fruit is sliced and left to dry on a layer of straw in the garden. They are crushed and pounded and are added to various dishes, e.g., the so-called kuskus (*keskesu*, cf. p. 247). Various types of melons and gourds are also grown in summer, e.g., the water melon (*taleǧeṣt*; *Colocynthis Citrullus*), a type of ordinary melon known as *tétakelt* or *tazemut* (*Cucurbita* sp.) which is frequently sliced and dried in the same way as tomatoes, and a kind of large gourd (*kabuya*; *Cucurbita maxima*). Certain other vegetables are grown in most gardens, notably various kinds of onions (*téskert*, *Allium sativum*; *éfeleli*, *Allium cepa*) and a kind of beans known as *tadellak*. A few plants are grown as spices, e.g., saffron (*tanermit*, *Crocus sativus*), red pebber (*chitta*, *Capsicum annum*), or for tea-admixture, e.g., the mint (*émerner*, *Mentha piperita* var.) and a plant known as *lahabok* which is said to have been introduced from the Sudan. Two very poisonous plants are also grown in certain gardens of Ahaggar, namely *éfelehleh* (*Hyoscyamus muticus* ssp. *falezlez*), which also grows wild in the lower country (cf. p. 178), and *burzig* (*Datura Stramonium*) (cf. Maire 1933, I, p. 191 f.). Foucauld mentions two other plants grown for their medicinal value (*ibedliwen*, *Trigonella foenumgraecum*; *tikamnin*) (Foucauld 1951–52, I, p. 33 & II, p. 812). A kind of wild salad (*tamaghé*) is also grown in the gardens according to Foucauld (Foucauld 1951–52, III, p. 1170). Potatoes (*Solanum tuberosum*) are now grown in some of the mountain oases – mainly for selling to Europeans at Tamanrasset. Among other cultivated plants found in the gardens of Ahaggar mention can be made of the following species after Maire:—

241 [252] [263] [829] [439]

*Lepidium sativum*, *Brassica Rapa* & *B. oleracea* (*aharet*), *Linum usitatissimum* (*ilatelé*, or *anarka*), *Medicago sativa*, *Pisum arvense* (*demchi*), *Vicia Faba*, *Lens culinaris* (*elredes*), *Vigna catjang*, *Cori-*

243

Fig. 137. The fresh soil carried to old gardens is placed in small heaps to be spread out between the tender plants of wheat and barley. Ahaggar, Abalessa.

241 *andrum sativum*, *Cuminum Cyminum* (*azkar*), *Daucus Carota* (*ezzeruget*), *Cucumis melo*, *Lagenaria vulgaris* (cf. Maire 1933, and particularly Maire 1940, p. 401).

245 [262] In addition to the above-mentioned plants there are various types of fruit trees which do not play any considerable rôle for food. The gardens contain very few date palm trees (*tazzayt*, *Phoenix dactylifera*) and there are no palm trees of any value in the gardens situated in the upper mountain zones where the fig tree (*tahart*, *Ficus carica*) thrives much better than in the lower country; the figs are [251] consumed fresh, or they are put on strings for drying, common practise elsewhere in North Africa. The [388] pomegranate (*terrummant*, *Punica Granatum*) is grown in some gardens; its fruits are eaten, and they are also used for dyeing skins (cf. p. 282). Grapes (*tezzebibt*, *Vitis vinifera*) are also grown in some gardens.

Maire mentions the cultivation of the peach (*Prunus Persica*) and the apricot (*Prunus Armeniaca*) (cf. Maire 1940, p. 401). These fruit trees have undoubtedly been quite recently introduced for Foucauld states that they are not grown in Ahaggar (cf. Foucauld 1951–52, I, p. 79 f.).

243 423 There are nowadays many agriculturists who have their private gardens so that they cultivate their winter crops and their summer crops entirely for their own use. But most agriculturists grow winter crops of wheat and barley on behalf of the Tuareg who are then the true garden owners.

[312] [476] Agriculturists who cultivate their gardens on their own behalf frequently irrigate crops by means of draught animals (zebus) which raise water from wells, but there are also some farmers who cultivate independently without any contract with pastoral Tuareg and nevertheless belong to a *foggara* team.

243 It can be estimated that an independently working agriculturist obtains a total yield of about 700 kilos of wheat and barley grown in winter. Of this yield he gives 10 kilos to the *Amenukal*, or to the

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

Of this yield he gives 10 Kilos to the Amenukal, or to the 243
Tuareg who has territorial rights (cf. p. 151), while the yield of one garden bed – that is about other [65] ten kilos – is given to a blacksmith who in return mends hoes and other agricultural implements. The [262] necessary amount of seed-corn, comprising about 50 kilos, should also be withdrawn from the winter crop yield so that his total net profit is about 630 kilos of wheat and barley. To this amount of cereals 241 can be added the yield of summer crops (millet, sorghum, maize, tomatoes, and other vegetables) for

243

221
241
243
805

Fig. 139. Horticultural calendar from Ahaggar.

The Tuareg and the negroid agriculturists have a lunar calendar of twelve months corresponding to the Arab calendar, but a lunar calendar has no practical value for the indication of seasonal agricultural activities. The Julian Calendar is known to some people of Ahaggar as well as to other Berbers of the Sahara and the Atlas. Tuareg names of Julian months are given above. Very few people in Ahaggar know the exact beginning and the end of the twelve Julian months, but a few names are used as seasonal terms: *innar* = "midwinter", *mars* = "beginning of spring", *ibri* = "early harvest" (of wheat and barley), *maiyu* = "beginning of summer", *tober* = "late harvest" (millet).

241 which no definite figures can be given, while the yield of fruit trees growing in the garden plot does
[423] not necessarily belong to the agriculturist. These trees frequently belong to pastoral Tuareg.

433 I think it can be estimated that an agricultural household with its own garden produce about a
262 thousand kilos of vegetables food products annually for its private use. We can add that though the members of an agricultural household live mainly on vegetable food products they also acquire a certain amount of food from livestock, which normally comprises a few goats and sheep, and perhaps one or two zebus. Conditions of stock-breeding are not always favourable to people who live continuously on the same spot, but it is advantageous to the agriculturists of Ahaggar, who live close to valleys with some pasture, that they are able to feed their animals on green garden products when pasture is badly developed and thus avoid the disaster of a drought. It is also an advantage to most agriculturists that they do not have to water their animals which can drink freely from the irrigation canals. The agriculturists can kill a few goats or sheep annually; they obtain milk and a little butter
[234] to be used mainly as a sauce for bread and porridge, and they make cheese of the *awles* type (cf. p. 224), but they never make cheese from fresh milk as do many pastoral Tuareg when milk is abundant. The agriculturists also breed fowls and pigeons, and some of them have an important meat supply from hunting with steel-traps (hares, jackals, fennecs, and ravens). Collecting, on the other hand, is of little or no value to irrigation farmers of Ahaggar.

241 The economic position of agriculturists who work without any particular obligations towards
466 pastoral Tuareg is tolerably good. It is less favourable to those who grow winter crops also on behalf
[423] of the Tuareg, as do most cultivators. Some of them irrigate the garden plot with water raised from
[511] wells by oxen which may belong to the cultivator or to the Tuareg. But most agriculturists who work
241 for the pastoral Tuareg irrigate by means of *foggara*. It is very strenuous work to dig a *foggara* canal,
312 and co-operation is needed not only for this but also for the maintenance of the whole irrigation system.
466 The gardens are individually tended by the agriculturists, who co-operate in the *foggara* work under
476 the leadership of a headman known as *amrar n efeli*, that is "chief of the *foggara*". This headman is

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

241 appointed by the Tuareg garden owners and is rewarded by a garden of his own for his responsibility
312 in supervising all co-operative work. The unit of agriculturists co-operating at the same *foggara* may
466 or may not correspond to an extended family. The agriculturists co-operating on any large *foggara*
476 irrigating ten or twelve gardens frequently represent two or three distinct families which are not linked to each other by kinship bonds. The cultivators of a *foggara* comprising nine gardens at Taṛhawhawt
[675] belong to three distinct, unrelated families. This is quite natural in view of the fact that contracts between the Tuareg and the cultivators are made individually.

423 There may also be no kinship bonds between the pastoral Tuareg who have gardens at the same foggara, and there are even Tuareg who own two or three gardens situated in widely separated river
[614] valleys of Ahaggar. But Tuareg garden owners of the same foggara frequently belong to the same tribe
[428] or even to the same tribal section. When a garden-owning Tuareg dies, his garden will generally pass to somebody within his family, but there seems to be no fixed rules governing the transference of gardens.

466 The individual contract between a Tuareg garden owner and his cultivator is made for a period of
675 six months – the period of growth for wheat and barley. The agriculturist is responsible for all garden
423 work, and the Tuareg garden owner has the following obligations:—
241 (1) To supply his cultivator with a hoe every year, or every two years in case a very good hoe is given.

(2) To pay for repairs of the *foggara* system, or for the digging of a new *foggara*. This payment is known as *almarsor* and consists of two kilos of cereals or dates every working day until water reaches the garden.

(3) To pay for the making of garden beds. This payment is known as *éhéré n egalab*, and is made only once as long as the garden remains on the same spot. When a garden is moved after a period of three or four years the payment must be made again. It varies with the size of the garden and the quality of its soil; in general it consists of 15–25 kilos of cereals.

243

Fig. 140. Millet (*éwéli*) of very high growth. It is said that this particular millet type was introduced to Ahaggar from the south – possibly from Ayr. Ahaggar, *Ahl Azzi* Arabs.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

241

Fig. 141. The large gourd known as *kabaya* (*Cucurbita maxima*) growing close to the thorny fence (*aforaɣ*) which term is also generally used to designate a garden. Ahaggar, *Akl Azzi* Arabs.

466 625 423 241 [17] [578] Tuareg garden owners have other obligations besides those listed under these three items, but these obligations vary with the systems of contract of which there are three. One system is known as *khamast* according to which the agriculturists gets only one fifth of the crops. This system is widely found in North Africa but has disappeared in Ahaggar some years ago. It is said that it was abolished by the *Amenukal* because it very frequently gave rise to disputes between Tuareg garden owners and their cultivators. It is now replaced by two other systems, the *tilt* system allowing one third of the crops to the cultivator, and the *aṛil* system according to which crops are divided equally between the owner and the cultivator. This last system is that almost exclusively used in Ahaggar nowadays.

To revert to Tuareg obligations towards their cultivators, these obligations, in addition to those mentioned above, are as follows:—

(4) To hand over an amount of seed-corn (*téfest*) of wheat and barley according to the size of the garden plot and the system of contract. With a *khamast* agreement the Tuareg garden owner gives all seed-corn. With a *tilt* agreement half of the seed-corn is supplied by the owner, the other half by the cultivator who is then also allowed to cultivate a private garden. With an *aṛil* agreement half of the seed-corn is given by the garden owner, the other half by the cultivator who does not possess a private garden unless he is headman of a *foggara* (p. 196).

(5) To give an amount of food to the agriculturist during the cultivation period of six months. This payment is known as *tenafok*, and is fixed at 75 kilos of millet, barley, or dates when cultivation is done according to the *aṛil* system, while 150 kilos are given for cultivation according to agreements of the two systems *tilt* and *khamast*.

[434] The net profit to an agriculturist who cultivates for a Tuareg garden owner is lower than that gained by an agriculturist cultivating exclusively for his own private use. This will be seen more clearly from the calculations below where a garden with an annual yield of 700 kilos wheat and barley is considered:—

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

| | *Cultivator* | | *Tuareg Garden Owner* | |
|---|---|---|---|---|
| | Receipts | Expenditure | Receipts | Expenditure |
| ***The khamast system*** | | | | |
| The *khamast* division | 140 kg | | 560 kg | |
| Land rent | | 5 kg | | 5 kg |
| Yield of one garden bed to blacksmith | | 5 kg | | 5 kg |
| Seed-corn | | | | 50 kg |
| Food given to the cultivator | 150 kg | | | 150 kg |
| | 290 kg | 10 kg | 560 kg | 210 kg |
| Net profit | 280 kg | | 350 kg | |
| ***The tilt system*** | | | | |
| The tilt division | 233 kg | | 466 kg | |
| Land rent | | 5 kg | | 5 kg |
| Yield of one garden bed to blacksmith | | 5 kg | | 5 kg |
| Seed-corn | | 25 kg | | 25 kg |
| Food given to the cultivator | 150 kg | | | 150 kg |
| | 383 kg | 35 kg | 466 kg | 185 kg |
| Net profit | 348 kg | | 281 kg | |
| ***The aril system*** | | | | |
| The *aril* division | 350 kg | | 350 kg | |
| Land rent | | 5 kg | | 5 kg |
| Yield of one garden bed to blacksmith | | 5 kg | | 5 kg |
| Seed-corn | | 25 kg | | 25 kg |
| Food given to the cultivator | 75 kg | | | 75 kg |
| | 425 kg | 35 kg | 350 kg | 110 kg |
| Net profit | 390 kg | | 240 kg | |

A few notes should be added to these calculations of receipts and expenditure in the three systems. Thus the profit of the cultivator in all three systems is somewhat bigger than is indicated. The hoe is given by the Tuareg garden owner, who must also make certain payments for irrigation work and for the making of new garden beds as mentioned above. The garden owner's net profit in kilogrammes is consequently somewhat lower than indicated, but it should be mentioned that payments made by a Tuareg garden owner are hardly ever made in wheat and barley, but mainly in millet and dates which are less valuable, particularly so because the pastoral Tuareg acquire millet and dates at very low prices during their caravan expeditions (cf. p. 209 ff.). Therefore, the profit made by a Tuareg garden owner cannot so easily be given in kilogrammes of agricultural food products. It is evident that all three systems are profitable to the Tuareg, and it is clear that an agriculturist who cultivates a garden entirely on his own behalf is better off than an agriculturist who works for the Tuareg. It is also evident that to the agriculturist the *khamast* system is less profitable than the *tilt* system, which again is less profitable than the *aril* system. With the abolishment of the *khamast* system the agriculturists now

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

466 obtain a larger amount of vegetable food products and more wheat and barley. The pastoral Tuareg
423 gain less from their gardens than they did when the *khamast* system prevailed, but it is still profitable
241 for them to be garden owners.

The quantity of agricultural products anually consumed per person among the *Kel Ahaggar* is
511 estimated by Lhote at 187 kilos millet, 15 kilos dates, and a small amount of wheat for which no
262 figure is given. For Arabs of the Sahara the quantity of vegetable food is estimated at 180 kilos wheat,
[17] and 75 kilos dates anually per person (Lhote 1955a, p. 263). I add to this that wheat is used for bread to a very large extent by the Ahaggar Tuareg, who also make much use of barley for bread and porridge. According to Malaurie the amount of agricultural food products available per person among the Ahaggar Tuareg is about 400 grammes a day, or 146 kilos anually (Malaurie 1953, p. 342). It should be noted again that the amount of agricultural food products necessary for a Tuareg household varies greatly from one year to the other. In years of drought when agricultural products form so to speak the only source of food for the nomads, they estimate that a household consisting of husband, wife, and one child will consume about two kilos of cereals (dates) every day, or 730 kilos in a year. Consequently the amount of cereals and dates consumed anually per person may in dry years rise to about 245 kilos. This seems to correspond to the amount of food considered necessary for Arabs of
[17] Tidikelt and Tawat, who live almost exclusively on cereals and dates. When employed as labourers by the French Administration these sedentary Arabs are given 16 kilos of wheat and 4 kilos of rice a month, or 240 kilos of agricultural products anually per person (Information obtained from the administration office of In Salah in 1954). The agricultural products obtained by a pastoral household from a single
511 garden will not meet the needs of the household and its slaves even in years of good grazing, and less
433 so in dry years when pastoralists subsist entirely on agricultural food products. I give an example: During the year 1954 55 which was extremely dry, a Tuareg who owned three gardens cultivated with an *aril* agreement could not feed his household and his slaves (comprising two men, two women, and three children from five to twelve years old) by means of his own garden products. The Ahaggar
[437] Tuareg depend on caravan trading for their provisions of agricultural food, and trading also helps them to create the capital of millet and dates which is invested in their gardens in Ahaggar grown on their behalf by agriculturists. I believe that most pastoral households of Ahaggar have gardens, but there are Tuareg who have none. This is true, for instance, of most Tuareg living in and around the Ahnet Massif. Tuareg of this region formerly had gardens irrigated by the *foggara* system at Abalessa, but to-day they acquire their vegetable food products mainly by caravan trading.

## IRRIGATION AGRICULTURE IN AYR

563 The largest aggregation of sedentary people in Ayr is found in Agadez (4.737), which is inhabited al-
361 most exclusively by negroid peoples who speak Hausa though most of them also know the Tuareg
162 language (*tamachek*). This large sedentary population mainly lives on trade and on crafts of
197 various kinds. The inhabitants are known to the Tuareg as the *Imeggedezen*. They are said to be related
433 to the Sultan (or the *Amenukal*) of Agadez. There is a tradition which claims that the Sultan came
173

Fig. 142. Tomatoes (*tomatem*; *Solanum lycopersicum* and a type of melon (*tazenut*; *Cucurbita* sp.) cut into slices and left upon a layer of straw for drying. A basket (*tésenit*) filled with ears of millet (*énéle*) is seen in the front. Ahaggar, *Ahl Azzi* Arabs.

563 from Constantinople, and the true *Imeggedezen*, it is said, came from the same region. They were
173 kinsmen of the Sultan who came to see their relative Sultan as guests or visitors and therefore acquired
[361] the name "*Imeggedezen*". They founded the city of Agadez, though it is said that sedentary people of the *Itésen* group of Tuareg were already living at this place. The city of Agadez seems to have been founded in the 15th century shortly after the foundation of the Sultanry which was established 1405
361 A.D. (cf. p. 414 f.). I shall return to the problems connected with the establishment of Agadez in a
621 later chapter, and shall here content myself by saying that Agadez was established as a trading post, which also became the seat of government of Ayr, and the town never seems to have been a true agri-
[312] cultural settlement. There are no gardens, and even drinking water is very scarce and fetched by the women from outside of the city at wells and in river beds. The *Imeggedezen* are mainly city dwellers
[563] though there is a small population of agricultural *Imeggedezen* that possesses gardens at Alarses, a few kilometres north-east of Agadez.

197 In Barth's days the main language of the sedentary Agadez population was *Sonray* (Barth 1857,
563 I, p. 504). This is still spoken by a few people within the city, and it constitutes the traditional language
361 of the people inhabiting the oasis of Ingal (1.430) west of Agadez. These Sonray-speaking people of
162 Ingal, known to the Tuareg as *Isawaren*, subsist mainly upon their palms which yield dates of an
563 excellent quality, and they do not otherwise engage much in agricultural activity. In the winter season
433 some of these people settle in Tegidda-n-tésemt towards the north to work in the salt pits. Trade and
245 crafts are also important industries to the sedentary people of Ingal, which owns a market.
221
463

Throughout the Ayr Massif there are many agricultural villages in which the farmers live in straw-
361 huts, and in houses built of stone and mud (cf. p. 327 ff., Figs. 246 ff.). Most people of these villages
342 belong to the group of *Kel Ewey* Tuareg, but there are also some agriculturists who belong to other Tuareg
162 groups, e.g., the *Itésen* (cf. p. 330, 412, 414, 417 f.). The *Kel Ewey* Tuareg originally came from the north
162 as true fair-skinned Tuareg, but in Ayr they mixed with an ancient negroid and Hausa-speaking popula-
144 tion that subsisted on agriculture.
433
[174]

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

162 tion that subsisted on agriculture. Most members of the *Kel Ewey* group are fairly negroid in appear-
144 ance, and though some of them lead a nomadic life and subsist mainly on stock-breeding, the bulk of
433 the *Kel Ewey* are sedentary agriculturists who have some livestock comprising goats, sheep, zebus, and sometimes camels also. Among the fair-skinned Tuareg of the *Kel Ferwan* drum-group there are very few sedentary agriculturists, though a few vassals have taken up irrigation agriculture in recent times. There are also agriculturists within the negroid group of the *Kel Ferwan* known as *Irawélen*.
[587] Some *Kel Ferwan* Tuareg have gardens cultivated by their slaves, but this is not customary nowadays when slavery is of little importance in Ayr. Contracts between pastoral Tuareg and cultivators
241 are said to have been unknown until recent times when a few pastoralists have made contracts with
466 cultivators. There seem to be no fixed systems regulating such relationships, but it is said to be common for the cultivator and the Tuareg to divide crops equally between them.

241 Though agriculture could be practised in Ayr without artificial irrigation there are no rain-grown
312 crops within the Massif nowadays. The *foggara* system is unknown, and irrigation is done by raising water from shallow wells. The system of a pole and bucket provided with a counterweight known in Ayr as *asefian* has disappeared quite recently. It was used at many agricultural settlements of Ayr until a few years ago, and in parts of the country formed the only type of irrigation system at the time of the French occupation. One informant told me that in his boyhood about 35 years ago no other irrigation method was employed at Alarses, and this is in agreement with literature (cf. Capot-Rey 1953a, p. 322). At that time, however, the method of raising water from wells by animal traction (in Ayr *anu*, in Ahaggar *tanut*) was also practised at many settlements. It is unknown when it came to Ayr, but it is said to have been introduced from the north – probably from the regions of Fezzan and Tasilé-n-Ajjer from where the same system came to Ahaggar (cf. p. 187). It is now used at all
[492] settlements as the only type of irrigation system, and zebu-oxen are always used for traction. This was not so in the past when zebus were less common than to-day, and it is said that donkeys were then the common draught-animals. The irrigation of gardens is performed in much the same way as in Ahaggar. The water raised from the shallow well (*anu*) is led through a narrow canal (*arelal*) to a large basin (*tisemt*) from where another canal (*duki*) leads to the garden (*afarag*), which is divided into a number of beds (*éfenral*).

243 Cereals form the most important crops in Ayr. The common winter crop is wheat (*elkama*; *Triticum vulgare*), but also barley (*Hordeum tetrastichum* var. *pallidum*) is very widely grown. One crop of these two cereals is taken every winter, and it is said that the period of growth is about five months; sowing is done in October, harvest in March. Cereals are also important for summer crops. Both millet (*énélé*; *Pennisetum typhoideum*) and sorghum (*abora*; *Sorghum caudatum*) are grown, and millet, as we have seen, has a very short period of growth – only about two months (cf. p. 184). But though millet is
[262] most important as food for agriculturists and pastoral Tuareg alike, it is not widely grown because it is difficult to protect it from the numerous small birds and because, it is said, millet grown in Ayr
[439] is of a quality inferior to that of the Sudanese type. Most of the millet eaten in Ayr is therefore imported from Damergu by pastoral Tuareg. By far the most important summer crop grown in Ayr is maize (*Zea mays*), which is known to the Tuareg as *abora maser*, that is "Egyptian sorghum" (*abora* =
[288] sorghum; *maser* = Egypt) (the name *maser* is also used to designate the white cotton used for garments

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

by many Tuareg, who say that they have not always known this white cotton, though indigo cotton 243
has been introduced from the Sudan since very remote times). Maize has a normal period of growth 286
of about three months, and two – in certain places perhaps even three – yields are taken in the hot seasons.

In addition to the above-mentioned cereals there are various kinds of vegetables grown in the Ayr 241
gardens. Tomatoes (*tomatem*; *Solanum lycopersicum*) are grown at most seasons with the exception of the dry and very hot summer period (*ówilen*). Also common in the Ayr gardens is the sweet potato (*dankale*; *Ipomoea Batatas*), which is sown at the beginning of the rains and harvested in winter. The true potato (*batata*; *Solanum tuberosum*) has been introduced more recently, and is grown mainly to [439]
be sold to European households in Agadez. It is grown in Eastern Ayr (Tabello). Melons (*Cucumis melo*) and water melons (*Colocynthis citrullus*) are grown all over Ayr and there are different vegetables such as onions (*Allium cepa & A. sativum*), which are harvested at most seasons. Two plants are grown 241
mainly because they are important as admixtures to porridge sauce. One is called *ékabewwa* (*Corchorus* 252
*olitorius*); it has maize-like seeds which are pounded in a mortar for sauce-making. The other plant is known as *malokhiya* (*Corchorus tridens*); its leaves are dried and pounded for sauce (cf. p. 243). The latter plant also grows wild outside the gardens. There are in Ayr also certain spice-plants, e.g., *Capsicum annuum & C. frutescens*. To all these cultivated plants can be added certain fruit trees, such as 245
the date palm (*talesdar*; *Phoenix dactylifera*), the fig tree (*tahart*; *Ficus carica*) grown in the mountains, and the lemon tree (*lemon*; *Citrus aurantifolia*) which is grown in Southern Ayr; it yields very small fruit which remains green even when ripe. It should finally be mentioned that the cotton plant (*ebihga*; 248
*Gossypium hirsutum*) is also grown in some gardens of Southern Ayr. According to Miré and Gillet it was introduced into Ayr by the Hausa, but the plant has also been introduced further north in the Sahara in Tawat (Miré & Gillet 1956, p. 244). As stated by Rodd, the cotton plant is rare in Ayr and has perhaps been recently introduced into this region (Rodd 1926a, p. 132). There are many other 241
cultivated plants in Ayr, but the above mentioned constitute the most important species.

In Ayr, as in the north, irrigated cereals form the basis of agriculture. Irrigation is carried out by means of a system introduced from the north, and the agricultural techniques largely resemble those of that section of the Sahara inhabited by Northern Tuareg, though there are certain differences. A new garden in Ayr is prepared by cutting and burning away the wild vegetation of trees, bushes, herbs, and grasses. By crop rotation (wheat and barley in winter; maize, millet, and sorghum in summer) [242]
it is possible to cultivate the same garden plot for a few years in succession – up to six or seven years, it is said. After this time it becomes necessary to make a new garden, or to manure the old garden plot with camel and cow dung whilst manure (*taki*) from other animals or from human beings is said not to be used, as it would cause the crops to become inedible. A well-manured garden plot can be cultivated continuously for about fifteen years. But fertilizing is not practised by all agriculturists, and to my knowledge they do not carry fresh soil to the garden plots as is the case with the agriculturists of Ahaggar. Agriculture in Ayr therefore frequently resembles shifting cultivation, though plots are [311]
irrigated, and deserted garden land is frequently seen in the valleys where agriculture is practised.

7:Nicolaisen E-5 (1951-1962) 1963 .MS25 Tuareg MS25

## AGRICULTURAL IMPLEMENTS AND THE PRESERVATION OF CROPS

241 412 The hoe forms the basic agricultural implement in Ahaggar and in Ayr. The type of hoe used in Ahaggar is known as *agelhim*, and it is akin to that in general use among irrigation farmers of the northern oases. It has a very large and heavy iron head provided with a ring for the shaft. I believe that this type of hoe is particularly fitted for irrigation work, but it does not seem to be in general use in Ayr. I have seen it at Iferwan in Northern Ayr where agriculturists have much contact with Tasilé-n-Ajjer, but I have not seen it further south in the Massif where it seems to be unknown. The common type of hoe in Ayr is different; it is named *tagumit* and is hafted by means of a tongue (Fig. [171] 143d). The same type of hoe is widely distributed in Africa south of the Sahara, and it is perhaps to be considered the oldest type of iron hoe within the continent (cf. Feilberg 1934, p. 228–278).

241 The hoe is used for agricultural work in general, for digging irrigation canals, making garden beds, and for the preparation of the soil. The hoe is not used for sowing cereals. Sowing in Ayr is known as *anabal* and is performed in the following way:— As many seeds as can be kept between the first and second fingers are pressed a little into the soil, and water is led into the garden beds immediately after sowing. I have myself never watched sowing, but I was told in Ayr that it was frequently done by old women. I think that this is probably connected with the belief in the mystic power known as [278] [841] *elbaraka* so characteristic of all North African peoples. For cereals contain this mystic power, which can be spoiled by unclean women. It is considered harmful to the *elbaraka* blessing if cereals are handled by menstruating women (cf. Westermarck 1926, I, p. 230). The hoe is used for weeding, 241 412 but the agriculturists of Ayr also have a special implement for this particular task. This is known as *elgechwad* and consists of a curved semi-circular iron blade hafted to a short wooden handle by means of a tongue (Fig. 143e). The semi-circular blade is sharpened at its outer and convex side which is pushed against the roots of weeds.

243 [412] Various methods are used for the harvesting of crops. In Ahaggar and in Tasilé-n-Ajjer wheat and barley are always harvested by means of a sickle (*amreh*) (Fig. 143a–b). The sickle in Ayr is known as *elgechwad*, like the weeding implement mentioned above. It is not used for harvesting crops, but for the cutting of annual grasses to be stored for fodder (Fig. 143f). In Ayr both wheat and barley are 245 harvested by drawing the straws from the ground with the hands. In Ahaggar and Tasilé-n-Ajjer sickles are also used for harvesting dates, while the date-growing agriculturists of Ayr use another method. They do not cut the bunches, but proceed in the following way:— When dates begin to ripen they enclose every bunch in a plaited pouch to protect the fruit from the ravens and other birds. The dates are harvested one by one when they are ripe, while those not yet fully ripe are left to be harvested later. Harvest is done in this manner about once a week until all dates have become ripe. Maize in Ayr 243 is harvested by drawing the plant from the ground with the hand, and this work is normally facilitated by loosening the soil around the roots by means of the hoe. I do not know how maize is harvested in Ahaggar, where this plant is not so widely grown as in Ayr. Everywhere among agricultural people of Ahaggar and Ayr millet and sorghum are cut with a knife (Ahaggar, *ehnusi*; Ayr, *ezegiz*) (Figs. 171–172)

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

243

They are known as *amrek*, pl. *imrehen*.
a. From Tamanrasset. Total length, 0.271 m. (N.M. G. 5256).
b. From Abalessa. Total length, 0.365 m. (N.M. G. 5828).
c–f. Agricultural implements from Ayr.
c. The short threshing stick (*aburi*). From Iferwan. Dimension: 0.49 m. (N.M. G. 6618).
d. The hoe (*tagumit*) hafted by means of a tongue. From *Kel Ewey* Tuareg near Agadez. Dimension: 0.70 m. (N.M. G. 6615).
e. The semi-circular weeding implement (*elgechwad*). From Iferwan. Dimension: 0.295 m. (N.M. G. 6617).
f. The sickle (*elgechwad*) which is used for cutting annual grasses. From Agadez. Dimension: 0.305 m. (N.M. G. 6613).

241 It seems as if millet and sorghum are always harvested by women, while dates are harvested only by
462 men. Other crops are harvested by persons of both sexes.

243 Threshing methods are the same in Ahaggar and Ayr. Wheat and barley, which are sheaved and dried before threshing, are beaten with a stick (Ahaggar, *aburi*; Ayr, *aburi* or *asedbak*). This threshing stick is an unfashioned bough of trees or date palms, but a short and club-like implement is also frequently used in Ayr (Fig. 143c). Threshing of millet, sorghum, and maize is done by pounding in a

243
415

Fig. 144. *Kel Ewey* woman winnowing grain by shaking it in a plaited bowl. Ayr. Iferwan.

243 large mortar. Winnowing of cereals is performed by shaking the seeds in a plaited bowl or tray to let
[415] husks and other impurities be removed by the wind (Fig. 144).

251 The Northern Tuareg use the following means for storing of crops:— (1) *taddat*, that is a skin bag
343 containing grain, dates, and the like, hidden under stones and rocks in the mountains; (2) *égend*, or *anu*, an underground storeroom lined with mats. It is used for cereals, including wild seeds, and is found both among agriculturists and pastoralists (Fig. 146); (3) *tarassana*, a grain silo built from stones and mud (Fig. 145). Nowadays such storerooms are not only used by agriculturists but also by pastoralists. However, this type of storeroom is said to have been introduced to Ahaggar with the introduction of irrigation agriculture about a hundred years ago, and was originally unknown to pastoral Tuareg.

[136] Among the *Kel Ferwan* Tuareg all storerooms for cereals are known as *tédengewt*. The storing of vegetable food products in skin bags covered with stones or hidden under rocks is apparently unknown – perhaps because of the numerous small rodents and the rich insect life which includes numerous white ants. Underground storerooms like those of Ahaggar are used by agriculturists and pastoral Tuareg alike. They are frequently excavated so deeply that they can hide a grown man standing in

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

them. They are lined and covered with mats as in Ahaggar, and though they may be used for the 251
storage of wild seeds they are mainly used for grown cereals and are generally found in or close to 343
gardens. Grain silos built of stones and mud – the *tarassana* type of Ahaggar – are said to occur among the *Kel Ewey* but I have never seen such storerooms in their villages, nor have I met the typical African storeroom built of straw and resting upon poles until south of the Massif in Damergu where they are used by shifting cultivators. Large earthenware containers shaped like cooking pots are used [415]
to store vegetable products (cereals) in certain villages, particularly at Ifetwan. Pastoral Tuareg of Ayr have the underground storerooms for the preservation of surplus grain and other vegetable products. Cereals to be consumed in the camps (notably millet) are kept in large skin-bags resting [415]
upon poles that they may not be damaged by white ants. The Ahaggar Tuareg also preserve cereals in their tents in skin-bags.

Irrigation agriculture is a strenuous task, but it is less influenced by climatic conditions than all 241
other occupations practised in the Sahara. The farmers are not exposed to the same disasters of drought [461]
periods as are pastoral Tuareg in the north, though it is said that rain is a direct blessing also to irrigated crops. But cultivated plants are exposed to certain dangers, e.g., locusts, and crops do not always thrive as they should. Bad luck in agricultural activities may in the opinion of the farmers be due to [272]
some mystical power or other. It may arise from incorrect treatment of cereals and dates so that they [278]
lose their *elbaraka*. Menstruating women, as mentioned above, are dangerous to vegetable food, and [841]
this is also true of the fire, for which reason one should never throw date kernels into the flames. The farmers also fear that their crops may suffer damage from the attack of the *Kel Asuf* spirits, and partic- [754]
ularly from the attack of the malignant force attached to the "evil eye" or the "evil mouth". To protect their crops the farmers frequently use amulets such as broken pots and skulls of domestic animals [237]
(notably of donkeys), which are considered an effective means against the "evil eye" and the "evil mouth" (cf. Nicolaisen 1961, p. 133 f., 160).

# Caravan Trading

Caravan trading of the Sahara has suffered severely from the European colonisation of Northern 178
Africa. The establishment of ports and railways in the Sudanese area and the abolition of the slave- 437
trade have brought to an end the large caravans passing through the desert. In recent times another 484
heavy blow has been struck against the caravans, for transportation is more and more taken over
by trucks which can easily pass through the open desert country. Many pastoralists of Northern [433]
Africa suffer from the decline of their trade, which for centuries has been an important stabilizing
factor for their subsistence. The decline of caravan trading is also strongly felt in the oases, which [366]
have played a very important part as trading posts or trading stations. Some of these oases have far [161]
fewer inhabitants nowadays than in the past, and it is most difficult for many sedentary people of the
oases to exist. The decline of the trade has been felt also among the pastoral Tuareg. But caravan
trading is still important to most of them, and many of them could not support life without it. To
understand the important role of caravan trading we have once more to return to the economic values
of subsistence activities.

## CARAVAN TRADING OF THE AHAGGAR TUAREG

The Ahaggar Tuareg cannot live exclusively on stock-breeding products all the year round – not even 433
in good years when annual pasture is well developed in autumn and early winter. Even in a good 262
year the nomads mainly eat vegetable food throughout the hot season, and some bread or porridge
is also consumed during the period of abundant milk yields. It is true that nomads can subsist entirely
on milk for long periods, and that some people do so for weeks or even months. Galan says that
pastoralists of of Ahaggar, when they live entirely on milk, can do with four litres a day per person
(Galan 1951, p. 231). But it is estimated by the Ayr Tuareg that they need about eight or ten litres a
day to live entirely on milk, and they all claim that they get weary from constant milk drinking. They [261]
say that though they do not feel hungry when they live exclusively on milk they experience a peculiar,
unpleasant feeling in the stomach. The relative importance of stock-breeding products (mainly milk)
and vegetable food (mainly wheat, millet, and dates) may be seen from the diagram Fig. 151.[1] In a
good year there is normally some possibility of collecting wild seeds for bread and porridge, but the
Tuareg claim that they cannot easily cover their need of vegetable products even in a year when milk
is abundant. And milk is not always abundant. We can estimate that for two or three good years 433

[p. 209]

[1] [cf. p. 216]

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

there will be one entirely dry year throughout, during which stock-breeding products have little or no value as food, and in such years of dry pasture there will also be very few wild plants to collect. Hunting, which plays little part for most Tuareg nowadays, is also of little value in an entirely dry year when many game animals die or migrate to other regions with more favourable pasture. It would seem obvious for pastoral Tuareg to do the same and to take their animals to grazing grounds outside of Ahaggar – particularly to the southern plains where pasture is normally better than in their own country. We have seen that most Ahaggar Tuareg in bad years have their she-camels far from Ahaggar in the Tamesna plains or in the country north of Adrar-n-Foras. We have also mentioned that, under very severe conditions, camps of Ahaggar and Ahnet may move to these southern regions with their flocks, though extensive goat-migrations are not always profitable. But most Tuareg remain in Ahaggar even in very dry years with their camps and flocks. Some of the animals will die, and none of them can be mated so that the flocks may rapidly decrease. During such years of drought the Ahaggar Tuareg live so to speak exclusively on agricultural food products of which they get only a part from their gardens grown by sedentary agriculturists (the *Harratin*, or *Izzegaren*). It is mainly through caravan trading that the Ahaggar Tuareg acquire their vegetable food products. Their two important trading expeditions to the Tidikelt oases and to the Sudan are carried out anually for the main purpose of acquiring dates and millet.

Trading with the Tidikelt oases (Awlef and In Salah) is based mainly upon a surplus of goats, camels, butter and cheese, and on dried meat. But many Tuareg who obtain large amounts of millet from the Sudanese trading expedition also sell part of their wheat grown in their own gardens in Ahaggar, and Sudanese articles bought during their south-bound trading expedition. In a dry year some Tuareg may choose not to visit the Tidikelt area as they have too small a surplus for trading. The south-bound caravans, on the other hand, are rarely prevented from going as their main trading object is rock-salt of an excellent quality mined at Amadror north-east of the Ahaggar Massif. Both north-bound and south-bound caravans will set off in autumn when the hottest season has come to an end, that is at the end of September or at the beginning of October.

The caravan route from Tamanraset in Ahaggar to In Salah in Tidikelt is about 750 kilometres, and the route is rather difficult because pasture is normally lacking for three to four days of the journey. Most Tuareg who cross this part of the desert therefore bring with them large supplies of the dried *tullult*-grass (*Aristida pungens*), which also serves as fodder for the pack-camels during the stay in the oases around which there is little pasture. The journey takes about twenty days in each direction, and the north-bound caravans return to Ahaggar again already in December or in January. The traders return with their camels loaded with dates of which a part may be re-sold in Ahaggar (Tamanraset), but they also buy European cotton and other European articles, which are cheaper in the north, and woollen blankets woven by sedentary people of the northern oases.

The south-bound caravans are very extensive. The towns visited in the south are Agadez, Tanut, and Zinder. The distance from Tamanraset to Zinder is, as the crow flies, about 1200 kilometres, while the distance from Tamanraset to Amadror, where salt is mined, is about 300 kilometres. In total the caravan journey from Ahaggar to Zinder and back again for many Tuareg amounts to more than 3000 kilometres. The south-bound caravans are organized as follows:— Slaves take the

252
443

Fig. 149. The market place of Agadez. In the front negroid Hausa men roasting small pieces of meat on a spit; in the background Tuareg camels offered for sale.

484 pack-camels to the salt pit of Amadror to mine salt in the hot season. They load the camels with salt
487 and bring them to the camp where further preparations for the journey are made. When the caravans
[317] have started southwards they stop in the Tamesna plains and rest there for at least one month to allow
the pack-camels to feed on annual pasture, and, if necessary, to exchange the pack-camels with others
[437] kept by the Ahaggar Tuareg in Tamesna. Thereupon the caravan will continue towards the millet-
growing towns and villages of the Sudan to bargain with the Hausa. The caravan returns to Ahaggar
[22] again at the end of March or at the beginning of April, so that the total duration of a south-bound caravan is up to six or seven months.

438 The Sudanese millet trade is of extreme value to the subsistence of the Ahaggar Tuareg. It is partic-
439 ularly important to their economy that they obtain millet for non-nomadic products transported by camels, which are mainly bred outside of Ahaggar. The millet trade is consequently not much influenced by Ahaggar's changeable climate. According to official statistics, the Ahaggar caravans in 1946 exported 375 tons salt, and imported 720 tons millet, while the cereals grown in Ahaggar amounted to 197 tons (cf. Malaurie 1953, p. 344). According to Galan vegetable food grown in the gardens of Ahaggar in 1950 (a bad year) amounted to 121 tons wheat, 5 tons millet and barley, and 4 tons of tomatoes – about 10 kg of wheat and 0.5 kg of millet, barley, and tomatoes per person (Galan 1951,
[466] p. 233). We see from this that the amount of cereals acquired in the Sudan far exceeds the amount grown in Ahaggar, and as we have mentioned, the millet trade is also important for the establishment of Tuareg agriculture in their own country where this cereal is used for payments to cultivators. It can also be added that the Sudanese caravan trade is more important to the Tuareg than appears from
[435] the figures above. For salt is much more valuable than millet, and for one load of salt the Tuareg receive from four to fifteen loads of millet – in 1946 the price was fifteen to one (cf. Malaurie 1953, p. 344). It is evident that the Tuareg could not take all this millet back to Ahaggar. Most of it is re-sold

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

433 in the Sudan for such articles as camel saddles, sandals, swords, millet mortars, indigo cotton, earthen-
439 ware pots, and the like. The Tuareg may also buy quantities of butter and cheese for sale to the sedentary people of Tidikelt and for their own use in dry years.

The Sudanese trade constitutes the great stabilizing factor in the economy of pastoral Tuareg of
[262] Ahaggar. In return for the valuable rock-salt, pastoral Tuareg obtain the bulk of their agricultural food products (millet), butter and cheese for their own consumption in dry years, many important artefacts and notably their camel saddles and their millet mortars. They also get a surplus of millet and goods for investment in their Ahaggar gardens and for selling to the sedentary people of the Tidikelt oases.

There are certain Tuareg who do not engage in the Sudanese salt trade, notably those living in Ahnet; and these Tuareg nowadays have no irrigated gardens either. They acquire their necessary vegetable food products from Tidikelt (dates) and from Abalessa and Tamanraset (wheat). They buy these vegetable products with their surplus of goats, sheep, camels, butter and cheese, and an occasional
[511] barbary sheep. In a good year they can meet their needs of food in this way, but it is most difficult for them to subsist in dry years; and it may happen that two dry years come in succession. When I
[114] stayed among the Ahnet Tuareg in 1954–55, all camps visited were very short of food, while the Tuareg of the Ahaggar Massif who engage much in the salt trade (the *Dag Rali* and the *Aguh-en-tehlé*) possessed what they needed of wheat, barley, dates, and millet.

[366] To-day there is a rather important market at Tamanraset where many Tuareg sell surplus livestock, and where they can also buy cereals and dates. But it is always profitable to sell livestock and meat
[435] in the Tidikelt oases where meat, butter and cheese are very expensive articles. Dates are cheap in these
000 oases, European goods and woven blankets are also cheaper than at Tamanraset. The trading expedi-

804
322
177

Fig. 150. Wooden measure (*muda*) which contains one kilo of cereals, or the like. The Tuareg have adopted the kilogramme into their own weight system. The proper Tuareg unit is the *taṣiwa* which, according to Foucauld, corresponds to three kilogrammes (Foucauld 1951–52, III, p. 1160), but nowadays the Ahaggar Tuareg count one *taṣiwa* as equal to two kilogrammes and a half. The Tuareg have wooden or metal measures of *taṣiwa* size, and there are also larger measures to be used for grain, dates, and the like. For units smaller than *muda* the Tuareg sometimes use a wooden measure called *tanaḳast* which holds half a kilogramme. Smaller quantities are measured with the hand held half open, and it is recognized in Ahaggar that one *taṣiwa* corresponds to 99 handfuls. In Ayr it is very common to use a little plaited bowl (*iéfakemt*) as the smallest unit of measurement. Dimension: 0.140 m high, 0.125 m in diameter at the rim. (F.M. 168).

7:Nicolaisen E 5 (1951-1962) 1963 MS25 Tuareg MS25

The trading expedi- 437
tions have remained important to the Ahaggar Tuareg, and it is clear that they would not go on trading 484
were these expeditions not profitable, for trading expeditions are extremely strenuous. Though the 461
expeditions set off when the extreme heat is decreasing, it is still very hot in the extensive barren plains in autumn and in winter during daytime. Water and pasture are often extremely scarce in this deserted country, and the Tuareg frequently have to travel rapidly. For days or weeks they live so to say on their camels, and if camels are not too heavily loaded they may do up to 16 hours a day for several days in succession. Under such journeys the Tuareg eat only once a day. Obviously such trading [262] expeditions are also very hard on the pack-camels, and there is always a risk of loosing a camel during such journeys through barren, desert country.

In this brief outline of caravan trading I have not considered those Ahaggar Tuareg living constantly 433
in the Tamesna plains and adjacent regions. These Tuareg own more livestock than the Tuareg of the 184
Ahaggar Massif, and I do not believe that they engage so much in extensive trading expeditions. [133]
They are comparatively rich in she-camels which are tolerably good milk yielders in these regions [262]
most of the year, and milk is more important as food than it is in Ahaggar. I believe that most Ahaggar [438]
Tuareg of the Tamesna region acquire their necessary vegetable products by selling surplus livestock [261]
butter and cheese at the markets of Ingal and Agadez.

## CARAVAN TRADING OF THE AYR TUAREG

Among the Ayr Tuareg stock-breeding products are far more important for food than in the north. 433
Grazing conditions are better with annual pasture as a recurrent event, and the Tuareg keep bigger 262
flocks of goats and sheep, larger camel herds, and most have a few zebus which are guarded without much difficulty. The *Kel Ferwan* Tuareg of Southern Ayr can live on milk for a large part of the year, though they, like those of Ahaggar, become tired of milk drinking if they get no solid food. There are Tuareg of Southern Ayr who live exclusively on milk for two or three months during the periods of *okasa* and *rarat* and to whom milk is important as food for at least six months. In the extremely hot season of *ewilen* when milk is very scarce most Tuareg eat millet porridge with a little milk or sauce (cf. p. 242 f.), and Tuareg who are not very wealthy eat millet porridge to a great extent all the year round, so that the necessary amount of millet for many camps is about 0.5 kilo a day per person, or about 180 kilos a year. In Ayr there are fairly good possibilities of collecting if there are not too many [222] locusts, but most Tuareg do not collect a great quantity of wild seeds, and claim that they would be very badly off without millet, as seeds of wild plants are not very nourishing in comparison. In one [261] year during the second world war (in 1943) they say that millet was very hard to get; it was then very difficult to subsist and a great many animals had to be killed for food. Millet is almost indispensable to the Tuareg; they also consume other vegetables derived from agriculture, notably wheat, maize, and dates, but millet is the most essential non-nomadic food product. Normally it can be acquired by most Ayr Tuareg without much difficulty.

The people of Ayr obtain their provisions of millet from the Sudanese area of shifting cultivation 439
notably from Damergu (Tanut). Millet can also be bought at Agadez whereto it is brought by Tuareg 437

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

439 caravans of the south or by Ayr Tuareg who import more millet than they need for their own use.
437 But millet is cheaper in Damergu than at the Agadez market, and most Tuareg prefer to organize
[435] their own millet caravans with camels and donkeys as pack-animals. In Damergu most Ayr Tuareg
[492] get millet in exchange for livestock or they buy it for money. Their caravans are not always very large,
[476] for the Southern Ayr Tuareg of the *Kel Ferwan* group do not organize their caravans co-operatively
[484] on the basis of kinship. Many individual households fetch their own millet with a few animals, and it
[592] is comparatively easy to do so as the millet growing country of Damergu is not very far away – the distance from Agadez to Tanut is only about 300 kilometres. The Ayr Tuareg do not have to engage in extensive trading expeditions to procure millet, and can buy millet very cheaply. A household, it
437 is said, does not have to sell a great many animals to secure the necessary supply of millet. Three or
439 four camel loads will cover the needs of most households, and this amount of millet can be acquired
435 for comparatively few animals – particularly if the animals vended are sheep, which have become
592 very expensive in recent times owing to the rapid increase of Europeans at Agadez. An extremely good
162 sheep or ram for slaughtering can bring in 2000 to 3000 West African francs, and a Tuareg household which buys millet in Damergu will need less than 10,000 francs to acquire the quantity necessary for a year. Thus the Ayr Tuareg can obtain their millet for a few sheep, and there are very few, if any, who do not posses this surplus, and it should be repeated that the increment of livestock is never stopped by drought periods as in the north. The extremely high price for sheep for butchering is a recent phenomena due to the increase of the French population. Fully-grown sheep or rams are expensive, and this is also the case with fowls, while goats are cheap. I believe we can estimate that a household would have to sell about 15 goats anually to obtain the amount of millet necessary for one year's consumption. However, there is little doubt that it has always been quite easy for the Tuareg of Southern Ayr to obtain the requisite amount of millet in exchange for livestock.

262 Millet and milk constitute the basic nourishment of the Ayr Tuareg, but they are very fond of an
[222] occasional change of food. And I believe that this is one important reason why the Ayr Tuareg, like those of Ahaggar, collect wild seeds even in years when grown cereals are abundant. For a change, the Ayr Tuareg are also extremely fond of dates which are not grown to any great extent in their own country. A few Ayr Tuareg own palms yielding dates of poor quality, and I think that a few house-
[439] holds also obtain some dates from Ingal. However, most dates eaten in Ayr are imported from the oasis of Bilma, situated in the very barren desert country between Ayr and Tibesti, about 700 kilometres north-east of Agadez.

437 The trade with Bilma is apparently an ancient one, and its foundation is salt which is of a very bad
439 quality compared with that mined at Amadror in the north. The rock-salt of Amadror is excellent
[317] for food, and though there is one good quality of Bilma salt that is used for food by the Tuareg of
[263] Ayr, most salt from Bilma contains much soil and other impurities. This impure salt is excellent for
[233] domestic animals which, in Ayr and further south where salt pastures do not exist, need a lot of salt. The Ayr Tuareg, and particularly those who do not visit the country of Azaouar at the end of the rains, need salt not only for their own food but also for their domestic animals. They obtain this from Bilma, which is visited by caravans in autumn or in the early winter. The inhabitants of Bilma, like other oases-dwellers, are in constant need of cereals and meat, and these products are imported

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

by the Tuareg of Ayr, the *Kel Geres*, and other Tuareg. The Tuareg obtain salt generally in exchange for millet, but they also bring with them dried meat, and meat from animals newly slaughtered; and although this meat is largely rotten when it arrives at Bilma it is easily sold to the oases dwellers who are yearning for meat. The oases dwellers have little to subsist upon but dates of which they have a surplus. This is purchased by the Tuareg, who get two loads of dates for one load of millet. The Bilma trade is less important nowadays than it was at the beginning of the century. In 1922 the Bilma caravans comprised about 7000 camels (Buchanan 1926, p. 83), while in 1908, when the trade was already decreasing, caravans numbered about 20,000 camels (Abadie 1927, p. 292). Caravans still go to Bilma to fetch salt and dates, but the salt trade is not so profitable to-day when Bilma salt can be bought fairly cheaply at Agadez, as the trucks bringing provisions from Agadez to the French administration and to the merchants of Bilma, take salt back with them when they return. The Ayr Tuareg do not organize their trading expeditions within family groups or sections as in Ahaggar. A Tuareg who does not want himself to go to Bilma may let a kinsman or a friend trade for him with his camels. The payment for this is a large loaf of salt which constitute one sixth or one seventh of a camel load.

The Ayr Tuareg do not generally obtain salt from the pits of Tegidda-n-tésemt though this place is not very far from the Massif to the west. They say that the Tegidda salt is not as good as Bilma's. The salt of Tegidda-n-tésemt is purchased mainly by the *Iwillemmoden Kel Dennek* when visiting the regions around Ingal after the rains. Some of the *Kel Ayr* who live in the extreme north (the *Kel Tédalé*, and others) occasionally go to Amadṛor in the north to fetch salt which is taken down to the Sudanese towns and villages. In years when drought prevails in Ahaggar these Tuareg take their surplus of livestock to the market at Tamanṛaset, for in dry years the provision of meat, butter, and cheese consumed in Ahaggar come mainly from Ayr and adjacent regions. When I stayed in Ahaggar in 1954–55 a great many Tuareg of the *Kel Tédalé* came to Tamanṛaset to sell camels, donkeys, sheep, goats, and zebus, and also brought with them large quantities of cow's butter and cheese. The route followed from Northern Ayr to Ahaggar runs via I-n-aẓawa and I-n-abeggi which are the only wells between the two mountain massifs. Water is very scarce and so is pasture, which is mainly limited to a scattered vegetation of annual plants; over very large areas there is no vegetation at all. It is easy to drive camels and donkeys through these regions, while more difficult for sheep, goats, and cattle. The zebus easily get cut hooves from walking on stony ground, while sheep and goats suffer much from thirst. In spite of this, all kinds of livestock can be driven through the barren desert from Ayr to Ahaggar, even as late as the month of March which is extremely hot in the barren desert country. The Tuareg frequently lose animals which die from thirst and hunger during the journey, but the trade is nevertheless extremely profitable as prices of livestock are high in Ahaggar in dry years, while prices of European goods such as tea, sugar, cotton, metal vessels, and the like are extremely low compared with the prices asked for these goods in Ayr.

The Ayr Tuareg, though owning more livestock than the Tuareg of Ahaggar, have a certain demand of agricultural food products. These products are mainly grown outside of the Massif, for the farmers of Ayr grow little millet, very few dates, and part of the wheat grown in Ayr is exported to the oases of Ganet and Ṛat in the north. Though these vegetable products can be purchased at Agadez, it is profitable to fetch them where they are cheap, namely in the Sudan (millet) and in Bilma (dates). And

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

Fig. 151. The relative importance throughout the year of food derived from stock-breeding and vegetable products mainly comprising agricultural products. The curves describe conditions in good years for wealthy families. However, milk (and meat) is less important to most Ayr families than indicated in the diagram which covers a household making use of the particular type of annual pasture which remains green throughout winter, notably *alwat* (*Schouwia purpurea ssp. Schimperi*) *adreyial* (*Astragalus Vogelii*), and *tegellet* (*Colocynthis vulgaris*). – This diagram should be compared with Fig. 14 where climatic and botanical changes throughout the year are outlined.

[511]
[824]

433 it is remunerative to buy an extra supply of millet in Damergu and to exchange it for dates and salt
439 at Bilma. Caravan trading is a source of profit to the Ayr Tuareg, but most of them ultimately acquire their agricultural food products in exchange for stock and stock-breeding products. Very few of them mine salt at Amadror, and most of them obtain salt in return for millet bought for domestic animals in Damergu, or for meat of domestic animals butchered in Ayr. The Tuareg cannot easily subsist without agricultural products but they can obtain them in exchange for their livestock.

233 We see again that conditions of stock-breeding are very favourable in Ayr in comparison with those
166 of Ahaggar and in Tasilé-n-Ajjer, where frequent drought periods make it difficult for the Tuareg to
[184] exist. It is easily understandable that the favourable grazing conditions of Ayr have caused many Tuareg of the north to migrate southwards. These migrations take place even to-day and have gone
433 on for centuries (cf. p. 411 ff.). However, even in Ayr it is most difficult to subsist without cultivated
262 cereals (millet), and we must do away with the myth that pastoralists of North Africa live entirely on milk and meat from their animals – they do not. This is true for all Tuareg I have visited, including

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

those of Tasilé-n-Ajjer and the *Kel Geres*. I have been informed by *Iwllemmeden* Tuareg of the *Kel Dennek* group, whom I met in Ayr, that they live on millet to much the same extent as the Ayr Tuareg, and that some of them have gardens cultivated by negroid agriculturists. For the *Kel Dennek* it is expressively stated by Nicolas that they cannot live on milk, that they kill comparatively few of their animals, and that they largely live on cereals obtained not only by collecting. Some of the Tuareg mentioned by Nicolas are described as semi-nomads (Nicolas 1950a, p. 145 ff.). Among the Southern Tuareg living further west in the Sudanese savannahs (the *Iwllemmeden Kel Ataram*), agricultural products are very important to the pastoralists who may possess gardens along the banks of the Niger, these gardens being cultivated by the *Bélla* (Aymard 1911, p. 117; Miner 1953, p. 60 ff.). 433 262

Nowadays there are no Tuareg who subsist without agricultural products, a few of them (the *Kel Ajjer*) practise a primitive type of agriculture in the river valleys, and within all groups there seem to be Tuareg who have turned to irrigation farming as their most important occupation. In the following section I discuss briefly the subject of Tuareg economy in the past. [178]

## TUAREG ECONOMY IN THE PAST

Tuareg culture was not profoundly altered by the advent of European military administration around the beginning of the present century. Their traditional material culture has persisted largely unchanged up to the present day. The major change has been the abolition of warfare and consequently the breakdown of the traditional political system, but the abolition of warfare also led to important changes in the organization of caravan trading. 178 648

Raiding expeditions were carried out in some Tuareg groups even after the arrival of the Europeans, who established small garrisons in the oases and had camel patrols roaming the country as they have nowadays. Buchanan thus describes a raid carried out by Ahaggar Tuareg against the Ayr village of Timia in the year 1920 (Buchanan 1921, p. 207 ff.), and raids have not been entirely unknown in Ayr even later, though the raiders have then been severely handicapped by the establishment of the French wireless stations which enabled the camel patrols of different areas to communicate with each other (Rodd 1926a, p. 188). Raiding have nowadays stopped, but before the European penetration and conquest it was so to speak an industry to be mentioned with other subsistence activities. 175 721 648

The Ahaggar Tuareg were known as prominent raiders and warriors in the past. The two dominent chiefdoms within the group of Ahaggar Tuareg, the *Kel Ṛela* and the *Taytoḳ*, frequently raided the *Iwllemmeden* Tuareg and the Arabs living north of Timbuktu, as these southern pastoralists were very rich in livestock and in slaves. Some of these Tuareg and Arabs even paid fixed dues to chiefs of the *Kel Ṛela* and the *Taytoḳ* in order that they should not be raided by Tuareg of these groups. However, these annual payments did not safeguard against raiding (cf. p. 401 f.). It seems as if the south-bound raiding expeditions were mainly profitable to the Ahaggar Tuareg, who could not so easily be raided in return by the Southern Tuareg. The Ahaggar Tuareg also raided other neighbouring pastoralists such as the Tuareg of Tasilé-n-Ajjer, and the powerful Arab tribe *Ulad Ba Ḥammu* with whom they had frequent and very serious quarrels; these people raided the Ahaggar Tuareg in return. It can be 175 721

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

175 added that wars were not confirmed to fighting between these large political groups, for there was
721 also fighting within these groups at intervals.

[648] The Ayr Tuareg had as their main enemies the Tebu, the Eastern *Iwillemmeden* and the Arab pastor-
[578] alists of the Tawa district. In Ayr there were also sharp disputes between various drum-groups of the Ayr federation, notably between the *Kel Ferwan* and the *Kel Faday*. The *Kel Faday* Tuareg frequently joined forces with the *Kel Dennek* in fighting the *Kel Ferwan*.

[437] Throughout the 19th century there was a risk of severe trouble everywhere in the Sahara with adjacent regions, but caravan trading was most important to Tuareg subsistence at that period in spite of these latent conditions of hostility.

175 Great caravans then crossed the desert carrying gold, ivory, ostrich feathers, and slaves from the
437 Sudan to the Mediterranean, and south-bound caravans traded with salt and Arab and European goods. The Tuareg had their important part in these large trading expeditions, and they traded with their surplus of livestock and stock-breeding products much in the same way as they do nowadays. They acquired dates and millet from the sedentary farmers who were in constant need of meat, butter, cheese, and the like.

175 The organization of caravan trading among the Ahaggar Tuareg was different in the past. To-day
437 the normal trading units are tribal sections, and this was probably also true in pre-European times,
484 but these trading units did not travel independently as they do nowadays. Several tribes of the same drum-group travelled together under the leadership of a noble Tuareg of the dominant tribe of their chiefdom. When the Ahaggar Tuareg had no severe disputes with the *Ulad Ba Hammu* who dominated the Tidikelt oases, they traded with their population of sedentary farmers much as they do nowadays.
[439] They brought livestock, butter, dried meat, and Sudanese goods which were bartered for dates and Arab goods. The Ahaggar Tuareg also traded southwards, but they say that they did not go further south than Agadez, as it was considered dangerous to penetrate too far into the Sudan. They also
[438] say that they did not trade with salt until a few years before the arrival of the French, and that the important trading object before that time were donkeys, of which there was a shortage in Ayr. All
[317] this seems to agree with Duveyrier's statement that the salt deposits of Amadror were not utilized in his time owing to insecurity, though he says that the deposits situated on the caravan road from Wargla to Agadez had formerly been mined (Duveyrier 1864, p. 143 f.). As to the caravan trade of the Ayr Tuareg, I believe that it was very much as it is nowadays, comprising trading expeditions to
[361] the millet-growing Sudan and to the Bilma oasis. It is most possible that the Ayr Tuareg also then
[162] travelled in larger units to protect themselves and their goods, for the *Kel Ferwan* Tuareg say that in the past camps were always bigger than to-day, as a camp consisting only of three to five tents could not defend itself against raiders.

175 It is known that the slave trade was carried on until the arrival of Europeans and in certain parts
567 of the Sahara even later. Both the *Kel Ahaggar* and the *Kel Ayr* claim that they engaged in slave trading
[648] until it was abolished by the French authorities. However, it seems as if the Tuareg never engaged in
[171] this trade to the same extent as the Arabs. This is stated by Bissuel in regard to the Tuareg of Ahaet who bought their slaves from the market of Timbuktu. In general they kept these slaves for their own use, in contrast to the Arabs of Tidikelt who traded with slaves on a very large scale (Bissuel

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

1888, p. 21 f.). Duveyrier says that among the *Kel Aïjer* all noble Tuareg had slaves, while only some of the vassals were slave owners. He says that slaves were bought and sold in towns (Duveyrier 1864, p. 339). Information about the Tuareg slave trade is given by Richardson, who undertook his journeys mainly to collect material on slavery which is described throughout his journals. According to Richardson's descriptions there can be little doubt that the Tuareg engaged in the slave trade, but I think that perhaps his statements are tinged by his deep antiphathy to slavery (cf. Richardson 1848, I–II & 1853, I–II). It is most possible that the Tuareg slave caravans he mentions were organized by Arab merchants of Ṛat and Ṛadames. The former engagement of pastoral Tuareg in the slave trade has also been mentioned by Lyon (Lyon 1821). 175 567 [114]

As to Tuareg caravan trade throughout the 19th century, we can add that all Tuareg tribes did not trade to the same extent. Within most groups there were certain tribes of particular classes which did not go in so much for warfare and raiding, but were keen traders. This was true of tribes of the *Isekkemaren* class in Ahaggar, and in Ahnet there were two Arab tribes allied with the drum-group of *Taytok*, namely the *Sekakna* and the *Mazil* who were responsible for the very important trade with Timbuktu (Bissuel 1888, p. 24). Among the *Kel Aïjer* the *Iforas* tribes traded on a much larger scale than other tribes (Duveyrier 1864, p. 359 ff.). In Ayr the same was true of certain tribes of the *Kel Ewey* group. 175 437 184

However, throughout the 19th century all Tuareg, with the exception of those of the nobility, engaged in caravan trading which played a great part for the pastoralists, providing them with cereals and dates necessary for their subsistence. Already in this century certain pastoralists had taken up irrigation agriculture, and some of them practised a very primitive type of agriculture, but vegetable products were acquired mainly through caravan trading. 175 437 433

This is done in order that food and food-vessels shall not be damaged by the numerous ants. Ayr, the *Imezzureg* tribe. Dimension: 0.44 m in diameter. (N.M. G. 6663).

# Food Preparation

It is natural to open this chapter on food preparation with a description of the use of milk (*akh*) among 234
pastoral Tuareg. The milk which serves as nourishment for the Tuareg derives from goats, sheep, 262
cows, and camels. Milk of all these animals is frequently drunk fresh without any preparation, and this is generally the case with camel's milk, which is not fitted for churning butter or for the manufacture of cheese (cf. p. 63). Milk of goats, sheep, and cows is used for butter and cheese, and is added to various dishes to be described below.

Fresh milk, which is known to the Ahaggar Tuareg as *akh kefayen*, is sometimes heated by means 252
of hot stones (*iḍayen* in Ahaggar; no particular name in Ayr). The stones heated are then put directly into the wooden milking bowl. The Tuareg practise this method mainly in winter as they do not like to drink cold milk, but milk is heated all the year round in this way with milk of animals which have just brought forth kids, lambs, or calves including camel calves. The milk taken from a mother animal until about twenty four hours after the birth of kids, lambs, or calves is known to the Tuareg of Ahaggar and Ayr as *éderes*. It is very rich and when it is heated by means of hot stones it becomes very thick forming almost a kind of cheese which is highly esteemed by the nomads. The milk of sheep and goats is considered *éderes* for two days after the birth of kids and lambs, though this term should properly be applied only to milk taken the first day after birth. The main reason for using hot stones for milk heating is said to be that milk does not get dirty in this way as it does if heated in earthenware pots over the fire (cf. p. 126).

262

Sour milk (*selay* in Ayr) is consumed mainly by the Ayr Tuareg, who conserve it in skin bags and [251]
especially in calabashes, for which reason this sour milk is also known to the Ayr Tuareg as *akh n* [415] *
*ezenu*, that is "calabash milk". The milk is often left about twenty four hours for souring, and it is [252]
then placed in a very cool place in order that it may not turn into junket which is not eaten by the Tuareg.

Both in Ayr and in Ahaggar the Tuareg may add water to fresh milk (cf. p. 126), and the Northern Tuareg also add water to buttermilk (*akh n aǵiwir*). This mixture of water and butter-milk is in high [484]
esteem among the Northern Tuareg, and camel riders frequently carry it with them in a special skin- [415] *
bag, known as *tasufra* (Fig. 155), attached to the riding saddle. Butter-milk cannot be transported in this way if water is not added, for the milk, though already once churned, will become butter during the camel's march. The Ayr Tuareg do not drink butter-milk which is given to domestic animals, but this beverage is so appreciated by the Northern Tuareg that some of them will not drink fresh milk unless butter-milk has been added, a mixture known as *agerengefa*, *akh imsayen*, or *umsey*.

b. Funnel plaited from straw of *taleggit* (*Juncus maritimus*) with the rim reinforced with leather. Made by Tuareg woman. Ahaggar, the *Dag Ḥali* tribe. Dimension: 0.135 m high. (F.M. 243).

234 *4/5 In Ahaggar the method of churning butter is as follows:— Milk of the morning yield is put into a skin bag (*émesesley*) (Figs. 156–157) to remain in this bag until next morning when churning takes place. During the hot season the *émesesley*, filled with milk, is placed in the shade of the tent in daytime, while in winter it is placed in sunshine, or close to the fire. Some milk of the evening yield is sometimes added to the morning milk in the *émesesley*. Before churning the milk thus soured is poured into the proper churning bag (*aḡiwir*, *tanwart*) which is inflated and shaken. Churning bags may vary in size; when there is little milk to be churned a little bag is used and shaking is done holding it in the hands (Fig. 158). When milk is very plentiful, butter is sometimes churned in larger bags (*anwar*), which at one end is attached to a pole, while shaking is done by pulling the other end of the bag with one or both hands. When the milk is shaken in this way it forms small white balls of butter which are removed from the churning bag with a wooden spoon (Fig. 191) when water has been added. This white butter (*udi wa mellen*, or *tesendut*) is occasionally used for food without further preparation, but this is not normal, for newly-churned butter is generally put into an earthen pot (*téṛirt*, or *ufrun*) (Figs. 186, 187a–b) together with parts of an annual plant known as *aymesnis* (*Chlamydophora pubescens*) (Fig. 160) to be heated over the fire. Some Tuareg also add meal of dried dates, or of horns of barbary sheep. After heating, butter (*udi*) assumes a dark yellow colour. It is stored in containers made of camel's hide (*tahattint*, *asaḡen*, *aṛañha*) (Figs. 161–162), or in Sudanese calabashes (*azenu*) (Figs. 163a–b). A particular metal pail (*éṛir*) (Fig. 164) manufactured by native blacksmiths is also used for

butter in Ahagg.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

butter in Ahaggar, and butter reserved for greasing the hair is frequently kept in a large horn (*isek*) of barbary sheep (Fig. 165). 251 415* [302]

The Ayr Tuareg make butter (*wiji*) in much the same way as the Northern Tuareg. For churning they use a skin bag (*anwar*), or a calabash (*azenu*), and they say that they prefer skin bags in winter, and calabashes in the hot season. Butter is heated or boiled immediately after churning, but the Ayr Tuareg do not add parts of plants, date flour, or the like. In Ayr butter is not churned as regularly as in the north. It is used mainly for cooking meat of thin animals, for a sauce which may be used for millet porridge instead of milk (cf. p. 243 f.), and for greasing the hair. Among the Northern Tuareg butter is added to many different dishes and particularly to bread, which is eaten almost daily by many people. In years of drought the Ahaggar Tuareg get their butter from Ayr (cf. p. 212, 215), and the Ayr Tuareg make much butter for export in such circumstances. They churn most butter from cow's 234 [415]* [252] [302] [262] [438]

They churn most butter from cows

234 milk, and this butter is not considered as delicious by the Ahaggar Tuareg as their own butter, churned
[262] mainly from goat's milk. – The use of wooden churning sticks by means of which milk is stirred in
234 an open container is unknown in Ahaggar and Ayr, so far as I know. Churning sticks are used in
412 other Tuareg groups. They are common among the Tuareg of Adṛaṛ-n-Foṛas (Musée d'Ethnogra-
184 phie, Neuchâtel, no. 49.2.44 & Musée de l'homme, Paris, no. 38.16.48) and among the *Iwillemmeden*
171 Tuareg and the Fulani (Musée de l'homme, Paris, nos. 41.19.411 & 41.19.1326).

234 All Northern Tuareg, as well as the Northern Arab pastoralists and semi-nomadic Berbers and
[171] Arabs of the Atlas, make cheese from butter-milk, while this type of cheese is unknown among the
[184] Southern Tuareg and also among the Fulani. In Ahaggar butter-milk cheese (*awlez*) is manufactured
[412] by women in the following manner:— Butter-milk is heated over the fire in an earthen pot (*téyirt*, or *afrun*)
* [415] (Figs. 186, 187a–b) by which process the milk is divided into two parts, namely pure water and a curdled mass of milk (*akru*). This mass of curdled milk is placed in a special basket (*aragus*) (Figs. 167a–b) hanging from a tree or a similar object to sort out the whey. Thus there remains a mass of cheese in the basket, and this mass is formed into small round pieces to be left for drying. Butter-milk cheese is manufactured in this way by all Northern Tuareg who are thus able to obtain butter and cheese from the same milk.

234 Another type of cheese is made from fresh milk and is manufactured not only by the Northern
171 [i.e. the Ayr Tuareg -- Analyst]

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

Tuareg but also by the southern groups and by Arab pastoralists of the Sahara; it is also known in 234
the Atlas, and is on the whole widely distributed in Northern Africa. This type of cheese is known to [171]
the Northern Tuareg as *takammart* and it is manufactured as follows:— Fresh milk is heated and [415]*
then poured into a large wooden bowl (e.g., *tarehut*) (Figs. 195a–b). The milk is curdled into a mass
of cheese by means of a rennet (*akammar*) consisting of the abomasum of kids that have never tasted
anything but milk. The curdled mass of cheese is pressed with the hands and with a piece of straw- [285]
mat (*éseber*) in order that the liquids may separate. The mass of cheese is formed into small rectangular
pieces of cheese which are left on the little straw-mat for about one day. They are then removed to [417]
be dried finally on a platform (*tahaga*, *tafalkat*) made of branches.

Cheese made from fresh milk is known to the Ayr Tuareg as *tekemmart*; it is manufactured to very
great extent and much in the same fashion as just described from Ahaggar. The abomasum of little [224]
kids or lambs to be used for rennet is named *tedeyant*, and the Ayr Tuareg add parts of an annual
plant known as *ekochmaren* (*Caralluma Mouretii*) in order that the milk may curdle quickly. The [285]
Ayr Tuareg also use little mats plaited from stems of the *afezu* grass (*Panicum turgidum*) to press and
form the rectangular pieces of cheese; the Ayr Tuareg make mats (*tésebert*) (Fig. 168) particularly
for this purpose, while the Ahaggar Tuareg generally use an old piece of a tent mat (*éseber*). In Ayr
the rectangular pieces of cheese are dried on bunches of hay placed in trees (acacias), or on the top
of the mat-covered tents.

The *takammart* or *tekemmart* type of cheese made from fresh milk is in high esteem as food among 262
all pastoralists of the Sahara. It is generally eaten when newly-made and soft, though it may also be 251
stored. The Ahaggar Tuareg make this type of cheese only when milk is plentiful, while the Ayr Tuareg 234
manufacture it most of the year though the main season of cheese-making is the season of *akasa*. 221

234 Milk of goats, sheep, and cows is frequently mixed to make cheese of the *takammart* type, but milk of these domestic animals is also used individually for cheese-making. The very best milk is said to be sheep-milk which gives almost white cheese, while cow's milk yield a more yellow-coloured one. –
128 The use of milk, butter, and cheese in connection with various vegetable dishes will be described later in this chapter, and we shall now briefly outline the use of meat and its preparation.

Meat (*isan*) is not a staple diet of the Tuareg. The Tuareg of Ayr consume more meat than the 262
Northern Tuareg, but even in the south it is not eaten daily. There are Ayr Tuareg who are reluctant
to kill their animals, and people who have much milk have very little need of meat. Meat is eaten by [674]
all Tuareg on certain festive occasions, whether social or (and) religious, and when camps are visited
by friends, certain relatives, and important guests. He-goats and rams, or barren goats and sheep, [231]
are the animals most commonly killed. The meat of sheep and rams is considered better than goat [232]
meat, and sheep are also highly esteemed for sacrifice. Whenever the Tuareg kill an animal for food 800

Whenever the Tuareg kill an animal for food 231
they perform a sacrifice, the idea of which seems to be an identification of the man and the killed animal. 282
This idea appears most clearly at the sacrifice made on the occasion of the name-giving feast seven 525
days after the birth of a child. A marabut, that is a Tuareg of the *Inesleman* class, and the father of 553
the child stand close together with their faces towards Mecca while the animal to be sacrificed is kept 282
to the ground. The marabut cuts the animal's throat and doing so cries out the name to be given to [565]
the child, and this name is thereupon repeated by the child's father. When the killing is performed in [442]
this way the knife (*ekmar* in Ahaggar; *dzegiz* in Ayr) and the cut across the throat are washed with
water before skinning is undertaken. I have dealt with certain ideas of Tuareg sacrifice elsewhere, 114
and have stated that on certain occasions they may sacrifice not to God but to the *Kel Asuf* spirits 282
(Nicolaisen 1961, p. 122 f., 147 f.). But whatever may be the ideas attached to Tuareg sacrifices all 231
animals, with the exception of the camel (cf. above p. 65), are killed by cutting their throat.

The methods of meat preparation are almost identical in Ayr and Ahaggar. The most common 252
method everywhere is cooking in an earthen pot, known in Ahaggar as *ufrun*, *iéṛirt*, *alekkin*, or *talekkint* 415 *
according to its size and form, or in a metal pot (*éṛir*) of European origin. Such European pots are [177]
common everywhere in Tuareg camps, but earthen pots are still used though less durable, for earthen
pots are cheap. Pots made of metal or copper, which are also known as *éṛir*, were also found among

*415

283

Fig. 165. Horn (*isrk*) of barbary sheep used for storing butter for greasing the hair. The opening is closed with a piece of date palm bast (*asan*), and the edge is pierced with a glowing awl (*ednel*) for the insertion of a cord of goat's hair by means of which the horn is attached to the tent ceiling. Ahaggar, the *Dag Rali* tribe. Dimension: 0.30 m long. (F.M. 236).

252 the Tuareg in the past. I believe that they were made by blacksmiths or imported from the north.
*415 Pastoral Tuareg do not manufacture earthen pots which are obtained from sedentary people. The
[222] cooking of meat is perhaps not a traditional method of food preparation to the Tuareg, though they seem to have used cooking pots for centuries.

252 A method of meat preparation undoubtedly introduced recently among the Tuareg, is that of spit
177 roasting. Meat roasted in this way is known as *mechwi*, a word of Arab origin, and the Northern Tuareg have taken over the method from the Arabs. The *mechwi* method is also known in Ayr, where it has perhaps been introduced by French administrators who had learned to appreciate meat thus
252 prepared during their visits among Northern Tuareg and Arabs. Pieces of sheep and goats and entire animals are prepared in this way (Fig. 174), and the meat should preferably be prepared with butter and red pepper before roasting.

The traditional Tuareg roasting method is to place entire animals (goats, sheep), or parts of them, under the hot ashes of the fire. This method is known to the Northern Tuareg as *abatul*, to the Tuareg of Ayr as *ebewil* (Fig. 175). This method of roasting meat is practised everywhere among the Tuareg, and it is on the whole similar to the method used for bread-baking described below (p. 238 f.).

Meat-roasting in the ashes is no doubt an ancient Tuareg method of food-preparation, and this also holds good for another method described in connection with the preparation of milk, namely food preparation by means of hot stones (cf. p. 221). The Ahaggar Tuareg prepare the stomachs of goats, sheep, and barbary sheep in this way, putting hot stones into the stomachs, while camel stomachs are boiled in a cooking pot and gazelle stomachs roasted in the ashes according to the *abatul* method mentioned above. These rules of food preparation seem also to be practised by the Ayr Tuareg, who put hot stones into stomachs of sheep and goats together with small pieces of meat. A stomach of goats or sheep prepared in this way, however, is given a final treatment in hot sand or in ashes close to the fire. The stomach of sheep or goats cooked [illegible] hot stones is known as *tarafa*, and a related word seems to be known also in Ahaggar (cf. Foucauld 1951–52, IV, p. 1583).

[262] The Tuareg eat most entrails of their slaughtered animals. Entrails of camels are normally boiled, and kidneys of all animals are prepared in this way. Most entrails of goats and sheep (liver, heart, and lungs) are roasted on the embers or in the ashes, and in Ayr the Tuareg roast fat put into the abomasum (*tederant*). The Northern Tuareg generally prepare liver and fat together in the following manner:— The liver is roasted upon the embers, is thereupon cut into small pieces which are wrapped

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

up with small strips of fat. The pieces of liver covered with fat are put on a slender iron or 252
wooden rod to be roasted slightly over the fire. This dish is known to all Tuareg by the Arabic word [177]
*elmefif*. It was introduced among the Northern Tuareg by the Arabs, but is not widely known among the Ayr Tuareg.

This brief description of Tuareg meat preparation can adequately be supplemented by a reference 252
to two peculiar dishes:— (1) A dish known to the Ahaggar Tuareg as *talebeggat*. It consists of meat 262
which after boiling or roasting is pounded in a large mortar and frequently served with liquid butter. This dish is also known to the Ayr Tuareg. (2) A dish which is described from Ahaggar by Foucauld 252
under the name *abangor*. It consists of untanned skin which is eaten in case of hunger after the following 261
preparation:— Untanned skin from household implements, shields, and the like is roasted under the ashes, and is thereupon pounded into small pieces. These are eaten without any further preparation, or after boiling. (Foucauld 1951–52, I, p. 73).

Like other North African peoples the Tuareg dry meat of domestic animals and of game. The people 251
of Ayr know three distinct drying methods, namely (1) *iwesse*, that is meat which is boiled until it is free of blood; it is dried in the shade; (2) *tikelsin*, uncooked meat cut into pieces to be dried on a string in the shade; (3) *kules*, uncooked meat cut into strips which are dried for some time to be treated with salt and various spices. This last method is not practised among the Tuareg of Ayr, but by sedentary people of Agadez and by Negroes further south in Damergu. The Ahaggar Tuareg generally boil or roast the meat before drying; meat roasted in the ashes according to the *abatul* method and thereupon dried is known as *takasa*. I do not know whether the Ahaggar Tuareg also practise the [225]
method of drying raw meat like the Ayr Tuareg, but the dried *agezzerum* lizzards which they take to Tidikelt on trading expeditions, are dried uncooked. Furthermore, the method of drying raw meat [171]
is known elsewhere in the Northern Sahara, and I have myself seen it practised among the Berber-speaking *Chawiya* of Aurès.

I conclude the description of Tuareg meat preparation with a brief note on the use of blood of living 272

camels. This blood never constitutes a proper dish to the Tuareg. They bleed camels to drink their blood only when they lack water on journeys in the desert. Bleeding is done according to the method described above, and the blood is collected in a drinking bowl. But the Ayr Tuareg say that they work up the mass of blood with the fingers with the result that the upper part of the amount of blood becomes more liquid, though it is always red in colour.

The Tuareg use the following implements to make cereals or other vegetable products into flour:—

(1) A large wooden mortar (*tindé*) with a heavy pestle (*éheren*) (Fig. 177). It is used in all camps and villages of Ahaggar, Tasilé-n-Ajjer, and Ayr, and is in fact known all over Tuareg country. It is used mainly for pounding millet and sorghum, but it is also employed for pounding other cereals, including certain wild seeds, and for dates, cheese, meat, locusts, and the like. These large wooden mortars are manufactured by the blacksmiths of Southern Tuareg country, including Ayr, where most Northern Tuareg obtain their mortars. Among the Northern Tuareg there are also other mortar types. A small mortar which like the former rests on a foot and is known by the same name (*tindé*) (Fig. 178), is used mainly by sedentary agriculturists for pounding rock-salt, dried tomatoes, tobacco for chewing, and other plants or materials to be used in small quantities. Another type of mortar without a foot and known to the Northern Tuareg as *akabar*, or *takabart*, (Fig. 176) is found mainly among pastoralists who use it on journeys for pounding millet.

(2) A saddle quern (*tehunt*) (Fig. 179), which consists of two natural and in general unfashioned stones, is found in most camps of the Northern Tuareg. This constitutes the only grinding implement for wheat, barley, and certain wild seeds among the *Kel Ajjer*. The stones used for saddle querns are sharpened at intervals with a hard stone or some other hard object (*tasettekut*) in order that they may grind effectively. A simple saddle quern (*asav*) is also known to the Ayr Tuareg, but it is less common there than in the north.

(3) The handmill (*tasirt*) (Fig. 181) is not a traditional implement of Tuareg culture. It is widely known all over Northern Africa both by Berbers and Arabs, by sedentary peoples and nomads living in black tents. It has been introduced to Ahaggar mainly by the immigration of the Arabic speaking Harratin (Izeggaren) of Tidikelt,

They stand with their faces towards Mekka and the camp of the new-born child. The marabut cuts the animal's throat simultaneously crying out loudly the child's name which is thereupon loudly repeated by the father. Ayr, the *Igendéynen* tribe.

4/2 *Harratin* (*Izeggaren*) of Tidikelt, and it is now also found in Tuareg camps (Fig. 182), where it is
252 less frequent than the above-mentioned saddle quern. The handmill was entirely unknown among the Ajjer Tuareg during my visit to Tasilé-n-Ajjer in 1952. The Tuareg who possess handmills obtain them from the sedentary agriculturists of Ahaggar (Tamanraset). – When saddle querns or handmills are used, a piece of cotton or skin (*asentel* in Ahaggar) is always placed under the grinding stones to catch the flour (Figs. 180, 182).

262 The Tuareg have many different vegetable dishes. The most important are bread, porridge, gruel, and various mixed beverages.

[262] Bread is a prominent dish for all Northern Tuareg who bake it mainly from wheat flour. Wheat bread has been my ordinary dish among all Tuareg of Ahaggar and Tasilé-n-Ajjer. Lhote states that

Fig. 171. Ordinary meat-knife (*elmust*) of the type used among Northern Tuareg and Arabs. Its broken handle is mended with hide of barbary sheep sewn with leather thread. Ahaggar, the *Dag Ball* tribe. Dimension: 0.28 m (total length). (F.M. 249).
All knives are manufactured by blacksmiths.

wheat bread is eaten particularly during migrations and on trading expeditions, or in periods when 262
butter is rare (Lhote 1955a, p. 262). This statement disagrees with my own experience. Wheat bread [114]
is an ordinary diet of many Northern Tuareg. Bread is also baked from barley and from certain wild [224]
seeds (notably *tawit*, *Chenopodium Vulvaria*; *éhéyefyef*, *Aizoon canariense*; *tullult*, *Aristida pungens*) and wild roots (*akahel*, *Cistanche Phelypaea*), while millet and sorghum are considered less suitable for baking. Seeds are generally prepared for baking by grinding them into flour by saddle querns or 282
handmills. In Northern Tuareg country there are two types of bread which have been introduced as [172]
a result of contact with Arabs or the Arabic-speaking *Harratin*. One type is named *elfetat* and is baked

231
291

Fig. 173. Tuareg skinning a ram. Ays, the *Igendéynen* tribe.

252 by placing the dough on a baking sheet. The other type of bread is generally known by the Arabic word *khubz*. This is baked from dough placed in the sand close to the fire, where it is covered with hot sand, ashes, and glows. These two types of bread in Ahaggar are baked mainly by sedentary agri-
[189] culturists and by Arab families. The type of bread traditionally baked by the Tuareg differs from Arab bread in that it is not made from proper dough, but from a kind of thin porridge or gruel consisting of flour mixed with water. This Tuareg type of bread is known as *tagella* and is baked as follows:— A heavy fire is lit in a shallow depression (about 25–30 cms in diameter and 8–10 cms deep) made

into fine-grained sand carried from the river bed to the fire place in front of the tent. When this heavy 252
fire has calmed down the embers and most of the ashes are moved from the shallow depression to its fringes by means of a small stick, and the thin porridge or gruel of flour and water to which also a little salt is added is poured out into the depression, a spoon being normally used to remove all the gruel out of the wooden bowl in which it has been stirred. A bunch of dry grasses, herbs, or tender twigs is thereupon fired over the gruel in order that its surface may harden, and it is then covered with hot fine-grained sand, ashes, and embers in the order mentioned. If the embers are considered insufficient for baking, a small fire may be lit on the top of the sand and ashes covering the gruel-bread, which is taken out after about twenty minutes to be turned and baked in the same way on the other side for a few minutes. Baking is then finished, the bread is finally removed to be washed in water (Fig. 183). It is broken into pieces and eaten from a large wooden bowl (Figs. 195a–b) together with 264 415* 412
liquid butter. It is eaten with wooden spoons (Figs. 191).

The type of bread just mentioned is known to people of the *Kel Ferwan* group as *tugella*. It is made 262
by very few Tuareg. Indeed, when I travelled together with Ayr Tuareg I very frequently baked my 252
own bread as I had learned to from the Tuareg of Ahaggar, because very few of the Ayr Tuareg I [122]
met were familiar with bread baking. Bread is not a staple diet of the Ayr Tuareg, and when they want to bake wheat flour they generally do so in the following way:— The flour is mixed with water to a dough which is placed upon the bottom and sides of a metal pot heated over the fire. This type of bread or bread-like dish is known to the *Kel Ferwan* Tuareg as *gurasa*. It can be mentioned that the
*Kel Ferwan* Tuareg also bake a particular type of bread from millet flour mixed with certain other 252
plant materials, but a bread of this kind is not baked for ordinary food, but as a kind of medicine. 261

[824]

It is called *ɛkanef* and is baked in the following manner:— The millet flour is mixed with juice of *tadent*-berries (i.e., berries of *Boscia senegalensis*) and also with certain medicines unknown to my informants who said they were of Sudanese origin. This mixture is made into a solid dough with a very small content of water, and is baked in the sand where it is covered with hot sand, ashes, and embers in the same way as the bread type known as *tugella* (*taġella* in the north).

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

412

Fig. 179. Simple saddle quern (*tehunt*) of two natural stones: (a) the lower part called *tehunt*, (b) the upper part called *azzed*. It is used for grinding cereals. Ahaggar, the *Aguh-en-tehlé* tribe. Dimension of the lower stone: 0.360 m long. Dimension of the upper stone: 0.115 m. (N.M. G. 5839a–b).

261 This *ékanef* bread is eaten exclusively by women who claim that it gives them a good appetite and makes them fat.

262 Millet porridge is a common dish among the Ahaggar Tuareg, and it constitutes by far the most important vegetable dish to the Ayr Tuareg and the sedentary agriculturists of the south. Millet
252 porridge is known in Ahaggar as *esink*, in Ayr as *echink*. The preparation of millet porridge involves much strenous work as follows:— (1) An amount of millet seeds is poured out into the large wooden mortar (*tindé*, p. 235, fig. 177). A little water is added to the seeds which are then pounded for about
*[413] ten minutes. The seeds thus pounded are then poured out into a plaited bowl (*tabeyka*; Fig. 185) or another receptacle to be winnowed. This process is done by shaking the plaited bowl itself, and by pouring small quantities of the pounded seeds from the bowl into a plaited tray (*téseyt*; Fig. 184) which is better fitted for winnowing by shaking. The husks or pods covering the seeds are thus taken away by the wind. (2) When the pounded seeds have been cleaned or winnowed in this way they are replaced in the wooden mortar, and water is again added. The seeds are now heavily pounded for about half an hour, and most of them are turned into flour after this process, but a small amount of seeds remains unpounded. The mixture of flour and unpounded seeds are poured out into the plaited

bowl and the plaited tray just described, and the flour is shaken into the large wooden bowl (*elkada*; Fig. 195b) while the unpounded seeds remain in the plaited receptacles. (3) The small amount of seeds which have not yet been turned into flour is put back into the mortar, a little water is again added, and pounding is resumed for five to ten minutes. Most seeds are now turned into flour which is placed in the wooden bowl by shaking the plaited receptacles. (4) The seeds which are not yet pounded after this treatment are replaced in the mortar to be pounded for two or three minutes without the addition of water. The flour produced is shaken into the wooden bowl. (5) What remains unpounded is replaced in the mortar to be pounded without water for two or three minutes, and the flour obtained is shaken into the wooden bowl. (6) The flour is put into the large cooking pot (*éṛir*) which has been boiling with water during pounding. (7) An extremely small quantity of flour derived from a final pounding is added to the pot after cooking for about five minutes. (8) During cooking the porridge is stirred with a wooden stick known to the Ahaggar Tuareg as *aserwi* (Fig. 188).

Millet porridge (*esink*, or *echink*) is of heavy consistency and is normally eaten with milk by means of spoons. But if milk is lacking or is scarce, the Tuareg also add various types of sauces such as the following which is made by many Ayr Tuareg:—Leaves of certain plants (*abezey*, *Cassia tora*; *malokhiya*, *Corchorus tridens*; *kuka*, a large tree growing in the Sudan) or seeds of a plant known as *ékabewa* (*Corchorus olitorius*) are put into a large mortar to be pounded together with onions, dried tomatoes,

Fig. 180. Tuareg woman grinding wheat on the simple saddle quern (*tekast*). The saddle quern is placed upon a piece of skin (leather) called *asentel* which receives the flour. Ahaggar, the *Deg Ball* tribe.

262 and red pepper which is much esteemed by the Tuareg, but not always available. The pounded flour
252 of these vegetables is boiled with water and butter and thus turned into a kind of thick sauce which is poured out over the porridge to be eaten.

The porridge type known as *esink* or *echink* can be made from other seeds besides millet. Porridge made from barley, which is then also pounded in the mortar, is highly esteemed by the Tuareg who also use various wild seeds and roots for this dish. Plants utilized for porridge are mentioned above in the description of collecting (p. 175 ff.). Porridge is also made from dried dates pounded in the millet mortar; this dish is common among the Northern Tuareg.

The Tuareg have a particular type of porridge which I have never tasted. It is known to the Ayr Tuareg as *barela*, and is made from pounded seeds of various cultivated plants (wheat, barley, maize, or millet). The seeds are pounded in the mortar but their husks or pods are not removed by winnowing. Otherwise the preparation of this dish is similar to that of ordinary porridge.

262 The Ahaggar Tuareg distinguish between very thick porridge called *tarawayt* and very thin porridge
846 or thick gruel known as *aliwa*. The latter dish is known to the Ayr Tuareg by the same name, and

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

among them it is eaten in particular by women during the first seven days after the birth of a child, 262
that is during the period from birth to the name-giving ceremony known as *isnawen*. It is considered 246
dangerous for a woman to eat too much vegetable food during this period, while meat is believed to
make her recover quickly after birth. The same diet is followed by young boys after their circumcision 262
until their wounds have healed. These dietetic rules no doubt have their root in magical beliefs. 304

All Tuareg esteem liquid or semi-liquid dishes which are consumed mainly during the very hot 262
season. A very common dish of this type is that named *aṛejira* (Ayr) or *aṛehara* (Ahaggar). It is made
from flour of millet, sorghum, dates, and crushed cheese mixed with water, the main substance being
pounded millet. The dish is served in a large wooden bowl or in a calabash, and is eaten and drunk [412]
by means of a large wooden ladle called *tamulat* (Fig. 194a–b). This liquid dish is a substitute for [251]
milk during the hot season when milk is scarce, and it is frequently used for food on journeys, in which
case it is transported in the form of dough-like balls to be dissolved in water just before eating.

The terms *aṛejira* and *aṛehara* are used for various liquid or semi-liquid dishes, or beverages, for
which the Tuareg have particular names according to their composition. Dates are less important
for liquid dishes in Ayr than among the Northern Tuareg to whom dates form an important part of
food. Very important in the north is a dish known as *talekessat*; it is made from dried dates pounded [252]

in a mortar with a little water to a soft dough to which a little cheese, butter, or milk is added before 262
eating. If a large quantity of milk is added this dish is known as *tarkit*. The Ahaggar Tuareg, as men- 252
tioned (p. 167), also pound dried dates with locusts to make a dish eaten by women who wish to grow fat. [261]

The Arabs and the Arabic-speaking agriculturists of Tidikelt (the *Ḥarratin*) have introduced among 262
the Northern Tuareg the well-known North African dish generally called kuskus. The dish is known [172]
to the Tuareg as *keskesu* which is also Arabic by origin. But this dish is not the staple diet among [171]
the Northern Tuareg that it is among the Arabs and the Berbers of the Atlas. It is eaten mainly on festive occasions, and there are many Tuareg women who even to-day do not know how to prepare it. The *keskesu* dish is preferably made from wheat flour, though barley flour may also be used. The 252
cereals are ground with hand-mills or quern stones (saddle querns), and the flour is rolled into very

Like

264 most Tuareg dishes they are eaten from a large wooden bowl. If meat is cooked with the soup it may be broken into small pieces to be eaten with the balls, but part of the meat cooked is always eaten separately. The Tuareg eat *keskesu* with spoons, but if spoons are lacking they also eat it with the
262 hand, as do the Arabs. In addition to *keskesu* with its small balls which resemble grains of rice, the Northern Tuareg have another dish prepared in the same way but with larger balls. It is termed
[189] *tikhemmezin* and is considered inferior to the *keskesu*. – Both these dishes are unknown to the Ayr Tuareg of the *Kel Ferwan* group.

262 Two particular dishes are mentioned from Ahaggar by Foucauld. One of them is called *ibergun*
252 and consists of unripe barley boiled in its own juice without water. The other one is known as *abezbez*
[267] and is made from tender plants of wheat and barley which are dried and pounded or ground into powder, to be eaten, boiled or unboiled, in periods of famine (Foucauld 1951–52, I, p. 89, 118).

Tuareg vegetable dishes are frequently prepared in a very simple way. Thus there is a dish known as *twes* (Ahaggar) or *tewes* (Ayr) which consists of entire seeds of millet or sorghum boiled in water. It is eaten mainly by children who frequently walk about the camp eating these boiled grains from their hands.

252 It is clear from the description of vegetable dishes that the cooking pot plays an important role for
*415 food preparation, and all dishes prepared in this way, including cooked meat, are known to the Tuareg

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

as *téyint* (Ayr) or *talekkint* (Ahaggar). But pastoral Tuareg do not make eartenware pots themselves. They obtain them from sedentary people, and it is possible that vegetable dishes have been prepared with hot stones up to recent times, for Foucauld states that hot stones are occasionally used for various vegetable dishes in Ahaggar (Foucauld 1951-52, IV, p. 1583). However, I have not been able to confirm this during my own investigations among the Tuareg. It should be added that certain vegetable dishes are neither boiled nor baked. This is the case with seeds and roots of various wild plants which are ground and pounded into flour to be eaten without further preparation. Such dishes are known to the Tuareg as *tébik* (Ahaggar) or *téderka* (Ayr). Seeds and roots of wild plants utilized in this way have been mentioned in the chapter on collecting p. 175 ff.

The Tuareg have a great many different dishes, but in spite of this variety they do not always change their food from one day to another. They frequently live on the same type of food for extremely long periods. They may live almost exclusively on milk for weeks and even months, and if milk is not available they live so to speak exclusively on vegetable dishes, which may also not be changed for very long periods.

The Ahaggar Tuareg have three meals a day:— (1) *tagimgint* which is a light meal taken in the morning. (2) *amekli* which is a prepared meal (e.g., bread, porridge, or *arehara*) eaten at midday. (3) *amagin* which is the evening meal, also known as *amensi*, or *azuzeg*. It is the most important meal.

Fig. 194a–c. Bowl-like ladles from Ahaggar and Ayr. They are used mainly for eating liquid dishes – in particular for the dish known as *arekara* (Ahaggar) or *arejira* (Ayr).

a. Ladle (*tamalat*) cut by blacksmith from wood of the *tabarak* tree (*Balanites aegyptiaca*). Ahaggar, blacksmiths of Abalessa. Dimension: 0.285 m long, 0.110–0.120 m in diameter (the bowl). (N.M. G. 5845).

b. Ladle (*tamalat*). Ayr, Agadez. Dimension: 0.330 m long. (N.M. G. 6631).

c. Ladle-like bowl (*assar*) cut by blacksmith from wood of the *tabarak* tree (*Balanites aegyptiaca*). Ahaggar, *Ahl Azzi* Arabs of Tamanrasset. This ladle-like bowl was not used for food but for conservation of fine-grained sand used for hair-dressing together with water and butter. Dimension: 0.330 m long, 0.120 m in diameter (the bowl). (N.M. G. 5879).

[302]

264 frequently consisting of bread or porridge eaten rather late at night. The Ayr Tuareg have related terms for their meals:— (1) *tegingimt* which is a prepared meal eaten late in the morning. (2) *tamakkelewt* which is the prepared meal taken at midday. (3) *temegint*, late evening meal which is the main meal in Ayr, as in Ahaggar. In addition to these meals there is a very light meal taken with tea immidiately after rising. It is known as *elfetur*.

[272]

[511] Incidentally there are Tuareg who do not have food enough to eat three times a day.

During times when Tuareg subsist exclusively on milk they have no regular meals. The amount of milk needed to support life is very great, and it is drunk slowly during the day. On extensive journeys when the camels cross the barren deserts, the Tuareg also do not have regular meals as they do in their camps.

# Crafts

Tuareg crafts clearly disclose traits belonging to distinct cuhural levels. This may be seen from a brief description of the methods of fire-making. 372 [174]

Matches are in ordinary use nowadays, but they are used economically not only because they cost money but also because many Tuareg live far away from towns or trading posts where matches can be obtained. The embers of a fire smoulder for a very long time, and when the Tuareg want to light a fire they normally find embers under the ashes where their fire has been. Glowing wood is carried from one tent to another on a fragment of calabashes or earthen pots, and some Tuareg even take fire with them in this way during nomadic migrations. If a new fire has to be lit and matches are not available, most Tuareg use the well-known method of fire-making by means of flint and steel. This method is widely resorted to in Northern Africa even to-day, and is practised among the Tuareg of Ahaggar as follows:— The curved piece of steel (*énefed*) is placed over the three middle fingers of the right hand. It is struck against a small piece of flint (*iafarast*) held between the first and second fingers of the left hand together with a small piece of lighting material which may be a small piece of cotton cloth. However, the best lighting material (*iaijert*) is a piece of wood of *teferyast* (*Echinops Bovei*), which has been boiled and thereupon beaten into a fibrous mass with a stone. The Tuareg keep this lighting material in a particular leather bag (*iarallabt*) together with the steel and one or two pieces of flint (Fig. 198). Lighting material according to Maire is also made from a plant named *tirahit* (*Tragonum nudatum*) (Maire 1933, p. 82). The spark produced by striking the steel against the flint causes the lighting material to glow, and after blowing on it or swinging it in the air, it is placed under a small bunch of hay which burst into flame after further heavy blowing. The use of flint and steel is not a very difficult method of fire-making, and I have used it myself on journeys when matches had come to an end. [169] [171] [324] [145] [324]

The Tuareg do not generally use more primitive methods of fire-making nowadays. But they know an ancient method of making fire by rubbing a piece of hard wood (*agar* in Ahaggar, *agar* in Ayr; *Maerua crassifolia*) against a piece of soft wood (*turha* in Ahaggar, *turza* in Ayr; *Calotropis procera*). By this process they produce by hand rubbing a glowing dust which is brought into flame by means of lighting material and hay as described above. One of my informants among the Ayr Tuareg had produced fire according to this method. Lhote states that the method is at times used by the Tuareg of Ahaggar, where the hard ribs of date palm leaves are also used for starting a fire by rubbing (Lhote 1955a, p. 258). [324]

Stone materials play a very little part in Tuareg crafts. Natural stones are used occasionally as 412 [324]

[p. 255]

372
824

Fig. 198. Flint (*tafarast*), steel (*ewefad*), and lighting material (*tajjert*). The lighting material, which is conserved in a leather bag (*tayalhabt*), is made from wood of *tafâryast* (*Echinops Bovei*). Ahaggar, the *Aghab-en-tehli* tribe. Dimension of the steel 0.065 m long. (F.M. 154a–d).

412 tools, e.g., for hammering tent pegs into the ground, for rope making as described below, for separating the hide from the body when skinning a barbary sheep, and for crushing rock-salt, red pebber, dried tomatoes, tobacco, and the like. We have seen above that the Tuareg saddle querns used for grinding cereals are natural stones of a particular form and size, and that they are used for grinding without any particular fashioning, though sometimes treated with a hard stone or a piece of iron to make the [324] grinding surface more rugged and effective. The handmill is never manufactured by pastoral Tuareg (cf. p. 214 ff., Figs. 179–182).

412 172 Prehistoric quern stones and stone pestles are found in many regions of the Central Sahara and these ancient implements, I was told, are sometimes used by the Tuareg of Ahaggar for grinding and pounding (Fig. 200). The Tuareg also use the numerous neolithic stone axes (Fig. 199) as whetstones for iron knives. These axes are known to the Ahaggar Tuareg as *taḍefi n eḡenna*, that is "the axe of the rain (or the thunder)", and all Tuareg believe that they have fallen from the sky during heavy storms.

301 Stone material is still used for certain Tuareg ornaments, and notably for the well-known arm-ring (*ahbeḡ* in Ahaggar, *éweki* in Ayr) which is worn by most adult men and also by some boys. These rings are sometimes mentioned in literature as a weapon, but they are not well fitted for this owing [564] to their fragility. Most arm-rings are made from soft stone such as serpentine, and are manufactured by blacksmiths (Ineden).

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

by blacksmiths (*Ineden*). Tuareg women wear certain stone ornaments which derive from prehistoric finds or are introduced from other countries. But in Ahaggar I have collected one stone ornament, or rather an amulet, which was said to have been manufactured by a Tuareg woman of the vassal class. This stone amulet (*amerwan*) (Fig. 201) may be described as a large bead or button pierced in the middle for the insertion of a leather strap. It is said to be used as an amulet against diseases of little children, who are also very fond of looking at the red-white stone material from which the amulet button is made. The hole for the little carrying strap is made by means of an awl known as *éndel* (Fig. 218b, p. 278). This stone amulet has been described elsewhere together with certain other stone ornaments used among the Ahaggar Tuareg (cf. Nicolaisen 1961, Fig. 6a–l p. 128 f., p. 139 f.).

Earthen pots are widely used by pastoral Tuareg even nowadays, though European metal vessels are available at the principal trading centres. They are particularly common in Ahaggar where the Tuareg take their earthen pots with them on donkey's back during nomadic migrations – the old belief that pottery does not go with the roaming life of pastoralists is contrary to fact. However, metal vessels are, of course, more durable and will no doubt in a few years replace the earthen pots which are not manufactured by pastoral Tuareg. The Ahaggar Tuareg acquire their pots from the cultivation centres where there are a few women who practise the art of pottery making. There are various types of pots (cf. Figs. 186, 187a–b) which are made from black clay (*talak*). The lowermost part of all pots is formed over the bottom of an old pot on which is placed a piece of moistened cotton in order that the clay shall not stick. The upper part of the pots is built up with the hands according to the well-known technique of the application of thin sausage-like strips of clay. This technique is also used for the manufacture of other containers such as earthen milk-bowls (*akus*) (Fig. 21a), incense jars (*elbakhkhar*) (Fig. 203), and drums (*akralal, abakar*) (Fig. 202a–b). These latter types of pottery are not in general use among pastoral Tuareg but are common among sedentary agriculturists. The pottery made in

The pottery made in

323 Ahaggar is plain and usually without any kind of ornamentation. But I have brought home from
[531] Abalessa a piece of a pot decorated with pricks in much the same way as are the prehistoric potsherds frequently found in caves in the Ahaggar Mountains. The pot in question was made by a woman from Abalessa. The pots to be burned are covered with wood, and small pieces of wood are also placed within them. Burning takes place in the evening when there is not too much wind, and the pots are removed next morning. After burning, the pots assume a red colour, but all pots that have
[114] been used over the fire for some time become black. I have myself never attended the manufacturing
[13] of pottery in Ahaggar, and readers are referred to a study by Lhote for more detailed information
[437] (Lhote 1947b, p. 145–154). Pastoral Tuareg of Ahaggar acquire most of their earthen pots from sedentary agriculturists of their own country, but they also buy some pots of superior quality during trading expeditions to the Sudan (Fig. 192).

[462] In Ayr, pottery is manufactured by sedentary women of Agadez and probably also by women of the sedentary *Kel Ewey* of certain Ayr villages. No true pastoralists seem to make pots, which in Ayr are manufactured according to techniques related to those from Ahaggar (cf. Lhote 1950c, p. 507–512).

531

Fig. 203. Earthen incense jar (*elbakkhar*). Ahaggar, *Ḫarratin* at Abalessa. Dimension: 0.179 m high. (N.M. G. 5889).

323 512). Most pastoral Tuareg of Ayr get their pots from Agadez, but pots are also imported from the
[437] south where they are of superior quality. These pots are said to be manufactured by black-skinned
323 *Igdalen* Tuareg (cf. p. 432) of the southlands, notably by people of the *Ikenawen* class which comprises
563 professional pot-makers. These people are not found among the *Kel Ayr* but are common in camps
[197] of the *Kel Geres* where I have met them. They speak *tamachek* but also have their own language
323 which is said to be related to *Sonray*. The pots made by these southern people are painted and decorated
531 (cf. Fig. 205) in contrast to those of Agadez which are plain and of very simple forms (Figs. 204a–b). So far as I am aware painted and decorated pottery is rarely manufactured in Ayr nowadays. But Rodd states that such pottery in the form of pitchers with a blue design is made near Agadez (Rodd 1926a, p. 160 f., pl. 22 p. 209), and when I investigated ruins of stone houses at Iferwan I found a great many sherds of finely-decorated painted pots which must have been used up to the end of the
[178] great Tuareg revolt in 1917 when these houses were destroyed by the French. Lhote has also mentioned the decline of pottery techniques in Ayr, and he states that, apart from little incense jars, no painted and decorated pots are manufactured at Agadez nowadays (Lhote 1950c, p. 511).

*415 Certain metal receptacles were known to the Tuareg long before the European occupation, notably
[439] a cooking pot (*ériir*) made from copper, and the flat drinking bowl (*tamennast*) made from tinned
[326] copper or brass in Tripolitania, or in Tunisia. Metal receptacles are also manufactured by native blacksmiths in Tuareg country, e.g., the pail (*ériir*) to be used for liquid butter (Fig. 164).

322 The blacksmiths are excellent wood-workers and make most wooden domestic utensils used by
[564] pastoral Tuareg (Figs. 21b, 37, 38, 58, 60, 61, 62, 63a–b, 75, 150, 153–154, 166, 176, 177, 178, 191,
[412] 194, 195, 212a, 219a–b, 285). The main implements for wood working are axes and adzes (Figs. 206a–d).

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

206a–d). The ordinary axe (*tadeft*) is used by all Tuareg who may also possess small adzes (*tat-tawt*), used mainly by women for the manufacturing of domestic implements such as spoons and milking bowls. These implements manufactured by Tuareg women are generally inferior in quality to those made by the blacksmiths, though certain noble women of the *Kel Rela* tribe make wooden milking bowls that are said to be superior to those of the blacksmiths. In Ayr, Tuareg women engage very little in wood-working, and the Ayr Tuareg are on the whole less skilled in crafts than are the Tuareg of Ahaggar.

Pastoral Tuareg are experts in rope making. Ropes made from various materials play an important part for the Tuareg for hobbling domestic animals, for fastening burdens transported on camels, as reins, for the erection of tents, and for a great many other purposes. Incidentally the Tuareg make substitutes for ropes in a very simple way. Thus if a man comes upon a camel which he wishes to take back to camp and has no rope or rein to lead it by he makes a lead from three or four pieces of palm leaf, or the like, attached to each other. It is stated by Maire that the Ahaggar Tuareg make simple

Fig. 204a–b. Earthen pots made by the sedentary *Imeggedezen* of Agadez.

a. A water jar with two spouts. It is known to the Ayr Tuareg and the Hausa-speaking *Imeggedezen* as *geigelesi*. It is used by the latter people but never by pastoral Tuareg. Dimension: 0.30 m high. (N.M. G. 6635).

b. Earthen jar used for water and also for cooking. It is known to the Ayr Tuareg as *tlyint* or *tiekin*, to the Hausa-speaking *Imeggedezen* as *tekmiya* or *mke*. Dimension: 0.285 m high. (N.M. G. 6634).

323
531
563

Fig. 205. Painted earthen pot (*tékanawt*) manufactured by the professional potmakers called *Ikenawen*. Ayr, Agadez. Dimension: 0.32 m high. (N.M. G. 6636).

283 824 hobble ropes from straws of the *tulhult* grass (*Aristida pungens*) (Maire 1933, p. 62). For the manufacture of proper ropes the Tuareg may employ the bark of trees. Both in Ahaggar and in Ayr they use the bark of *Acacia Raddiana* (*abser* in Ahaggar, *afagag* in Ayr) for this purpose (Fig. 113). These ropes are made after much the same method as that used for the Ahaggar ropes of date palm bast (*asan*) and those of dum palm leaves made in Ayr. Ropes of this kind are always made by men, who, when 283 462 making ropes from date palm bast, proceed in the following way:— Pieces of bast are soaked in water contained in a receptacle. They are thereupon torn into small strips about 20–30 cms long. These strips are rolled and twisted between the hands, and are kept in this rolled position under the foot until sufficient numbers of strips are available for the rope to be made. The ends of two rolled strips are then placed between the first and the second toes, and the strips are twisted together between the hands. New strips are added and twisted in this fashion until a suitable length of two twisted rows of strips has been made. This length is thereupon stretched over one of the feet, doubled, and twisted between the hands. It is finally hammered with a stone while resting on another stone or upon the bottom of a large mortar which is frequently used for support. The Ahaggar Tuareg make their hobble ropes in this way (Fig. 207), and the Ayr Tuareg apply the same technique to ropes made from strips of dum palm leaves which are also soaked in water before twisting. Both in Ahaggar and in Ayr this method may also be used for the manufacture of leather cords (Figs. 43, 73a).

412

Fig. 206a–d. Axe and adzes of the Ahaggar Tuareg.

a. The ordinary axe (*taǫefit*) which is found in all Tuareg camps. Ahaggar, the *Aǫuh-en-tehlé* tribe. Dimension: 0.572 m long; dimension of the iron blade: 0.157 m long, 0.053 m broad. (N.M. G. 5233).

b. *tattawt*, a small socket-shafted adze with knee-shaft. Adzes of this type are common in Tuareg camps. They are used mainly by women for wood-carving. Ahaggar, the *Aǫuh-en-tehlé* tribe. Dimension: 0.301 m long. (N.M. G. 5232). [322]

c. *tékadimt*, adze shafted by means of a piece of sheet-iron and nails. Ahaggar, blacksmiths of Abalessa. Dimension: 0.440 m long; dimension of the iron blade: 0.150 m long, 0.058 m broad at the edge. (N.M. G. 5864).

d. *tékadimt*, slot-shafted adze. Ahaggar, blacksmiths of Tamanrasct. Dimension: 0.430 m long; dimension of the iron blade: 0.222 m long, 0.065 m broad at the edge. (N.M. G. 5865).

The axe and the adzes are all made by blacksmiths. [564]

The very best ropes or cords manufactured by the Ahaggar Tuareg are those made from goat's 283 hair which is sheared with a knife by the women once a year in the hot season. These ropes are known [237] to the Ahaggar Tuareg as *ihellumen* (sing. *ahellum*), while the proper term for a rope of goat's hair [233] in Ayr is *azaw*. But the Ayr Tuareg do not make such ropes as they have goats of the short-haired breed (p. 33). They obtain their ropes from the Ahaggar Tuareg. Ropes of goat hair are manufactured [438] by women by the following method:— The mass of hair, known as *éhafilen*, is placed upon a piece [462] of skin and is prevented from blowing away by means of a stone. The hair is then taken out in small quantities with the first and second fingers of the left hand to be spun upon a stick 30–40 cms long.

b. Bag woven exclusively of goat-hair. It has two leather straps for suspension. Dimension: 0.34 m long. Ahaggar, the *Dag Ḥali* tribe. (F.M. 259).

285
824
237
531

Fig. 210a–b. Two coiled baskets provided with lids.

[462] a. *taklulit*, basket plaited from pieces of palm leaves (*aḍum*) and reinforced with coloured leather (goat-skin). Manufactured by women of the sedentary *Kel Ret* in Tasilé-n-Ajjer, bought from blacksmiths at Tamanrasset in Ahaggar. Dimension: 0.13 m high. (F.M. 227).

b. *adabun*, basket plaited from pieces of palm leaves (*aḍum*). It is ornamented with coloured leather thread and with woollen yarn. Ahaggar, blacksmiths at Abalessa. Dimension: 0.205 m high. (N.M. G. 5837a–b).

283 This stick, which is held in the right hand, is turned around its own axes while the hair taken out from the mass with the left hand is occasionally moistened with water or with spittle. The stick upon which the hair is spun is known as *aseggelem*. I have noted in Ahaggar that a length of 50–60 metres of spun hair can be made in about twenty minutes. Such a lenght of spun hair is trebled and attached to two sticks also known as *aseggelem* (pl. *iseggelam*). It is twisted together by two women each holding one of the sticks, and may be conserved for some time before it is finally made into a rope by further trebling and twisting (cf. Fig. 208). Certain cords to be used in connection with riding camels (e.g., reins) are not twisted in the above manner, but are plaited (cf. Fig. 51). The spun hair is used for the manufacture of certain objects without twisting (cf. Fig. 167a–b). Lhote states that the hair growing on the knees and neck of barbary sheep is also used for spinning (Lhote 1955a, p. 319).

[237] The Northern Tuareg spin camel's hair or wool (*teḥuft*) which is used for very few purposes (cf.
[286] p. 67). But camel's hair is sometimes mixed with goat's hair to be spun for thread used for a primitive type of weaving; true weaving is an unknown craft among the Tuareg while important to Arab pastor-
286 alists of the Northern Sahara. The Tuareg type of primitive weaving with spun hair is carried out
* [415] with no other implement but the hand; it is used for small transportation bags known as *tiṛrar* (sing.
[114] *téṛerirt*), a word, according to Foucauld, derived from Arabic (cf. Foucauld 1951–52, IV, p. 1776) (cf. Fig. 209a–b). I have myself never had the opportunity to see how weaving of this type is done.

7:Nicolaisen E.-5 (1951-1962) 1963 MS25 Tuareg MS25

A photograph illustrating a women making a bag from spun hair is reproduced by Lhote, who states that bags of this nature are rarely manufactured nowadays and are made exclusively by a few noble women of the *Kel Rela* tribe (Lhote 1955a, p. 319 f., pl. XV p. 384). This statement does not agree with information gathered by myself in Ahaggar, where I was told that bags were made from spun hair by Tuareg women of other tribes and notably by women of the *Isekkemaren* class.

In Ayr spinning of cotton is performed mainly to obtain sewing thread, which is considered superior to European thread for sewing cotton clothes. To my knowledge most pastoral women do not spin their own cotton thread but buy it at the market of Agadez. However I have noted the existence of simple cotton bows in a *Kel Tédalé* camp in the northern part of the Ayr Massif. The occurrence of the simple cotton bow among the Ayr Tuareg should no doubt be viewed in connection with the use of this implement in the Western Sudan (cf. Lagercrantz 1950, p. 260 ff.) from where the cotton plant has also been introduced.

Coiled basket-work plays an important part with the Tuareg, particularly the Northern Tuareg who are experts in this technique which is related to sewing. A very primitive type of coiled basketry

Fig. 212a–b. The large wooden bed (*tédabat*) which is used by all pastoral Ayr Tuareg.

a. The wooden skeleton consisting of the following parts:— (1) Four wooden legs (*tésetkelt*, pl. *tisetkal*). (2) Two horizontal cross-beams (*tabatakat*, pl. *tibatakatin*) carved into the shape of a disc at their ends. (3) Six horizontal poles (*afasas*, pl. *ifesasen*) resting in shallow grooves of the horizontal cross-beams. These poles are made from wood of a tree called *koriyo*; this type of wood is also used for the heavy cross-beam seen in the front, while the hindmost cross-beam is made of wood called *teresa*.

b. The wooden skeleton covered with two mats (*téshert*, pl. *tisebrin*) of *afezu* grass (*Panicum turgidum*). The stems of this grass are tied together with leather strips. Beds are frequently covered with three mats. Dimension of the bed: ca. 1.70×1.36×0.21 m. (N.M. G. 6640a–o).

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

may be seen in Fig. 167a–b illustrating baskets used for the manufacture of butter-milk cheese in Ahaggar. True coiled basketry is sewn with a little awl (*itstent*) (Fig. 218a). 285 [413]

The technique of coiled basket work is used in the manufacture of a great many receptacles among the Tuareg of Ahaggar, and coiled basketry made and utilized by these Tuareg can be seen in Figs. 184, 185, 196a–c, 210a–b.

The Ayr Tuareg apparently do not make coiled basketry to a very great extent, but they know a technique related to that used in Ahaggar, and also sew with a small awl (*éstan*). The reason why so many Ayr pastoralists make very little coiled basketry work probably lies in the fact that plates, bowls, and other receptacles of this type can be obtained at the market of Agadez at very low prices. [184] [432] [266]

In the manufacture of plaited basketry the Ayr Tuareg are experts. They use the leaves of the dum palm for plaiting a great many different articles such as tent-mats, containers, and the like. When large mats and similar objects are made, the palm leaves are always plaited into narrow bands which are sewn together with pieces of leaves by means of a large needle (*tasubla*) (Fig. 220b). Plaiting dum palm leaves is one of the most important tasks of women among the *Kel Ayr*. Pastoral Tuareg of Ahaggar in contrast to those of Ayr do not engage much in plaiting basketry, and I believe that most of them are unaware of this technique which is known to all sedentary agriculturists of Ahaggar. The plaiting material used by these people is date palm leaves (*agum*) from which they make mats, bags, and similar objects. Baskets (*aleguiguten*) like that reproduced Fig. 211 are manufactured by sedentary agriculturists of Abalessa and are sometimes used by pastoral Tuareg. Another type of plaited basket is that illustrated Fig. 135. It is made from palm leaves and has two handles made from palm bast twisted into a rope which is sewn into the basket by means of the large needle (*tasugla*, or *tasubla*) (Fig 220b). This basket type (*iésenit*) is widely found throughout Northern Africa among sedentary people of the oases and in the Atlas. The sedentary agriculturists of Ahaggar use baskets of this kind for many different purposes, and they play a part in agricultural work, e.g., to carry fresh soil to the gardens (p. 191) and to remove soil when digging and cleaning out foggara canals. [824] [413] [171] [415] *

The Tuareg have a third technique which can adequately be mentioned in connection with plaiting, namely the manufacturing of mats from the stems of the *afezu* grass (*Panicum turgidum*). These mats are made from straws placed parallel to each other and fixed together by means of strips of leather. These mats are known as *éseber* or *iéserbert* according to their use and size. They play an important part in Ahaggar where they are used as a kind of windscreen surrounding all tents, and they are manufactured by many women among the *Kel Ahaggar* (Figs. 268, 269). Mats of this type are also made by some Ayr Tuareg for cheese manufacturing (Fig. 168), but Tuareg women of Ayr practise very little this particular technique of mat making. Large mats made from *afezu* stems are used for bed covers, and in rare cases also for windscreens or sunshades, but these mats, which are found in all Tuareg camps together with the large wooden bed (*iédabut*) (Fig. 212a–b), are not manufactured in Ayr but in the south, particularly by women of the *Igdalen* Tuareg. Mats manufactured by this method are used for an interior cover of the barrel-vaulted mat-tent (Fig. 265d); these mats are also imported from the south. [824] [351] [462] [563] [462] [342] [462]

The Tuareg are expert at skin and leather work which constitues the most important craft in the 281

Fig. 213. Tanning receptacle (*ahaǵa*) of camel-hide lashed to a ring consisting of a bough bent into a circular position. Ahaggar, the *Dag Ḥali* tribe. Dimension: 0.55 m in diameter. (N.M. G. 5229).

281 north where tents and a great many domestic implements and containers are made from skin. Skin
[462] work plays a certain role also for the Ayr Tuareg, but pastoral women in Ayr do not engage in this craft to the same extent as do women among the Ahaggar Tuareg.

281 The Tuareg have several terms for skin and leather. In Ahaggar I have noted the following:—
192 (1) *élem*, the common word for the skin of most animals whether tanned or untanned; (2) *akker*, that is the common word for an untanned hide of all animals with the exception of camels, oxen, giraffe, and certain antelope; (3) *éṛit*, the skin of camels, oxen, giraffe, and certain antelope whether tanned or untanned. The terms noted among the *Kel Ferwan* Tuareg in Ayr are largely different:— (1) *awreṛeṛ*, an untanned hide; (2) *égachik*, tanned or untanned skin of all animals with the exception of oxen, camels, giraffe, and certain antelope; (3) *éṛit*, tanned or untanned skin of oxen, camels, giraffe, and certain antelope; (4) *esarku*, tanned skin of oxen.

281 I have already mentioned that camels are killed in a peculiar way and partitioned before skinning so that the hide is never removed entire. I have stated in the same connection that pastoral Ayr Tuareg do not use camel's hide in their crafts, and I have mentioned that though camel's hide plays a certain part in Northern Tuareg crafts they never tan it, while they tan skin of all other domestic animals and game animals such as gazelle and barbary sheep. The Northern Tuareg use camel's hide for lashing wood (cf. Fig. 86), and they also employ it for camel whips (cf. p. 84) and for certain other artifacts which are now to be described.

*[415] The Northern Tuareg use camel's hide for the manufacturing of a large tanning receptacle known as ahaǵa (Fig. 213).

as *ahaga* (Fig. 213). Such tanning receptacles are made in the following way among the Ahaggar Tuareg:— A slender bough of the *tahunek* tree (*Rhus oxyacantha*) is bent and fixed into a circular form, and a piece of camel's hide soaked in water is attached to this frame. Sand and pebbles are thereupon placed upon the hide within the frame, which is lifted upwards by means of cords fastened to it and to the bough of a tree. This is done to produce the bowl-like form of the receptacle which is left filled with sand and pebbles and attached to the tree for a few days. Thus it is dried by the sun, and thereafter it will become very hard and keep the desired bowl-like form. Certain butter-containers made from raw camel hide are manufactured on the same principle, the entrance to such containers being made by the insertion of a piece of wood around which the upper part of the piece of hide is firmly attached. The sedentary agriculturists of Ahaggar also use camel's hide for the manufacture of a long rope (*akhamil*), which is used for drawing water from wells by means of oxen when the *tanut* system of irrigation (Fig. 132a–b) is employed. A rope of this kind is made from strips of soaked hide twisted together and hammered between stones to be left for drying in the sun. It is also said that camel's hide in the north is used for sandals of a particular type, while the Ayr Tuareg may use raw oxe-hide for sandals (cf. p. 301). The Ayr Tuareg may also employ raw oxe-hide for the manufacture of ropes and cords, and for camel whips. The hides of camels and oxen are known to the Tuareg by the common term *éyit* and they seem to possess certain qualities in common.

281 [824] [46]* [283] [294]

The hide of such animals as goats, sheep, gazelle, barbary sheep is never used untanned among the Tuareg, and they may tan the hide of oxen and various other animals.

The Tuareg use a particular method for tanning goat-skin to be used for water-bags (*abayor*) (Figs. 215–217). I have watched this, particularly in Ahaggar, where a water-bag is prepared in the following way:— The animal is killed in the normal way of cutting its throat, and is then so skinned that the hide comes off almost entire. This is done by making the following openings with the knife: the head is cut off, cuts are made around the lower part of all four feet, and on the inner side of the

Fig. 216. Water bag (*abayor*). Ahaggar, Olufsen's collection. (N.M.).

hind thighs over the animal's anus. This latter opening is made big enough for the skin to be drawn 281
off the body forwards over the neck. When the hide is removed and has been cleaned by scraping with a knife, it is ready for tanning, which is done as follows:— The openings made on all four legs are [413]
closed simply by tieing the leg skin into knots, while the opening made on the inner side of the hind thighs is sewn together with straw by means of the awl (*iistent*) (Fig. 218a), the anus opening being closed with a cord tied around it. The hide is now closed except at the neck opening. It is filled with [824]
a mixture of water and bark (*iiñet*) of the *tamat* acacia (*Acacia seyal*), and the neck-opening is thereupon closed with a cord tied around it. The hide, which now forms a closed bag filled with bark and water, is placed in the shade of the tent for seven to ten days to be turned and shaken every day. The mixture of bark and water is thereupon poured out, the cuts sewn together or tied with knots are reopened, the inner side of the hide is cleaned and treated with butter, and the openings are closed again in a more solid fashion, the large hind opening being closed with strips of cotton placed over the incision and sewn together with leather thread by means of the awl. A water bag prepared in this way will very often contain reddish water, as the *tamat* bark yields a red colour, but nevertheless all Tuareg consider bark of the *tamat* acacia as the very best tannin for water bags. Bark of *abser* [824]
(*afagag* in Ayr) (*Acacia Raddiana*) and also bark of *tahunek* (*Rhus oxyacantha*) may be used for tanning water bags. Water bags are, with very rare exceptions, made from hairy skin because they keep the water cool and fresh. The large open irrigation pail (*aga*) is made from skin tanned with bark like [415] *
water bags, but to my knowledge bark tanning among the Tuareg is not employed for other articles.

a. Wooden cutting board (*elkeyleb*). It is made from wood of the *taburak* tree (*Balanites aegyptiaca*). 0.480 m long. (N.M. G. 5867). [824]

b. Wooden implement (*asettesu*) for smoothing leather. Wood of the *taburak* tree. Dimension: 0.248 m long. (N.M. G. 5868).

c. Heavy black stone (*tazzei*) with level under side. Used for smoothing leather. Dimension: 0.079 × 0.061 m. (N.M. G. 5873).

d. Knife (*telmasti*). Dimension: 0.163 m long. (N.M. G. 5869).

Manufactured and used by blacksmiths in Ahaggar, Abalessa.

The vassal Tuareg of Ahaggar use hairy skin for the manufacture of certain receptacles other than water bags (cf. Figs. 111, 125). I have never seen hairy skin bags of this type in Ayr, and even in Ahaggar most skin bags are made from depilated skins. In Ahaggar the hair is removed from the hide by means of a plant known as *tachkat* (*Pergularia tomentosa*). A bundle of this plant is dipped into hot water and is rubbed against the inner side of the hide which is spread out over a large stone or a similar object. Even after one day the hair can then be removed by one or two women who pluck it with their fingers. In Ahaggar I have also been told by sedentary agriculturists that the hair can be removed by means of salt. The salt is placed upon the inner side of the hide and this treatment makes it possible to scrape away the hair by means of a knife or a stone. The Ayr Tuareg questioned about their methods of depilation place ashes from the fireplace on the inner side of the hide which after this treatment is covered with moistened sand for one day. After this treatment the hair is removed with a knife or simply with the fingers. 281 [565] [413]* [824]

The tannin generally used by the Tuareg of Ahaggar and Ayr for articles other than water bags 281 824

Fig. 220a–g. Sewing bags and their contents.

a. Sewing bag (*askagen*) made of decorated leather sewn to a piece of hollow ox-horn which constitutes the bottom of the bag. Dimension: 0.415 m long. Ahaggar, the *Dag Ḥali* tribe. – In the bag were the objects b–e.
b. Large sewing needle (*tasugla*, or *tassubla*).
c. Sewing awl (*iistent*).
d. Leather knife (*telmusit*).
e. Four pieces of leather (*izzeman*) for repairs. (N.M. G. 5225a–e).
f. Sewing bag (*askagen*) of the above-mentioned type but richly decorated with leather fringes. Ahaggar, *Ḥarratin* of I-n-dalağ. Dimension: 0.335 m long. (N.M. G. 5241).
g. Ox horn (*isek*) cut for bottom of sewing bag (*askagen*). Ahaggar, *Ḥarratin*. Dimension: 0.136 m long. (N.M. G. 5228).

281 824 is fruit of the *taggart* acacia (*Acacia scorpioides*) which is known to the Ayr Tuareg as *tiggart*. The fruit is pounded into a kind of flour or powder which is mixed with water in the large tanning receptacle made from camel hide (Ahaggar) or in a large wooden or enameled receptacle (Ayr). For tannin the Ahaggar Tuareg also use leaves of the *tamat* acacia (*Acacia seyal*). These are collected as follows: a large bough is cut off the acacia, and is left to dry in a clean, sandy place. When the bough and its leaves have been dried by the sun for some time, the bough is beaten with a stick so that the leaves

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

fall to the ground where they are collected. They are conserved dry until tanning takes place when they are pounded in the large mortar and mixed with water in the tanning receptacle. The Ahaggar Tuareg may also use galls of the *tabarekkat* tamarisk (*Tamarix aphylla*) (cf. Foucauld 1951–52, II, p. 885 & Maire 1933, p. 159) and fruit of the *tedjoq* tree (*Pistacia atlantica*) (Maire 1933, p. 149). 281 824

In addition to treatment with these vegetable tannins the skin is also treated with butter or rubbed with fatty substances, such as a piece of the brain of a slaughtered animal. These are the main features of skin tanning which in Ahaggar takes place in the following way:— (1) The hairy or depilated hide is placed in the tannin receptacle which contains one of the above-mentioned vegetable tannins mixed with water. The hide remains in this receptacle for one or two days if fruit of the *taggart* acacia is used, while three or four days will be necessary using *tamat* leaves known as *ala*. The hide in the receptacle is daily rubbed between the hands in order that the tannin may penetrate well into it. (2) When the hide is removed from the receptacle it is washed with cold water and thereupon dried in the shade. 281

b. Bag known as *abelkof*. Ahaggar, the *Ifuh-en-tahli* tribe. Dimension: 0.36 m long. (N.M. G. 5239).
c. Bag of *ishchikwat* type. Ahaggar, probably manufactured by Ahaggar Tuareg af Tamesna. Dimension: 0.30 m long – without fringes. (N.M. G. 5219).

281
*415
531

Fig. 222. Large bag of *téchchélkwat* type. The *téchchélkwat* bags (pl. *téchchélkwatin*) are normally made of entire skins of kids or goats while this large bag is made from several pieces of leather sewn together. Ahaggar, probably manufactured in Ayr. Dimension: 0.92 m long – not counting the leather tassels. (N.M. G. 5216).

281 (3) Butter or fatty substances are rubbed into the inner side of the skin, after which the skin is covered with wet sand for a while. (4) The skin is dried and thereupon softened by rubbing it between the hands – a task sometimes performed by men, though tanning is the task of women.

281 The implements used by the Tuareg for the manufacture of skin articles are few and simple. Sewing
413 of skin is rarely done with a needle, though the large iron neddle known as *tasubla*, and in Ahaggar also as *tasugla* (Fig. 220b), is used for sewing among the Ahaggar Tuareg in the manufacture of donkey saddles (cf. Fig. 86, p. 110). But with such rare exceptions the Tuareg sew their skin articles by means of the little awl known as *tisteni* in Ahaggar (Fig. 218a), as *éstan* in Ayr. With this implement the women pierce holes close to each other and through them draw thin leather thread
[283] (*ezzemi* in Ahaggar). Sinew thread is not in general use among the Tuareg, but I knew a gazelle hunter in Tasilé-n-Ajjer, who took out the sinews of the hind leg of a killed gazelle to use them for mending his leather belt. With this exception I have never seen sinew thread employed for sewing among pastoral Tuareg and my fairly large ethnographical collection containing all types of Tuareg skin and leather articles contains no specimen sewn with sinew thread. For sewing sandals the Ahaggar
413 Tuareg use a large awl which is known as *éndel* (Fig. 218b). This word is also used for iron implements

237 Ayr Tuareg a piece of ram's horn may serve as an amulet case attached around the upper arm. Horns
*[415] of barbary sheep are used for butter containers among the Northern Tuareg (cf. p. 223; Fig. 165), who sometimes use a piece of pointed gazelle horn for daubing antimony around the eye.

281 The Ahaggar women cut skin and leather with a small knife (*telmusit*), and a piece of wood (*asettemu*)
462 and/or a stone (*taẓẓet*) are used for smoothing the skin which is then placed upon a particular wooden
[413] board (*elkeyleb*) (cf. Figs. 219a–d). The Ayr Tuareg do not make so much refined skin work. Women
*[415] among the Northern Tuareg conserve their implements for skin and leather work in a particular bag (*askagen*) which is made from leather attached to a bottom piece of horn (*isek*) (Figs. 220a–g).

[531] Northern Tuareg women take a great interest in their skin and leather artifacts, which are richly decorated with fringes and hanging tassels, and with geometric designs in different colours. I have
386 noted the following colours among the Tuareg of Ahaggar and Tasilé-n-Ajjer:—
822 (1) *baba*, indigo which is introduced from the south in the form of balls.

(2) *tawnkent*, which is also known as *tafidet* and *taneẓẓeft* according to Foucauld 1951–52, IV, p. 1934. It is a yellowish mineral which yields an entirely black colour frequently seen on ornamented skin bags. The mineral according to the Ahaggar Tuareg is introduced from the south, while the Tuareg of Tasilé-n-Ajjer claim that they obtain their minerals of this type from Serdeles north-east of Ṛat. – A black colour which is also known as *tawnkent* is said to be made by the Tuareg of Ahaggar in the following way:— Pieces of iron are put into water contained in some small receptacle, usually a tea glass. This receptacle containing water and iron pieces is covered with a bowl or a similar object in order that the sun light cannot penetrate. After a few days the water turns into a black colour to be used for skin dyeing.

(3) *semento*, a green colour derived from a mineral or a powder introduced from the south. According to some Tuareg this green colour is also made by means of a vegetable powder introduced from the north, from the region of Mzab.

(4) *khodarbas*, a powder which yields a green colour. It is said to be introduced from the south (from Tawa) and to derive from a tree known as *tafnit*.

[524] (5) *errumman*, the fruit of the pomegranate tree known as *terrummant* (*Punica Granatum*). It is used with a white mineral (alum), known as *aẓref n Tawat*, and introduced from In Salah. Parts of the pomegranate fruit and of this mineral are mixed with water to be used for a yellow or yellow-brown dye which is applied to many decorated skin bags for ground colour.

(6) *temesaruak*, a mineral introduced from the north (Mzab). It produces a yellow colour.

[243] (7) *herki*, a reddish brown colour obtained from a particular type of sorghum known as *tallak* grown in the cultivation centres of Ahaggar.

(8) *téderset*, a white colour obtained by placing the skin for about three days in a container with fresh milk to which a little salt is added. – Among Tuareg of Tasilé-n-Ajjer I was told that a white colour is also obtained from a kind of powder introduced from the Sudan.

386 Before use these above mentioned colours or dyeing materials are generally dissolved in water
[53] contained in a tea glass. When they are employed for the very fine geometric designs of leather bags they are daubed with a small knife known as *telmusit* (Fig. 219b).

[439] It is interesting that most dyes used by the Northern Tuareg are introduced from the north or from the south,

[824] [276] [462] [565] b. Cylindrical brass tube covered with ornamented leather. It is known as *faralu wa n tuka* and serves for the conservation of *tuka*, that is ashes of burned *afezu* grass (*Panicum turgidum*). Ashes of this grass are used by some Tuareg for chewing tobacco. It is said in Ahaggar that containers of this type are made exclusively by noble women of the *Kel Relo* tribe, and that the containers should be worn only by noble Tuareg and not by vassals. The brass tube is always made by blacksmiths. Ahaggar, blacksmiths of Abalessa. Dimension: 0.265 m long (total length). (N.M. G. 5888).

c. A piece of cane covered with coloured leather and fringes of the same material. It is called *tafendit* and serves for the conservation of *tazult* (antimony). Ahaggar, the *Aguh-en-tehlé* tribe. Dimension: 0.116 m. (N.M. G. 5267).

386 the south, or are obtained from plants grown by sedentary agriculturists. The technique of skin dyeing [281] as practised by the Tuareg nowadays cannot be considered an ancient one in Tuareg culture. Its [174] origin is probably to be looked for in the more developed civilizations of Northern Africa, and not in a nomadic culture like that of the Tuareg. Other dyeing methods known to the Tuareg may well be very ancient. I believe this to be true of the red ochre known to the Ahaggar Tuareg as *tameghoyt*,

386 to the Ayr Tuareg as *tamezgoyt*. It is found both in Ahaggar and in Ayr, and is used for dyeing tent-skins (cf. p. 361).

289 A number of the most common skin bags and similar objects of decorated leather work made by
462 Tuareg women in Ahaggar are reproduced in Figs. 220–229.

* [415] Though the pastoral Tuareg women in the north are excellent leather workers they find their superiors
[564] in the blacksmiths women and those of the *Imeggedezen* of Agadez. Women of these sedentary negroid groups provide pastoral Tuareg with leather objects like sword-sheaths, amulet cases, leather purses, large saddle bags, cushions, and the like (cf. Figs. 72a, 76, 121a–b, 172a–b, 198).

# Dress

In this chapter on Tuareg dress I do neither describe all types of Tuareg garments nor dress ornamentation, but content myself with a brief description of the prominent articles of dress and of certain peculiar garments which are interesting and important for our understanding of the cultural position of the Tuareg. 29 128

In Northern Tuareg country pastoral women sometimes wear a large hat plaited from date palm leaves and known as *tèlé*, which literally means "shade" (cf. Fig. 231). However, hats of this kind are never manufactured by pastoral Tuareg who obtain them from sedentary agriculturists. Hats of the same type are very common further north in Africa where they are worn not only by women but also by men, and I believe that hats of this sort were introduced to the Tuareg by the Arabs and the Arabic speaking *Harratin*, who came to Ahaggar about a hundred years ago. In Ayr I have seen plaited hats worn by one or two black-skinned men of the *Kel Ewey* group. These hats are also used among the Hausa. True pastoral Tuareg like those of the *Kel Ferwan* group do not wear hats. 292 [285] [171] [177] [184]

It seems as if the hat is a foreign element in Tuareg culture, and that as traditional head garments the Tuareg have nothing beyond the veil and the headcloth described in some detail in the general chapter about the Tuareg (cf. p. 14 f.). We have seen that both the veil and the headcloth are sometimes referred to as *alechchu*, "a piece of Sudanese indigo cotton sewn together from narrow strips or bands", for the traditional veil and headcloth are made from this type of cotton which is highly esteemed for many other garments. It seems to be the oldest type of cotton used for dress among the Tuareg, while white cotton of an ordinary type has been introduced more recently among them. The Ayr Tuareg use the word *maser* for white cotton woven in one piece, and they say that this word refers to *Misr* (Egypt) wherefrom cotton of this particular type was first introduced. It came much later than indigo cotton of Sudanese type, which has been known in Ayr from very ancient times. 291 294

Indigo coloured cotton introduced from the Sudan is very expensive and is nowadays used mainly for festive occasions, while daily dress, including the veil, is made of European cotton, which is indigo or white in colour. There can be no doubt that the comparatively cheap European cotton has displaced the use of skin or leather for daily dress. For we know that skin shirts were extremely common in Ahaggar at the beginning of the present century (cf. Foucauld 1951–52, I, p. 112), and Duveyrier says that "le pardessus en peau" is held in esteem (Duveyrier 1864, p. 406). Before Duveyrier we have Lyon's statement that Tuareg of the Fezzan area use skin (leather) for dress:— "A leather kaftan is also much worn, of their own manufacture, as are leather shirts of the skins of antelopes, very neatly sewed, and well prepared". In addition Lyon depicts a Tuareg wearing a leather shirt with ample sleeves (Lyon 1821, p. 110). 291 [292] [178]

[p. 287]

291
294

Fig. 232. The cut of a leather shirt (*tébetik*) from Ahaggar. The shirt is ornamented with leather fringes along the seams and at the ends of the open sleeves. The shirt is made from sheepskin dyed with indigo. Ahaggar, the *Kel Inṛer* tribe. Dimension: 1.15 m long, 0.60 m wide at the waist. (Musée de l'homme, No. 41-19-1645).

291 I have never seen a skin shirt among the Tuareg, but it seems as if skin shirts are worn in certain
[237] parts of Ahaggar even at the present time. They are described from the regions north and east of the Kudia, and are made by certain tribes of the *Isekkemaren* who use skins of barbary sheep or goats for the lower part of the shirt, fine goatskin for the upper part covering the shoulders, and gazelle skin or the skin of kids for the sleeves (Mounier 1942, p. 158). A skin shirt is found in the "Musée d'Ethnographie et de Préhistorie du Bardo" in Algiers. It is called *tébetik*, and is described as follows:—

291 "Le corps de la tunique figurée est fait de trois pièces de cuir: une pour les épaules et la poitrine,
294 avec un trou pour passer la tête, deux autres pour le devant et le dos. Ces deux dernières pièces sont reliées sur le côté par deux bandes de cuir verticales; le tout formant une sorte de robe évasée à la base. Les manches sont ouvertes dans le sens de la longeur, donnont ainsi liberté complète aux bras. De petites franges de cuir très fines décorent l'ensemble à l'emplacement des coutures. – Dimensions: hauteur totale 1.20 m; taille 45 cm; manche 55 cm. Inventaire du Musée: F 9". (Balout 1959, pl. VI).

291 The above-described shirt is clearly of the poncho type, and this is also the case with three leather
[291] shirts preserved in the "Musée de l'homme" in Paris. The shirts seem to be identical in cut and size, and are here briefly described by reference to one of them. It is made from tanned and depilated sheep skin, dyed with indigo. Its total length is 1.15 m and width at waist 0.60 m. Its museum number is 41.19.1625 and it is said to have been manufactured by a woman of the *Kel-Inṛer* tribe (*Isekkemaren*).
[294] It is also stated in the museum's card-index that such shirts are worn by poor people in Téfedest and by *Dag Ṛali* slaves.

291
294

Fig. 233. Cut to illustrate a Tuareg cotton shirt of poncho type. The central part of this shirt is made from two pieces of cotton sewn together at the neck opening; most shirts have a single central cotton piece. The shirt depicted derives from Tasilé-n-Ajjer where a complete woman's dress was bought in 1952. This dress comprises the following pieces which are all made of modern European cotton:—

a. Shirt (*tékamist*) of indigo cotton. Dimension: 1.89 m wide at the top, 1.32 m long. The *Kel Terwit* tribe (cf. illustration).
b. Shirt (*tékamist*) of similar cut but of white cotton. On festive occasions the women frequently wear a white shirt under the indigo-coloured one. Dimension: 1.89 m wide at the top, 1.34 m long. The *Kel Terwit* tribe. [292]
c. Large piece of indigo cotton 192 × 1.15 m which serves as underskirt or petticoat (*asegbes*). Élézi (Ft. Polignac).
d. Large piece of indigo cotton 1.565 × 1.935 m which serves as a kind of shawl covering head, shoulders, and back. It is called *tikest*. Élézi (Ft. Polignac).
e. Headcloth (*ékerkey*) similar to the man's veil (*taǵulmust*). It is made of Sudanese indigo cotton measuring 2.14 × 0.25 m. Élézi (Ft. Polignac). (N.M. G. 5488a–e).

It is more than likely that skin shirts of poncho type have also once been used in Ayr, where the Tuareg say that skin was widely used for dress during the 1917-revolt when cotton was scarce. 291

The cotton shirts worn by adult Tuareg men are of various types and possess individual names. The Ahaggar Tuareg generally wear a sleeve-less shirt called *takerbast*, or a shirt known as *tékamist* which has large sleeves. There are other names for shirts with or without sleeves (cf. Foucauld 1951–52, I, p. 610 f.), but all shirts are of the same basic cut based on the poncho principle. The poncho cut is very obvious the more so as the shirts are frequently made from one piece of cotton provided 291 294

291 with an opening for the head, and folded and sewn together at the lower part of the sides. The folded
294 piece of cotton may also be united at its lower parts by the insertion of a trapeze-like piece of cotton known as *tébanik*. The cotton shirt worn by most Tuareg men in Ayr is known as *teketket*, and is of the same poncho cut as the shirts mentioned above from Ahaggar.

All Tuareg men wear large and wide cotton trousers known as *ékerbey*. The cut of these trousers is the same in Ahaggar and in Ayr. A pair of trousers I wore when among the Ayr Tuareg is 1.10 m wide at the waist where they have a channel for the insertion of a leather cord (*tamennalt*) by means of which the trousers are laced up. The total length of the trouser legs is 1.06 m, so that the width is a little larger than the length. The trousers are sewn from three pieces of cotton. They consist of a front and back piece identically cut and sewn together at the sides; a third piece of cotton is inserted between the legs (Fig. 236).

291 The trousers are extremely large and loose. They are well-suited not only for the hot desert climate but also for camel riding. The Tuareg sometimes pull their trousers up over the knees so that they are entirely bare-legged. They do this, for instance, when they water domestic animals from wells and in various other situations where long trousers are embarassing. But they will never pull up their
[576] trousers in presence of foreigners (particularly foreign women) or in the presence of parents-in-law
[606] (particularly mothers-in-law). For it is extremely shameful for a man to show himself bare-legged to persons to whom he must also not show his mouth, and the Tuareg express this fact by saying that "the veil and the trousers are brothers". In general, young boys wear a shirt of poncho type, in addition to which many of them also wear a leather loin-cloth (*arṭoḡ* in Ahaggar) made of goat skin. Such loin-cloths are attached around the waist and drawn between the legs. They are worn by certain vassal boys and by young slaves almost up to the time of initiation and veil adoption, and trousers may be adopted at the same time as the veil. It seems as if the loin-cloth has also once been a traditional garment of grown men, for Rodd states that they sometimes wear a tanned skin around the loins below the trousers – more especially in bush country where burr grass is very prevalent (Rodd 1926a, p. 164).

291
294

Fig. 236. Cut of Tuareg trousers (*tkerbey*). They are made from two identical pieces of cotton sewn together at the sides and united at the inside with a particular piece of cotton sewn to the legs. The trousers are very wide and are laced around the waist by means of a leather cord called *tamesnakt*. Dimension: 1.06 m total length, 1.10 m wide at the waist. (Author's collection).

291 Veil, shirt, and trousers constitute the main elements of Tuareg dress. On festive occasions many
292 men also wear a particular type of shoulder belt or bandoleer. This consists of a long strip of coloured cotton (frequently red) wrapped several times around the waist and over the shoulders forming a cross over the chest and over the back. This belt or bandoleer is known to the Ahaggar Tuareg as *tirzemin*, or *theyderen*, to the Ayr Tuareg as *técherbit*. Rodd ascribes a practical use to this belt, which, he says, the Tuareg wind tightly around their bodies as support for the abdomen on which the motion of the camel imposes great strain during long marches (Rodd 1926a, p. 194). I have myself never seen Tuareg use such belts on long journeys, and have only seen them in use on festive occasions connected with

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

292 ceremonial ridings as those described on p. 104 f. I have been informed both in Ahaggar and in Ayr that bandoleers were used exclusively for such purposes. Rodd depicts a rock-drawing from Timia in Ayr and believes that it perhaps represents a man wearing a bandoleer (Rood 1926a, p. 194, pl. 40 p. 305). This may be so, but I have been told by Ayr Tuareg of the *Kel Ferwan* group that bandoleers were introduced among the Ayr Tuareg by the French when they formed the camel patrol made up of Tuareg from different Ayr tribes. However, my informants also claimed that the use of bandoleers for camel riders was an ancient custom in the north among the Ahaggar Tuareg, from where it was introduced to Ayr by the French. Informants of Ahaggar and Tasilé-n-Ajjer told me that the custom was traditional to noble Tuareg but not to vassals, though Tuareg of the vassal class also wear bandoleers nowadays.

291 Apart from the head-cloth (*ékerhey*) the following garments are typical of Northern Tuareg women:— (1) *tékamist*, that is a large and wide shirt of cotton, in form and cut identical with the man's shirt; (2) *asegbez*, a large piece of cotton used for a skirt or a petticoat; this is fixed tightly around the waist merely by folding it at the upper edge; (3) *tikest*, a large piece of cotton worn as a shawl over the shoulders and head, covering the head-cloth.

In addition to the head-cloth (*adalil*), which they frequently wear rolled up on the top of the head, Tuareg women of the *Kel Ferwan* group wear three main garments:— (1) *aftek*, a very short shirt of poncho cut. It is very akin to the shirt worn by Hausa-speaking women of Agadez, who use the words

291 *liga* or *tagua* for this garment piece; (2) *téri*, a large piece of cotton worn as a skirt wound around the waist in the same way as in the north; (3) *tesegbes*, a large piece of cotton used as a petticoat.

[114] Lhote has published some very interesting information on the dress of Tuareg women. Thus he mentions that certain women among Sudanese Tuareg wear a kind of shawl over the shoulders instead of a poncho shirt. I have myself seen this garment among pastoral Arabs south of Ayr and close to [567] Aderbissinat, but I have never seen it among the Tuareg. Still more interesting is Lhote's description of a skin skirt worn by slave women among the *Iwillemmeden* (Lhote 1955a, p. 308). This leather skirt, which is laced around the waist by means of a leather cord, is also recorded from the *Bélla* of Timbuktu by Dupuis-Yakouba (cf. Seabrook 1934, p. 251), and some skirts of the same type are conserved in the "Musée de l'homme" in Paris. One skirt among those found in the Paris museum (no. 33.78.9) comes from the Sudanese *Bélla*, and was collected in the region of Arawan by the "Expedition du [294] Hall" in 1945. It is made from several pieces of decorated leather sewn together with leather thread; its total length is about 0.70 m. Another skirt of the same type, but without a museum number, is perhaps of the same origin. In addition to these two skirts the Paris museum possesses three other leather skirts of the same type. They were collected by Lhote in 1939 among Tuareg living in the south-west. One of these skirts is from the *Tengerregif* Tuareg (mus. no. 41.19.845) while the two others come from the *Kel Inteser* (mus. no. 41.19.846 & 847). The skirts are known as *elavaite* according [567] [568] to the museum's card-index, where it is stated that they are worn by slave women, and it is added that similar leather skirts were worn by slave women and poor women of the vassal class among the

Ayr Tuareg up to the French [illegible]

are somewhat longer, and provided with two shoulder-straps. The skirts were collected by Lhote in 291
1939 in the region of Ansongo at the Niger, and derive from the *Kel es Suk* Tuareg. According to the card-index similar skirts are also worn by *Bélla* women of the *Dawssahak* and *Echcherifen* (Musée de

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

291 l'homme, nos. 41.19.1376 & 1377). A skin skirt suspended from the shoulders by means of two leather straps also occurs among the *Iwellemmeden Kel Ataram* around Meneka and Gao (cf. Nicolas 1950a, Fig. 38,7 p. 169, p. 176).

292 In case of severe cold a simple hairy skin mantle may be worn by both men and women of the
[232] Northern Tuareg. These mantles are not very common nowadays, when most Tuareg use woollen
[177] blankets introduced from the north, but they are still worn by vassals, slaves, and sedentary agriculturists of Ahaggar. A skin mantle is known as *aglim* and it frequently consists of a single sheep-
[294] skin worn over the back with hair inside (Fig. 240). But there are also larger mantles composed of several hairy goat-skin and/or sheep-skin sewn together with leather thread by means of a little awl (*istem*). These larger mantles are attached around the upper part of the body by means of a leather
[184] cord around the neck (cf. Fig. 241). Skin mantles are said to be unknown in Ayr, and literature makes no mention of them in other Tuareg groups.

178 Garments made from skin or leather are nowadays rare among the Tuareg. But the Tuareg, like
291 many other peoples who have given up the use of skin and leather for dress, still use this material for foot-wear which comprises various types of sandals.

291 The common type of sandal used among the Tuareg is known as *ḫratimen* (sing. *ḫratim*) which
[237] word is also used more generally for sandals of other types. It is made from the hide of oxen and sometimes of hides of the oryx antelope or giraffe whose hides are considered superior for sandals. It is not manufactured by the Tuareg but by sedentary peoples of Agadez and other towns in the south.
[438] The Northern Tuareg, like the Tuareg of Ayr, generally procure their sandals from Agadez where the type is also known by the Hausa word *takelmi*. The manufacture of such sandals is described in
294 detail by Lhote, who states that the untanned hide to be used for soles is treated in the following
281 way:— (1) Beating with wood against a flat stone; (2) Softening in wet sand; (3) Continued beating with wood against a flat stone; (4) Greasing with butter, tallow, or fatty vegetable substances; (5) Continued beating in order that the fat may penetrate into the pores of the hide. A sandal is made from two layers of hide thus prepared and covered with a tanned piece of sheep-skin which is dyed and decorated. These three layers are sewn together. The sandal is finally provided with a leather strap to pass between the first and second toes, and this strap again is connected with a broader band of leather sewn to both sides of the hind part of the sandal so that the band supports the instep (Fig.
[114] 242b). The reader is referred to Lhote's study of sandals for further information about their manu-
291 facture (Lhote 1950d, p. 514 ff.). The *takelmi* sandals are excellent for many purposes: They are easily pulled off and put on which is advantageous to camel riders who ride bare-footed but frequently dismount, and then need their sandals put on quickly because of the burning sand and rocks. The
[137] very broad soles of this sandal type is also very advantageous not only as protection against the burning soil, but also against the numerous acacia thorns lying so to speak everywhere in the river valleys. But the Tuareg do not wear sandals of this type just because they find them practical and efficient. They also wear them because they are considered more beautiful in shape and colour than other sandal types made by the Tuareg themselves. Among the Ayr Tuareg a particular type of sandal
[285] is plaited from dum palm leaves. According to Lhote this plaited sandal is known as *slisleplatine* (Lhote 1950d, p. 522, Fig. 10 p. 521, pl. XXII Fig. 1). I have never heard it called this, the name I

a. Woman's sandals of the *imerkadra* type. Ahaggar, the *Aguh-en-tehli* tribe. Dimension: 0.224–0.227 m long. (N.M. G. 5277a–b).

b. Woman's sandals of the *dratin* (*tokalmi*) type. Ahaggar, manufactured at Agadez. Dimension: 0.279–0.283 long. (N.M. G. 5278a–b).

291

Fig. 243. Sandals resembling the *tagliezez* type but having no heel-straps. Ahaggar, Olufsen's collection. Dimension: 0.275–0.285 m long. (N.M. G. 1.8).

have heard being *éṛatim n tagayt*. It is provided with a strap of leaf passing between the first and second toes, and straps of the same material to support the instep. Thus it is kept to the foot in much the same way as the leather *takalmi* sandal, and there is possibly a historical relationship between the two types. Sandals made from plaiting dum palm leaves wear out rapidly but are quickly made. They are worn mainly by children and by very poor people.

[462] An extremely common type of sandal in Ahaggar is that known as *émerked* (pl. *imerkeden*). These are never made by professional craftsmen, but are manufactured in Tuareg camps by vassal women [237] who use the large awl (*éndel*) for sewing sandals. They are made of the tanned skin of sheep and 294 goats, or the skin of oxen if this is available. The sandals, almost rectangular in form, are made from several layers of tanned skin sewn together with leather thread. At the back of each sandal two leather loops are inserted in, and sewn to, the leather layers, while a long leather strap is inserted in and sewn 291 to, the fore part. The sandal is kept firmly to the foot by means of the leather strap which passes between the first and second toes, and through the two leather loops to be fastened over the instep (cf. Fig. 242a). This sandal type is in high esteem for walking in the mountainous parts of the Ahaggar Massif, for it is strong, keeps firmly to the foot, and does not easily slide on the rocky surface. It is

never manufactured by noble women, but noble Tuareg obtain this footwear from vassals, or have It is 291 them made by their slaves. Lhote states that *imerkeden* sandals in the past were more common among [294] the noble Tuareg of Ahaggar (Lhote 1952a, p. 605). *Imerkeden* sandals are very common in Tasilit-n-Ajjer. They are said to be known among the *Kel Ewey* Tuareg under the name *takakat*. The *Kel Ferwan* Tuareg say that they have a related type, but this I have never seen. The *Kel Ferwan* Tuareg almost exclusively wear sandals of *takalmi* type.
